Address by Senator Neuberger at the Madison Avenue Baptist Church, New York City

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, January 26, 1956

Mr. NEUBERGER. Mr. President, on January 25, 1956, it was my privilege to address a dinner of the Madison Avenue Baptist Church in New York City under the auspices of one of the most outstanding religious leaders ever to serve in my State.

This man is Dr. Ralph B. Walker, formerly of the White Temple, of Portland, Oreg. I knew Dr. Walker and his charming wife when they were in our own State. Dr. Walker has combined humanitarian and progressive views with deep spiritual feeling and an ability to exalt his listeners. Portland's loss is New York's gain.

On the occasion of addressing Dr. Walker's congregation in the city of New York I also had the privilege of meeting many former residents of Oregon, such as Mr. and Mrs. Owen A. MacGill, formerly of McMinnville; Mr. and Mrs. Ronald S. Callvert, formerly of Portland; Mrs. Lurline Green, a registered nurse, formerly of Portland; and Mr. S. D. Buell, likewise formerly of Portland. These people all told me what a distinction it was to have a pastor like Ralph Walker in the greatest city of our land.

I had the pleasure of discussing my desire to have more young people enter public life, in which connection I explained the $500 scholarship which I have presented to Linfield College to encourage idealistic students with an ambition to work in government. This scholarship is the result of a $500 award which I received from the Democratic clubs of Long Island in 1955 as "Democrat of the Year." I had the honor of formally presenting it to Linfield College in October, through Linfield's outstanding president, Dr. Harry L. Dillon. Incidentally, Dr. Dillon concurs in my hopes that more young men and young women can be induced to make government their careers.

Mr. President, because of the high value which Dr. Ralph Walker places on good government, I spoke January 25, 1956, on the urgent need to control the vast political slush funds which threaten and imperil the free exercise of government in the United States.

I ask unanimous consent that a brief statement to the press, summarizing that speech, may be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

PRESS RELEASE BY SENATOR NEUBERGER

Multi-million-dollar political campaigns are a threat to democracy, Senator RICHARD L. NEUBERGER, Democrat of Oregon, told a banquet meeting of the Madison Avenue Baptist Church in New York City Wednesday night. The Oregon Senator said legislative safeguards were urgently needed to prevent any candidate or political party from "buying public offices like baubles in a jewelry store."

NEUBERGER suggested to his audience that, eventually, the only feasible solution might be some form of a proposal made originally in 1908 by President Theodore Roosevelt, recommending that the Government take over the financing of political parties.

"This probably sounds revolutionary," declared NEUBERGER, "and yet it came first from a man as devoted to Americanism as Teddy Roosevelt, who led the Rough Riders up San Juan Hill. He realized that large-scale political contributions from special interests were incompatible with free and untrammeled service in the highest offices in the land."

NEUBERGER also proposed that the conflict of interests statute should apply to Members of Congress, as well as to officials of the executive branch of the Government. "We are inclined to place elective people on a pedestal above other mere mortals—and without justification," he claimed.

NEUBERGER pointed out that, in his State, it was illegal for a State liquor inspector to accept a gift of a few bottles of whisky, but that a man running for Governor could accept thousands of dollars in campaign contributions from men who own distilleries. "This sort of double standard makes absolutely no sense from the standpoint of logic and ethics," he added.

The 43-year-old Oregon Senator announced that he soon would introduce "far-reaching" legislation dealing with the whole question of campaign contribution in national political campaigns "in time for 1956."

Casein and Powdered Milk

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1956

Mr. PHILBIN. Mr. Speaker, the serious situation affecting users of the American milk product, casein, has been brought to my attention.

It would appear that shortages of casein have developed for sometime past and American users in the plastic and other industries have been required to pay much higher prices to foreign producers taking advantage of shortages of this product. I am informed that in recent months New Zealand and the Argentine, largest producers of casein have increased their prices of the product by about 50 percent. This has occasioned great added expense to all American industries using casein.

The incredible part of this situation is that at the same time this Government is holding a very large supply of powdered milk purchased under the support-price program. There is evidently no present market for this powdered milk and it is not expected that there will be. Thus it would seem to be a complete loss to the Government and, what is worse, a willful, terrible waste of a valuable raw material which, if properly handled, could be profitably utilized by American industry.

This is just another instance of the uneconomic waste and extravagance that has flowed from ill-considered Government programs. I brought the matter to the attention of the distinguished Secretary of Agriculture and have requested him to see whether or not some way could be worked out by which surplus milk could be used to make casein thus supplying necessary supplies of this product to American users who need it and hence would be able to procure it at reasonable prices without suffering from additional international "squeeze plays."

It is my hope that some program can be evolved which will more profitably utilize surplus milk and at the same time supply casein to American industry.

I have requested the Department of Agriculture, the Tariff Commission and the Committee for Reciprocity Information and the Office of Defense Mobilization, as well as the President's office to give careful consideration to this matter to see whether some suitable solution can be effected by which American casein consumers will be relieved from shortages and exploitation and whereby surplus milk can be converted into marketable casein instead of being manufactured into powder which is placed in the warehouses to deteriorate and rot.

One Hundred and Ninety-fifth Anniversary of the Birth of Albert Gallatin, a Great American of Swiss Descent

EXTENSION OF REMARKS
OF
HON. THADDEUS M. MACHROWICZ
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1956

Mr. MACHROWICZ. Mr. Speaker, 195 years ago, on January 29 of this

year, there was born in Switzerland a man who was destined to become a great American, who served with great honor in the United States Congress and in executive positions of these United States.

A precocious youth of 19 landed on America's shores in 1780, speaking English in the heavy French-Swiss accent he was never to lose; but by the time he was 35, Albert Gallatin, was to have achieved renown as one of the most distinguished and perhaps the most controversial of the new republic's political figures.

Born on January 29, 1761, in Geneva, Gallatin did not, as so many other Europeans, have to leave his native home to find his material fortune. The son of one of Switzerland's leading families and a brilliant scholar at the Geneva Academy, the future of the young man was assured. But, fired with a belief in American democracy which he was never to give up even in time of greatest political trial, Gallatin chose to share in the development of the political experiment on the other side of the Atlantic. He was, in the words of the American historian, Claude Bowers, a born democrat.

That his and Jefferson's ideas for building a brave new world coincided so perfectly proved singularly advantageous for our country and its third President. For, among the Jeffersonians, only Gallatin was capable of dealing intelligently with the Hamilton financial system which took little cognizance of the people's wishes in its functioning.

Restoring the power of the purse to Congress was the first step in Gallatin's plans to create a sound and democratic fiscal system for America. As a Member of Congress and founder of the House Ways and Means Committee, Gallatin was to achieve his purpose and win the respect and affection of Jefferson who made him Secretary of the Treasury upon assuming the Presidency in 1801.

That this step earned him the wrath and scorn of the Hamiltonian forces did not daunt Gallatin in his determination. The epithet of "foreigner," though it must have hurt this man whom Jefferson was to find as zealously devoted to the liberties and interest of our country as its most affectionate citizen, did not stop him from working to liquidate the national debt, reduce taxes and hold Government expenditures at a minimum.

The development of commerce and the establishment of rigorous methods in the conduct of the Treasury Department were contributions of Gallatin which earned the once weak young Republic respect throughout the world.

It is of the essence that America always commands such respect, but it is especially important now. It was Gallatin's belief that the path to progress and prosperity is paved with commercial understanding. And, in seeming accord, the present administration brought forth its trade, not aid, program not very long ago.

But, despite its good intentions, the executive branch of the Government has departed from this path on several occasions since announcing this policy, perhaps most seriously when it imposed additional restrictions on watch imports from Switzerland—land of Gallatin's birth and, incidentally, America's best cash customer in Europe.

A misstep such as this, or the recent tariff boost on foreign bicycles, can act to harm not only the material interests of our country but its moral interests as well. How morally damaging such ill-considered moves can be, is evident from the very unfavorable reaction they received in the press of the United States and of the entire world. And the economic damage affects, besides the Swiss exporters and the American watch importers, American farmers and manufacturers who have been doing good cash business with Switzerland and who want to continue and enlarge it.

In memory both of this great Swiss-born American who contributed so much to his adopted land and the valuable Swiss-American Treaty of Peace and Commerce signed by our two countries 105 years ago, I would like to see a restoration of happier commercial relations. And the sooner, the better.

Clarence P. Quimby

EXTENSION OF REMARKS
OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1956

Mr. PHILBIN. Mr. Speaker, I am prompted by the report of the impending retirement of Headmaster Clarence Quimby, of Cushing Academy, Ashburnham, Mass., in my district, to make a few pertinent observations concerning his most praiseworthy service.

Clarence Quimby has ably and faithfully served Cushing Academy, one of America's best preparatory schools, for the past 23 years. He is beloved by all who have ever come in contact with him.

He brought to his important work in education an impressive background of academic achievement. His scholarly attainments are marked—a graduate of Bates College with the degree of bachelor of arts; Harvard, master of education, recipient of an advanced honorary doctorate from Bates and other acknowledgments of academic distinction.

Descendant of a solid, highly esteemed New England family, he early realized certain true values of life—faith in the Creator, independence of mind, fellowship of the spirit and eagerness to work. Of rugged, individualistic makeup, his horizons were broad and lofty; his talents recognized by all who came in touch with him. Inevitably, he made steady advancement in his chosen profession of education and his career reached a happy, distinguished climax at Cushing Academy, where his administration was characterized by progress, soundness, integrity and character building.

He is the type of master genuinely interested in those trustingly committed to his care and guidance. With fervor, zeal, and high purpose, he unselfishly pursued his tasks every day of his life. Generations of Cushing graduates and their families well know the debt they owe him. Every community in which he lived was enriched by his presence. His untiring civic, patriotic and public contributions were noteworthy and deeply appreciated by his fellow citizens.

Clarence Quimby has truly found his way into the hearts of his students, his teachers and the many men and women his activities have touched. He has gained their trust, admiration, affection, and confidence.

Confirmed in his love of clean sportsmanship as an integral part of American education, he built up a dynamic athletic program at Cushing and has plans in being for its further extension.

As I indicated at the outset of my remarks, Headmaster Quimby was exceptionally well trained, as he was admirably fitted, for work in academic life. But he had other qualities and qualifications not always found in leading educators, which were perhaps the truest mark of his greatness. He was an excellent administrator. Under his wise supervision, Cushing has grown and expanded in size and prestige. Because of his vision, ability, and unflagging energy, even greater progress is planned and in immediate prospect.

Great as his achievements were, however, it is in his human relations that Clarence Quimby secured his greatest victories. Possessed of a stern New England sense of duty, and an aptitude for working around the clock, yet he always found time for meticulous attention to even the slightest detail of his work. Aways on the job, he knows his faculty and student body intimately. He is virtually the hub around which the life of Cushing—educational, cultural, social, and spiritual—revolves, and it was under his farsighted, devoted leadership that Cushing recorded the noteworthy advances of the last generation.

It would be a happy circumstance indeed, if every institution in the land could be infused with the spirit of patriotism, love of humanity, enthusiasm for work, unselfish devotion to students, school, and Nation, which Clarence Quimby has exemplified at Cushing.

I have been privileged to observe at close range Clarence Quimby's continued outstanding work, and to know him as a great educator and a great human being. It is not surprising at all that he should have the respect, admiration, and gratitude of all those interested in sound, sensible, forward-moving American education abreast of all modern development, but bound fast to the rock of fundamental principle. A true patriot in thought, word, and action, he is never given to narrow provincialism, hysterical fanfare or eccentric theory. His powerful influence for good will long be felt in the field in which he worked, and I feel proud indeed to have in my district, and I may say for a friend, this beloved teacher and leader, who is such a great credit and great asset to our educational system and our country.

As I know him and as others know him, he is not ready for retirement because he is still in every respect in the prime of his manly vigor. It would be my wish

that he may continue at Cushing, where he has done such outstanding work. In any event, I hope that he will by all means continue in the field of education where his wisdom, understanding, ability, and deep knowledge of the problems of our youth so commendably and admirably fit him for future service.

I extend to him and to his devoted helpmate, Mrs. Quimby, who has been loyally and magnificiently by his side in all his endeavors, my heartiest congratulations for their very many contributions to the educational, cultural, and business and civic life of my district and State and wish them both many years of continued constructive effort and happiness.

The nation that has men like Clarence Quimby among its leaders, working for the enlightment and advancement of its youth, need have no fears for the future.

[From the Worcester Gazette of December 23, 1955]

CUSHING HEAD IN ASHBURNHAM WILL RETIRE

(By Lawrence J. Nee)

ASHBURNHAM, December 23.—Clarence P. Quimby, Cushing Academy headmaster, today announced he would retire in June from the position he has held for the past 23 years. He has reached the compulsory retirement age.

He became principal of Cushing in 1933, in the depths of the depression, when only 70 boarding students were registered at the school. Cushing was able to retain its experienced faculty and to keep financially stable.

It took a door-to-door campaign to obtain enrollments with calls on alumni and friends to interest young people in the advantages of attending the School on the Hill. The current enrollment of boarding students is 200, equal to the dormitory capacity.

BUILDING PROGRAM

A long range building program is in progress. Work on a new gymnasium will begin in March or April by Columbus & Berg, Gardner contractors.

Widely known as the "Yankee Schoolmaster," Headmaster Quimby often speaks before educational and civic groups and has given nearly 300 graduation and baccalaureate addresses. He traditionally delivers the Sunday morning commencement talk to the graduating class.

In all his speaking engagements, he has supported the coeducational philosophy of Cushing.

PAST BUILDING

During the time he has headed the school, a new dormitory for 75 girls has been built, the dining hall has been increased in size to accommodate 230, a new athletic field with spacious bleachers has been constructed and the heating plant has been converted to low pressure with oil. An outdoor riding ring and an improved ski slope are among the sports facilities added at the school.

In addition to his school duties, Headmaster Quimby was town moderator of Ashburnham, an official in the Ashburnham Community Church, president of Gardner Rotary Club, president of North Worcester County Principals' Association and, for many years, a member of the October Conference in New Hampshire.

After graduating from Bates College in his native Maine, headmaster Quimby was principal of the Hampstead, N. H., Academy 2 years, principal of Cony High School in Augusta, Maine, 3 years, master at Mitchel Military School for Boys, principal of Manchester (Conn.) High School 10 years, and president 6 years of Westbrook Seminary, now Westbrook Junior College.

FUTURE PLANS

His future plans, though not definite, include public speaking and literary work.

Three of the four children of headmaster and Mrs. Quimby will be at their home for the holidays.

Their daughters, Mrs. Betty Holt, of Northampton, and Mrs. Althea Spencer, of Gonic, N. H., their son, Clarence P. Quimby, Jr., and their families will be present. A third daughter, Mrs. Barbara Watson of Willamette, Ill., will be unable to attend the reunion.

CHRISTMAS MESSAGE OF CLARENCE AND LILLIAN QUIMBY

We have just had our delightful candlelight vesper program in the school chapel—before that we had attended the annual fire-lighting ritual in the new dormitory—all symbolic of the warmth and joy of Noel. These make us think of our friends whom we care for all through the year, but especially remember at Christmas.

Since our time for retirement has arrived, these will be our last greetings from Cushing Academy and Jewett Hall. While our plans for the future are not defintie, they will surely include long continued good wishes for you. From Bates to Ashburnham via Portland, Augusta, and Manchester, our path has been a happy one—made more cheerful by the contacts with and memories of our friends.

Sitting here by the glowing fireplace around which we and our children have gathered for the past 23 years, we again send you hearty greetings of the season. May health and happiness attend you and yours in the year to come.

CLARENCE AND LILLIAN QUIMBY.

CHRISTMAS 1955.

Address by the Vice President at Salute-to-Eisenhower Dinner in Chicago

---

EXTENSION OF REMARKS

OF

HON. EVERETT M. DIRKSEN

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Thursday, January 26, 1956

Mr. DIRKSEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very superb address delivered by our distinguished Vice President at the salute-to-Eisenhower dinner in Chicago on January 20, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

May I tell you first some of the reasons why I am so honored to be speaking at this dinner.

Because Illinois has one of the Nation's outstanding Republican Governors in Bill Stratton; one of the great Republican Senators in EVERETT DIRKSEN; and 13 fine Republican Congressmen, including the whip of the House, LES ARENDS.

Because this Chicago dinner, considering the area it has to draw from, has surpassed every city in America in the number of its guests honoring President Eisenhower.

Because right here in this very hall, the magnificent crusade of the man we honor tonight was launched just 3½ years ago.

So many Americans owe so much to President Eisenhower's leadership that the time allotted to me, as you can imagine, is completely inadequate to do the subject justice. With your permission, I would like to touch tonight on only the high spots of four great general questions.

The condition the Eisenhower administration found the country in when we went to Washington just 3 years ago today.

The condition the country is in today after 3 years of Eisenhower leadership.

Some of the major complaints of the critics of the administration.

The great vista for the future if Eisenhower Republican principles continue to guide this country in the 4 years ahead.

Three years ago this is what we found: There was a war in Korea. Controls shackled the economy. The people's purchasing power was going down every day. The previous administration had proposed plans for socialization and federalization of America's farmers, medical profession, housing, schools, and power, including the atom.

Most distressing of all, we found that a great majority of the American people, Democrats and Republicans alike, had lost faith in the honesty, the integrity, and the security of those who served them in government.

After 3 years of Eisenhower leadership and Eisenhower Republican policy, this is the situation we find today.

The world is at peace for the first time in 15 years.

Controls have been taken off the economy.

The American people have had the biggest tax cut in history.

For the first time since the Republican 80th Congress, we not only have a balanced budget for this year, but the President has submitted a balanced budget for the next year as well.

As a result of these economic policies we find America enjoying its greatest prospecity in history with gross national product, personal income, consumer expenditures, individual assets, and scores of other economic indicators at alltime highs.

The plans for socializing basic American institutions have been thrown into the ash can, and the Eisenhower Republican program, offered in the state of the Union message this year, if enacted by the Congress will produce more schools, more highways, more hospitals, more child welfare services, more medical research, more health insurance, better working conditions and wage standards, more homes, than our predecessors ever dreamed of.

And, probably most important, honesty, integrity, and dignity have been restored to Government in Washington, D. C.

On the basis of this record, I am going to make some categorical claims which I do not think can be questioned.

Never has an administration kept its promises more faithfully than this administration.

Never has an administration done a better job for all the people than this administration.

Never have the American people had more reason to be grateful to the leadership of a President than they are to President Eisenhower today.

What then are the major criticisms of the administration and the answers to those criticisms?

There are, of course, those who at the present time are criticizing the Eisenhower-Dulles foreign policy.

A recent Democratic governor of this great State seems to be leading that chorus. He calls for the repudiation and resignation of Secretary of State Dulles.

There is a short answer to his suggestion. What does he offer? Nothing except a return to the Acheson foreign policy. What is the test of the success or failure of foreign policy? Whether it brings war or peace.

As far as the American people are concerned, I think they care less about what was said, or why, about policy than they do about the net results. And this they know. The Truman-Acheson policy got us into war, and the Eisenhower-Dulles policy got us out

of war. And on that issue there is no question but that there will be an overwhelming vote of confidence for a continuation of that policy for 4 more years.

But let us analyze for a moment more closely the background of the man who opposes the Eisenhower-Dulles policy. We find:

This is the man who criticized President Eisenhower when he suggested during the campaign of 1952 that he should go to Korea and who in turn offered nothing but a continuation of that desperate, endless struggle.

This is the man who quavered over our strong stand when the Chinese Communists threatened Quemoy and Matsu and suggested that perhaps we had better force our allies to give up these areas in order to avoid the risk of war.

This is the man who quibbled about our policy in Indochina without offering any constructive alternative as to what might be done.

And this is the man who sniped at President Eisenhower when he went to Geneva—where I say the President rendered magnificent service to the free world on two counts.

This was the first conference ever held with the Russians at the head of state level in which the United States surrendered neither principle nor territory.

The President, for the first time since World War II, got the United States off the defensive and on the offensive on the great issue of peace before the world.

I have just been thinking what would have happened if Mr. Stevenson had been President these last 3 years. We, of course, do not know the answer to that question, but of these principles I am sure.

Indecision, weakness, retreat, and surrender do not bring peace in dealing with dictatorial, aggressive communism.

We tried that in Korea. Secretary Acheson said that Korea was outside our defense zone and the Communists attacked 6 months later. I say the American people indicated they had enough of the Acheson policy in 1952—they don't want to return to it now.

If there is uncertainty in the minds of potential enemies as to what the United States will do if put to the test by aggressive action, we really run the risk of war.

If the kind of talk Mr. Stevenson has been indulging in has given the impression to the world that we were bluffing or that we might not carry out our intentions, it can have only one effect—increase the risk of war.

If we want peace, the world must understand that we have the capability to defend ourselves against aggression and that we have the intention and will to take appropriate action against a potential enemy if it engages in aggression.

We must recognize that there are risks in waging war, and that there are also risks that must be taken in waging peace. The only way you can avoid risks in waging either war or peace is to surrender, and surrender is not in the vocabulary of the Eisenhower administration.

On the contrary, we not only will never agree to the surrender of our own freedom, but as Americans we can never acquiesce in the denial of freedom to others. As the President recently said: "The peaceful liberation of the captive peoples has been, is, and, until success is achieved, will continue to be a major goal of United States foreign policy."

Strength, firmness, and courage is the way to peace without surrender. And the American people want 4 more years of that kind of decisive leadership.

I would suggest that if Mr. Stevenson has nothing more constructive to suggest than criticism, he join with millions of his fellow Democrats in the country and some of the outstanding Democrats in the Senate who have so loyally supported, and are supporting the Eisenhower-Dulles foreign policy—a policy which deserves support because it got us out of one war, has kept us out of others, and provides the best chance for peace without surrender in the years ahead.

A second criticism that is often made of this administration is that we are only interested in big business—that we are against the little fellow.

I suggest that just for a moment we examine the record of this administration, not in terms of what is good for businessmen but solely in terms of whether its policies have been in the best interests of the 65 million American wage earners. What does the wage earner want?

He wants a job.

He wants high wages.

He wants purchasing power.

He wants a sound security program for the future.

Today, America's wage earners have more jobs at higher wages, with greater purchasing power, sounder security, and fewer strikes than at any time in history, and they have peace to boot.

I have been rather amused by the controversy which has been raging over whether union leaders should or should not take part in political campaigns. Just to express a personal point of view, I welcome their participation. And I urge that they compare the record of this administration and its predecessor on the basis of this test.

Under which administration have union members had it the best?

If that test is applied, they will find that union members have it better today than they have ever had it at any time in their history. And I submit that if they act on the basis of what has proved to be best for their members every union leader in America will be out stumping for 4 more years of the Eisenhower administration in 1956.

What is there then to the claim that this is a business administration?

It is true to this extent. The Government of the United States is the biggest business in the world. As such, President Eisenhower believes it ought to have the best management in the world.

And no achievement of this administration has been more in the national interest than getting businessmen the caliber of Secretary Humphrey and Secretary Wilson, and scores like them, to come to Washington to provide that kind of management.

Another criticism of this administration is that farmers have not shared in the Nation's increased prosperity.

The charge is correct, but let us examine the reason for it.

What in essence is the farmer's problem? It is the fact that considering his costs farm prices are too low.

Why are farm prices low? The major reason is the tremendous farm surpluses which hang over the market. Our economists have estimated that these inherited surpluses reduced farm income by a whopping $2 billion in 1955 alone. In other words, if we had not had the surpluses farmers would have had their best year in history in 1955.

What caused the surpluses? The demands for high production in wartime. The high rigid support program of the previous administration.

We got rid of one of the causes for high surpluses by ending the Korean war and I don't think you will find one farmer in the country who would not say that war is too high a price to pay for any temporary prosperity on the farm or anywhere else.

We got rid of the other cause of surpluses by adopting the flexible price-support program.

Now, however, we still have to deal with the $6 billion in surplus we inherited. We have to see that the farmer gets some immediate help. And we have to see that we don't get into this surplus jam again.

Here are the highlights of the program which we think will do that job.

The soil-bank system to use surplus commodities to retire unneeded acres from excess production.

A surplus-disposal plan to help move surplus stocks out the front door while the soil bank reduces what comes in the back door.

An intensive drive for export markets.

Strengthened commodity programs for individual products such as corn, wheat, cotton, rice, and dairy products.

An expanded rural-development program for the low-income farm families.

Research increases to help us find new crops, new markets, and new uses for our agricultural abundance.

And a dollar limit in price-support payments to any individual or farm, so as to help the family farm without giving windfall profits to large-scale corporate agriculture.

In bringing this program to the Congress and to the country, let me tell you the philosophy behind it:

For the past 25 years we have never had real prosperity on the farm except at a time when production was stimulated as a result of war or shortages created by war.

This administration believes in building for the future on the basis of peacetime rather than wartime demands. We believe there is a way to have prosperity on the farm and everywhere else in peacetime.

As far as the farm is concerned, we believe that our new program combined with what we have already done provides the answer to the problem.

I can assure this audience that there is no problem which more concerns the President and his administration than the problem of raising farm income. We believe we have the answer to it and we are going to leave no stone unturned to see to it that our legislative proposals are approved by the Congress at the earliest possible date.

Finally, there is another group who criticize this administration on an entirely different ground. We hear people from time to time say, "The Eisenhower administration is too liberal, too New Dealish. What we thought we were voting for and working for was a real conservative administration."

May I at this point talk to you very frankly and forthrightly about the Republican Party and what I believe it stands for.

First, to be practical, we must consider the alternative. The choice is not between the Eisenhower program and something more conservative, but between the Eisenhower program and something far more radical.

The American people are not going to stand still. They want progress. And they want an administration which does not look to the past or is satisfied with the present, but one which offers new and greater hope for the future.

The Republican Party in its greatest days has always been, is now, and must continue to be the party of progress. If you don't believe this is true, read the speeches and the biographies of Abraham Lincoln, of Theodore Roosevelt, and of Herbert Hoover.

Let us consider what some of America's needs are for the next 10 years if we are to continue to have progress. Here are some estimated goals in the fields of power, roads, schools, hospitals, and slum clearance.

In the next 10 years America will need: 101 million kilowatts of power at a cost of approximately $20 billion; 3,348,000 miles of highway at a cost of $100 billion; 927,000 primary and secondary classrooms at a cost of $30 billion; 1,288,000 hospital beds at a cost of $22 billion; the replacement of 5 million housing units, and the reconditioning of 15 million more at a total cost of $24 billion; and a program which will remove discrimination in employment, opportunity, and education on the American scene so that we

will quit losing $30 billion a year, which is the economic cost of discrimination today.

Now, the question arises, How do we meet these needs? Our New Deal friends had a very simple answer to such questions. They would say, "Let the Government do it."

If there was unemployment, the Government should make jobs.

If there was a need for houses, the Government should build them.

If better medical care was needed, the Government should provide it.

Their programs all sounded good. The only trouble with them was that they wouldn't work.

But right at this point, as Republicans, let us do a little soul searching.

We have to recognize that at times in the past we have allowed the advocates of big Government to "steal the ball" from us on the issue of progress and run away with it. We opposed the means without offering an adequate alternative. The people therefore assumed that we opposed the end as well.

And I say tonight that one of the greatest services that has been rendered by President Eisenhower and his administration is in showing the American people again that you can be progressive and humanitarian without being socialistic.

He has given the Republican Party the forward look and it is our New Deal friends who now are in the position of wanting to turn back to discredited economic policies which were never able to provide prosperity except in wartime.

But some might well ask, how do our programs differ from those of our predecessors if our goals are the same?

The major difference is that we believe the way to real progress and prosperity is through programs which rely primarily on private rather than Government enterprise.

We believe the Federal Government should step in only where the job cannot be done more effectively by private enterprise or State and local government.

We know that to rely on Federal Government programs to meet the needs is wrong on several counts. But it is primarily wrong because federalized programs are not adequate to do the job.

All the resources of America must be tapped if we are to meet the needs which spell progress for the next 10 years. The Eisenhower program which is based on the principle of the Federal Government working in partnership with private enterprise and local and State governments is designed to do just that, and that is why it will succeed where the Federal program is doomed to failure.

In other words, we oppose the programs of our predecessors, not because they were too high, but because they were too low.

Our aim is a gross national product of $500 billion by 1965. If we attain that goal, the resources will be available to build the schools, roads, houses, and to meet the other great social needs of the American people—and to add approximately $1,000 a year to the income of every family of 4 in America.

What a great goal for a party and for a Nation. It is one which will catch the imagination of all of the American people. And it is one that we can attain without compromising American principles in the process.

I realize that there is one other great question on the minds of every person here. And this is, Will the President run again?

I do not have the authority or knowledge to answer that question. But of this much we can be sure. The President will make the right decision at the right time, and whatever that decision is it will be made with the best interests of America in mind. Regardless of what that decision may be, let us dedicate ourselves tonight to these propositions, without qualification.

There must be 4 more years of our Republican stewardship at Washington—years of peace, progress, and prosperity for our country and for the world as a result of what President Eisenhower has so nobly begun.

We owe it to our President to assure the completion of his program by electing the men and women who are committed to its purposes from the bottom to the very top of our Republican tickets next November.

Whatever President Eisenhower himself may decide, we must make certain that there is another term for those principles for which he stands and for those Americans who owe him the great debt of gratitude and loyalty which I have strived, however, inadequately, to express tonight.

There must be another term for the American boys who did not die in Korea, because President Eisenhower stopped the shooting war in the Far East and steered the course of peace and friendship in Asia and in Europe.

There must be another term for the millions of American wage earners who have made the greatest gains in the history of labor under President Eisenhower's fair and friendly policy.

There must be another term for the small-business man and the white-collar workers whose taxes have been lowered and whose savings have been protected against the inflation which had plagued the Nation for almost a generation.

There must be another term for our 16 million Negro citizens who have experienced the greatest gains in removing discrimination in travel, education, opportunity, and civil rights of any 3-year period in the history of America.

And there must be another term for the millions of men and women throughout the Americas and all over the free world who see in President Eisenhower the architect of peace, the statesman who turned back the fatal trend toward the unimaginable disaster of atomic warfare.

And above all there must be another term for the simple personal creed of the man in the White House as he voiced it in his message to Congress 2 years ago this very month:

"This administration believes that no American—no one group of Americans—can truly prosper unless all Americans prosper. We must not become a nation divided into factions or special groups and hostile cliques. We are one family made up of millions of Americans with the same hopes for a full and happy life."

Address by Hon. Henry Cabot Lodge, Jr., at Salute-to-Eisenhower Dinner at Pittsburgh, Pa.

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, January 26, 1956

Mr. MARTIN of Pennsylvania. Mr. President, on January 20, 1956, at Pittsburgh, Pa., our former colleague, the Honorable Henry Cabot Lodge, Jr., of Massachusetts, delivered a very able and interesting address. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

To one who has seen at first hand the influence of Pennsylvania in national Republican affairs, the chance to speak here in the great city of Pittsburgh is a memorable event.

Its meaning is enhanced by the thought that I have served in the United States Senate with two men, both of whom come from western Pennsylvania. One is Senator EDWARD MARTIN, whose patriotism, courtesy and sincerity are well known to you all. The other is Senator JIM DUFF, who is a special friend of mine—not only in the Senate, but particularly in the campaign to secure the Republican nomination for General Eisenhower in 1952. In that effort JIM DUFF's sure political instinct, his brilliance and his boldness were indispensable.

Nor can I be in Pennsylvania without extending congratulations to all Pennsylvanians on the fact that they are having as a fellow citizen a new voter in Gettysburg.

Gettysburg suggests Pennsylvania; it suggests Dwight Eisenhower; it suggests Abraham Lincoln. So for all of these reasons this is a noteworthy Republican occasion.

It is perhaps natural for me, speaking after 3 years of service in President Eisenhower's Cabinet and also as his spokesman in the United Nations, to talk tonight in terms of foreign relations. It is also proper, I think, that as the party which is in power in the executive branch (the other party having organized the Congress), we should not engage in attack or in defense, but present the record to the people and leave it up to them to judge. We can say in all truth that we present this record with honest pride and with appreciation for the important bipartisan support of the last 3 years.

Now as to foreign policy. There may be a few things within the responsibility of government, such as a flood or a raging polio epidenmic, which affect the citizen's life as closely as the issue of foreign policy. But nothing affects him more closely than does the challenge of preventing the unutterable woe of another war and, if there is one, of having arranged matters so that he will have allies to help him carry the load. In its barest sense, this is what foreign policy is about.

Foreign policy springs from the soil of national strength. What happens to us at home affects what happens to us abroad.

When, therefore, we move toward ending segregation in schools and restaurants; when we refuse to allow companies which do business with the Government to discriminate because of race or color; and when we read statements such as that of my friend Ralph Bunche, the distinguished American Negro who is Under Secretary General of the United Nations, in the CIO News, the official union paper, that: "I would now live in Washington, D. C., because of the remarkable changes in the Nation's Capital"—we are doing and seeing things which are widely noticed abroad and which have a beneficial effect on our foreign relations.

When it comes about that we have 65 million jobs in America—remembering that the statement some years back that America could provide 60 million seemed so radical at the time—we first say to ourselves that the Ike policies are not too liberal, as some ultraconservatives say they are, and that they are not too conservative either. But we must also recognize that here is something which impresses the rest of the world more than any amount of oratory and propaganda. Our 65 million jobs are a stupendous fact which many countries wish to emulate.

When we see our record of steady expansion of social services—on Lincoln's basis of where needed—to help solve the problems of old age, maternity and child welfare, health and education, we see something the importance of which is vividly understood abroad.

The great overriding fact that we have prosperity without inflation, without waste, and with an excellent chance of a balanced budget; and that we are having this prosperity without war and without war orders—is the most effective rebuttal there is to the charges which Communist propaganda makes against us.

There are some who do not share the general prosperity—and all elements in our country certainly should share it. As far as farmers are concerned, a new and effective program is underway to help solve their hard problems. I am confident that the program will do big things. The farmer is the backbone of American society. What helps the farmer helps the Nation.

The fact which stands out most clearly in any view of foreign policy is that we are at peace. We no longer have the agonizing experience of reading casualty lists from Korea—or from anywhere else—in our daily papers.

But this is not all that there is to report to you. There is a list which I would like to submit—not in a partisan spirit, because there is no partisan politics in foreign policy as far as we are concerned—a list of events in which the United States in recent years has played an important, and sometimes a vital, part. It is as follows:

American Hemisphere: The defeat of communism in Guatemala and prevention of its spread to other parts of Central America; the Caracas Conference, which established hemispheric unity against Communist subversion; and the application of the Rio Pact to the troubles in Costa Rica.

Europe: The settlement of the stubborn dispute over Trieste; the signing of the Austrian Treaty by the Soviet Union; and the membership of West Germany in the Atlantic community. We have also steadfastly refused to "outrage our own consciences" and "assure future conflict" as the President says, by condoning the bondage which Communist colonialism has fastened on the satellite nations.

Near and Middle East: The "northern tier" defense pact which has been joined by Pakistan, Iran, Iraq, and Turkey; the agreements to strengthen the defense of Pakistan and Iraq; the settlement of the Iranian oil issue; the Anglo-Egyptian agreement on the bitter Suez Canal dispute; and the maintenance of the Israel-Arab Armistice Agreements—although the situation there is still explosive and the sending of weapons by the Communists is portentous.

Far East: In addition to making peace in Korea, the nations of Vietnam, Laos, and Cambodia have been helped to evolve from colonialism to freedom; the Manila Pact has been achieved for the security of Asian and Pacific peoples; and our firm action regarding Formosa and the Pescadores has so far avoided both war and Communist expansion.

United Nations: President Eisenhower's leadership has been especially marked in the atoms-for-peace program, which has so conspicuously brightened America's imagine before the world; and his patient leadership which gave the United Nations a chance to render a uniquely distinguished service in bringing about the liberation of our 15 captive fliers from Communist China.

At the United Nations also attempts to seat the Chinese Communists have been beaten down on 27 public occasions since I have been the United States representative, and in each one of these attempts the United States has very properly taken the lead. It remains our policy that Communist China cannot shoot her way into the United Nations and that as long as she is an aggressor and as long as her behavior is in flagrant disregard of accepted international standards of conduct, that she should not be a member. When we ponder on how some of our prisoners were treated and when we see the pictures of missionaries such as Mr. and Mrs. Bradshaw, we realize how far we still are from a condition in which Communist China can validly lay claim to respectability.

At the United Nations too every single American employee has been screened in accordance with the FBI and Civil Service Commission procedures for the simple reason that when there are so many good Americans to choose from, their is absolutely no excuse for employing one single American Communist.

Added to these developments has been the vital work of the United Nations as a center for harmonizing the actions of nations.

President Eisenhower's "open sky" proposal for aerial inspection of each other's military installations will, if it is put into effect, end the prospect of a major surprise assault on our country and on other free nations. As a country which will never be the aggressor, we and the other free nations with us have the greatest stake in protection against a surprise attack. It was therefore a great day for us when the United Nations General Assembly, by a vote of 56 to 7, endorsed President Eisenhower's "open sky" plan. The only nations voting against it were the Soviet Union and its satellites. It received the support of all the so-called neutralist countries. May this mean that before long these aerial "sentinels of peace" will be giving us security from aggression and pave the way toward real disarmament.

Thanks to the efforts of President Eisenhower at Geneva, the harm which adverse propaganda had done to our country has been completely overturned and our standing throughout the world is higher than it has ever been in history. At the Foreign Ministers' meeting of last autumn the hard facts of the Soviet position were brought out in sharp focus. Unpalatable though these facts are, it is vital to know the truth. It is a real gain to ward off the danger of wishful thinking. It makes possible a sound posture of year-in and year-out national alertness—a posture which we can live with all the time and which does not ruinously build us up to D-days which could well mean war or bankruptcy or a mass of obsolescent weapons—if not all three at once.

Whatever we do now in foreign affairs we do from a position of national strength, both military and economic. A large element of strength has been the broad congressional support of foreign policy, regardless of which party had organized the Congress, and for which both the President and Congress deserve credit.

One very large question in the field of foreign policy which every American should ask himself is this: Can it be said that in the last 10 years we have learned any new truth concerning the cure for war—as doctors have in the past discovered new truths which lead them on to the cure of a deadly disease? Or are we all merely in a squirrel's cage of writing memos to each other and moving from one greater or lesser crisis to another?

I think we have learned two lessons. The first appears vividly in the United Nations, which has acquired huge influence not by using legal power, but by becoming the most potent single instrument in the world for affecting public opinion. This first new truth then is that influence which grows naturally and rapidly in accordance with events is more effective than law which is not obeyed. Influence often underlies law and, in fact, if the forces of opinion which make influence are contrary to the letter of the law, the law becomes a dead letter.

Some years ago many favored the "hitch your wagon to a star" approach, whereby governments made legal commitments in the vague hope that this would somehow improve matters, even though it was plain that such commitments would not be lived up to when the test came. It is clear today that the approach to world peace does not lie in surrendering sovereignty and in making commitments in disregard of future military, strategic, and political realities, but in working through world opinion. Thus we may ultimately move toward a world sense of justice on which alone world peace can be dependably based.

Certainly no man in modern times has shown himself more expert at leading and inspiring world opinion and making it an effective force in the world than President Eisenhower. He constantly points out that, although military and economic strength are necessary for the successful conduct of foreign policy, the spiritual is the greatest strength and that America is most influential when she lives up to the ideals which gave her birth. The ideals of the Declaration of Independence and of Abraham Lincoln may, we hope, at least help to bring the world someday to a commonsense of justice.

The second lesson which we have learned in the last 10 years about a cure for war impels us to turn again to President Eisenhower. This lesson can be summed up in the words "flexibility" and "firmness."

When the United States was first conscious of the fact that it had become a world power, some tended to be doctrinaire. We were so determined not to be so-called isolationists that we became ritualistic internationalists, and tried to conduct foreign relations in accordance with abstractions and generalizations.

All of this was a well intentioned beginning, but we now have learned that you cannot be rigid and doctrinaire in dealing with the manifold realities of world politics. Under the pressure of experience, we have learned to be flexible on details without losing sight of our basic objectives. For instance:

Last summer at Geneva, President Eisenhower was flexible both in the fact that he went to Geneva and in his attitude toward the details of the agreements that might be reached; but his seizing of the initiative by means of his "open sky" plan to prevent surprise attack and to open the gate leading to disarmament was a sign, not only of inventiveness, but of firmness and constancy as well.

Secretary Dulles, during the same summer, in his suggestion that the United States would be willing to assume a part of the costs of compensating and settling the Arab refugees, and in his parallel proposals for settling the conflict between Israel and the Arab states, was flexible and imaginative in his pursuit of our firm and fixed goal of building a sound security system in the Middle East. This is typical of his imaginative, wise and idealistic service as Secretary of State.

On Communist China, our foreign policy has required that we avoid being caught in the many traps that have been laid for us in that area. This called for flexibility, which we have shown. But this should also be noted: we not only have sacrificed nothing of substance; we have also not become involved in a Far Eastern war.

On President Eisenhower's desk in the White House is a small sign which reads: "Suaviter In Mode; Fortiter In Re"—which might be roughly translated as "flexible in method; strong in substance." This motto of the President's seems truly to have inspired the conduct of our foreign relations.

These two ways of striving for peace—through working on world opinion and through flexibility of method—must be considered in the light of the probability that the Soviet Union is sufficiently appalled by the nature of atomic war not to want another world war, however little it may object to—and, in fact, may seek to stimulate—peripheral wars. We therefore may be having a real chance to take some fundamental steps toward durable peace. We must certainly never stop trying.

To sum up:

With the country freed from red tape and political bickering, the Eisenhower leadership has created an atmosphere in which Americans appreciate each other, resulting in more work and wages than ever before. The Eisenhower leadership also opposes waste, inflation, and socialism; it favors

needed Government help to the citizen; and it fights for civil rights. In the world struggle between freedom and communism, the United States is stronger than ever—and without American casualty lists, either from Korea or elsewhere.

This kind of Reupblican leadership gives every American his greatest chance to live live the full life and to make the most of all that Providence has vouchsafed him.

I remember the old jibe that the Republican Party is a class party. What class is hurt by the record which I have just cited? What class is hurt by prosperity? What class is hurt by peace? Mr. Chairman, Dwight Eisenhower is making the Republican Party into every man's party, because every man prizes his civil rights, every man prizes his economic welfare, every man is opposed to waste and inflation, and every man wants peace.

In some countries of the Old World it is commonly said that one group can only advance at the expense of other groups. We in America know that no group is really and lastingly helped except by measures which help all groups. In some countries abroad the citizen is told on all sides that he faces two choices: either of getting a few driblets of wealth from the table of big-business monopoly or else of having the wealth divided for him by politicians. In America we have learned that the citizen is not at all restricted to these two unattractive alternatives. What we see in America is a huge increase in opportunity for all the people to earn—not driblets from the table of selfish big business; not driblets from the hands of selfish big politicians—but wealth which comes directly to the citizen from all the different places and under all the different conditions in which wealth is created in ever increasing measure. As a representative of the United States who is in daily contact with representatives of other lands, I can say that it is this direct increase in earning and production of wealth which makes us the envy of the world—and the despair of Communist theorists.

We believe in our wonderful two-party system because competition in politics makes for better politics just as competition in business makes for better business. We in particular are proud of the Republican record of service. But modern Americans do not believe that the party system should be carried to the point where it destroys national unity.

The big fight today is not between Republicans and Democrats.

In this dangerous world the big struggle is between us Americans with our allies who love freedom on the one side, and, on the other side, the Communist rulers who would destroy us. This was true when Stalin ruled in Moscow; it is true today; and prudence demands that we expect it to be true in the future.

In this struggle we need the leadership of Dwight Eisenhower. Thank God that his recovery is progressing so well. May he be completely returned to health and lead us for another 4 years.

If you will forgive a personal note in closing: I have all my life believed in Abraham Lincoln and the Republican Party, and, since 1941, when I first met Colonel Eisenhower on the Army maneuvers in Louisiana, I have believed in Dwight Eisenhower. What a godsend he has been to America. I wish also that I had the ability to describe the sadness which swept over the United Nations when news came of his illness. Men of every race, creed, and color felt a possessive sense of grief. We appreciate their good wishes. We also cherish the warmth and sincerity of the wishes expressed by the Democratic leaders and by Americans generally, regardless of party.

Yes, ladies and gentlemen, we can indeed say in conclusion that both the Republican Party and Dwight Eisenhower have come through magnificently. It is a thrill and a privilege for us all to have a hand in this great adventure under the leadership of President Eisenhower.

Housing Problems in New York—Joseph P. McMurray, New York State Housing Commissioner

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Thursday, January 26, 1956

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two articles published in today's New York Times. One of them was written by Mr. Warren Weaver, Jr., and the other by Mr. Charles Grutzner. Both articles refer to a man who is well known to the Senate of the United States. He is Joseph F. McMurray, who is the Commissioner of Housing of the State of New York. He served long and with great distinction as a staff member of the United States Senate.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

MORE HOUSING AID ASKED IN REPORT—McMURRAY INFORMS GOVERNOR MIDDLE-INCOME PROGRAM FALLS SHORT OF NEEDS

(By Warren Weaver, Jr.)

ALBANY, January 25.—The State's new $50-million middle-income housing program can provide adequate dwellings for only 4,000 of the 140,000 families in that salary group who need them, Governor Harriman was told yesterday.

Before the State money was made available on January 1 for loans to finance middle-income housing, preliminary applications had been made under the program for projects costing more than $250 million, he was informed. This information was reported to the Governor by Joseph P. McMurray, State Housing Commissioner.

He urged the administration to make more funds available for the program "if it is intended to meet in any significant measure the actual need."

In last fall's election the voters approved by a narrow margin the use of $50 million of a $200 million housing bond issue for loans to limited profit companies ready to build middle-income projects. Tax exemptions as long as 30 years are available under the program.

Studies by the State Division of Housing show that there are 1,458,000 families in the State earning between $3,750 and $5,900 a year, Mr. McMurray said. This group constitutes the middle third of the State's families classified by income.

ESTIMATES NEEDS

Of this group, the commissioner reported, about 140,000 families live now in "units that are dilapidated or lack adequate plumbing." This represents about one-fifth of the substandard housing in the State.

According to Mr. McMurray, middle-income families can afford to pay $52 to $82 a month for rent if they budget one-sixth of income, or $63 to $98 if they budget one-fifth. Very little housing is being built at these rental levels, he said.

"The magnitude of the existing need for middle-income housing is shown by the amount of money needed to provide decent housing for this group," he declared. "Considering only the 140,000 units which are dilapidated or lack proper plumbing, and which are occupied by middle-income families, an expenditure of about $1,800 million would be required."

The report stated that "no significant supply" of new rental housing was available in New York City at less than $120 a month for a 1-bedroom apartment or $150 for a 2-bedroom unit.

To afford such housing, Mr. McMurray said, a family should be earning between $7,200 and $10,800 a year depending on its budget, thus putting virtually all available New York City apartments out of reach of middle-income families.

The commissioner estimated that housing built by limited-profit companies under the new program would rent for about $36 less a month than a similar nonsubsidized unit. If a nonprofit cooperative built the apartments under the plan, the saving would be about $52 a month.

HIS GOAL IS DECENT HOMES FOR ALL—MIDDLE-INCOME GROUP IS HOUSING CHIEF'S TARGET FOR AID—McMURRAY GOT STATE POST AFTER SERVICE IN WASHINGTON

(By Charles Grutzner)

Nearly half the family income went for rent when Joseph P. McMurray, State housing commissioner, was a boy in the Bronx.

The McMurrays were paying $35 a month in a 2-family frame dwelling on Decatur Avenue when Joe's father was getting $18 a week as a clerk in Wall Street. When Mr. McMurray's salary reached $33 a week, before the Wall Street crash, the family moved into a $55 apartment.

Commissioner McMurray's report on the middle-income housing problem, made public yesterday by Governor Harriman, says that no family should pay more than one-fifth of its income as rent.

Mr. McMurray wants to make it possible for every family to live in a decent home in a good neighborhood. He has, for instance, pushed up the low-income definition so that more families with an income of $100 a week can qualify, if they have several children, for public housing. And now he is trying to interest private and quasi-public money in putting up middle-income housing at reasonable rents.

The commissioner, who will be 44 years old next March 4, has served as aide to many Washington committees and was executive director of the New York City Housing Authority for 5 months before Mr. Harriman, as Governor-elect, tapped him for the State post in December, 1954.

Pictures of Mr. McMurray's 4 sons and 2 daughters, their ages from 13 years to 4½ years, stand on his desk at the State Division of Housing office, 270 Broadway. The McMurrays—his wife is the former Isabelle C. Kenny—live at 184 Beach 145th St., Neponsit, Queens.

Working after school and during vacations, Joseph McMurray was successively a grocer's delivery boy, a newsboy for the Bronx Home News, drug clerk, and copy boy for the Wall Street News Bureau. He decided to become a professor of economics. So, on graduation from Jamaica High School, he got a job as runner for a Wall Street house. The family had by then moved to Queens Village, Queens.

The brokerage firm for which he worked went out of business the same day the elder Mr. McMurray lost his job on the street. Whereupon Mr. McMurray decided he had to get a college education. He often walked, to save the nickel bus fare, to Jamaica, where he took the elevated to Brooklyn. He earned his A. B. at Brooklyn College, took 3 years of

graduate work in economics at the New School for Social Research, and participated in the Columbia University study on State and City Sales Tax in 1933 and 1935.

Civil-service examinations took him to Washington as statistician and economist in a succession of Government agencies, including the Department of Commerce, Federal Works Agency, National Resources Planning Board, and Bureau of Labor Statistics.

He was administrative assistant in 1947–48 to the late Senator Robert F. Wagner.

As economic consultant and staff director to the Senate Banking Committee from 1948 to 1954, he made a study of housing in England, Scandinavia, Holland, Francee, and Switzerland in 1949, and later of Federal housing programs in the United States.

When he was about to leave Washington for the New York City housing post, a dozen Senators made speeches about his services to the Government. Typical were the remarks of Senator PAUL H. DOUGLAS, Democrat, of Illinois, who said:

"Joe McMurray seems to me to be a model public servant. I have always found his statements of fact to be accurate, unprejudiced and unbiased and his knowledge of the legislation under his study to be thorough and complete. He is a tireless worker; he is completely devoted to the public, and has a fine sense of humor and the gift of his race in getting along with people."

This appraisal was shared by Senators as different politically from Mr. DOUGLAS as, for example, HOMER CAPEHART, Republican, of Indiana.

The Natural Gas Bill

EXTENSION OF REMARKS

OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Thursday, January 26, 1956

Mr. MONRONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two editorials dealing with the natural-gas bill.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Tulsa Tribune of January 23, 1956]

THE NATURAL GAS BILL

Effects of the Harris-Fulbright bill being debated in the United States Senate are not limited to natural gas producers and consumers. They go much deeper in relation to our form of government.

The big question at issue is shall Congress establish an entirely new governmental policy by permitting a Federal agency, for the first time in peacetime history, to wield price-fixing power over a competitively produced commodity at its point of production.

If this policy is permitted to stand, there is nothing to prevent the Government from fixing the price, at the source, of coal, oil, lumber, iron ore, lead, or any other commodity.

The measure does not relieve producers of natural gas from Federal regulation. It does not open the way for a skyrocketing of prices. It does protect the gas consumer from unreasonable prices.

The main things involved in the matter are: The production of natural gas either is or is not a public utility function; and, the producer price of natural gas either is or is not a big part of the consumer's gas bill.

The real issue involved is not whether the producer of natural gas shall be regulated but what type of regulation will be imposed.

Contrary to widespread belief, the Harris-Fulbright bill does not remove natural gas producers from Federal regulation. It simply changes the type of regulation.

Instead of the Federal Power Commission having power and authority to regulate at the wellhead the price of all natural gas which eventually enters into interstate commerce, the Harris-Fulbright bill gives the FPC jurisdiction over the amount the interstate carrier can pay the producer for the gas and this amount must be a reasonable market price as determined by the commission under practical guides.

In other words, instead of having price-fixing powers, as at present, over 8,100 producers of natural gas, the Commission would have jurisdiction over the amount 100 interstate transporters of natural gas may pay producers.

The interstate transporter of gas and the distributor are classed as utilities and, as such, enjoy numerous advantages including marketing franchises as sole suppliers in areas they serve, which eliminated all competition from their operations.

While natural-gas producers have been placed in the category of utilities they do not enjoy the advantages of a utility status. Their business is still intensely competitive.

The Natural Gas Act specifically exempted producers and gatherers of natural gas from provisions of the act and jurisdiction of FPC. It states "provisions of this act shall not apply to the production or gathering of natural gas."

For 16 years after passage of the act, it was generally believed the act did not cover sales of natural gas by independent producers and the FPC so ruled on 11 separate occasions.

On June 7, 1954, the United States Supreme Court handed down a decision in a case against Phillips Petroleum Co. in which the court instructed FPC to regulate prices at the wellhead of all natural gas which eventually entered into interstate commerce. About 4,000 producers, mostly oilmen, who did not own or have any interest in interstate transportation facilities, automatically were brought under regulation of FPC, as far as their natural-gas prices were concerned.

Supreme Court Justice Douglas stated the history and language of the Natural Gas Act are against direct Federal jurisdiction over the sale of natural gas at its point of production.

A Presidential Advisory Committee on Energy Supplies and Resources Policy reported "we believe the Federal Government should not control the production, gathering, processing, or sale of natural gas prior to its entry into an interstate transmission line."

Opponents of the Harris-Fulbright bill claim its passage will remove natural gas producers from Federal regulation and that, as a result, natural gas prices will increase up to $800 million a year.

Such statements are entirely contrary to all facts and logic.

The Harris-Fulbright bill is not a decontrol measure. It restores competition by removing from producers the utility type regulation imposed by the Supreme Court decision and substitutes consumer protection features that authorize the FPC to prevent pipeline companies from paying producers more than a reasonable market price for their gas.

The United States Bureau of Mines reports that for 1954, producers of natural gas in the United States were paid an average rate of 10.1 cents per thousand cubic feet for all gas supplied to residential consumers.

To increase the gas bill of the residential consumer by even $750 million a year, the producer price would have to be at least 50 cents a thousand cubic feet, or about five times the price in 1954.

Can anyone really believe the FPC would approve such an increase?

Natural gas is used largely for heating purposes and, as such, is competitive with coal, fuel oil, and electricity. Any substantial increase in gas prices would result immediately in many consumers changing over to coal, oil, or electricity.

Without any regulation whatever, the competitive price situation in fuels would prevent any material increase in natural gas prices by producers.

[From the Albany Knickerbocker News of January 19, 1956]

BASIC QUESTIONS RAISED BY NATURAL GAS DEBATE

Almost by definition—though there are notable exceptions—Government agencies are in favor of Government regulation. Particularly is this true of an agency engaged in the business of regulating, as with the Public Service Commission of New York State.

In a sense, that is an entirely proper function of such an agency—to present the case for controls in any situation involving public utilities.

New York PSC has taken a vigorous, almost militant, stand against the Fulbright bill, now being debated in the United States Senate. Purpose of this bill (already passed by the House as the Harris bill) is to remove from Federal control the sale of natural gas at the wellhead.

Obviously this is not a simple, uncomplicated issue, as the House vote—209 to 203—clearly indicates. The so-called consumer States, mostly in the Northeast, are supposed to be afraid of price gouging if there is no regulation of gas prices at the producer level. They cite what they call an escalator clause in most natural gas contracts under which all producers are guaranteed the same price paid to any producer in that particular field; point out also that this applies only to raising prices, not to lowering them. This pegs all natural gas, they insist, at the price level which must be demanded by the least efficient producer.

Genesis of this dispute is a Supreme Court decision of June 1954 which brought wellhead prices of natural gas under Federal regulation. What Senator FULBRIGHT and his allies seek to do is nullify the Court's decision by legislation.

We raise the question, though, Doesn't the argument for regulation collapse against the following facts?

Prior to the Supreme Court ruling, the price of gas at the producer level had not been regulated.

The so-called escalator clause had been a common (though not universal) practice in the gasfields prior to the Court decision.

Logically, then, it would follow that prices to consumers would have gone down after the regulations were imposed.

That didn't happen. The pattern of prices to consumers underwent no significant change when the Government regulators moved in.

But something else did happen: The number of new gas wells being tapped dropped off by about 10 percent. Also, there was a clear disposition on the part of producers to avoid interstate sales and to lure big users of natural gas, manufacturing plants, for example, into their home States. And surely the memory of World War II is fresh enough in our minds to recall how controls defeat their own end by drying up supplies.

Lamar Ratliff, Mississippi Farm Youth, Wins $1,000 Check for Corn Production

EXTENSION OF REMARKS
OF
HON. JOHN STENNIS
OF MISSISSIPPI
IN THE SENATE OF THE UNITED STATES
Thursday, January 26, 1956

Mr. STENNIS. Mr. President, recently a Mississippi youth broke the world's record in the production of corn per acre, when he produced during the crop year 1945 a total of 304.38 bushels per acre.

I ask unanimous consent that there be printed in the Appendix of the RECORD an article entitled, "State Farm Youth Wins $1,000 Check," that appeared in the Jackson (Miss.) Clarion Ledger on January 19, 1956.

Lamar Ratliff, of Baldwyn, Miss., is a young man who deserves special recognition for an outstanding achievement. He has established a world corn-production record of 304.38 bushels of corn per acre. This achievement represents many, many hours of hard work, study, and planning by this 4–H Club member.

Progress in the production of agricultural commodities is as important today as in the past, despite the fact we now have surpluses. Can we expect to feed and clothe the future generations without planning and research today? As long as we have young people interested in agriculture, forestry, and conservation, we can face the future with confidence.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STATE FARM YOUTH WINS $1,000 CHECK

A 16-year-old Mississippi farm boy who, with the help of a mule named Dolly, accomplished a feat no full-grown man ever matched, collected $1,000 today.

Lamar Ratliff, of Baldwyn, Miss., set a new world's record last fall by harvesting 304 bushels of corn from 1 acre of land.

He journeyed to Chicago where Wheeler McMillen, vice president of Farm Journal, handed him a check for $1,000.

The presentation climaxed 9 years of study and striving by various farmers. And McMillen compared young Lamar's accomplishment with running a 4-minute mile or climbing Mount Everest. McMillen said:

"One day in the summer of 1946 while walking around the grounds at White Sulphur Springs in company with Joe Schrock, of Congerville, Ill., we got to talking about the potential practicability of irrigation for the corn crop in the semi-humid areas of the country."

The conversation, he said, led to an experiment by 2 farmers in Iowa, 2 in Illinois, and 1 in Indiana—which resulted in a high of 115.23 bushels an acre. But this was topped by another farmer who raised his yield to 191 bushels, then a record high. McMillen said:

"Somewhere along the line we named the idea the 300-bushel corn adventure."

Meanwhile, down in Baldwyn, Miss., Lamar won a $20 prize in 1950 when he was a 10-year-old 4–H boy. Hooking a Georgia stock plow to his mule, Dolly, he cultivated an acre patch of sandy soil in a hollow of his dad's place and produced 179 bushels of corn.

Twenty dollars was presented to him by Seth Pounds, vice president of the Peoples Bank and Trust Co., in Booneville, Miss.

And with the 1955 grand prize-winning crop, Lamar, with the same mule but more know-how, planted 32,000 plants, thinned it by hand to an actual count of 25,850 plants when the corn came up and cultivated it twice during the growing process.

The result was the dreamed of 300 bushels.

In presenting Lamar with the award check, McMillen said:

"It is quite natural that at a time when surpluses are on the public mind someone should ask what is the point of producing 300 bushels of corn per acre.

"The answer is that there are no advantages in ignorance. Every step toward opening the frontiers of knowledge is a step in the right direction."

The Mississippi youth plans to use his money to help finance his college education. His father, Paul Ratliff, was presented with a $1,000 check, too, for anything he wants to buy to improve his 170-acre farm.

Traffic Jam in the Sky

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Thursday, January 26, 1956

Mr. MONRONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very fine editorial published in the St. Louis Post Dispatch of January 16, 1956. It is entitled "Traffic Jam in the Sky."

The editorial deals with the failure of the Department of Commerce to recognize the fact that a national crisis exists, and that the only suggestion still being made is for additional studies on an existing crisis.

I deeply regret that it is impossible to publish cartoons in the CONGRESSIONAL RECORD, because the cartoon accompanying this editorial, by Mr. Fitspatrick, one of the all-time greats of cartooning, shows an airplane landing on an airport with terrific speed, while a man labeled "Commerce Department" is trying to flag it in with a flag labeled "Peanut Politics."

As a result of hearings held thus far, we have found nothing but peanut politics being played with the air safety of this Nation.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TRAFFIC JAM IN THE SKY

Danger of midair collision on the Nation's commercial airways is so great as to amount to a daily threat to lives of airliner passengers. That is the outstanding and alarming point made by a special Government advisory group of eight men who are qualified in the aviation field. The peril cited in their report to Rowland Hughes, Director of the Budget, has been stressed several times in recent years by other men and other groups equally well qualified to speak. They got little attention.

The Air Line Pilots Association, whose members fly the planes of the scheduled airlines, has emphasized the collision hazard since 1945. The International Air Transportation Association, made up of 74 domestic and foreign carriers, adopted a resolution last October calling for action in the United States and abroad to make the airways safer.

Now the office of the Director of the Budget, which in the past has red-penciled Civil Aeronautics Administration requests for funds to improve air traffic control, is told that urgent action is necessary. The report says "even more dangerous conditions can be anticipated" unless aviation facilities are brought in line with air traffic growth and aircraft development.

These "even more dangerous conditions" must have been what Lt. Gen. Joseph Smith, head of the Military Air Transport Service, had in mind last fall when he said:

"I understand that lack of progress has been due to inability of the air traffic control agency to obtain necessary funds. The cost of a midair collision of one of our B–47s and a passenger-laden Super Connie would buy a lot of high-altitude control."

The committee's suggestion that the immediate remedy lies in appointment of a figure of national renown to head a complete review of aviation problems and then draw up a master 20-year plan for integrated development of all aviation facilities is an excellent one. But there is good reason to believe that this very leadership could have come from the CAA had the CAA been an independent agency and not responsible to the Commerce Department.

Senator MONRONEY of Oklahoma, whose Senate Aviation Subcommittee is investigating the sudden ouster by Secretary Weeks of Frederick B. Lee as head of the CAA, contends that the committee report proves the dangers aloft are "the direct result of Week's pennypinching policies." Mr. Lee, in his testimony at the inquiry and on his record, builds a convincing case for his contention that his plans for improving air traffic control were stifled by his superiors.

Mr. Lee's criticism of the Commerce Department is reinforced by the testimony of J. B. Hartranft, Jr., president of the Aircraft Owners and Pilots Association, who declared the CAA had become a "ridiculous beanbag" of the Commerce Department. And it is indeed strange that the last three CAA heads have averaged only 21 months in office.

Aviation transportation has suddenly become a lusty young giant crowding into the bigtime circle of industry alongside steel, shipping, automobiles, and railroads. Yet its great piston-driven airfleets are operating under an outmoded air traffic control system that endangers lives. That control system cannot even attempt to handle the jet transportation era that will begin in 1959. This deplorable state of affairs demands an explanation as well as action from Secretary of Commerce Weeks himself.

National Gallery of Art

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, January 26, 1956

Mr. MARTIN of Pennsylvania. Mr. President, about a month ago a commemorative stamp in honor of Andrew William Mellon, former Secretary of the Treasury, and the founder of the National Gallery of Art, was issued, and a ceremony in connection therewith was held. There was much comment with regard to it, and I have in my hand a short poem which was written relative to the use of the National Gallery of Art.

I ask unanimous consent that the poem be printed in the Appendix of the RECORD.

There being no objection, the poem was ordered to be printed in the RECORD, as follows:

NATIONAL GALLERY OF ART

(By Albert W. Dowling, in the Washington Evening Star)

How often I have come to seek
Within these walls, where beauty lies,
An hour to hear an artist speak
A text from some Madonna's eyes.

Here have I come in search of truth
To store against a barren day,
Or fill my eye with endless youth
Which laughs at time, forever May.

Here have I glimpsed and been a part
Of history's exciting span,
And marveled at the world's great art
And left these halls, a wiser man.

Stop Whispering: Proclaim United States Story

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Philadelphia Inquirer, Friday, January 20, 1956, which states that the United States has a selling job to do—to sell our country and all it means to the people of the world:

America has a selling job to do. That job is to sell our country and all it means to the peoples of the world.

For many decades the United States of America was a beacon in the minds of men. Our country was held high as a friend of the oppressed, helper of the needy, champion of human liberty.

Today all that is changed. We seem to have fewer friends abroad with each succeeding year. What friends we have too often are in high places; the peoples seem to have lost touch. They appear ready to believe Communist lies that distort American ideals. Never in human history has a country done so much to assist others as ours, only to be misunderstood and maligned.

The Inquirer believes there is one basic reason for this grave state of affairs: Failure to get the real story of the real America directly to the peoples of other countries.

That failure is the more lamentable when we realize that salesmanship has long been one of our strong points. We can sell United States cars, United States films, United States music, United States goods almost anywhere. But we have slipped up badly on selling the great Nation which produced those goods—and so much more that is precious in the world today.

Because citizens of the United States have not been conditioned to regard propaganda as a major and normal function of government, our country's information agencies have been working in slow motion, with inadequate funds, insufficient personnel and indifferent public support. Even now the Voice of America is a whisper, not a shout.

Lacking, above all, has been that spirit of dedication to our cause which the Communists pour out in such measure in behalf of their campaign to enslave mankind.

Many United States Information Agency workers are doing a valiant job. But they struggle not only against their opposite numbers in Red agencies but against the work of Communists who have infiltrated schools, colleges, and other institutions, especially in Asia and the Middle East.

At a time when the cold war is being renewed by Moscow with redoubled vigor—even on our Latin-American doorstep—it is time for Americans to face facts. It is just as important for us to win this war for the minds of men as it would be to win a war waged with guns, bombs, and planes. The stakes are just as high. Yet we would not expect to win a shooting war with a piggy-bank budget. How, then, can we expect to win the cold war with that same sort of small-change financing?

We have been spending, with hardly any question, for defense and foreign aid. The new budget includes over $40 billion for those two categories. Proportionately, the job of selling the American story is almost ignored. Surely if we were to allocate for that purpose only one-half of 1 percent of that sum—or about $200 million—it would not be too much. General Motors alone spends an estimated $100 million a year to advertise and promote its products.

A drastically stepped-up expenditure to sell the American Way would, in itself, be a valuable adjunct to the defense and foreign aid programs themselves. They are all part of the same struggle: to keep the free world free, and preserve our own freedom thereby.

The Inquirer believes that getting the truth about the United States to the peoples of other lands is one of the most urgent tasks we face. That is why a broadly expanded program should become part of our bipartisan foreign policy.

That is why we hope both the Republican and Democratic Party platforms for 1956 will include a pledge to that end.

We must stop whispering. We must proclaim the truth—in words that will be heard, and understand clearly, throughout the world.

Another Iowa Chamber of Commerce Demands Economic Justice for Farmers

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1956

Mr. GROSS. Mr. Speaker, another Iowa chamber of commerce has rightly expressed concern over the injustices presently being heaped on Midwest farmers.

In an excellent resolution which fully recognizes the seriousness of the situation on Iowa farms, the board of directors of the Waverly (Iowa) Chamber of Commerce urges that immediate action be taken to bolster sagging livestock prices and that measures be adopted to assist farmers in obtaining equitable prices for all their products.

Mr. Speaker, I agree wholeheartedly with this resolution, which follows:

RESOLUTION

Whereas the board of directors of the Waverly Chamber of Commerce fully realizes the great importance of the farmers in the Waverly trade area to Waverly merchants; and

Whereas the directors note with concern the continued downward trend of farm prices which is taking place while the price of the articles the farmer has to purchase is rising; and

Whereas recent predictions by some leading economists indicate a further drop in farm income in 1956, but a continued increase in other business; and

Whereas no evidence is noted that anything concrete has been done in Washington to alleviate and correct the above discrepancies: Be it therefore

Resolved, That we, the said board of directors of the Waverly Chamber of Commerce, in meeting assembled in Waverly this 11th day of January 1956, do hereby urge the administration and Congress to immediately put into effect such temporary measures as may be necessary to assure farmers of fair hog and cattle prices during the present emergency; and be it further

Resolved, That we urge the administration and Congress to prepare, pass, and put into effect, with as much celerity as circumstances will permit, legislation that will assure farmers of equitable prices for their products in times of maladjustment without instituting any permanent controls that would limit their freedom of operations and opportunity; and be it further

Resolved, That copies of this resolution be forwarded to President Eisenhower, Secretary of Agriculture Benson, Senators Hickenlooper and Martin, to Congressman H. R. Gross, to Governor Leo Hoegh, to Bremer County Farm Bureau officials, and to Waverly newspapers.

In witness whereof the following officers of the said organization hereto attach their signatures.

HEBERT L. DORFMAN,
President.
ROBERT L. BENCK,
Vice President.
M. R. LACKOR,
Executive Director.

City of the Free

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1956

Mr. ASPINALL. Mr. Speaker, under leave to extend my remarks, I should like to include a poem written by the poet laureate of the State of Colorado, Mr. Milford E. Shields, of Durango, Colo.

The poem is entitled "City of the Free," and was written by Mr. Shields to commemorate the 165th anniversary of the laying out of the city of Washington. It was on January 24, 1791, that George Washington set surveyors to work on the site of our Capital City.

The poem follows:

CITY OF THE FREE—WASHINGTON, D. C.

(By Milford E. Shields)

There is a city filled with light,
The city of the free;
She is a beacon shining bright—
Our Washington, D. C.

She is the glory of our land,
And beauty to behold,
The city built by heart and hand,
More precious than pure gold.

There is a city filled with hope
That is man's fondest dream;
The stars alone contain the scope
Of her transcendent gleam.

We will preserve our city fair,
Her splendor shall not die,
For all America glows there,
By grace of God on high.

There is a city filled with light,
The city of the free,
Most precious jewel in God's sight—
Our Washington, D. C.

Growing Threat of Foreign Import

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Boston Sunday Herald annual textile review, January 22, 1956, by Mr. William F. Sullivan, president of Northern Textile Association.

This article well analyzes the complex problems of the textile industry, and the need of our Government to establish import quotas on textiles and apparel adequate to maintain the jobs of American textile workers and safeguard the billions invested in these industries:

FOREIGN IMPORT RATE THREATENS TEXTILE INDUSTRY

(By William F. Sullivan, president, Northern Textile Association)

Last year New England textile manufacturers continued to move on many fronts in their efforts to maintain competitive operations in this area.

During most of the year, the industry was in the depression which began in 1954 but which has alleviated somewhat during the last half of 1955.

Although liquidations of some New England mills continued to occur during 1955, the remainder of the mills continued to actively promote a program to bring about equality of operating costs between Northern and Southern mills and to protect themselves against the imports of low wage foreign textiles. Action was undertaken to keep the costs of raw material from getting out of line with competitors and to prevent future losses from floods and other disasters.

The mills continue to work on regional problems with a realistic awareness of their importance. The test for everything undertaken by the mills and their association has been—"Will it improve the chances for successful operations in New England?"

The New England mills ever conscious of their vulnerability have looked on the growing threat of foreign exports principally from Japan as a primary problem, not only in 1955, but also in 1956. Last June, the United States reduced duties on most cotton textile items an average of 25 percent, and in some cases, as high as 50 percent. This was done principally for the advantage of Japan. Actually, the duties before the reduction were so low that Japanese goods made by labor earning about an average of less than 15 cents an hour had no difficulty in entering this country, duty paid, at prices less than the cost of American goods.

Foreign manufacturers are also able to purchase foreign grown cotton at prices below that which the American manufacturer must pay for American cotton.

With this two-edge differential in labor costs and raw materials, plus the greatly reduced duties, Japanese goods have been flowing into the United States at an ever-increasing rate. Imports of cotton cloth in 1955 will amount to about 130 million square yards as compared with imports of 64 million in 1953.

There has been an increasing tendency for these imports to be concentrated in certain lines and particularly the finer goods made by the New England mills. Japanese imports of velveteens have jumped from 134,000 yards in all of 1954 to over 5 million yards in the first 9 months of 1955.

Similarly, ginghams, which are made in New England, the Japanese have increased their imports to such a degree that they now import about one-third of the American production. Equally important, the Japanese have also begun to concentrate on apparel. Their imports of cotton shirts have tripled since 1954 and cotton wearing apparel imports have increased tenfold.

This problem is so serious that all branches of the industry are earnestly endeavoring to work out a solution which will prove practical, prevent serious unemployment, and at the same time not jeopardize United States relations with Japan.

Secretary of State Dulles has stated that he has personally advised representatives of the Japanese Government that they should exercise restraint in their exports and not attempt to capture so much of the American market that an American industry will be injured.

The Japanese have announced some voluntary controls on their exports of cotton goods to the United States, but because of the ease with which Japanese goods can be transshipped from third countries and the uncertainty of one-sided controls by the Japanese, New England and other American textile manufacturers are urging the establishment of quotas on foreign imports on a basis which would be equitable and enforceable. The United States textile manufacturers have suggested a liberal annual quota of 150 percent of the average imports for 1953–54.

The next 6 months will be crucial for the industry in its efforts to prevent curtailment and unemployment caused by the importation of foreign goods. Congress will be asked to help in working out a solution. The New England governors have already transmitted to the President and the New England congressional delegation a resolution urging our Government "to establish as promptly as possible import quotas on textiles and apparel adequate to maintain the jobs of American textile workers and safeguard the billions invested in these industries." Sixteen southern governors have taken similar action.

MINIMUM WAGES

Last year was marked by success in the New England textile manufacturers' efforts to raise the minimum wage in the industry.

The $1-per-hour minimum under the Walsh-Healey Public Contracts Act established for the textile industry in early 1953 by the Secretary of Labor had been enjoined in the courts by a group of southern mills. On December 1, 1955 the Court of Appeals for the District of Columbia ruled against the southern mills and in favor of the position adopted by the Secretary of Labor and the northern mills.

Congress also raised the minimum wage to $1 effective next March 1. All New England mills pay over $1 an hour. Southern mills which pay less than that amount will have to raise their wages next March. This should reduce somewhat the wage differential between northern and southern mills, although it alone will not eliminate the differential in labor cost. The minimum-wage increase was actively supported by the New England congressional delegation and the New England governors.

FREIGHT RATES

The New England cotton mills were faced with the problem of an increase in the differential in freight rates on raw cotton shipped to New England and immediately took action with the New England and southwestern railroads to eliminate the increased differential and maintain the historical relationship in rates.

A delegation of New England manufacturers went to St. Louis where the southwestern lines agreed to maintain the old rate relationship on cotton to New England.

A petition is presently pending with the Southern Railroad to grant to New England mills the same reduction already granted to southern mills. The support of the New England railroads has either been promised or is expected for these proposals.

AREA COOPERATION

The textile industry in the area takes the point of view that in addition to individual mill activities in research, modernization, manufacturing, and selling the industry as such must continue to present to the public and those who represent the area in State and Federal Governments the facts about the industry and the policies and actions which are essential to its welfare.

Awareness of common problems and a willingness to make the effort to find solutions adds immeasurably to the industry's chances of success in the future.

The New England governors and the New England congressional delegation have been generous with their time and efforts in working on many complex problems.

The New England Senators meet regularly to consider regional problems. A special committee of the New England Representatives in Congress under the chairmanship of THOMAS LANE, of Lawrence, has been established to meet and work with the New England governors' textile committee, headed by Dr. Seymour E. Harris, of Harvard.

Russian Unrest Key Weapon, Krajcovic Says

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newsstory which appeared in the Los Angeles Examiner, Monday, January 23, 1956, which relates the statements of Dr. V. Stefan Krajcovic, one-time underground agent in Europe and now chairman of the National Committee for Liberation of Slovakia. Dr. Krajcovic said that the most powerful weapon America could use in its world contest with communism "is the effective beaming of hope for liberation to the suppressed nationalities groups within Russia":

LOS ANGELES VISITOR URGES FREE WORLD STIR REVOLT IN SOVIET UNION

Effective beaming of hope for liberation to the suppressed nationalists groups within Russia itself would be the most powerful weapon America could forge in its world contest with communism.

That opinion was expressed here yesterday by Dr. V. Stefan Krajcovic, one-time underground agent in Europe and now chairman of the National Committee for Liberation of Slovakia.

"If we create enough disorder inside Russia itself, they would be so busy with this penetration or infiltration that they would not have time to stir up hostilities in the free world as they are now doing in the Near East," he said at the Biltmore.

STATUS

"In the Soviet Union, half the people are not Russians but are Ukrainians, Georgians, Armenians, Cossacks, Mongol, Baltic, and other homogeneous peoples living in semicolonial status.

"And that," he commented, "is the greatest weakness of the Soviet Union.

"For the United States to properly develop it, using the American principle of the right of self-determination for all enslaved people, would, I feel, be potentially more devastatingly to Russia than the atomic or hydrogen bomb."

But so far, Dr. Krajcovic said, United States policy has seemed reluctant to use this weapon, presumably because it still adheres to noninterference with the prewar status quo, including "the colonial system on which the whole devilish Communist system is based."

UNREST

Simultaneously, with the campaign directed toward the Russian nationalist groups, the visitor stated, the free world should step up its efforts to foster increasing unrest in the satellite nations.

Both of these campaigns, he declared, should be assigned exclusively to "private means," he remarked, "as it is only by such means that we can defeat communism.

"Perhaps," he suggested, "to meet their so-called Communist Internationale, we should set up a Democratic Internationale."

Krajcovic, whose headquarters are in Washington, D. C., said reports which reached him there, showed the Geneva Conference "harmed the underground very much."

"It seemed to seal the status quo of the satellites," he explained. "But now that American has found out the falseness of the Russian attitude the movement is resurgent."

Should We Block or Help Japanese Textile Trade?

EXTENSION OF REMARKS

OF

HON. SIDNEY R. YATES

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1956

Mr. YATES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article which appeared in the Washington Sunday Star, January 22, 1956, entitled "Should We Block or Help Japanese Textile Trade?"

The article follows:

SHOULD WE BLOCK OR HELP JAPANESE TEXTILE TRADE?

(By Herbert Bratter)

Deploring the interference of domestic policies with foreign policy, former Ambassador George F. Kennan finds that "selfishness and shortsightedness ride supreme" between wars. A case in point is the current clamor by textile and other interests to limit imports of cheap Japanese goods, such as cotton fabrics and blouses, which have been arriving in mounting quantities.

Before World War II we brought economic pressure on Japan by quotas and gentlemen's agreements limiting their shipments here. Later these were supplemented by limitation of our exports of strategic commodities to Japan. When Japan turned toward the Asiatic mainland we sought to checkmate her there as well. The Japanese answered at Pearl Harbor. Have we really learned anything from that experience?

United States textile spokesmen view with alarm the growth of imports from Japan from 1.5 million yards of cloth in 1952 to an estimated 75.9 million yards in 1955. Not only piece goods were imported, but sheets, pillowslips, blouses and other items, the products of low wage rates and elasticity of operating hours. Against the imports, says the American Cotton Manufacturers Institute, our weakened tariffs are of little avail. Although Japan has voluntarily undertaken to limit future exports and to avoid price cutting, our industry insists that the Government impose strict quotas.

TWO-PERCENT IMPACT

A recent survey of 20 American industries indicates that the most prosperous of all has been textiles and apparel. Since Japanese goods, even at the present rate of imports, equals only about 2 percent of total United States textile output, the manufacturers demanding import quotas obviously are more concerned with the future than the present Japanese competition.

Two questions are posed by the clamor for quotas. First, is the injury caused by imports of Japanese textiles and apparel such that a sympathetic nation should give that industry greater protection? Second, if we rigidly restrict Japanese earnings in this market will the economic consequences on Japan in turn have political consequences that may be even more costly to this Nation?

The "cheap Japanese labor" argument so often heard can be taken with a grain of salt. Back in 1937, when similar fears of Japanese trade competition swept the United States textile industry, Dr. Claudius Murchison, now economic adviser of the American Cotton Manufacturers' Institute, negotiated in Japan a far-reaching gentlemen's agreement that limited Japanese textile exports. Then, to correct some false notions, he pointed out that "it is not generally true that the Japanese industry operates at excessively long hours and without recognition of customary days of rest. * * * We derived no impression that they (the workers) were subjects of exploitation. * * * In our competition with the Japanese textile industry we are not competing with labor exploitation or with lower living standards. * * * I have undergone an intensive educational process."

That was in 1937. Since then Japanese labor unions have learned a lot from us. The workers' standards have improved. In 1954 per capita real income in Japan was 6.2 percent above prewar. We fear Japan's cheap labor, but the country with the cheapest labor in the world per unit of output is the United States, which helps explain why so many countries raise tariff barriers against our goods.

THIRD BEST CUSTOMER

Japanese workers' productivity in textiles, according to Japanese data, is less than half that here; in farming, a third to a half; in steel and electric power, a fourth; and in coal mining only a tenth.

In considering imposition of quotas on Japanese textiles—a step which, incidentally, would certainly stimulate demands for quotas on various other import items—the Nation looks at more than just the profits of a single industry. Since VJ-Day we have spent an estimated $2 billion on aid for Japan. The Japanese are among the proudest people of the world. They prefer to earn their own living by trading. If they sell much goods here, they buy still more.

They are our third best customer, buying here three times as much as they sell us.

Yet, despite the country's dire economic need, Japan, cowed by American cotton mill pressure on the Congress, in December voluntarily decided to limit cotton fabric exports to the United States to 150 million square yards in 1956. Blouse exports will be held to 2.5 million dozen and other restrictions and safeguards will be maintained.

The American drive for import quotas is up against the determined opposition of the Administration, as detailed in Secretary of State John Foster Dulles' letter to Senator MARGARET CHASE SMITH, published in December. The Secretary based his opposition on economic grounds. He might also have cited history.

Since great wars have multiple causes it may be too much to attribute Pearl Harbor solely to economic factors. But it is certainly true that the economic and other pressures put on Japan, not alone by the United States but by western countries generally, contributed importantly to the tightening of the noose around Japan's neck and therefore to the ascendency of the military in formulating Japan's foreign policy.

Japan is one of the most crowded countries in the world, a mountainous land of limited arable soil and industrial raw material resources. For the surplus population, emigration (excepting to the nearby Chinese mainland) offered no solution in view of the immigration barriers of other countries. Exports of low-priced textiles and other manufactures, as noted above, were limited not only as to the United States, but also many other countries including the trade-important British commonwealth and colonies. Japanese goods were no more welcomed by competing interests in Britain, Australia, New Zealand, Canada or Africa than by those here.

TURN TO MANCHURIA

The Japanese sought the economic resources of Manchuria and the markets of China, then a politically disordered land of war lords and civil conflicts. But, as we well know, that proved to be a big mistake on Japan's part, for it aroused not only the United States textile and light-bulb industries, but all those whose purpose it was to bring American might to China's defense.

For generations we had taken China's side, despite anti-American boycotts and anti-foreignism in China. After the Boxers slaughtered foreigners in Peking and elsewhere, we devoted the Boxer indemnity to friendly education. Because of the large missionary and business population of Americans resident in and propagandizing for China, we maintained there for generations the largest consular and diplomatic establishment anywhere; marines and infantry, and a large naval establishment in the Far East, including gunboats on the Yangtze River.

We had, we were told, to protect the great China trade, although in the year of the "China Incident," 1937, the gross value of our exports to China was only 0.16 of 1 percent of our output of movable goods. Our really important trade with Japan required only routine diplomatic facilities. Our intervention against the Japanese in China failed, however, to shut the Japanese up in their islands. War ensued, although it did not produce the results sought by prewar Chinese leaders and their American friends.

Another Pearl Harbor blow by Japan is not likely soon. But United States economic pressure against Japanese goods is sure to push Japan toward relations with Communist countries on the Asian mainland. That would strengthen the Soviet area economically and militarily.

Natural Gas

EXTENSION OF REMARKS
OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1956

Mr. ALGER. Mr. Speaker, my interest in the legislative efforts to correct the Supreme Court's decision in the Phillips case is more than a desire to correct an injustice to one of the large industries of my State. It is a determination to overcome a new and dangerous philosophy announced in the Supreme Court's decision.

Why should natural gas, the product of an intensely competitive and high risk industry, be singled out as the only commodity so produced to be brought under direct Federal price-fixing while in the hands of the producer?

If a bureau in Washington can fix the price of gas, on an arbitrary basis, can it not just as easily fix the price of other products?

If natural gas is singled out for direct Federal price-fixing today, might it not be oil or cattle or cotton or dairy products—or all of them—tomorrow?

If there is any doubt that natural gas is a commodity produced by a highly competitive industry—far removed from the utility status—let us takt a look at some of the facts about the demand-supply-price picture. They will show not only that the industry is competitive, but also that the consumer of natural gas inevitably receives his greatest protection from competitive activity.

First, there is a great and growing demand, natural gas customers have tripled and natural gas delivered to residential consumers has quintupled since 1938.

Consumption of natural gas has just about tripled since World War II. Today more than 27 million gas customers are residential users, including those using mixed, manufactured and LPG as well as natural gas. The American Gas Association estimates that an additional 1.2 million users will be added in 1956 if supplies are available. Countless other potential customers are anxious to see their communities served by natural gas.

Obviously, the efficiency and clealiness of this fuel contributed to its popularity. Obviously, also, its reasonable prices have been considered among its advantages to the constantly growing gas consuming public.

Competition between producers of gas—as well as between them and other fuels—has been evidenced by the refusal of prices of natural gas to react to inflationary conditions as sharply as have the prices of other fuels. Natural gas is one of the few items in the family budget for which price has remained comparatively stable.

Based on 1935 to 1939 averages compiled by the Bureau of Labor Statistics, natural gas used by residential consumers for range and automatic water heater use in 1954 had an index of 93.6 or well under average prices for the 1935 to 1939 period. Contrast this with 222.6 for anthracite coal, 212.9 for bituminous coal, and 207.7 for No. 2 fuel oil. Contrast this also with the 192 overall cost-of-living index for 1954.

If the tremendous demand is not matched by a similar rise in supply, the price of natural gas naturally will tend to rise. But this increase will be even larger if the producers' prices are regulated on a cost-plus utility basis. Supply is the great consideration, and price-fixing regulations will have a tendency to reduce, rather than increase, the search for new supplies. They also will tend to divert more of the supply from the interstate market into the intrastate, which even now represents half of the total marketed production. Intrastate sales were not made subject to Federal control by the Phillips decision.

With the tremendous expansion of the market made possible by the many large interstate lines built since World War II, the ratio of supply to net production has diminished rapidly. Even so, the industry has proved up new gas supply at the rate of almost 2 trillion cubic feet for each trillion produced since 1954. During that year, new supply barely exceeded actual production.

Which represents the greater need—to fix prices with a hope of keeping costs to consumers down, as long as the present supply lasts; or to rely on time-tested free competition to encourage wider search for greater reserves to supply the present consuming public and the millions who hope to join today's fortunate consumers?

Developments of recent years clearly show that all reserves possible are essential to meet future needs. Roughly speaking, we have about 22 years of supply at the current rate of withdrawal, but that rate of withdrawal may continue to grow.

Certainly an adequate price is essential to prevent waste of casing-head gas, which is produced with oil. Prices for natural gas must be at least enough to pay for the expense of conservation measures. Adequate price also is essential to promote production from wells whose primary product is gas. Leading geologists are convinced that we have not reached the limit in our discoveries of oil and gas. However, the incentive provided will determine to what extent we are able to make additional discoveries.

Because of joint costs and the infinite number of variables, it is impossible to determine a regulated price based on a cost formula, such as would be necessary if gas producing is considered a utility. Gas must be allowed to seek its true price level through free competition with competitive fuels, or it will be found necessary to regulate the prices of these fuels, also, and thus establish a Federal bureau control over all of our energy resources.

If reserves are to keep pace with demand, every producer—not just a few big companies—must have price incentive to search for and produce more gas. The minor or independent producer is the typical wildcatter. He finds the big majority of new fields, and we cannot meet our needs without him. He needs incentive.

There are thousands of these independents in action today. The number is not less than 13,000 and may be as many as 15,000 or even more. The picture some would paint of a monopoly industry controlled by a few large companies is far from true. Of all the extractive industries, bituminous coal is the only one in which leading companies produce as small a portion of the total as in the natural-gas industry. Compared with manufacturers of all kinds, natural gas is less concentrated in the hands of a few companies than 382 out of the total of 452 studied.

The picture for gas production is: First 4 companies, 17 percent; first 8, 28; first 20, 46; first 50, 66; and first 100, 78. There also is a gradual gradation from one size to the next in order, a condition ideal for competitive behavior. Seekers of monopoly can look elsewhere.

The ease of entry into production of natural gas is a sure sign of the absence of monopoly. Natural-gas companies even seek additional competitors, frequently looking for partners because of limitation of funds when they spend so much on exploration, title clearance, and leasing.

Competition definitely is present when the producer or gatherer meets the interstate pipeline or transmission company at the bargaining table. The pipeline companies are not so numerous as the producers, but between them they have an interconnecting network of lines covering the large producing areas of the Southwest. With one exception, the various large lines all are connected either directly or indirectly with most of the producing areas of the Southwest. Thus they have widely scattered supply sources to which they can turn if one source prices itself out of the market. Neither the seller nor the buyer has the other "over a barrel."

These active competitive conditions which prevail are pointed up by the price behavior of natural gas. Prices have shown great flexibility and continually have lagged behind the rising cost of living.

Indicating their responsiveness to competitive conditions, prices paid under contracts executed in 1954 ranged from 4 to 14 cents in Kansas and from 4 to 16 cents in Louisiana and Texas.

The increased rates paid by consumers today are not due primarily to higher field prices, but to generally higher prices of everything that enters into the distribution, transmission, and production of gas. These include sharp rises in the cost of steel, labor, taxes, and many other expenses. Only about a tenth of the total cost to the residential consumer is represented by the price received by the producer for natural gas at the wellhead.

Under free competition, the natural gas producing industry has met every test of service to the consumer. What sound reason is there for fixing on a cost-plus utility basis the wellhead price that a producer may get for his gas?

Regulating only the larger producers is no answer to the problem. Who is the larger producer? What if royalty owners, owners of divided interests, small producers feeding into a single gatherer

or natural gasoline plant, and others demand payment in kind and insist on separate sales?

Price fixing is not in the long-range interest of the consumer. Putting gas production on a utility status would bring staggering problems and costs, with no benefits and very probably some definite losses.

Consider the staff necessary and the expenses involved if the Federal Power Commission must review 30,000 separate sales transactions, with thousands more each year. Consider the insurmountable difficulties in trying to determine prices on a cost basis. What about loss of incentive to producers? Futility compounded.

No five men can solve all the problems that have been solved by millions of individual decisions from day to day. The vast machinery for direct regulation of prices for thousands of producers would be only one of many costs, both tangible and intangible. The consumer will pay the price, both in taxes and in increased charges for the gas itself.

Direct regulation in the form of price-fixing is not the answer. The consumer's greatest protection is competitive activity. His true interest lies with a continuing supply. He deserves the benefits of competition.

The Fulbright-Harris bill will reinstate this free and fair competition in natural gas production, which has worked so well through the years for everyone concerned, including consumers. In addition to this best of all regulators, competion, the bill provides extra assurance for consumers through indirect controls which will see that wellhead prices are reasonable, even under the most unusual circumstances.

It will be good for producers. It will be good for consumers. It will be good for our country.

Thirty-eighth Anniversary of Ukrainian Independence Day

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1956

Mr. DODD. Mr. Speaker, the black shadow of imperialistic communism has enveloped many peoples, but none, perhaps, have been so forgotten in this hideous picture of selfish and diabolic aggression than the people of the Ukraine. Here, chained by the blood shackles of Soviet aggression, are more than 40 million men, women, and children, the vast majority of whom, even today, pray for release and freedom and independence. History records that 38 years ago the Ukrainians declared their independence only to be struck down into abject slavery by the Red fist of communism, which they abhored and fought and tried in vain to reject forever.

The flag of the Ukraine is of blue and gold. I venture to describe it as blue for hope in their eventual release and gold to signify the precious spirit of honest democracy that still burns within the hearts of the true patriots of that forgotten nation.

But as long as justice lives within our world, the Ukraine shall not and must not be forgotten. Many of our American citizens of Ukrainian derivation will not allow the story of the heroic struggle of these people to be buried beneath the massive lie that emanates from the dark confines of Moscow's Kremlin.

I join with our citizens of Ukrainian descent in helping to remind America and all the free world that the Ukraine is a captive country. I join with millions of other lovers of liberty and honor and self-determination in the hope that we shall all live to see the day when the Ukraine takes her rightful place among the nations of the free world.

George S. Holmes

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1956

Mr. ASPINALL. Mr. Speaker, I read a poem to the House written by my friend, the late George Sanford Holmes. Many of the Members knew Mr. Holmes and for them and for those who may have appreciated his poem, I should like to include his obituary as it appeared in the Daily Sentinel, of Grand Junction, Colo., and also an editorial from the same paper commenting upon his career. This material will give more of an insight into his life, but it cannot show the dedication he had to his calling, or the example it forms of the value of a free press.

To Mr. Holmes news was an entity of its own. The establishment and dissemination of news, to his mind, proceeded solely upon the facts. If opinion was to be deduced, it was to be deduced from the facts established. Nothing gave him more cause for anguish than sloppy reporting or careless editorializing. His work followed the great tenets of clarity, conciseness, and correctness. I regret that my ability with words is so far short of his own that I cannot do justice to him. I can say no more than that he was a great journalist in the best sense of that term.

The article and editorial follow:

CORRESPONDENT FOR SENTINEL GEORGE S. HOLMES DIES—VETERAN STATE NEWSMAN

George Sanford Holmes, the Sentinel's Washington correspondent, died Sunday at his Yorktown Village, Md., home of a heart ailment.

Mr. Holmes had been ill for several months, but had apparently been on the road to recovery. He was 71.

His death ends a distinguished journalistic career which stretched over a half century.

Mr. Holmes was graduated from Brown University, Providence, R. I., in 1904. He was a member of Phi Beta Kappa and Alpha Tau Omega. He began newspaper work as a reporter on the Providence Tribune and later became city editor.

In 1908 he joined the Rocky Mountain News in Denver and was reporter, political writer, city editor, and, from 1925 to 1928, managing editor. He left Denver in 1928 to become associated with the Scripps-Howard Newspaper Alliance staff in Washington, D. C.

During his 10 years with Scripps-Howard Mr. Holmes specialized in covering issues and personalities of particular interest to the Rocky Mountain area—experience which made him particularly valuable to the Sentinel in recent years.

Mr. Holmes became director of information for the National Youth Administration in 1938. Two years later he became Chief of the Bureau of Public Relations for the construction Division of the Quartermaster Corps of the United States Army. He continued in posts under Gen. Brehon Somervell throughout World War II.

After the war he became Chief of Public Relations for the Real Property Disposal Division of the War Assets Administration, and in 1949 transferred to the Defense Electric Power Administration, Department of the Interior.

He left Government service in 1953 to become affiliated with The Sentinel full time. He had supplied special articles from Washington to The Sentinel for 20 years or more.

He was a member of the Senate Press Gallery and a specialist in covering events pertaining to the development of resources of the West. Mr. Holmes covered in detail, with expert knowledge, the legislation on water matters of particular importance to this area. He had followed the Colorado River storage project from its inception and was acquainted with both the open and behind-the-scenes moves which affected it. Mr. Holmes was widely acquainted with the Members of the United States Senate and House, and was highly regarded by them.

In 1949, Mr. Holmes published a book of poems about Washington called "Yes, This Is Washington." The volume was a piquant view of life in Washington, ranging from satire to heart-felt sonnets. It was widely hailed by critics all over the country.

He also published The Story of Walter Scott Lenox, the Blind Potter, and wrote a daily column, Off the Record, for Scripps-Howard.

Mr. Holmes was a member of Palestine Lodge No. 151, A. F. & A. M., Denver; Mile High Club, Denver; Cosmos Club, Washington, D. C.; National Press Club, Washington; Brown University Alumni Assn.; and Colorado State Society. He was a past president of the Denver Kiwanis Club, and a life member of Kiwanis.

Surviving are his widow, Mrs. Hortense Belcher Holmes, and a daughter, Mrs. Herman Russell of Baltimore.

Funeral services are scheduled for Wednesday.

WE LOSE A FINE REPORTER AND FRIEND

Grand Junction and all the intermountain region have lost a good friend in the death of George Sanford Holmes who has been The Sentinel's Washington correspondent for a number of years. Mr. Holmes was at one time managing editor of the Rocky Mountain News. In 1928 he joined the Washington staff of the Scripps-Howard organization. From that vantage point he was able to gain general and inside information about and interpret Washington movements that were related to the Rocky Mountain region.

While his newspapering was interrupted by several years' service in a Government information post, George Sanford Holmes' interest in and concern for this region never lagged. So not surprisingly at the end of his Government service he again became Washington correspondent for a selected few newspapers, among them The Sentinel. And our readers developed a high regard for his in-

formative reports on what was going on in Washington that was of especial import to the western slope and all Colorado.

But expert newsman that he was, George Holmes also found time to write of many other things; of things that were not of the type to make headlines. He had published many poems of sentiment and satire.

He also authored several books and many articles on topics of interest to Americans seeking behind-the-lines information. We shall miss his ever-dependable reports from the Nation's Capital as we shall miss George Sanford Holmes as a friend and fellow newspaperman.

Maryland and the Middle of the Road

EXTENSION OF REMARKS
OF
HON. EDWARD T. MILLER
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 25, 1956

Mr. MILLER of Maryland. Mr. Speaker, yesterday Gov. Theodore R. McKeldin spoke at a luncheon meeting of the officers of the Maryland State Society of Washington, D. C., and gave us an interesting report on the state of our beloved Free State.

Under leave granted, I herewith insert his address:

ADDRESS OF THEODORE R. MCKELDIN, GOVERNOR OF MARYLAND

Whenever the 48 States of the Union are listed in order of population, of wealth, of per capita income, of industrial production, or of almost anything else except area, you will find Maryland somewhere between 21st and 27th place. That is to say, it is always in the middle, give or take 2 or 3 places. In area it drops to 41st place, but in nothing else.

In 1888 Maryland voted for Cleveland, the Democrat, but he lost. In 1948 Maryland voted for Dewey, the Republican, and he lost. But in the intervening 60 years Maryland had voted for the winner in every presidential election, and in 1952 she resumed the habit. This is at least a strong suggestion that Maryland thinking is pretty close to what the average American thinks.

If that is true, it is well worthwhile to consider for a few minutes what Maryland thinks of one of the most controversial phrases now current in American politics. I do not assert that what Maryland thinks is always right, but I do claim that it furnishes a fairly accurate guide to what most Americans are thinking on the same subject, and that is worth knowing.

The phrase I have in mind is middle-of-the-road man. When President Eisenhower so described himself, his overwhelming personal popularity was just rising to its crest. It goes without saying that if the most popular figure in the country was a middle-of-the-road man, every ambitious politician in the country was going to describe himself in the same words. But our ambitious politicians include men of the most widely diverse types, and the result is that we hear the term "middle-of-the-road man" applied to themselves by people so utterly different that if one is telling the truth the other can't be. We need a standard of measurement by which we can judge when a man's claim to the title has some color of truth, and when it is preposterous.

It seems to me that a standard accepted by a middle-of-the-road State may reasonably be assumed to be a correct measurement of of a middle-of-the-road man. Since Maryland, except in area, is conspicuously a middle State, I am going to discuss what we accept as a middle-of-the-road man in the region between Oakland and Ocean City.

To begin with, I shall admit that Maryland, like other States, has its quota of bitter partisans, who can see nothing in any opponent except a Fascist or a Communist. But I do think that in Maryland they constitute a minority so small and so unimportant that they may be dismissed in any serious discussion of the spirit of the State. So, having acknowledged that they do exist, I shall say no more about them.

I think I may say without hesitation that in Maryland we regard a middle-of-the-road man as one who marches there, not one who sits down in the middle of the road and refuses to budge, either forward or backward The very essence of history is movement, which means change; it is a law of life over which we have no control and to deny it is folly. The man who refuses to conform to the necessity of change is not a middle-of-the-road man or any other kind of man. He is not a man at all, he is a mummy.

I think I may make another claim that you, who know Maryland, will grant without hesitation. We regard the middle-of-the-road man as one who is not only moving, but moving in the direction taken by the mass of mankind. The man who is bent on going back to George Washington may be in the very center of the highway, but he is engaged in a hopeless endeavor and neither his wishes nor his ideas count for very much. He, too, may be dismissed from further consideration.

But what is the direction that the mass of mankind is taking? Right there is where our troubles begin. That is the point that gives rise to parties and factions and disputes in Maryland. We make no claim to be a population of soothsayers, and we have no more certain knowledge of the future than any of our neighbors. But I believe that the bulk of our people are optimistic enough to think that the general course of our history has been forward, toward more even-handed justion, or a century, the advance is perceptible. toward a finer civilization.

It cannot be denied that our progress has been slow and wavering. We have not marched forward in a straight line, but in zig-zag fashion, or rather, in a series of looping curves that sometimes seemed to be going backward. Which way we are going today, or tomorrow, or this week is uncertain; but when you take for your yardstick a generation, or a century, the advance is perceptible. So, at least, we believe.

Take, for example, the attitude of the State toward the most perplexing of current problems, that of racial desegregation. Recent decisions of the Supreme Court have disrupted a social pattern that had existed in Maryland for a long time. Any such disruption gives rise to difficulties and perplexities. Whether the pattern is essetnially bad or good is beside the point; if it is an old one, its sudden disruption produces dangerous tensions.

It has produced them in Maryland, and it is idle to deny it. I see no point in trying to deny it for, like John Milton, "I cannot praise a fugitive and cloistered virtue, unexercised and unbreathed," by a struggle with a real problem. I cannot praise the marvelous tolerance of those communities that never had a race problem. Most of us can be as tolerant as the angels above about conditions that we do not have to face. If there were not a Negro, a Catholic, a Jew, a Japanese, a Mexican, or a Puerto Rican in all Maryland, would we be troubled by race or religious prejudice? And would our freedom from trouble be any credit to us?

In the matter of desegregation my pride in Maryland is not that it has given us no trouble, but that we have tried to meet that trouble in a fashion worthy of civilized men. I do not speak in any holier-than-thou spirit. I do not claim that our methods have been ideal and I am not certain that they are the best that could have been devised. I am aware that the problem in some other States has been more difficult than it was in our case, and if they have been less successful in handling it, it is possible that their effort has been as praiseworthy as ours.

What does entitle us to credit is our prompt acceptance of equality of opportunity for all citizens as an American ideal to be striven for regardless of the difficulties it may entail. We have not wavered in that faith, and we shall not waver; nor will the efforts of wise men of all races be defeated. It may take time. It has already taken hard labor and hard thinking. But in the end we shall work this thing out in such a manner as to distribute justice more evenly and to make it easier for every citizen of every race to develop to the highest extent such talents as God has given him.

This belief that the man who keeps step with the best judgment and highest aspirations of the American people does move forward, however slowly, is the justification of the middle-of-the-road philosophy. However, it is no justification of complacency. The road of history is indeed a winding trail. If you take your stand at any point sufficiently far back, say in 1776, the date of our origin as a politically free people, and draw your line of sight to the year 1956, you will find that the middle of the road has been sometimes far to the right, and at others equally far to the left of that line.

More than that, there have been incessant divergences. People have been constantly darting off, now to the right, now to the left, some even backward. Out of every 20 who thus depart from the main body, fully 19 wind up in bogs or brambles and get nowhere. But the 20th must be regarded as the salt of the earth, for the 20th darts ahead. Guided by some inspiration that passeth understanding, he cuts across a looping curve followed by the main body and arrives at a point far in advance long before the rest of us get there.

These are the men to whom in later years we erect statues in the hall of fame. They are the ones whose lives add luster to the national history, and whose words we quote when we wish to inspire the youth of the land. They are the Washingtons and Lincolns, the Franklins and Jeffersons; yet in their own generations vast numbers of their fellow citizens listed each of them among the 19 whose divergences were folly.

Here is the consideration that has led Maryland, the middle State, to set a high value on tolerance. We do not forget that when George Calvert wrote into the charter of Maryland, and his son rigorously enforced, the principle of religious freedom, both were accused by extremists of being wicked subversives. Catholic fanatic and Protestant fanatic, at war on all else, were completely agreed that religious freedom would overthrow the British constitution and bring both king and country to ruin.

But Maryland tried it, and it worked. The record shows that we tried it somewhat reluctantly, perhaps as reluctantly as we are now trying desegregation. But try it we did, and it proved to be in line with the march of history.

It is a curious fact, too often ignored, that religious freedom worked out profitably materially, as well as morally. Pennsylvania, founded 50 years later on the same principle, and Maryland, were the only 2 of the 13 Colonies that paid a handsome financial return to their founders and continued to pay it right up to the Revolution. The farsighted wisdom of the Calverts and the Penns paid off in cash as well as in fame; and I, for one, am convinced that Maryland's legacy of tolerance is to this day adding to the material prosperity as well as to the honor of the State.

Tolerance is a dangerous thing. All history attests it, and it is folly to deny it. But intolerance is not merely dangerous, it is

suicidal. Tolerance is one aspect of freedom, and freedom is always dangerous. But the Nation that abolishes freedom in the hope of attaining security is like a man who would commit suicide to avoid being murdered. In freedom there is a chance of prosperity and peace; in tyranny there is no chance of either.

I think I may say, therefore, that in Maryland our idea of a middle-of-the-road man is one who moves in the direction being taken by the mass of his fellows. He is distrustful of those who dart away because he is convinced that, in most instances and in the long run, the wisdom of the whole people is greater than that of any individual.

But he remains keenly aware that in some specific instance, and in the short run, a really great man may be wiser than the Nation, although he will not seem so at the time. Hence your Marylander is reluctant to suppress any deviationist, for while the chances are that he is a fool, it is always possible that he is a prophet, and it is far better to permit 19 fools to gabble folly than to prevent 1 sage from uttering wisdom. Folly soon defeats itself, but it is by the small remnant of wisdom in the public clamor that the Nation is sustained and maintained and raised to greatness.

Far be it from me to proclaim the spirit of Maryland as the summation and glorious end of all philosophy. My claim for it is much more modest; I present it as a homely wisdom best suited to men who do not aspire to shake the world, but who wish to enjoy an opportunity to live their own lives undisturbed and who are willing to grant the same privilege to their neighbors.

This may sound simple, but in reality it is an extremely complicated problem, and the worst of the complications are those brought on not by any human wickedness or folly but by the course of events that no man can control. Like most of th Eastern States, Maryland at present is experiencing a population growth less like expansion than like explosion. All our public facilities and utilities, schools, roads, water supply, transportation, power lines, are being taxed to the limit of their capacity and some are failing, not through mismanagement but through the sudden increase of the demands upon them.

One of the most serious of all our problems is one that many people never stop to consider, and can hardly understand when they are reminded of it. It is the strain that rapid growth throws, not on the physical plant, but on the organizational system of our public services. The physical failure is plain to the dullest. When a community that formerly consisted of a hundred houses is invaded by developers who build an additional 900 houses it is evident that the water main that formerly served that community will no longer be big enough. Simple Simon can understand that.

What sometimes escapes people a great deal wiser than Simple Simon is the fact that when the same thing is happening, not in one community but in scores and hundreds at the same time, it may easily happen that more than the water mains will prove too small. The whole organization controlling water supply may have to be rebuilt.

I have deliberately chosen water supply to illustrate my point because that is one thing for which the State government has relatively little responsibility, and I do not wish my words here today to be applied to any specific department of the State government. But you can see what I mean. We have recently had trouble in more than one department. Some of it, perhaps, may be attributable to misconduct, but that constitutes no great threat, for we know how to handle misconduct. What is far more serious is the fact that some departments are breaking down simply because their organization was never designed to carry the load now thrown upon it.

Here is a problem that cannot be solved by the simple process of adding more people to the payroll. Every businessman knows that if you neglect your organization the time comes when adding more people means only that they will get in each other's way. The larger the organization, the more complex is the problem of arranging its relations for efficient operation. Much praise has been lavished on the New England system of the town meeting as a perfect expression of democracy. So it was, when 250 people were involved; but try to run a commonwealth of two and a half million people on the town meeting system and all you will get is chaos.

This is the point at which Maryland's preference for the middle of the road creates difficulties. We have, let us say, a department that has functioned reasonably well under a system of organization devised 50 years ago. The people of Maryland approve the principle of letting well enough alone; so when the machinery of that department begins to creak and groan, and perhaps grind to a halt, the first assumption of our people is that there must be a monkey-wrench thrower around, and if he can be eliminated all will be well.

It is a matter of no small difficulty to persuade them that it may be necessary to redesign the whole machine—to shift, so to speak, from propellors to jet propulsion. Yet surely nothing can be plainer than the fact that when the load is increased enormously the machinery may break down without any sabotage at all. Nevertheless, a governor who proposes anything like a thoroughgoing overhaul of the system of organization is certain to be accused, on the one hand, of trying to introduce socialism into Maryland, and, on the other, of trying to set up a dictatorship.

There is nothing partisan in this. I have encountered the difficulty, but so did my predecessors of the other party. It is simply the deep-laid and, to tell the truth, usually well-grounded suspicion of the people that any leader who deviates from the accustomed course is probably wrong.

Yet I do not complain of this, for the people of Maryland are not immovable. It is hard to move them, but it is not impossible. Like my predecessors, I have suggested a great many more improvements than have actually been put into effect; but some have been adopted, and there is great hope that the next session of the legislature will adopt still more. In some things, for example, in care for the mentally ill, Maryland is moving into the van; in very few does she still linger in the rearguard. She is still conspicuously a conservative State, but she moves.

This leisurely tempo is hard on a Governor who by virtue of his office is kept informed of the innumerable things that ought to be done, many of which are unknown to the average citizen; but if it makes the Governor's work harder, it also makes the State's progress safer. As I look back over the years during which I have held the office of Governor, I realize that a great many things that I consider wise and necessary, and which I have advocated vigorously, have not been done; but I also know that what has been done will never have to be undone. So if I am inclined to boast it is not so much about the number of forward steps we have taken under my administrations, as about the fact that we have never had to retrieve a false step.

There, I believe, is an accurate report of Maryland's state of mind at this hour. I know that on such occasions as this it is customary for a speaker to spend most of his time on the glories of the past and the beauty and bounty of nature. You know all that as well as I do. We have brought the frigate *Constellation* back to Baltimore. The Star Spangled Banner still floats over Fort McHenry. Nobody has forgotten John Eager Howard, or the other heroes and sages of the past. The Chesapeake Bay and the Blue Ridge Mountains remain as beautiful as they ever were and still "the clustered spires of Frederick stand green-walled by the hills of Maryland."

So I have simply taken all that for granted today and have tried to give you, instead of a laudation of the past, a sober report on how the State is prepared to face the future in a world that is fumbling its way through such fog and darkness as it has rarely encountered. I think I can assure you that the report is encouraging. I believe that Maryland today is as steady as any State in the Union. Oh, certainly, we have a few Jeremiahs who can see nothing ahead but woe and ruin, and they are balanced by a few Pollyannas who can see nothing wrong in the best of all possible worlds.

But the Jeremiahs and the Pollyannas put together are a small minority of our people. The temper of Maryland at this moment is neither terrified nor elated. If difficulties lie ahead, we are ready to face them; if great opportunities lie ahead, we are ready to seize them. We do not claim to be miracle workers. We do not deny that, as the Prayer Book puts it, "We have left undone those things which we ought to have done; and we have done those things which we ought not to have done" many times. Yet I believe I can say in all honesty that if the need comes for a great deed we are not incapable today any more than we were long ago when the Maryland line was the backbone of that forlorn hope that George Washington transformed into the triumph of the ages.

A Bill To Extend Rural Mail Routes

EXTENSION OF REMARKS

OF

HON. J. HARRY McGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1956

Mr. McGREGOR. Mr. Speaker, I have introduced a bill which gives authority to the Postmaster General, subject to the postal laws and regulations, the right to extend rural mail routes. This bill, if it becomes a law, would give rural mail delivery, as nearly as practicable, to the entire rural population of the United States.

I previously had introduced a bill similar to this making it mandatory that all be given rural mail service. It has been proven to me, Mr. Speaker, that my previous mandatory bill would not be equitable or workable, as in some areas of our country it would be nearly impossible to be in compliance with that mandatory clause.

I am reintroducing the bill, and I have been assured by those in control that everything would be done wherever at all possible to see that the intent of the law be carried out. This legislation, Mr. Speaker, will probably require realinements of routes; but when this is done, I feel certain that practically all will have rural mail service to their property, and it will cost our Federal Government only a very small amount. After all, Mr. Speaker, we are all citizens and are entitled to equitable service and treatment, regardless of where we live.

Senator McClellan as Chairman of Permanent Subcommittee

EXTENSION OF REMARKS
OF
HON. EARLE C. CLEMENTS
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Thursday, January 26, 1956

Mr. CLEMENTS. Mr. President, one of the most important responsibilities of the Congress is the responsibility of investigation. It involves a power which, when used wisely, redounds to the benefit of our country but which, when used unwisely, can lead to unfortunate consequences.

I doubt whether the power to investigate has ever been lodged in abler hands than those of our distinguished colleague, the Senator from Arkansas [Mr. MCCLELLAN].

Senator MCCLELLAN, as chairman of the Permanent Subcommittee on Investigations, has established a reputation surpassed by none. His inquiries have been strict but fair; thorough but not time-wasting. And at all times, they have been directed to the objective of improving our Government and assuring our people the utmost in efficiency.

As a Senator, I am very proud of my association with such a distinguished American. As a man, I am very happy to have him as a friend.

I ask unanimous consent that there be printed in the Appendix of the RECORD an excellent article entitled "Let the Record Speak," written by Mr. Leslie Carpenter and published in the Sunday magazine of the Arkansas Gazette on August 21, 1955. The article deals with the investigating methods used by Senator MCCLELLAN—methods which have been universally approved for their fairness and their effectiveness.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LET THE RECORD SPEAK

(By Leslie Carpenter)

When Senator JOHN L. MCCLELLAN replaced the most controversial man in the United States Senate—Senator JOSEPH R. MCCARTHY, Republican, of Wisconsin—as chairman of the Senate permanent Subcommittee on Investigations last January, the Arkansan told a newspaperman what he had in mind for the investigatingest subcommittee of the Congress.

"The subcommittee," MCCLELLAN said, "will make a record, and that record will speak for itself."

No political promise has ever been better kept.

Under the chairmanship of the serious and smart Arkansan, the subcommittee has made a record of fact gathering and fair play.

Gone is the sensational circuslike atmosphere of MCCARTHY's heyday. No longer do Capitol policemen have to throw spectators out of a kleig-lighted hearing room for demonstrating. No longer do witnesses shout at Senators. No longer do Senators shout at witnesses.

It is like a different place—perhaps not as interesting, but definitely an atmosphere in which the people of a democracy can take pride rather than shame.

The reason for this difference is MCCLELLAN. MCCARTHY is, of course, still around—still around as the ranking Republican of the subcommittee, in fact. But MCCARTHY is a different man. And that is because of MCCLELLAN, too.

It is an accepted fact that MCCLELLAN is the man most responsible for MCCARTHY's downfall, unless the credit for it is given to MCCARTHY himself.

Liberals of the Democratic Party who have always considered MCCLELLAN to be something of a villain within their party's ranks because of his HARRY BYRD-like conservative attitude toward social and economic reforms have applauded MCCLELLAN the loudest for his performance during the Army-McCarthy hearings in 1954.

More than anyone, MCCLELLAN was the one whose piercing questions brought out the essential facts. He demanded and got what order there was during the razzle-dazzle of the hearing. MCCLELLAN already was a Senator known nationally. But he became even better known during the hearings which were televised and projected onto millions of screens throughout the Nation.

MCCARTHY now, censured by the Senate and plagued with bad health and a loss of prestige, generally permits MCCLELLAN to run the subcommittee his own way. MCCARTHY, like other political foes of MCCLELLAN in the past, realizes that's the safest way to do it. MCCLELLAN is a fighter and knows how to take care of his enemies.

The subcommittee—actually a branch of the Senate Government Operations Committee, of which MCCLELLAN is also chairman—was born in the days when Harry S. Truman was a Senator and organized it to look into war contracts.

The subcommittee served such a useful purpose then that it was later given permanent status as an investigating group—the only one in the Senate which is officially "permanent." Other investigating groups have only a temporary status.

There are no limits imposed on the scope of what the subcommittee can investigate. Literally, it has the run of the Government. But its role can perhaps best be described as a sort of congressional conscience to weigh various delicate situations in Uncle Sam's big government and determine if they are good or bad. Most often this involves some phase of wrong-doing in Government.

The flamboyant MCCARTHY, who craved publicity and attention, ran the subcommittee as a prosecutor, hungry for scandal and determined to land a conviction—at least in the eyes of the public—in every case which was brought up. This meant at times that witnesses before the subcommittee were stripped of rights to offer a defense or to justify their side of the case.

MCCLELLAN, on the other hand, considers the subcommittee to be a fact-finding group. And, as he said in January, the facts will speak for themselves.

MCCLELLAN does not consider himself a prosecutor as the subcommittee chairman and does not behave as one.

Take, for instance, the subcommittee's brief public hearings on the Talbott case last month. The facts were brought out about Secretary of Air Force Harold Talbott's partnership in the firm of Paul B. Mulligan & Co., which represented companies doing business with the Air Force. Four days after the public hearings ended—and the facts were gathered—Talbott resigned.

MCCLELLAN never grasped for headlines demanding that Talbott be fired, but he brought out facts which made that course inevitable. There are some partisan Democrats who think MCCLELLAN could have made more political hay out of the Talbott case. But the Arkansan's supporters counter that MCCLELLAN exhibited the sort of good conduct which is expected of a Senator—that to have performed otherwise would have been to parallel what would have been expected from MCCARTHY.

Another example was the Peress case. No one ever bothered to count the many times MCCARTHY demanded to know in press releases, press conferences, and interviews who promoted Peress?

When MCCLELLAN assumed the subcommittee chairmanship this year after the Democrats won control of the Senate, MCCLELLAN asked that same question—but he asked it of the Army, rather than through the newspapers.

And he found out who did promote the one-time Army dentist who refused to say whether or not he had held membership in the Communist Party. The facts, as developed by MCCLELLAN, revealed that the Army made 48 errors in handling the Peress promotion and discharge. MCCLELLAN got the facts, and the Army has undertaken to revise administrative procedures so that none of the mistakes will happen again.

To the newspaper correspondents of Washington, the 59-year-old Senator from Arkansas is something of a riddle. He is the complete opposite of MCCARTHY from the standpoint of news coverage. MCCARTHY had an appetite for headlines that was in an extreme. Seemingly, MCCLELLAN would prefer it if his name stayed out of the newspapers as much as possible. MCCLELLAN may be the only Senator who never issues a press release.

MCCLELLAN tries to go out of his way to be helpful to a newspaper reporter when a reporter seeks him out. (MCCLELLAN would never seek out a reporter.) But MCCLELLAN does not understand the reporters and their problems as other Senators do. MCCLELLAN understands well that he is conducting public business, but he does not like to be quoted in an interview. He is always willing to give facts frankly "for your background," as he will tell a reporter. But he will often make his comments and the information he has revealed "off the record"—that is, not to be quoted or attributed to him.

This is the reason why MCCLELLAN, one of the Nation's best known Senators, is so rarely quoted, except for speeches he makes in the Senate Chamber.

MCCLELLAN is something of a one-man operator in the Senate. A man with little formal education, he has a razor sharp mind. He makes all his own decisions without consulting dozens of other Senators like many of his colleagues. The Senate is often called the world's most exclusive club—a band of palsy-walsy extroverts. MCCLELLAN holds his own in this group with brains, because he is without the warm, back-slapping personality of an average politician.

On the national scene, MCCLELLAN is known primarily as an investigator and one of the leaders of the Southern conservative school of thought.

In Arkansas, he is perhaps best known as the man able to bring home the bacon—the Federal bacon—for the State.

MCCLELLAN's skill in being certain that Arkansas gets its share—or more—of Federal expenditures has been demonstrated many, many times. The best example this year was when he wrote into the law a provision requiring the Army to reopen the Army-Navy Hospital at Hot Springs after the Army had refused to keep it in operation otherwise.

But there is a long, long list of flood control and navigation improvements on the State's rivers which have been constructed or are under construction now primarily because of MCCLELLAN. Certainly, one of the large Federal dams in the State will one day be named for MCCLELLAN as a tribute to the work he has done to develop the natural resources of Arkansas.

It is true, of course, that MCCLELLAN has operated from a point of advantage in securing hundreds of millions of dollars for improving the State's streams. MCCLELLAN is a member of the Senate Appropriations Committee, and is a member of that com-

mittee's Public Works Subcommittee which decides which water projects are to have money and how much. It is also true that the Senate is more generous with money for water work than is the House of Representatives which always originates such bills.

But it is obvious that Arkansas would not have been so fortunate in recent years had not MCCLELLAN worked himself into this point of advantage and made full use of it to the benefit of the State.

MCCLELLAN may be well remembered by the Arkansas taxpayer each year when he fills out his income-tax form. It was MCCLELLAN who fought a long battle to extend to all States the split-income (community property) tax benefits which for a long time were enjoyed by only a few States, notably Louisiana, Texas, Oklahoma, Arizona, and California. MCCLELLAN finally succeeded in getting this written into the tax laws in 1948 after losing his first effort to do it the year before by four votes on a rollcall. MCCLELLAN believes this has saved Arkansas taxpayers $40 million in 17 years.

MCCLELLAN has been active with a wide variety of legislation over a long period. He has a bill authorizing Federal aid to school construction which may be one of the major issues to face the next session of Congress. Also due to come up next year is his bill making it possible for any taxpaying citizen to bring a suit to test the constitutionality of the right of the Tennessee Valley Authority to build steam powerplants with unappropriated funds derived from power sales when the plants involved are not related to Government services or for firming up hydroelectric power. If such a practice is constitutional, MCCLELLAN maintains, then he would like for Arkansas to have some of those steam plants. If not, he says, then the TVA has no right to continue building them.

MCCLELLAN has served on both Hoover Commissions—although he is apparently not as enthusiastic about the reports submitted by the second commission this year as he was about the recommendations of the first Hoover Commission. He was the author of most of the legislation which put into effect the proposals of the first Hoover Commission.

MCCLELLAN was the author of legislation making it possible for States to acquire surplus property for educational and public-health purposes. He wrote the provision in the 1953 foreign-aid bill requiring America's allies to take a large share of the aid in the form of surplus United States farm products.

Since coming to the Senate in January 1943, MCCLELLAN has been the sponsor of a large volume of additional legislation.

When I asked him what he is proudest of during his service in Congress—first for 2 years in the House, and then for 13 years in the Senate—he parried the question.

In typical fashion, he said he would rather not comment on that.

But there are a number of things he could well take pride in—because he is a hard worker who knows how to get things done.

The Plight of the Aged

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1956

Mr. CANFIELD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Morning Call, Paterson, N. J., of January 24, 1956.

THE PLIGHT OF THE AGED

With reports of record-breaking wages earned in this country in the past year, with statements of the almost incredible prosperity which is being enjoyed, it comes as something of a shock to read a report just issued by the Twentieth Century Fund, entitled "Economic Needs of Older People," the survey has brought to light the disturbing information that almost three-quarters of the people in the United States who are more than 65 years of age either have no incomes at all or have incomes of less than $1,000 a year. In view of the overall income figures, it seems unbelievable that a segment of the population can share so meagerly in the country's wealth.

Some of this, of course, is due to the fact that employment is almost impossible to find by the older folk. A gradual rise begins at the age of 44 and increases until by 65 only about 30 percent of the people have jobs, the survey points out.

Such information will give pause to all who are interested in helping to meet the problems of the elderly. With the increased span of life vouchsafed through the miracles of modern medical care, the inescapable fact emerges that whereas additional years are being granted there is at the same time inadequate provision to make those extra years worth living.

Each decade sees an increase in older folk in relation to the rest of the Nation. There are now four times as many persons over 65 in this country as there were in 1900, while the total population has only doubled. This means there will be no diminution of the problem, for which, of course, social security in time will provide a partial answer. Perhaps, in addition, a revision of thinking is indicated on moving along the accepted compulsory retirement age to 70.

Iron Curtain Closeup

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AYRES
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1956

Mr. AYRES. Mr. Speaker, our colleague, Representative PATRICK J. HILLINGS, made a very constructive trip last year, the details of which are outlined below. I commend Congressman HILLINGS for having the nerve to put in writing all the opinions he formulated on his trip:

HILLINGS TELLS TOUR DRAWBACKS IN U. S. S. R.

(By Representative PATRICK J. HILLINGS, Republican, of California)

Moscow, September 3.—Anyone who has traveled abroad is in for a lot of surprises when he becomes a tourist in Russia.

It takes a bigger chunk of initiative and adventure to be a tourist here than almost anywhere else in the world.

First there is no guide book to Russia. In fact, there is hardly any tourist information at all available outside. It is not much different once you are here.

The Soviets do not even sell a street map of Moscow, Leningrad, or Kiev.

Once you land in the U. S. S. R. you are in the hands of Intourist, the state travel agency.

MONOPOLY

They own the only hotels in which the ordinary tourist can stay in the big cities and they supply the guides and interpreters.

It is a state monopoly without any competition.

Surprisingly enough, Intourist does not twist your arm to see certain things. They do not even volunteer suggestions about what you can visit.

Unlike tourist agencies in other places, Intourist never says "wouldn't you like to go here? Wouldn't you like to see this or that?"

The closest they ever come is an occasional "What would you like to do?"

You should decide the first day what you want to see and have Intourist get started right away on arrangements.

LONG DELAYS

Whether it is just plain inefficiency or whether everything has to be checked with the proper authorities, arranging anything here takes infinitely longer than anywhere else.

But tourists will find that most of their reasonable requests are taken care of—eventually. Then it is likely to come with a rush, like my visit to the Moscow film studio.

After waiting several days for Intourist to arrange the visit the service bureau telephoned Monday afternoon without warning and announced "a guide and a car will be ready in 10 minutes to take you to Mosfilm."

What should you plan to see in Moscow?

Firstly, the Kremlin and the Lenin-Stalin mausoleum should be on everyone's "must" list. You would not want to miss them.

The Kremlin—hilltop citadel of czars and commissars—has a wonderful museum, a big old cannon, and a huge cracked bell said to be the biggest ever cast.

But when you ask to see the offices of the government you are told "it is forbidden to go there."

WAIT AT TOMB

At the Lenin-Stalin tomb they put you near the head of the long line of people waiting to see the embalmed bodies of Soviet Russia's founding fathers.

Ahead of you are official delegations and perhaps a group of peace partisans. But even this 40-minute wait on Red Square is interesting. You see people from all over the world with flowers and wreaths who have come to pay their respects.

Secondly, a collective farm. Make this request early. It takes a lot of time to organize. The Moscow region is now in the middle of the harvest season and some tourists who ask to see a collective are told that the manager is too busy.

Thirdly, the Stalin Auto Works or some other factory. You will probably spend, as I did, more time being told about and shown the cultural and recreational side of factory life than about the working and living conditions, but it is still very interesting.

GREAT VIEW

Fourthly, don't miss the view of the city at night from the Lenin Hills Bluff overlooking the Moscow River. Here is one that Intourist would never even think to suggest. The guides, as state tourist agnecy employees, are officials of the Government. But they do not try to inject the propaganda line into everything they say.

The hotel in which I stayed in Moscow—the National—seems the best of the three Intourist hotels in the capital—all of which were built before the revolution. The National is furnished in its original mid-Victorian style but it is surprisingly clean and comfortable.

The food is not bad. But the tourist should not expect great variety. Intourist restaurants either have special menus in English or four-language menus in Russian, English, French, and German.

NO BARGAINS

The official ruble rate of four to the dollar makes it almost impossible to get good values in souvenirs. Most things I have seen in the shops appear to be second-class mer-

chandise with prices three times what we would pay for first class.

Intourist does, however, provide an all expense plan for $19 a day. You can buy vouchers either in New York, European capitals, or in the U. S. S. R. itself after you get here.

Under this plan I have what would be about a $10 room in an American hotel (plus a million dollar view of the Kremlin and Red Square), 3 meals, and a tea-time snack which are valued at about 55 rubles, (some $14 at the official rate) and 2 hours of guided sightseeing with a car.

But meals outside the Intourist hotels, laundry and other incidentals, bring the figure to about $30 a day.

DOUBTFUL BOON

For anyone who ever felt he would like to take a vacation without newspapers, radio, and TV this is perhaps an ideal spot.

No Soviet newstand carries any Western newspaper or magazine and you really feel cut off from the news.

Leningrad, Moscow, and Kiev offer practically open house for photographers. You cannot snap bridges or anything of a military nature.

If you have any doubts you can find out whether the subject you would like to take is off limits for snapshooting by asking the nearest policeman.

IRON CURTAIN CLOSEUP—REPRESENTATIVE HILLINGS SAYS SATELLITE COUNTRIES LIKE "BIG PRISON"

(By Representative PATRICK J. HILLINGS, Republican, of California)

For nearly 3 weeks traveling through the Soviet Union and 4 satellite countries, I felt I was in a "big prison."

I talked not only with Communist leaders but also with average people. In fact, I went out of my way to strike up conversations with the ordinary people to sound out their feelings, their hopes.

From my talks with various people in Russia, Rumania, Hungary, Czechoslovakia, and Poland, I am convinced that some of our best friends are living behind the Iron Curtain.

I firmly believe that 90 percent—possibly more—of the people living in the satellites are against Soviet Communism. They are dissatisfied with life under the Red rulers.

REVOLT UNLIKELY

However, I feel there is little likelihood of the oppressed people living behind the Iron Curtain rising up and throwing off the yoke of communism—unless some great dramatic event should occur.

In the satellite nations I was approached several times by individuals who asked to talk to me privately.

Fortunately I speak enough German to carry on a conversation and many people in the satellites, as well as in Russia, know some German.

This enabled me to get closer to the people than most Western visitors.

I used a couple of American gadgets to strike up conversations. One was a vest pocket radio and the other a camera which takes and delivers a photograph in 60 seconds.

POCKET RADIO

These two things broke the ice for me with many people, even in Russia, where they are more afraid to talk with foreigners than the satellite peoples are.

One evening in Budapest, while sitting in a cafe, I took out my pocket radio, placed it on the table and turned up the volume.

Everyone searched the room for the music, finally centering their attention on me and the tiny radio, which is about the size of a package of cigarettes.

Finally, a man at the next table leaned over and asked in English with a heavy accent:

"Are you American?"

When I said yes, he looked around, then asked:

"When will the day come when we will be free again?"

I could say no more than, "I dont' know, but I hope it will be soon."

INTERRUPTION

Just then a heavy built, dark-looking man entered the cafe and peered around the room. My friend at the next table turned back to his friends and began hurridely talking with them.

The rest of the people in the cafe, who had been watching the radio and my conversation, also busied themselves with their food and drinks.

After the dark man had left the cafe, my friend at the next table again leaned over, saying:

"What are you doing in Budapest?"

When I told him I had come to Hungary to see how the people were living, he bitterly replied:

"As you can plainly see, not very well."

Again and again people in the satellite nations would ask me:

"When are you Americans going to help us?"

"When are we going to be free?"

DON'T WANT WAR

People in the satellites are worried, worried that the West will forget them, abandon them to live eternally under Moscow's rule.

The Geneva conference of the Big Four, particularly caused this feeling of despondency to increase among the people in the satellites.

Yet the Russian people, after the Geneva conference, heaved a huge sigh of relief, because they felt it meant the chances of a war had been thrust far away—and they do not want a war.

People in the satellites are much easier to talk to than the Russian people.

Several times, while traveling through the satellites, I was discreetly approached by individuals who asked me to meet them privately.

SECRET MEETING

One night in a Romanian cafe, I took a picture of the waiter with my 60-second camera and handed him the print, causing a great deal of excitement.

After the entire cafe had exclaimed over the "Amerikanski" camera, a young man asked if I would take his picture with his fiancee.

Afterwards I was called to the telephone in the basement. There was no call for me, just the same young man who whispered in broken English:

"Can I see you tomorrow privately?"

We made a date for a cafe the next afternoon. He met me and we sat close to the window to keep an eye out for secret police.

He told me he was a doctor and had learned English in school. After explaining how they needed American medical supplies, he asked if I had any American newspapers or magazines.

WANT MAGAZINES

I went back to the hotel and brought back what I had and started to hand them to him. He stopped me abruptly with a glance of fear.

"Just sit on them, and leave them when you get up," he said.

All over the satellites I found that the people are desperately hungry for information about America. They always asked us for whatever papers and magazines we had.

IRON CURTAIN CLOSEUP—RED LEADERS LIVE HIGH WHILE PEOPLE SLAVE, SAYS HILLINGS

(By Representative PATRICK J. HILLINGS, Republican, of California)

The Communist rulers are deliberately keeping living conditions poor in order to control and further communize the people.

This is my firm conviction after touring the Soviet Union, Rumania, Hungary, Czechoslovakia, and Poland.

The Reds have put the improvement of living conditions in second place.

Food, shelter, and clothing are all tactical weapons which the Communist rulers are using to make sure the people are fully "sovietized"—particularly in the satellites.

The Red leaders want to make the people completely dependent on the Communist government for everything.

OPPRESSION IS AIM

They are more concerned with shaping the people's minds along Communist lines than they are in actually improving conditions for the masses.

If the Communist rulers really wanted to improve living conditions for their people, there are many thing they could do much faster than they are now being done.

They even put blocks in the way of individuals who try to improve things for themselves.

I talked with an old woman in Poland who had to save for 3 years just to buy a shoddy raincoat.

The Red rulers are putting far more emphasis on the so-called cultural construction—subways, monuments, and government buildings—than on housing.

And in the Soviet orbit, housing is one of the biggest problems they have.

In Russia and in the four satellites, I saw monuments and government buildings being constructed, subways being rushed to completion.

They are working furiously on the Leningrad subway to complete it by November. It will have stations, lined in marble and alabaster, loking like temples.

NEW ELITE CLASS

Meanwhile, the people are living in dingy 1-room apartments, and many have to share that 1 room with another family.

The personal interests of the people seem to be secondary to the Communist leaders.

The leaders seem to like those showpiece subways. But they could use the money and energy instead for building more apartment houses for the people.

Yet there is the new class of people in Russia and the satellites who are living off the fat of the land. They are Communist Party officials and the military men.

I felt a certain smoldering resentment among the people—even in Russia—against this new class which enjoys far more rights and privileges than the old-time capitalists ever enjoyed.

For example, while visiting a department store in Leningrad, I saw a crowd in the fur department.

Finding a man who spoke German, I asked:

"How can they afford to buy such expensive furs?"

When he answered me, I sensed in his tone of voice a feeling of guarded bitterness. He pointed to a Red army major and said:

"He can buy furs for his wife or girl friend."

EXCLUSIVE

Another time, I asked a man in Moscow what the special lanes down the center of each main boulevard were for. Each was marked with two white lines and traffic was kept out of them.

He told me:

"Those are for the leaders' cars only."

Later I found out that the rulers drive without regard to traffic regulations down those specially marked center lanes.

Nowhere in the free world do the Government leaders reserve parts of the streets for themselves. So this was another example of how the new ruling class in the Soviet orbit places the interest of the people behind its own interests.

Curiously, although they are doing a good deal of construction in the Soviet bloc, I never saw a man with a paint brush in his

hand. Even rather new buildings began to look run down quickly.

The American Embassy in Moscow, which is leased from the Soviet Government and is a comparatively new building, is run down and needs repair.

The only solid, permanent type of construction I saw seemed to be statues and monuments of Communist leaders.

IRON CURTAIN CLOSEUP—REDS RESENT CRITICISM

(By Representative PATRICK J. HILLINGS, Republican, of California)

The Soviet and satellite leaders I met were terribly sensitive to criticism, particularly by the West.

They seemed to think the world was against them—especially the American press.

They just cannot seem to get through their heads that we allow people in the United States to critize our Government and that it is possible for us to criticize other governments.

I am convinced this is a dangerous aspect of the Communist mentality because it is obvious that their misinterpretation of the American press and the American political scene might cause some Russian official to make a rash decision.

And his decision possibly would create great troubles in the world.

MISINTERPRETED

I think we must do a great deal to convince the Communist leaders what the free system of information and freedom of expression in America really means.

I kept trying to explain this to the Soviet and satellite leaders whom I met—but had little success.

I asked them if they didn't have enough confidence in the people in their countries to differentiate between various kinds of information.

They generally replied:

"We just don't want to expose them to lies and propaganda."

In Romania, the Acting Foreign Minister told me:

"We often let the British Broadcasting System news reports come through without jamming because we feel they are more accurate in reporting news of the United States than the Voice of America is."

I argued with him, but he countered that the VOA contained propaganda.

BRITAIN PRAISED

"Well it's reporting news of America. If we tell what happens on the American scene that is news, not propaganda," I stated.

He answered that he still believed the British were better than the Americans in reporting what's going on in the United States.

Then he asked me:

"Why do American Congressmen go off half-cocked when they criticize the Soviet Union and the people's democracies?"

I told him the Communists made it so difficult for us to get information about their lands that it is hard to know what is true and what is not.

Grinning, he called in an aid with the July 25, 1955, copy of the CONGRESSIONAL RECORD and showed me an article.

Incidentally, he had the CONGRESSIONAL RECORD copy just a few weeks after it had been printed, which shows you how they can easily get information about America.

Showing me a speech made by KATHARINE ST. GEORGE, a Republican Congresswoman from New York, he commented:

"Here is the case of an American Congressman condoning violence."

In her speech Congresswoman ST. GEORGE had taken the side of Rumanian refugees who had besieged the Rumanian Communist legation in Berne, Switzerland, some months ago.

"We are concerned with freedom and encouraging the people to have the opportunity to enjoy freedom," I pointed out.

Another Soviet official also showed how close they keep tabs on American Congressmen.

Soviet Acting Foreign Minister Valerian Zorin threw back into my face a quote from a speech I had made in Akron, Ohio, in June this year. But he misquoted me.

RECALLS SPEECH

I was discussing with Zorin how we could further reduce tensions when he suddenly said:

"Well now, for example, Mr. HILLINGS, you said the Soviet Union is the greatest threat to world peace."

But I distinctly remembered that speech. I had said "The armed might of the Soviet Union poses the greatest threat to world peace."

I tried to explain the difference to him but without much luck.

IRON CURTAIN CLOSEUP—REDS MAKE IT TOUGH FOR UNITED STATES ENVOYS

(By Representative PATRICK J. HILLINGS, Republican, of California)

America's diplomats working and living in the Soviet orbit under horrible conditions are truly "unsung heroes" of freedom.

They are harassed economically. Communist governments make them change their dollars into local currencies at fantastic rates which make living costs unbelievable.

Red regimes either refuse or delay helping American diplomats get living quarters.

The Rumanian Government took its own sweet time about helping one American Foreign Service officer find quarters for his family.

For months he had to live in a hotel, paying the exorbitant price of approximately $60 a day.

EXCHANGE "HOLDUP"

In Russia, the Soviet Government keeps the exchange rate at four rubles for $1 when the rate, according to real values, should be something like 30 rubles to $1.

I asked Soviet Acting Foreign Minister Valerian Zorin if there was any chance of his Government improving this rate of exchange so our diplomats, and visitors, would not have to spend so much money just to live.

He said he didn't think there would be any change.

To me, this is more proof that the "Geneva smile" on the Soviet face doesn't go very deep.

In Bucharest, at the airport, I bought three cups of coffee. Cost? About $2.16 each at the official rate of exchange.

The Reds are making it as difficult as possible for our American diplomats.

MUST STAND GUARD

In Romania the Red regime refuses to provide housing for marine guards. In Czechoslovakia, the Communists arbitrarily limit the number of American diplomats to 13. This makes it impossible to have marines for guard duty there also.

As a result, Foreign Service officers after a full day's work—often 10 or 11 hours—have to buckle on a pistol, take a box lunch, and stand guard in the United States Embassy or Legation for the entire night.

Frequently a diplomat will have to stand guard every third or fourth night.

In other satellites, the Communist Government refuses to give enough housing for secretaries and stenographers. So the diplomats have to do all their own clerical work.

This means that the American taxpayer, who is paying a Foreign Service officer for high-quality work, is losing money. The more time the diplomat has to spend on typing, the less he can apply to his original job.

We should be very proud of our American diplomats serving us behind the Iron Curtain.

SHOULD HAVE BEST

At the same time we owe it to them to put more pressure on the Red governments to make things easier for our diplomats so that the living hardships could be alleviated.

In Washington, the Soviet and satellite diplomats live in luxurious mansions. They never have to worry about hot water.

Nor do they have to walk up 9 flights of stairs 1 week every month like the American Ambassador in Moscow has to do.

We should try to make it possible for the American representatives in the Red orbit to live decently.

In many cases they don't—they only "exist."

I think we should provide our diplomats behind the Iron Curtain with the very best and latest American cars with all modern gadgets.

CHANGE NEEDED

We also should provide them with other modern conveniences which so clearly illustrate the high American standard of living.

These things, cars and other modern items, are marvelous showpieces.

Everywhere I went in Russia and the satellites, crowds would collect to stare at the American diplomatic cars.

And some of the old cars we have provided our diplomats are simply ridiculous.

The Communists could show good faith by allowing American diplomats to live decently in the Soviet Union and satellites.

The School Bill

EXTENSION OF REMARKS

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1956

Mr. CANFIELD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the New York Times of January 26, 1956:

THE SCHOOL BILL

The first major piece of legislation to be taken up in the House this year is the proposal to give substantial Federal aid to the public schools. The Kelley bill, reported by the Education and Labor Committee last July, is now being considered for clearance to the House floor by the Rules Committee. On the other side of the Capitol, Senator SMITH of New Jersey has introduced a bill embodying the revised program put forward early this month by President Eisenhower.

The two measures differ in scope, but only to a limited degree in philosophy. The Kelley bill would provide a total of $1.6 billion in grants-in-aid to the States for school construction over a 4-year period. This compares with $1.25 billion over 5 years under the Eisenhower plan. Both proposals wisely require matching appropriations by the States. The difference in amounts is considerable, but it is not so great that a compromise could not be reached; and in fact both sums—huge though they are—would provide only a fraction of the construction necessary to meet the present classroom shortage. Both measures allocate $750 million in Federal credits for the purchase of bonds of school districts that are unable to sell them at reasonable rates.

The major philosophical difference between the two bills is in the method of distributing the Federal grants among the var-

ious States. The Kelley bill would make a flat grant, based on the number of school-age children in each State. The Eisenhower method of apportioning Federal aid is more complicated and, in our view, more equable. It would distribute the funds according to a formula that takes into consideration the relative wealth of the respective States, the number of pupils, and also, to some extent, the degree to which they have done their part to support public education out of their own resources.

The practical difference between the flat grant principle in the Kelley bill and the equalization principle in the Eisenhower program is illustrated by figures showing, very roughly, what would happen in New York. Under the former measure New York State would receive over $32 million per annum from the Federal Government; under the Eisenhower plan New York would get only some $12 million. We favor the latter program in principle for the simple reason that it seems far more sensible to give Federal aid roughly according to need than merely to redistribute tax money on a per capita basis without any reference to the financial ability of the respective States to meet their own school construction problems. It must never be forgotten—and the Eisenhower program emphasizes the point—that school matters are essentially and primarily a local responsibility; but the present crisis is so great that the Federal Government must step in for temporary help.

Honest disagreement over questions such as this can be ironed out. But what we fear cannot be ironed out in conjunction with a Federal school aid bill is dispute over the segregation issue. While one can sympathize with the desire to deny Federal aid to school districts that fail to integrate their schools in accordance with the decision of the Supreme Court, it is basically irrelevant to the fundamental purpose of the pending legislation. Furthermore, it is so charged with emotion that once an antisegregation amendment becomes attached to any school aid bill we fear that school aid in general will be doomed to defeat.

President Eisenhower was perfectly right yesterday in stating that "the need of the American children for schools is right now, immediately, today," and for suggesting that the segregation issue would delay passage of any such measure. It would not only delay it; it would very probably kill it. The Supreme Court has described its own wise method for ridding this country of the curse of segregated education. That is one problem; Federal aid to education is another. If we want the latter, let us get it without amendments that—no matter how sincere and praiseworthy their purpose—would in all probability kill it.

Has the Farmer Learned His Lesson?

EXTENSION OF REMARKS
OF
HON. ROY W. WIER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1956

Mr. WIER. Mr. Speaker, under permission to extend my remarks in the CONGRESSIONAL RECORD, I include an article from Honeywell News, Local 1145, United Electrical Workers, Minneapolis, Minn., entitled "Has the Farmer Learned His Lesson?"

The article follows:

HAS THE FARMER LEARNED HIS LESSON?

A few years ago in Minnesota, the farmer used to be the stanchest supporter of Republican candidates for office. A recent survey by the Minnesota poll shows that today that support has dwindled until he is the worse supporter of the Republican office seekers. Why is this? He learned his lesson.

The farmer had to learn his lesson the hard way. In 1952, for example, Republican politicians promised the farmer that they should have 100 percent of parity. Republican politicians said, "90 percent isn't enough—you ought to have 100 percent." The farmer fell for this in 1952.

The result was that we got a national Republican administration and we got a State Republican administration and the farmer, instead of getting 100 percent of parity, would have been very happy to keep what he had.

Yes, the farmer, in 1952, in Minnesota at least and certainly in a lot of other States, voted on the basis of the promise of better things. In the last 3 years, he has learned his lesson the real hard way—through the pocketbook. Today, as we said before, he is refusing to support or vote for the broken promise party.

THE SAME TREATMENT FOR EVERYONE

Of course, this kind of treatment that the farmer got is not limited to the farmer alone. The Republican national administration, as they had promised, cut taxes, but where did they cut the taxes? On big corporations, on large incomes. There was no tax relief, however, for the small income people who really needed the tax relief very badly.

Now when the Democrats in Congress, like Senator HUBERT H. HUMPHREY, talked about cutting taxes on the small income group, the hue and cry from the Republican national administration was, "we have got to balance the budget."

There was no talk of balance budget, however, when they cut taxes on the high income group. The facts are, they cut the taxes on that group without balancing the budget and the only thing the millionnaire, George Humphrey, the Secretary of the Treasury, advocated was to increase the national debt limit. During this same period when the Government employees asked for a much-needed wage raise and when Congress, and a Democratic Congress, voted the wage increase for Government employees, the national administration vetoed that wage increase, saying that they couldn't afford to pay it, while, as we said before, cutting taxes on large income groups.

NOT ONLY FARMERS

Yes, it was not only the farmers who got it between the neck, but what kind of an administration can you expect that has a Cabinet loaded with millionnaires—men of the type of George Humphrey, Secretary of the Treasury, and Charlie Wilson, former head of the largest corporation of the world, General Motors, and a millionnaire in his own right. They just don't represent the common people of America.

It should be borne in mind when we speak about Charlie Wilson, former head of General Motors, that that's the same General Motors that kept the General Motors workers out on strike for 113 days while their families went without bread and butter, in an attempt to keep that union from getting a decent wage increase for the workers of General Motors. These people just don't talk the workers' or the farmers' language.

Three years of office have shown the national Republican administration as representing just what everybody should have known they were going to represent—the people of wealth of America. Yes, the dirt farmer learned his lesson. The question is: How many others learned their lesson?

Statement of Principles of GI Farmers of America

EXTENSION OF REMARKS
OF
HON. JAMES I. DOLLIVER
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1956

Mr. DOLLIVER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of principles from the GI Farmers of America, Webster City, Iowa:

STATEMENT OF PRINCIPLES OF GI FARMERS OF AMERICA

As a member of the GI Farmers of America and as an honorably discharged veteran of the Armed Forces of the United States of America, I do hereby subscribe to the following statement of principles and beliefs:

I believe that the concepts announced in the Constitution of the United States of America are essential to the prosperity and welfare of all farmers and to the agricultural community.

I believe that through concerted individual effort and governmental cooperation, the economic condition of all farmers can be improved.

I believe that a strong agriculture is essential to the defense and prosperity of the United States of America.

I believe that in periods of economic adversity, the individual farmer should join with his Government in encouraging control of farm markets.

This organization was originally formed for two reasons:

1. The severe distress of the small farmer.
2. Help initiate a workable program for agriculture.

We are composed of the veterans of the Armed Forces of World War I, World War II, and the Korean conflict. This organization is less than 1 month old, but our views have been readily accepted by many farmers of this great farming area.

As in the twenties and thirties, the veterans of World War I bore the brunt of the depression. Their families were underfed, underhoused, and underclothed. Today this same situation is developing. The farmer veterans of World War II and the Korean war are in a situation that could lead to another general depression. In the early thirties, through trial and error, it was found that by legislation this situation could be alleviated to a great extent. The Congress must do everything in its power to avert a recurrence of the farm depression.

Through lack of operating capital, many young tenant farmers (veteran or otherwise) are being forced off their farms. One more year of this financial pressure will eliminate many more. Their individual cases would not indicate lack of proficiency, but rather lack of economic power to overcome adverse markets. Today these farmers are being shoved off their farms by larger interests under the cloak of claimed inefficiency, on the part of the small farmer. This charge is untrue.

The responsibility for the present market is equally upon the Department of Agriculture, the agricultural colleges and the farmers themselves. Production has outstripped practical demand and thus indicates a need for general cutbacks of production. This can be achieved only by intervention by the Congress, since the Department of Agriculture is committed to inaction.

Production of commodities to feed our Nation and its allies can only be achieved if

the small farmers can operate on a profitable basis. The alternative is ridiculous overproduction, which will lead to agricultural bankruptcy.

Parity is equality. We ask only 90 percent of equality under such controls as the Congress deems wise.

VOLUNTARY COMPULSION

Our theory is based on the fact that we are Americans first and farmers second. Every farmer (veteran or otherwise) is guilty of doing his part in overproduction of most commodities produced in this vast Nation. With this in mind, we must at this time of economic adversity join hands and every farmer work together to meet a common problem.

If every farmer accepts controls for a period of 1 year we feel sure our oversupply of feed grain would readily return to a normal supply as outlined by the Secretary of Agriculture.

Overproduction of feed grains caused oversupply of livestock, resulting in financial disaster unheard of in the history of this great Nation. Cross compliance between States producing different commodities is essential.

Corn is the basic crop of the Midwest and at this time is not considered in surplus. This position must be protected from surplus feed being shipped into the Corn Belt area. Ultimately the result would be new livestock lows. We feel that an exchange of certificates for grain in lieu of cash under the proposed soil-bank plan would result in greater livestock production.

As the soil-bank, or idle-land program is tentatively set, the reduction of approximately 20 percent will defeat its own purpose. Taking 20 percent of tillable land on one-quarter section out of production would create undue financial distress. Many farmers will decline to participate in this sort of program. It would mean slow finaicial destruction to the average tenant farmer.

Under our proposal, with every farmer participating, idle land on each farm could be held to a minimum. The percentage of land laid idle would not in any way create undue hardship on individuals participating. Every man—veteran or otherwise—would be doing his share in solving and reducing this overabundance of feed grain and livestock. A farmer farming 160 acres does not expect to have the standard of living comparable to a man on 640 acres. However, each should be willing to accept this reduction if on an equal percentage basis. This percentage of idle land, 8, 9, or 10 percent, could easily be adjusted by the Secretary of Agriculture.

Lands taken out of production under control regulations would be seeded and left lay for a period of 3 years, subject only to harvesting of nurse crop and clipping for weed control. This land would also be available for feed or grazing if severe drought conditions were to develop. This could be subject to ASC discretion.

Every man with equal acreage should be treated the same. (Farms with under 80 acres should not be cut proportionately to larger farms.) If the Congress requests the President of the United States to ask American farmers to help the Government, the real American would not turn this down.

Because of great dislike for some farm organizations in various parts of the country by individuals, we feel that veterans and other individuals could be contacted through ASC offices and volunteer their services. Extension service should be very willing to cooperate. Each farm cooperating with the leaders of this Nation could be given a sign reading, "I am cooperating with the the Department of Agriculture."

Most younger farmers, and many older farmers, realize that the time has come for the rank and file to ask for some type of controls. The family sized farm must be preserved. We must be willing to help ourselves.

The defense potential of the United States is based on the reservoir of manpower and commodities of the family sized farm. Its loss would cost dearly in the national effort.

CORN

Since corn is the basic crop in the Midwest and the basis for farm programs in this area, we recommend the discontinuance of using past history in arriving at acreage allotments. Instead it is urged that the basis of such allotments be made on tillable acres. Discrimination was practiced in the past against those who voluntarily reduced and controlled their production.

We recommend bushel quotas per farm, based on State, county, and township fertility levels, and in accordance with land prices in said counties. Each farm equal in fertility and equal in acres would receive the same bushel and acreage allotment. Because of the great desire for most farmers to overproduce, the bushel quota and acreage allotment system would tend to alleviate the Government storage situation.

The incentive for feeding should not be reduced. It is imperative that men selling their grain should accept an additional reduction either in the acreage allotments, or by leaving an additional percent lay idle. A limit of $25,000 be placed on the amount one individual could receive supports on.

Our long-range corn plan is in direct support of the program submitted by President Eisenhower as his alternate corn program. We feel that this plan should not go into effect for 1 year. Our reasoning is based on the fact that a feed surplus situation prevails. We believe that the Corn Belt should be willing to do their share in relieving this situation. In solution the price of corn should return to 90 percent of parity.

By using the idle acreage principle, corn allotments could be dropped by the year 1957. Soybeans, oats, hay, and other feeds in the Corn Belt would be reduced proportionately on most diversified farms. The rotation plans would continue as normal.

ASC offices could easily evaluate the problems of marginal and submarginal farms. Each office in individual countries are familiar with the soils and problems of the area.

An ever-normal supply of corn as set by the Secretary of Agriculture is primarily essential to the welfare and diet of this Nation. Ample supplies must be available in event of drought, plant and insert hazards, feed for the livestock producer, and national defense.

SWINE

Directly in line with the oversupply of feed grain came oversupply of hogs. It is imperative that a floor (temporary) of 16 cents per pound (live) at terminal markets be established. This floor would be retroactive to a period of comparable prices.

Sixteen dollars per hundredweight on top hogs (190–220) would tend to act as a floor rather than a ceiling.

With a return to normal on feed grains, hogs would never be in serious financial distress.

If this floor is attained and retroactive subsidy paid, each swine producer would automatically cut back his production 8 to 10 percent as outlined by the Secretary of Agriculture.

One producer would never be supported by government subsidy over 1 hog per acre or 100 head. One hundred head would be a maximum per individual or group of individuals. Partnership feeding which is quite common in the Midwest would permit one-half hog per acre up to 100 head each.

CATTLE

Cattle feeding operations in the Midwest are probably in a more disastrous financial condition than swine. However the operation itself is not as widespread or concentrated on the farms. At the present time it is not being dramatized as in the case of pork.

We recommend a floor of $24 per hundredweight on choice cattle at terminal markets. This floor would create little incentive to over-produce if the feed grain situation were normal.

Retroactive payments would be very difficult to obtain due to the wide difference in the grades of beef. If a program is adopted the beef producers (ranchers and feeders) could easily govern their projects by the price of feed grains supported at 90 percent of parity.

We feel that there is a widespread support for requiring packers to stop all feeding operations.

FINANCE

The extension of credit alone would not solve the financial problems faced by the young farmers (veterans or otherwise). Credit plus reasonable interest rates, however, are of major importance. Temporary relief must be enacted, but credit alone could place a burden on individuals that could not be escaped.

We feel that farm loans should be granted on an equality basis with urban loans. Loans on city property are readily available. It seems unfair that farm loans should require a higher percentage of downpayment than urban loans. Marginal and submarginal land loans are available to some extent; however, these loans should also cover soils of high fertility.

We feel that veterans especially should be accommodated. Their record of repayment on loans has been outstanding.

SURPLUS PROBLEM

We recommend that agricultural surpluses be traded on the world market for strategic materials. These materials could be stockpiled and used in the event of a national emergency. Any attempt to use these materials to lower domestic prices of said items should be blocked by law.

Imports of agricultural commodities already in excess in this country should be held to the lowest possible percentage under existing agreements.

Foreign aid should include products already in excess of normal supply needed to fill our own market requirements. Expanding foreign aid should include a larger proportion of our agricultural products.

Classics of Democracy—Index A–Z

EXTENSION OF REMARKS

OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 25, 1956

Mr. O'HARA of Illinois. Mr. Speaker, I am extending my remarks to include an index of the letters from representative Americans appearing in the extensions of my remarks in the general heading of "Classics of American Democracy." The columns on the right give the page and date of the CONGRESSIONAL RECORD in which the letters appear:

	Page No.	Date
A		
Allen Abrams, Rothschild, Wis., vice president, Marathon Corp.; director, National Association of Manufacturers	A583	Jan. 19
The Advertising Council, Inc., New York, N. Y.:		
See George P. Ludlam, vice president	A604	Jan. 20
See Theodore S. Reipplier, president	A605	Do.
Robert W. Akers, Beaumont, Tex., editor in chief, Enterprise and Journal	A491	Jan. 18
W. A. Alexander & Co., Chicago, Ill.:		
See Harve G. Badgerow, vice president	A605	Jan. 20
Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America, Detroit, Mich.:		
See O. J. Mischo, international secretary-treasurer	A667	Jan. 23
American Academy of Political Science:		
See William Anderson, past president	A494	Jan. 20
American Association of Advertising Agencies, New York, N. Y.:		
See Frederic R. Gamble, president	A604	Do.
American Broadcasting Co., New York, N. Y.:		
See Robert E. Kintner, president	A490	Jan. 18
American Federation of Hosiery Workers, Philadelphia, Pa.:		
See John J. McCoy, editor, The Hosiery Worker	A584	Jan. 19
American Federation of State, County, and Municipal Employees, Madison, Wis.:		
See John P. Caldwell, director, education and publications	A584	Do.
American Federation of Technical Engineers, Washington, D. C.:		
See Edward J. Coughlin, assistant to the president	A585	Do.
American Institute of Public Opinion, Princeton, N. J.:		
See George Gallup, director	A605	Jan. 20
American Legion:		
See Stephen F. Chadwick, past national commander	A602	Do.
See Harry W. Colmery, past national commander	A602	Do.
See Ray Murphy, past national commander	A666	Jan. 23
See James F. O'Neil, publisher	A603	Jan. 20
See Lynn V. Stambaugh, past national commander	A602	Do.
See A. J. Thomas, Jr., commander, Department of Florida	A603	Do.
See Enrique N. Vela, commander, Department of Puerto Rico	A669	Jan. 23

Corporation Mergers and the Antitrust Laws

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1956

Mr. CELLER. Mr. Speaker, under leave to extend my remarks, I insert herewith a statement I made before the New York State Bar Association, on January 25, 1956:

CORPORATION MERGERS AND THE ANTITRUST LAWS

(Address by Congressman EMANUEL CELLER, before the New York State Bar Association, January 25, 1956)

I have been looking forward to this happy reunion with so many good friends. I see in this audience a number of experts on the problems generated by mergers and the enforcement of the antitrust laws. It is, of course, like the proverbial carrying of coals to Newcastle to remind such a sophisticated group that the number of corporate marriages, the urge to merge, has caused national concern.

Consider that in the year just ended the number of mergers set a 25-year record and proceeded at a rate four times that of 1949. Consider also that through mergers, giant corporations have swallowed up small competitors on a wholesale scale. Indeed, in the last 5 years over 3,000 concerns have disappeared in this unrelenting process. This trend has taken many different forms.

Through so-called conglomerate mergers, huge corporations, not content to dominate one industry, are penetrating many other industries where the product or service offered is wholly unrelated to their original field. This is necessary, some spokesmen say, to provide greater diversification or round out a product line. Possibly so. But when this happens, the sheer economic power and vast financial resources of the giant entering the new industry threatens the continued existence of smaller competitors.

At times the pattern resembles a crazy quilt. Philadelphia & Reading Corp., a lead-

ing hard coal producer, announces plans to purchase the assets of the Union Underwear Co. Textron-American—itself the product of a multiple merger—has entered the electronics business and is prepared to take over the international cable business of Western Union Telegraph Co. ACF-Brill Motors, of Philadelphia, also a product of previous mergers, has recently taken over a food wholesaler and three food chains in Michigan and Oklahoma, reputedly to avoid taxation of its bus operations disposal.[1]

A rumor is now going around in financial circles—apocryphal, I am sure—that Worthington Pump will soon merge with International Nickel. The new entity I suppose will be known as Pumpernickel.

It is no wonder that the Wall Street Journal commented that the type of merger now going on strikes an old fogey with a sense of complete bewilderment. Rail equipment builders enter the road machinery and electronics field. A chemical concern proposes marriage to a washing machine maker. A coal mining organization acquires oil, shipping construction machinery, and machine tool firms. A construction contractor acquires a steel mill and a paint maker.

There is the human factor, too. Frequently, a plant is closed when a company is taken over, throwing people out of work and reducing the economic wealth of the community. Take the textile industry, for example. Many mills have been shut down in the wake of mergers. This has often caused aggravated hardship to mill employees and to the communities in which the closed plants are located. Thousands of displaced workers can not find jobs of any kind. In many instances, the closed mills formed the economic heart of the community upon which local governments, jobs, stores, professions, services, and churches depended for income.[2]

Not all mergers have had these unfortunate consequences. Many—those in the automobile industry are typical—have helped competition by strengthening the market position of the combined companies and their ability to compete more vigorously. Also on the positive side of the ledger some corporations have averted bankruptcy in this way. And some have assured themselves of adequate supplies during periods when materials are scarce and of guaranteed product outlets in periods of recession.

But the story does not end there. I think it is fair to say that many mergers can be attributed to the voracious appetite of certain giant organizations; their acquisitions, which are sometimes motivated by personal factors of prestige, are on the increase. On the other hand acquisitions by small corporations have declined significantly.[3]

What about the characteristics of the concerns that have been taken over? Have the corporations that have been engulfed in the current wave, been the financially weak, the unsound organizations that needed rescue? Were they, in the main, too highly specialized, poorly organized, or inefficiently managed? The answer is, no. Even a casual glance at their identity reveals that many were growing, efficient, profitable, vigorously competitive businesses.

In dealing with this problem there are, I think, a few obvious fundamentals which are sometimes lost sight of, if not ignored entirely. The basic objective of the antitrust laws is the preservation of a free competitive enterprise system in which economic activity is controlled so far as possible by the market and not by men. Those who enacted our antitrust laws believed that the market should control business decisions, not businessmen the market. They strove to safeguard and preserve genuinely workable, effective competition, the kind where prices, output, wages and other rewards depend not on the decisions of a few but result from the day-to-day actions of rival business firms, independently motivated. This decentralized brand of decision-making, they knew, would insure a maximum not only of individual opportunity, but of political liberty.

These familiar landmarks may be obvious but they are sometimes taken for granted. Recall the report of the Attorney General's National Committee To Study the Antitrust Laws. Although it was prepared by a group of illustrious lawyers and economists, it does not, in my opinion, come to grips with some of these fundamentals. As one member pointed out, it did not "consider the vast changes in industrial structure that have occurred since the enactment of the Sherman Act—and the significance of these changes to the functioning of markets—nor did it consider the relationship of the law and its interpretation to these changes."[4] The majority version of this highly publicized document chooses to ignore the great combination movement at the turn of the century, the less spectacular movement of the 1920's, and the similar movement now taking place. Critics point out that the majority nowhere uses the term "merger movement" or discusses its significance.[5]

Yet the fact is that the basic objective of the antitrust laws has been frustrated in considerable part by mergers which have resulted in giant aggregations that have obtained economic power to control price and supply, yes to dominate many industries.

The growing domination of the market place by the larger corporations was recently highlighted by the Senate Small Business Committee which reported these facts:

"While the prosperity of 1955 brought a profit rate of 14.4 percent to the biggest corporations (those with assets over $100 million) the smallest group (those with assets of less than $250,000) reported earnings in the first 6 months of but 4.45 percent. * * * Between the first halves of 1952 and 1955, while the giant companies earnings 'went through the roof' the smallest manufacturing plants profits headed for the cellar. Expressed in percentages the earnings of the small concerns fell off 27.4 percent between the two periods while the earnings of the large companies increased by 58.5 percent.

* * * * *

"There is an ominous significance," the report concludes, "in an economic atmosphere which makes it possible for the Nation's mammoth corporations to reap record profits while the general run of small enterprises are worse off than they were 3 years ago."[6]

What is more, the trend in industry after industry is in the direction of fewer companies of greater size. The fact is that the long-term rise in industrial concentration in this country is to a considerable extent due to what my economist friends refer to as external expansion of business, which is another name for mergers. Indeed, the power of the industrial leaders in steel, copper, cans, dairy products, to name but a few, is primarily attributable to this reaching out and buying up other concerns, not to natural growth. Many major companies in this country actually acquired nearly all their assets by merger. I am not overlooking, of course, the part tax considerations have played in pushing forward the merger movement.

A 1955 Federal Trade Commission report observed that recent merger activity has been most marked in the machinery, food, chemicals, fabricated metals, transportation equipment, and textile industries. In each of these fields, there were over 100 consolidations in the period from 1948 to 1954.[7] It is significant that these industries are not the more heavily concentrated ones. This is readily understandable. Mergers in industries where concentration has existed historically, have not been more widespread simply because there are only a few small concerns available for purchase to begin with. The point is that when you find a large number of consolidations in a given industry, you will also find that a good deal of competitive enterprise existed up to that time.

Another aspect is that many mergers have a competitive effect that mushrooms out. The impact reaches small firms which may have to compete with a consolidated corporation; it reaches customers of the acquired enterprise, who have found their former source of supply cut off; it reaches former suppliers of either of the combining corporations who find that their products or services are no longer needed; and it reaches firms who have lost an important outlet for their products as a result of the acquiring corporation's decision to have its products sold exclusively to the marketing organization of the acquired corporation.[8]

These are some of the reasons why Congress has been deeply concerned about the direction in which merger movements are reorienting our system of free-competitive enterprise. And this is why the Celler-Kefauver Antimerger Act was placed on the statute books in 1950.[9]

The act, as you are aware, closed a widely exploited loophole in the Clayton Antitrust Act of 1914. This loophole existed because section 7 of that act applied only to corporate mergers accomplished by stock purchases. Companies could circumvent the law by the simple device of buying up the plant or other assets of a second concern—thus leaving the enforcement agencies powerless. The Celler-Kefauver Act, among other things, plugged this convenient gap by amending section 7 to forbid corporate mergers no matter if accomplished by asset purchase or stock purchase if the effect may be substantially to lessen competition or tend to monopoly in any section of the country.

I hasten to add that this new law does not prohibit all mergers; nor does it prohibit mergers between competitors where the effect on competition is not substantial. Imbedded in the legislative history is the principle that consolidations which enable smaller concerns in an industry to compete more effectively are in the public interest.[10] At the same time the act does not legalize mergers which were illegal under old section 7. Changes made by the new law were intended to enlarge th coverage of that section to apply to all types of corporate mergers and acquisitions—horizontal, vertical and conglomerate—which have the specified effects of competition.[11]

I recognize that it is a difficult task to ascertain the probable effect upon competition of a particular transaction. Certainly there is no infallible answer to the problem of screening out so-called good mergers from those that are bad. However, I insist that every effort must be made to find out.

Some contend that no action should be taken or even that no inquiry should be made because the percentage of bad mergers may be comparatively small. I reject this argument. The percentage of motorists who violate traffic laws is likewise small; so is the incidence of homicide. Nonetheless, I fell that we should constantly strive to reduce the margin still further by continuous and thorough scrutiny, by seeking ever better preventive measures, and by more vigilant enforcement.

The problem may easily be oversimplified. The most voluble but least helpful are those critics who see the issue only in terms of black or white. Some contend that all mergers are bad. Exponents of this view are

Footnotes at end of speech.

Footnotes at end of speech.

Footnotes at end of speech.

anyone in this second group would concede that any proposed, highly profitable business merger could ever be potentially damaging to competition. From their point of view, most every merger strengthens competition few in number. Many more subscribe to the theory that all mergers are good. Certainly it would come as a decided shock if or is indispensable for technological progress.

It is sometimes convenient to forget, however, that normally news of strengthened competition is interpreted to mean lower profit margins and therefore a decline in stock market prices. How account then for the almost invariable increase in stock market prices when these so-called "competition strengthening" combinations occur?

Nor is it demonstrably true that the concentration of research expenditures in large firms results in important product and process innovations by these firms.[12] On the contrary there appears to be no necessary correlation between giant size and technological advance.[13]

Frequently, I am asked: What criteria determine whether a particular transaction would be in violation of the Celler-Kefauver act. A good starting point in my judgment is afforded by the House and Senate Committee reports on the bill. As these reports indicate, the act is addressed to situations in which large enterprises extend their power by successive small acquisitions. The cumulative effect of this process may be to convert an industry from one of intense competition among many enterprises, to one where 2 or 3 large concerns produce the entire supply.[14]

The law may be violated in other ways: by eliminating in whole or material part the competitive activity of an enterprise which has been a substantial factor in competition; by increasing the relative size of the enterprise making the acquisition to such a point that its advantage over its competitors threatens to be decisive; by unduly reducing the number of competing enterprises; or by establishing relationships between buyers and sellers which deprive their rivals of a fair opportunity to compete.

The Senate report summarizes the legislative objective in a few words: it is "to cope with monopolistic tendencies in their incipiency and well before they have attained such effects as would justify a Sherman Act proceeding."[16] In short, the necessary inference may be drawn if the future competitive effect may be shown to be adverse, even though the actual anticompetitive result cannot be demonstrated. This statement of legislative intent is important in resolving this basic question: What quantum of evidence is necessary to satisfy the test of illegality where a leading company in a market acquires a competing concern whose share of the market is likewise substantial?

Two approaches are possible. The first is to regard these facts alone as sufficient to support the inference of potential damage. The alternative is to open the door to a Sherman Act "rule of reason" type of inquiry. This means looking into all the economic factors including the competitive pattern of the industry as a whole and its markets, the acquiring company's market position, the market position of the acquired company, and the market position of its major competitors.

It is helpful to bear in mind that the new section 7 (Celler-Kefauver) test of illegality is identical with the test under other sections of the Clayton Act, section 3 for example. Both sections predicate illegality upon whether the "effect may be substantially to lessen competition." True, section 3 is focused upon exclusive dealing and requirement contracts, that is arrangements whereby sellers prevent their distributors from handling competitors' goods. But the point is that such arrangements have the same effect as mergers in shutting off part of the market to competition.

Indeed, comparatively speaking, a merger operates as a more basic restraint upon competition than control of distribution outlets. As one economist put it, "a set of requirement contracts are a loose and revocable form of association; they exclude from the market between the contracting parties all other parties for a limited period. A merger through the purchase of stock or assets is permanent, and excludes all others for good."[17]

These considerations alone would indicate that the tests used by the courts in construing the effects clause of section 3 should be persuasive in interpreting the same clause of section 7. In addition, the House Judiciary report on the new section 7 specifically points out that the tests of illegality "are intended to be similar to those which the courts have applied in interpreting the same language in other sections of the Clayton Act."[18]

In this context the Standard Stations[19] decision of the Supreme Court, handed down only 2 months before the House Judiciary report was published, takes on added importance. There the Court was called upon to construe the "effects" clause of section 3; it held that a system of exclusive dealing contracts employed by a leading company in the market and covering a segment of the market that is substantial, is illegal without more. In this view, it was unnecessary to consider evidence of the actual effects of these contracts or the economic justification for their use. This case makes it clear that to require proof that competition has actually diminished or to insist upon a general rule of reason inquiry into the effect of these exclusive supply contracts, would in the Court's words "be to stultify the force of Congress' declaration that requirement contracts are to be prohibited wherever their effect 'may be' to substantially lessen competition."[20]

I am aware that the Standard stations approach even in its own realm of exclusive dealing arrangements has been viewed with alarm by some commentators—the words "extreme, unsound, and insupportable in law or economics" have been used to characterize the decision.[21] By the same token, these commentators view with even greater alarm—they consider "catastrophic"—any doctrine that deviates from a rule of reason inquiry even in Clayton Act merger cases.[22] This view is apparently shared by the Federal Trade Commission as well, to judge from its decision in the Pillsbury case,[23] the first and only decision under the new Antimerger Act.

That case, it will be recalled, involved corporate acquisitions by Pillsbury Mills (the largest in the Southeast and the second largest in the Nation) of two substantial competitors. Although these transactions enabled Pillsbury to move into first place nationally in the mix market and to increase its leading share in the Southeast from about 23 percent to 45 percent, the Commission held, in an opinion written by former Chairman Howrey, that the Standard Stations decision had no application to the new antimerger law; instead the Commission said "there must be a case by case examination of all relevant economic factors in order to ascertain the probable economic consequences of corporate mergers and acquisitions."

I would make no secret of my sharp disagreement with the rationale the Commission developed in this case. Its line of reasoning, I believe, blurs the distinction between the Sherman Act and the Celler-Kefauver Act and weakens the Celler-Kefauver Act as an effective weapon for dealing with mergers. Consequently, the members of our Antitrust Subcommittee—and I think I may include the Department of Justice also—cannot go along with the Commission on this score. We believe, in contrast, that when a leading concern merges with an important competitor, an inference of potential danger to competition may be drawn without further inquiry. When the body economic suffers a severe paralytic stroke, it is scarcely credible that Congress desired treatment to be delayed while extended argument takes place as to whether the patient is in danger.[24]

Because of the scope and extent of economic evidence the Federal Trade Commission permitted, the Pillsbury case bids fair to become another *Jarndyce* v. *Jarndyce*. Over 2 years have already elapsed since the initial decision; I understand that evidence is still being taken and that the end is nowhere in sight. If a final adjudication takes place in the courts less than 4 years from now, I would be greatly surprised. The possibility of restoring the competitive situation and providing adequate relief will certainly have disappeared too, since by this time the assets of the combined firms have become thoroughly commingled. This makes the task of unscrambling them a virtual impossibility.

If force and effect is to be given the congressional intent, the Commission must, of course, reexamine its Pillsbury doctrine at the first opportunity. It must also make it clear that it is not conducting extensive economic investigations for the purpose of adding to the general fund of knowledge—as it seems to be doing now.

I should not want this disagreement construed as personal criticism. As a matter of fact, I have the highest regard for former Chairman Howrey, for Judge Gwynne, the present Chairman of the Federal Trade Commission, and for Judge Barnes, who heads the Antitrust Division.

Beyond that, as our antitrust subcommittee pointed out, merger enforcement activity has been seriously hampered by lack of funds. It is highly gratifying, therefore, that the subcommittee's recommendation that the Congress grant substantial increases to the Department of Justice and the Federal Trade Commission for merger work, has been incorporated in the President's budget message, in terms of a specific request for a 25 percent increase in funds for the Federal Trade Commission to be used solely for this purpose.

Apart from an increase in funds, 5 years of experience in administering the Celler-Kefauver Act have demonstrated a need for additional statutory authorization in order to improve enforcement procedures. To begin with, a needed amendment is one that would make mandatory the advance notification and reporting of mergers involving larger concerns. The Antitrust Division and the Federal Trade Commission now learn of proposed or pending mergers by scanning financial periodicals, trade journals and other publications. Needless to say, this is a horse-and-buggy procedure. Many important mergers may be consummated without adequate or timely notice in the press. Furthermore, there is a drain on the energy and funds of the Government agencies in order to compile economic data in the face of a contemplated merger, to determine whether a full-scale investigation should be undertaken.

While I am not wedded to the form a bill should take, I am strongly in favor of premerger notification and reporting legislation, covering corporations whose combined as-

Footnotes at end of speech.

Footnotes at end of speech.

Footnotes at end of speech.

sets exceed $10 million. They should be required to file notice of the proposal with the Federal Trade Commission and the Department of Justice, 90 days in advance of the transaction. An additional provision should require the companies to furnish the enforcement agencies with such information as they may request. This would not be a particular burden on the companies since the data necessary would be of a type that is readily available to them.

To avoid any possible confusion, let me make it clear that none of the bills being considered by our committee would require proposed mergers to be cleared or approved in advance by Government agencies. That is not the purpose of premerger notification and reporting provisions .

There is also need, I believe, for a corollary amendment that would give the Federal Trade Commission authority, similar to that now in the hands of the Attorney General, to seek a preliminary court injunction restraining consummation of any corporate merger pending final adjudication. This would preserve the status quo until the merger legality was determined.

For the past week our Antitrust Subcommittee has held hearings on three bills dealing with these special problems, one sponsored by Representative PATMAN and two by myself. Representative KEATING also introduced a bill dealing with premerger notification and reporting.

With the support of organizations such as yours, I am extremely hopeful that appropriate legislation can and will be enacted during this session of the Congress.

It would be well to understand the significance of the intensive acceleration of mergers. What is at stake here is the economic vitality of our country itself.

[19] *United States* v. *Standard Oil Co. of Calif.* (337 U. S. 310 (1949)).

[20] Supra, p. 313. In the *Standard Fashion Co.* v. *Magrane-Houston Co.* (258 U. S. 346 (1922)), the High Court held that section 3 of the Clayton act was transgressed by exclusive dealing arrangements between a pattern manufacturer and retail establishments, upon a showing without more that the manufacturer controlled about two-fifths of the pattern outlets of the country. The Court rejected arguments advocating a broad Sherman Act type rule of reason inquiry into economic consequences which, it was urged, was necessary to ascertain the actual effects of the exclusive arrangement.

[21] See for example Handler, Monopolies, Mergers, and Markets: A New Focus, trade regulation symposium, trade regulation committee, Federal Bar Association, 1954, pp. 33–34. One argument usually made by these commentators is that the House Judiciary report on the Celler-Kefauver bill "approved" *International Shoe Co.* v. *Federal Trade Commission* (280 U. S. 291 (1930)). That case involved a merger of two leading shoe manufacturers who, according to the Court, did not substantially compete with each other in more than 5 percent of the relevant markets. The Court refused to hold the transaction illegal under old section 7, for the reason among others, that the companies were not in substantial competition with each other. In the opinion of the Court section 7 dealt with such acquisitions as probably will result in lessening competition to a substantial degree—that is, to such a degree as will seriously injure the public. The decision obliterated the distinction between the Sherman and Clayton Acts test of illegality. See *Standard Oil Co.* v. *Federal Trade Commission* (282 Fed. 81 (1922)), *United States* v. *Republic Steel Corp.* (11 Fed. Supp. 117 (1935)). See also Schwartz, *Potential Impairment of Competition* (98 U. Pa. Law Review 33 (1949)).

While it is correct that the House Judiciary report cited International Shoe (H. Rept. No. 1191, 81st Cong., 1st sess. (1949), p. 7) the reason is quite different than that suggested by some of the critics to whom I am referring. The report cited the case to make it clear that the Celler-Kefauver bill would not make illegal mergers between small companies, which afford greater competition to large companies. The context in which the discussion of International Shoe occurs indicates that since direct competition between the two companies involved in International Shoe was not substantial, the case could be regarded for illustrative purposes as analogous to a merger between small companies. That the House Judiciary Committee hardly intended to have its bill merely duplicate the Sherman Act is plain from the report which states that "it is not the purpose of this committee to recommend duplication of existing legislation."

Any lingering doubts about this were put to rest by the later Senate report on the bill (S. Rept. No. 1775, 81st Cong., 2d sess. (1950)). The Senate committee commented on the "tendency of the courts in cases under (old section 7) to revert to the Sherman Act test" (p. 4), and stated that it wished "to make it clear that the bill is not intended to revert to the Sherman Act test." The Senate report contains a sharp reminder that "the intent here as in other parts of the Clayton Act, is to cope with monopolistic tendencies in their incipiency and well before they have attained such effects as would justify a Sherman Act proceeding" (pp. 4–5). Also the report noted that "a requirement of certainty and actuality of injury to competition is incompatible with any effort to supplement the Sherman Act by reading incipient restraints" (p. 6).

Those who insist on inflexible application of the rule of reason under the new act, it may be concluded, would not only ignore the congressional mandate, but favor standards that are all but indistinguishable from those of the Sherman Act. The ultimate result of such logic would be to render the new act a dead letter for all practical purposes.

[24] In order that there be no misunderstanding about my position, let me make it clear that if the merging concerns are not leading ones, a rule of reason type of inquiry may be entirely appropriate even though the volume of trade affected is quantitatively substantial. But that is not the kind of situation to which I am now addressing myself.

Politics, Writers, and Artists

EXTENSION OF REMARKS
OF
HON. JAMES J. DELANEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1956

Mr. DELANEY. Mr. Speaker, the following interesting address was given by the Honorable Carmine G. DeSapio, secretary of state of the State of New York, before the Dutch Treat Club of New York City at a luncheon on January 17, 1956:

POLITICS, WRITERS, AND ARTISTS

It is a great pleasure for me to visit with the members and friends of the Dutch Treat Club. I very much appreciate this opportunity to join with you today, although I must confess that I am not a little apprehensive about addressing such an audience. You people—with your words, your music, your drawings—with the art which you create and the culture which you inspire, give really articulate expression to the times in which we live, and to the history which each exciting new day makes.

You are the people who not only interpret public thinking, but to a very large degree, shape public opinion. And for the most part, you are the vigilantes of good government, at the same time that you are the barometers of the public attitude.

I haven't had sufficient time to check the enrollments of all those present here this afternoon, but on the rare chance that there may be a few Republicans in the audience, I will exercise the utmost restraint and try to keep my comments on as nonpartisan a level as possible.

It is not very easy, these days, to determine just why people become involved in the efforts and activities of one of the major political parties as against the other. I would guess that for the most part, the se-

lection of a party or dedication to its work, is the result of little more than pure chance. I have never researched the matter, but it is my feeling that most of us originally became Democrats because our parents were Democrats; or Republicans because our friends or neighbors were Republicans.

Certainly, there is no question that millions of people vote other than a straight party ticket, and other millions change their political allegiance from election to election. For as issues change, as platforms adjust themselves to the new problems of new eras, so too do the votes of large groups of American citizens change. The farmer, more often than not, votes as a farmer, and supports that party which he feels represents his best interests as a farmer. The same is true of city workers, professionals, union leaders, businessmen, and most other segments of our population. And I suppose, when you get down to basics, that is why both parties try to sell their programs to as large a cross section of the American electorate as possible. And if it so happens that one of the parties, philosophically or even traditionally should happen to lean more sympathetically to one group in our population than to another, you may be sure that that party will make every effort to conceal the fact, at the same time that the opposing party makes every effort to proclaim it.

This, my friends, is where you, you who mold public opinion, have a unique and a rare opportunity. Your interests need not be partisan. Your efforts need not be aimed at the achievement of particular election results. Yours is the happy and constructive lot of being able to call the turns as you see them, without regard for political consequences.

Nor does this mean to suggest that politicians necessarily are completely selfish and biased. For although it is quite true that to the politician, winning the election is paramount, it is equally true that with very rare exception, the American politician is as patriotically devoted to his country as any good American would want to be.

But I would be the first to admit that politicians are perfectly fallible, and that our political parties are nothing more nor less than the men and women who constitute them—just as government is nothing more nor less than a reflection of the programs and the attitudes of the political parties in office.

And I suppose, that so long as there is politics, and so long as there are political parties, there will be axes to grind and there will be biased views. There will be arguments and debate. There will be praise and vilification. There will be applause and derision. There will be accolade and insult. There will be confusion and contradiction.

But it is also true that so long as there are opposing political parties, America will be great and strong.

We have witnessed a strange phenomenon in American politics in recent years—one which was brought into dramatic focus the other day, by the President's state of the Union message. For in that message, was defined what is at least an expressed acknowledgment on the part of the Republican Party of the need for social legislation and for recognition of the responsibility of Government to help those who are unable to help themselves.

I have heard many people in both parties characterize the President's state of the Union message as "New Deal" both in tone and in aim, and as being in keeping with what has long been the democratic philosophy of government. And in the absence of any evident rebellion from such Republican stalwarts as Senators JENNER, GOLDWATER, CAPEHART, and BRICKER, it is fair to conclude that the President set forth the new policy of the Grand Old Party. When you review this message in the light of statements of principles which have been made by the Republican legislative leaders in New York, and by other Republican spokesmen throughout the country, you must come to the conclusion that if the Republicans haven't actually accepted a program of liberal government, they at least believe that this is what the people want.

Now you and I know that our country can never be the long-term beneficiary of the kind of campaign strategy in which both parties seek to out-promise each other. And we know too, that the two-party system loses much of its strength and meaning if both parties claim to seek the same thing, differing only on the question as to who could accomplish them quicker and better.

Our security as a Nation—indeed, the very safeguarding of our liberty—depends upon the acknowledgement and forthright declaration that there are fundamental differences between the two parties—differences in psychology, in philosophy, in tradition, in approach, in ideas and in objective.

Now I don't mean to suggest that the Democrats should claim a monopoly on social reform, any more than the Republicans have a right to claim a monopoly on sound economics. I don't believe that either party has an exclusive franchise on sincerity, on integrity, or on dedication.

But I do believe that the character of our governments—whether local, State, or Federal—should be appraised in terms of their achievements; as well as in terms of the history, the backgrounds and the philosophies of the men who administer these governments to say nothing of the tradition of the particular party in office.

And just as honest debate and vocal difference of opinion is necessary to the preservation of our system of government, so is it extremely dangerous to take the myopic view, if you are a Democrat, that everything the Republicans do should be attacked, or if you are a Republican, that everything the Democrats do should be ridiculed.

Changing times bring changing challenges and different needs. No party, no system, no government can survive the determination to stand still either in reflection on the glories of the past, or in fear of new experiments. We have no choice but to move forward, for it is impossible to stand still in today's moving world. Static thinking has no place in a dynamic era, and certainly not in the age of the atom.

You are the last people in the world I need remind that we stand on the precipice of disaster. But, by the same token, we stand too, on the threshold of new wonder, of new glory, of new advancement. For just as the atom is an awesome force of destruction, so too, is it a wondrous source of creation. And which of these it shall be, depends entirely on the decisions which are made in the next few years.

It is perfectly true—and has been true through the ages—that the people are possessed of infinite wisdom. They need only to be armed with the facts, to give expression to their inherent sense of humanity and to their natural instinct for being correct. This truism poses for you, my good friends—you who are gathered in this room today, together with your counterparts throughout the country—a responsibility of incalculable magnitude.

The people read your writings and are influenced by what you say. They listen to your analyses and they accept your authority. They study your pictures and drawings, and their judgments are formed. They look to you—as leaders in the arts—for objective guidance for accurate portrayal and for honest leadership.

Whether or not the people obtain these, is for your own consciences to decide. From politicians they get—as they expect—partisan propaganda. From the newspapers, from magazines, from radio, from television they expect—and should get—the unvarnished; the uncolored truth.

When the politician guesses incorrectly—when he fails to anticipate and understand the people's wishes—his mistake becomes graphically evident on election day. He is then faced with 1 or 2 alternatives. He can invite disaster for himself by seeking to impose his thinking on the people and hope to have better luck next time, or he can adjust his policies and his program to conform to the voter's wishes.

But he cannot lure public interest with a dramatic presentation which subtly conveys a particular viewpoint. He cannot attract an audience to his thinking through comic strips or entertaining columns, or because he is a needed and necessary source of information on what is going on in the world. The politician cannot reach the voter every day with a cartoon that carries both interest and impact.

He is limited to the distribution of partisan literature, or to the delivery of partisan speeches. And he is almost always dependent upon you people to help get his message to the public. He can never hope to get into the homes and the minds and the hearts of the people every day—as you do—and even if he could, the chances are his message would be one-sided and slanted.

Now the question presents itself: Are the editors and writers and commentators and artists to deny themselves the same right to human thought and emotion with which the politician should like everyone to believe he is possessed? Don't they have ideas and tastes and individuality of thought and opinion? The answer obviously, is yes. But they have one other thing—they have an overbearingly profound responsibility as teachers of the people.

My friends, would you tolerate the partisan teaching of our children in the schools? And I ask, Aren't the people of letters, in fact the teachers of history, in the classroom of the world?

Needless to say, it would be sheer folly to deny the right of editorial expression to any American, least of all to a person in the arts. But in your case, there is an added—an awesome—responsibility. It is for you to dispel confusion. It is for you to fulfill the right of the American people to know all of the facts—to know where they have been; where they are; and where they are going.

There is a distinction between exposition and explanation, as against interpretation and opinion. There is a world of difference between stating the facts and then expressing a judgment; and misstating or misemphasizing the facts in order to prove a judgment.

President Eisenhower, Governor Harriman, Mayor Wagner, and other public officials everywhere will tell you how difficult it is to attract outstanding men and women to public service. The salaries are low; the hours are long; the work is hard. And instead of honor and respect and appreciation for their sacrifices, they live in constant fear of attack and vilification. Leonard Hall and Paul Butler—and party leaders throughout the country—know how difficult it is to attract men and women to political activity, because the politician too often is depicted as a sinister, evil disciple of corruption and greed.

And yet, where would America be, where would the world be without politics, without men and women who recognize that it is not enough for a citizen merely to cast his ballot, but rather that it is the duty of every citizen to be a part of and an influence upon his party and its decisions? And just as our bad public officials, and bad politicians, and bad businessmen, and bad labor leaders, and bad newspapermen should be exposed and turned out of positions of trust, so too, should no group be maligned; no segment of our society be forced to carry the cross of the minority of maldoers in its particular field.

I would strip the halo from the hypocrites, and I would strip the mask from the phonies. But to condemn a politician or a party, either because of the wrongdoings of a few, or by the application of ancient history, is to condemn our American system of government.

I hope you will pardon the probable presumptuousness of what I say, and understand that when I suggest that some of those who have the responsibility for disseminating public knowledge may not be doing so with complete fairness, I allude to a small minority, the kind of minority which exists in my profession, as well as in yours, and in all others.

But I feel, as you must, that there is no place for politics as usual in these perilous times. Our children, their children, and their descendants for generations to come will never forgive the mistakes we make today, assuming that those mistakes do not foreclose the existence of future generations.

It is as unsound as it is precarious for our teachers—for you—to take the view, in January of 1956, that whoever the Republicans nominate should be defeated, or that whoever the Democrats nominate will be no good. It is, rather, for all of us—Republicans and Democrats alike—to agree on one simple principle, and that is that the most vital responsibility which both parties owe to America and to the world, is to nominate the best possible candidates for the overwhelming important office of President.

My friends, if both parties put forward the best possible candidates, the people will win the election.

And, although, as partisans, it is our privilege—if not our duty—to believe in the party of our choice; to believe in its program; to believe in its leaders and to believe in its heritage, it is our first duty as Americans, to safeguard the welfare of our country.

The election campaign which we approach will be unprecedented in many ways, not the least of which will be in enthusiasm on the one hand, and in bitterness on the other. I am sure that none of us need fear the consequences of the campaign in terms of the future of our world position, because history has proved that every free election makes every democracy so much the stronger, at the same time that it brings to the world a new lesson in the meaning of freedom.

But we can dramatize this lesson at the same time that we render great public service by assuring that the people will hear all sides of all questions in free and frank discussion.

In modern times, the complexion and character of election campaigns have changed to the point where both parties are very largely dependent upon radio and television for reaching the voters with their messages.

You people know better than I, how expensive this is. I read recently where the Republican Party has budgeted more than $8 million for radio and television alone, and this naturally places a similar onus on the Democratic Party, for it too, must seek to reach the same number of people, the same number of times. Where do these vast sums of money come from? Obviously from the contributions of party supporters. And, needless to say, many of those who make substantial contributions to the party of their choice, expect to benefit in some manner. This benefit may be in the nature of an appointment to the cabinet or in some other form of favor and recognition.

The extent to which a political party is beholden to large contributors is the very extent of the weakness of our governmental structure. And that is why it may be well for us to consider the advisability of consolidating a large part of the public service time, which our radio and television networks so generously apportion throughout the year, to the period of an important campaign. The less money the party feels compelled to spend, the less it will depend on large contributions and the more it can appeal to the general public for support. No person has the right to buy, and no group has the right to own a political party. No political leader should be beholden to a contributor, because our political parties belong only to the people and not to any individual or group of individuals. And assuring this too, my friends, becomes your responsibility, as well as the responsibility of our political leaders.

I thank you for your patience and courtesy. I thank you, too, for your gracious invitation to join with you today. You will pardon me, I am sure, if I was somewhat partisan, but I don't think you would expect me to be otherwise. It is on two-party partisanship that our Nation grew strong. And it is on awareness and enlightenment that our Nation will grow even stronger.

Who Made the Money on Your Hogs?

EXTENSION OF REMARKS

OF

HON. ROY W. WIER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1956

Mr. WIER. Mr. Speaker, under permission to extend my remarks in the CONGRESSIONAL RECORD, I include items from two publications, one from the Farm Journal, a Pew publication of Philadelphia, Pa., and the other from the Packinghouse Worker of Chicago, Ill., both being issues of January 1956.

For some time back the consumers have been wondering when they are going to get the benefit of the lower prices the farmers have been "enjoying" the past 3 years. The article from the Farm Journal at least indicates where some of it is going. It will be of further interest when we learn that what the chainstores take out of the cut as they, too, are now in the packing business as well as retail distribution.

Of course, the Farm Journal could hardly be expected to discuss any problem of economics without taking a crack at labor. They do not give any percentages as to the added percentage returned to labor. They just generalize, which perhaps is better to serve their needs. They represent a philosophy that must convince the consumers in the cities that the farmer with his price supports is the cause of their high cost of living. In turn the farmer must be convinced that his difficulties arise from the "exorbitant" rise of labor's wage.

No doubt this will be more noticeable from now on until November. There will be no figures on a percentage on labor return as over 1953 or 1954, neither will there be any on the percentage increase on the productivity of labor through automation. For that reason I am requesting the permission to insert both articles.

The article from the Farm Journal follows:

WHO MADE THE MONEY ON YOUR HOGS?

Hog prices in 1955 skidded to the lowest level in 14 years—while the margin between farm hog prices and retail pork prices ballooned to the highest levels on record. Beef margins also widened. We now have better figures on who got the money.

Remember "Who's Making the Money on Your Hogs?" in December Farm Journal? Dean Wolf reported that organized labor all along the line was doing considerably better, but he had trouble learning just how well packers and meat counters were doing.

This will help complete the picture—now that six major packing companies have reported earnings to their stockholders (however, all their earnings aren't made on meat):

Swift & Co.: Sales tonnage reached a new high; net income topped $22 million—a 20 percent increase over 1954.

Armour & Co.; Net is $10.1 million—5½ times more than in 1954.

Wilson & Co.: Declared its first dividend on common stock since 1952. Last year it cleared $3.1 million; is expected to clear more than $4 million for 1955.

Cudahy Packing Co.: Net earnings in 1955—$2.7 million—are the highest since 1950.

Geo. A. Hormel & Co.: Dollar sales hit a new record; net earnings reached $3.7 million—more than double a year earlier.

John Morrell & Co.: Sales up considerably; net reached $2.7 million—an increase of more than 4 times over last year.

"Some of the companies didn't do very well in 1954," reports an observer close to the scene, "but they did a great deal better in 1955."

It's still too early to know how the food chains did last year, but they'll be reporting earnings soon. Their meat counters account for about a fourth of their volume.

The Packinghouse Worker article follows:

COMING SOON: THE FULLY AUTOMATED SAUSAGE

We have seen plenty of mechanization already. What we are about to see is automation.

What's the difference? To put it as simply as possible, when machines start running the regular machines—that's automation.

The question is, what about the people? It has been tough enough to struggle with the problems tossed in our laps when a single new machine comes along, a wienie peeler for example. How big will the headache be when the wienie peeler is hitched into a series of machines to run product straight from the sausage grinder, through the stuffer, the smokehouse, and on past the packaging units directly to the shipping room?

The only operator left will be the person who pushes the button marked "franks" or the one marked "salami."

MEAT INSTITUTE

All this was discussed very pointedly at the most recent session of the American Meat Institute. Some 6,500 of our bosses were there to trade ideas and get "hep" to the very latest.

As a result of a speech by C. E. Evanson, one of the country's leading engineers specializing in automation, you may be sure that your own plant superintendent is looking at his sausage room and his entire smoked meat operation with a new light in his eyes.

"Today, any company can have an automated kitchen," said Evanson. At the same time he warned his listeners that "the non-automated plants will be the 'also-rans,' getting the crumbs left over from the more efficiently run organizations, constantly combatting uncontrollable seasonable ups-and-downs, and living from one period of layoffs to another."

Evanson laid it on the line to the industry monguls. "It readily becomes apparent," he said, "that the companies which automate first have the best opportunity to get

the lion's share of our expanding market. They will be the ones who will have the greater sales potentials through increased production, improved quality, reduced cost and stabilized employment."

Getting down to cases, Evanson plunged into a practical discussion of the automation possibilities in meat packing, scolding the industry as he did so for being asleep, so far, to its biggest opportunities.

"When one outside your field sees what other companies and other industries are doing in automation—companies which do not have the volume, do not have the assured markets, or the stable product which you people are so fortunate to have—it becomes difficult for many of us in automation engineering to understand why your great industry does not do more in the field of automation," Evanson said.

AUTOMATIC CONTROLS

Every sausage department has a diversified range of products, different products, different formulas, and different operations. These problems can dismay the uninitiated who have not encountered and surmounted similar problems in similar industries, but once the various formulas have been developed and have been based upon factors which can be measured, then it does not matter how many formulas you have or what balance of ingredients you use, because whatever the balance requires, you have a formula for it.

Controls developed for your processing will enable you to produce your product according to your formula more positively and more consistently than with any skilled operator. In other words, you use the skill and experience once to develop the formula and formulation.

From then on you allow the equipment to do the work and use the controls to see that the equipment adheres to the process. The same principle applies all along the production line. When certain formulas need more time for cooking or require different temperatures, the equipment is preset at the same time at which the formula was decided upon. Once established the equipment maintains its setting through feed-back control.

PUNCHED CARD

Today, any company can have an automated kitchen. The only limitation to automatic continuous processing is the present status of the stuffing operation. As you know, a great deal of time and effort is being put forth currently to develop a casing which can be fed and stuffed continuously and automatically.

When this is accomplished the manufacture of sausage will be completely automated from the beginning of the kitchen operation through the packaging because automatic means already have been developed for linking, handling, weighing, and packaging the product.

With proper electrical and electronic controls, the sausage maker who produces relatively small quantities of various sausage can be automated as efficiently as the larger producer who manufactures one type of sausage on each production line. Just as electrical test circuits can be changed instantaneously by inserting a punched card into a reader in place of a differently punched card, so can the smaller sausage kitchen, which has many small runs of different formulas, change from one formula to another.

Each card represents a formula and process, which, when used, carries the product through its particular operations and controls the formula, weight, temperature, and time, etc. Naturally, a different card is required for dry sausage than, for example, for domestic sausage.

AUTOMATING BACON

It is not necessary that a product be a fluid or semifluid to be adaptable for automation. Neither is it necessary that a product be completely uniform. As another example of how a product can be automated, consider the nonuniform bacon belly. Instead of cured bellies being weighed and segregated manually, hung on hooks manually, hung on trees and pushed into smokehouses manually, pushed into coolers manually, allowed to take up valuable space while being cooled, loaded into presses manually, transferred to slicers manually, separated into groups manually, graded manually, weighed manually, and wrapped and packed manually, in the not too distant future a line will be unveiled which will segregate the bellies according to weight automatically, transport them through the automatic smokehouse and into a quick chill unit.

From the quick chill unit they will be transferred automatically to a press and without the aid of human hands will proceed directly through the slicing operations. The slices will be counted automatically and weighed automatically. Finally, the drafts will be packaged and packed automatically.

It is anticipated that an automatic line will produce 2 to 3 times as much as what is known today as a standard bacon production line. More than 2 full days of production time will be saved in the process. Finally, and perhaps most important, a closer control and a more uniform and higher quality product will be produced from such a line because the product is no longer subject to the vagaries of human inefficiency and disinterest.

Naturally, a program of this type is not put into operation overnight. It is done step by step, but as each step is installed, it is installed according to the preconceived overall plan. A program such as this costs money, a good deal of money, but actually it costs absolutely nothing. It costs nothing because the savings in waste, the improvement in quality, the upgrading of the product, and the greater production per unit of labor add up to additional profit which will pay for the initial investment many times over. In some instances, an automated line can pay for itself in less than a year. In any case, a well-conceived, thought-through, and properly planned program of automation will pay for itself in 2, 3, or 4 years.

Actually in many cases it costs more not to automate because any plant or department within a plant which can be automated and is not is paying for automation without receiving the benefits of automation. With automation less space is required per unit of product produced, less inventory in process is required, less labor per unit of product is required, less spoilage, and less waste per unit is encountered. With automation you will have a higher quality, more uniform product, less arduous work for the employees, lower costs and better control over your entire production process.

Second Hoover Commission Report

EXTENSION OF REMARKS

OF

HON. PERKINS BASS

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1956

Mr. BASS of New Hampshire. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to insert a resolution adopted by the directors of the New Hampshire Junior Chamber of Commerce submitted to me by Mr. Charles L. Manos, of Claremont, N. H., secretary of the New Hampshire Junior Chamber of Commerce, in support of the recommendations of the Hoover Commission:

RESOLUTION IN SUPPORT OF THE BIPARTISAN EFFORTS OF THE CITIZENS COMMITTEE FOR THE HOOVER REPORT

Whereas the efficient and economical conduct of governmental affairs is vitally important to the maintenance of our American tradition of free self-government; and

Whereas the first bipartisan Commission of Organization of the Executive Branch of the Government (Hoover report) made a study of Government (1947–49) which resulted in many important improvements and economies in Federal operations; and

Whereas the bipartisan new Hoover Commission, created by Congress in 1953, has completed a 2-year study of the Federal Government and has submitted a report containing specific recommendations for reducing waste and duplication, increasing efficiency, and eliminating needless Government competition with private business: Now, therefore, be it

Resolved, That we, the directors, of the New Hampshire Junior Chamber of Commerce assembled this 11th day of December 1955, endorse and command the objectives of the Hoover Commission and urge the administration and Congress to work together, on a bipartisan basis, toward prompt and full consideration of the recommendations of the Commission.

I would like to commend Mr. Manos and the members of the New Hampshire Chamber of Commerce for the efforts they have expended in this connection, and their work at a grassroots level to obtain better government. Their action is but one of a number of indications in my State of New Hampshire of a growing awareness of the continuing need for efficiency and economy in government.

Proposal for Establishment of a Military Airbase in Northeastern Ohio

EXTENSION OF REMARKS

OF

HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1956

Mr. BOW. Mr. Speaker, at a time when all of us are striving to save Federal funds I am greatly concerned about a Defense Department proposal for a new Air Reserve base in northeastern Ohio which would, it seems to me, constitute a sizable waste of funds.

I am advised the Navy is surveying 2 or 3 sites in the Cleveland-Canton-Akron area with a view to building a new base for Air Reserve activities. This is a proposal that was abandoned last year by the Air Force. My concern arises from the fact that adequate facilities for both services could be made available with a small expenditure to enlarge Akron-Canton Airport, thus saving for the

taxpayers most of the $15 to $20 millions a new base would cost.

Under unanimous consent, I include herewith a letter on this subject from the chairman of the Akron-Canton Airport Agency, Mr. C. Blake McDowell, Sr., of Akron:

AKRON-CANTON AIRPORT,
January 17, 1956.

United States Representative FRANK T. BOW,
House Office Building, Washington, D. C.

DEAR REPRESENTATIVE BOW: In view of conflicting announcements made last week by United States Representative M. J. KIRWAN, of Youngstown, and United States Representative W. H. AYRES, of Akron, relative to the establishment of a military air base in northeastern Ohio, we, the members of the Akron-Canton Airport Agency, request that more serious consideration be given to the Navy using existing facilities.

Representative KIRWAN announced January 12 that the Navy base will be constructed in the Youngstown vicinity.

Representative AYRES said January 13 that the base will be built in Medina County.

After careful and arduous scrutiny of both proposals, we would like to say once again that a new airbase anywhere in northeastern Ohio seems highly illogical.

As you know, Ohio is the crossroads of all cross-country air traffic, both military and civilian. The Civil Aeronautics Administraton is greatly disturbed about the high density of air traffic between Akron, Youngstown, and Cleveland. A separate new air base anywhere in the proposed locations will result in causing an already hazardous air traffic control problem to become even worse.

We point out that the Navy's existing air reserve training facilities are located at Akron Municipal Airport, only 7 miles north of Akron-Canton Airport.

Akron-Canton was built at a cost of $2,500,000 under the Federal Government's development of landing areas for national defense program. That program was designed to provide facilities for joint use of the Navy, Air Force, and commercial and civil aviation.

Only a portion of the 1,172 acres owned by Akron-Canton is now in use. There is adequate acreage for military development for the Navy's proposed program, and more than enough land to meet any other military and civil air needs in the foreseeable future.

The present number of aircraft movements at Akron-Canton Airport utilize only a small percentage of our total air traffic potential.

Poor weather conditions which frequently force other airports to close are practically non-existent at Akron-Canton due to its ideal location and elevation.

More than 1 million people live within a 35-mile radius of Akron-Canton, which provides a large pool from which the Navy could draw its reserve personnel.

The major cities in this area and the Ohio Highway Department are in the process of building a network of super highways that will cut in half the amount of driving time from these cities to Akron-Canton Airport.

When the freeways are completed, Akron and Canton will be only 15 minutes from the bicounty airport. Cleveland and Youngstown will be only a 1 hour's drive.

We also feel that if the Navy base is established at our airport, it will not only help the military's national defense program but will be of valuable assistance to commercial aviation serving the residents in this area.

It would provide a runway development program the communities otherwise could not afford and at the same time open new avenues for industrial growth.

With the addition of the Navy here, it would become possible to obtain navigational safety aids, including surveillance radar and high intensity approach and runway lighting, which normally would not be provided by the Civil Aeronautics Administration for civil operations alone.

The payroll of military personnel and goods they would use here, would also bolster the area's economy. The communities would benefit from any capital improvements made at Akron-Canton by the Navy.

Announcements concerning the establishment of a new Navy base near Youngstown or in Medina County have implied that the Navy would spend only $4 million for the air base.

However, since you are familiar with rising construction costs, you can readily see that before the proposed base was completed it would entail an expenditure of ten to fifteen million dollars. On the other hand, the only expenditure that would be necessary for the Navy to move in at Akron-Canton would be to expand the present runway system and construct the buildings, which would amount to only a fraction of the cost proposed for a separate airbase.

The Government, as we pointed out before, already has spent $2½ million, when construction costs were much lower, to develop Akron-Canton Airport.

It would be folly, indeed, to construct a separate Navy airbase, inasmuch as our Federal officials, including the military branches, have said they are trying to reduce defense spending where it is possible to balance the national budget.

We believe that since adequate existing facilities are available to the Navy here at Akron-Canton Airport it would be unfeasible, illogical, and impracticable for the Federal Government to squander taxpayers' money for an unneeded airbase in northeastern Ohio.

Thanking you for your consideration and cooperation in this matter, we remain,

Respectfully yours,
AKRON-CANTON AIRPORT AGENCY,
C. BLAKE MCDOWELL, Sr.,
Chairman.

Tribute to the Los Angeles Times

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. LIPSCOMB. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to include a resolution in behalf of many of my colleagues of the California delegation in the House of Representatives in tribute to the Los Angeles Times on the occasion of its 75th anniversary. The resolution follows:

TRIBUTE TO THE LOS ANGELES TIMES

Whereas for three-quarters of a century the splendid progressive journalism exemplified by the Los Angeles Times has been a strong influence for the common good in the city and county of Los Angeles and that influence has indeed extended into the State of California and the Nation; and

Whereas the Los Angeles Times has throughout its history shown the vigor of American enterprise, independence, and courage in maintaining the standards of a free press: Therefore be it

Resolved by the undersigned members of the California delegation in the House of Representatives of the United States Congress, That they extend their congratulations and best wishes to the Los Angeles Times on this, its 75th anniversary, wishing it continuing prosperity and influence in the lives of the people of Los Angeles, Calif., and the Nation.

CARL HINSHAW, 20th District; HARRY R. SHEPPARD, 27th District; CECIL R. KING, 17th District; JOHN PHILLIPS, 29th District; LEROY JOHNSON, 11th District; CLAIR ENGLE, 2d District; GORDON L. MCDONOUGH, 15th District; JOHN J. ALLEN, JR., 7th District; HUBERT B. SCUDDER, 1st District; PAT HILLINGS, 25th District; J. ARTHUR YOUNGER, 9th District; W. S. MAILLIARD, 4th District; EDGAR W. HIESTAND, 21st District; JAMES B. UTT, 28th District; CHARLES S. GUBSER, 10th District; JOE HOLT, 22d District; CRAIG HOSMER, 18th District; BOB WILSON, 30th District; GLEN LIPSCOMB, 24th District; CHARLES M. TEAGUE, 13th District; JOHN F. BALDWIN, 6th District; DONALD L. JACKSON, 16th District.

Repeal or Renovate the Present Tax Laws

EXTENSION OF REMARKS
OF
HON. HERMAN P. EBERHARTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1956

Mr. EBERHARTER. Mr. Speaker, under leave to revise and extend my remarks, I am today inserting in the Appendix of the RECORD a newspaper article from the Roanoke World-News, Roanoke, Va., which reports on a speech made by Mr. T. Coleman Andrews, who just recently resigned as Commissioner of the Internal Revenue Service. I think it is worthy of note that Mr. Andrews is speaking out against our present income tax laws as being complicated, confusing, and incomprehensible to the average citizen, and "probably should be repealed."

This is extremely interesting to me, since I remember so well that the 1954 Internal Revenue Code was passed by Republicans and was hailed by them as a great simplification of the tax law. This praise of the 1954 code came not only from Republican Members of Congress, but also from Administration officials, including Mr. Andrews' former boss, Secretary of the Treasury Humphrey. Republican members of the Committee on Ways and Means, in their majority report on this bill, described it as including "a rearrangement of the provisions to place them in more logical sequence, the deletion of obsolete material, and an attempt to express the Internal Revenue laws in a more understandable manner."

In accordance with this newspaper account, Mr. Andrews, in referring to the fact that the present administration tried hard to simplify the tax laws in the 1954 code, states "but they didn't accomplish their objective."

It is most interesting to me that the man who was Commissioner of Internal Revenue at the time this code was being written should now describe it in such terms. His feelings about the 1954 code certainly could not be the result of any new discoveries he has made since he left the Service on November 30, 1955.

If Mr. Andrews felt that the 1954 code was such a complicated piece of legislation why did he not let his views be known to us on the Committee on Ways and Means and to the Senate Committee on Finance? We would have been delighted to have him present his views on the subject.

I would like to remind you, Mr. Speaker, of my reaction and that of the Democratic Members on the Committee on Ways and Means to the 1954 code, which you will find in our minority report thereon. After pointing out in our report that the staffs of the Treasury Department and the Joint Committee on Internal Revenue Taxation spent over 2 years preparing recommendations for the bill, we stated:

In contrast, the committee deliberated on this bill for only one month and a half. In our opinion, such a complete overhauling as this, involving the most complicated laws which the Congress has ever written, would require at least 1 year to fully understand the change proposed and to intelligently approve existing law as being as nearly perfect as it can be made.

We frankly admit that we do not fully understand or comprehend many of the changes proposed in the bill. Many tax lawyers spend their entire lives keeping posted on certain narrow fields of taxes. In many instances, we were not even given a draft of the proposed changes in the law until the committee began considering them.

We fear, that, in the hasty manner in which this most complicated legislation has been handled, we will have to spend many weeks straightening out the law in the future, if the bill becomes law.

My only comment at this point is that I am very glad to know that Mr. Andrews now agrees with us on the 1954 code. I am only sorry that he did not take the trouble to study the views of the Democratic members of the Committee on Ways and Means and let his views be known to the Congress when the legislation was being considered. I must give Mr. Andrews credit for one thing, however. He certainly possesses discretion, for it takes a great deal of talent in this direction to be able to spend 3 years as Commissioner of Internal Revenue, without ever once giving any indication that he entertained such views about our tax laws. Discretion is a fine thing, but in this instance I think it might have been more helpful if Mr. Andrews had voiced his recommendations on the subject of tax revision while it was his job to do so, instead of waiting until after he resigned.

Mr. Speaker, in addition to reminding the House that we Democrats can now say to the Republicans, "We told you so," I would like to again point out that the 1954 code by far gave the majority of the tax relief it provided to higher income groups, and the Republican's trickle-down theory of taxation is rampand throughout the code. The most glaring example of all is the dividend exclusion and credit provision. Now mind you, Mr. Speaker, this is tax relief for persons with unearned income. One would think that if any tax relief were to be given, it at least would have been given to persons who earned their income. But, no, this is not the way the Republican trickle-down theory of tax relief works. People who must earn their living with their hands and with their minds, under this Republican plan of taxation must await that time when by some theory which I have never been able to understand, tax relief at the top eventually trickles down to the masses of the people at the bottom. It is now estimated by the Joint Committee on Internal Revenue Taxation that the dividend exclusion and credit provisions cost $420 million a year alone. Just consider this as compared to the piddling relief which this Republican tax bill gave to deserving people. For example, the estimates of the relief provided in the retirement income credit provision in the majority report on the 1954 code indicates that for fiscal year 1955, it would amount to $125 million. This is the largest item of relief provided for taxpayers generally, and it amounts to barely more than one-fourth that provided for coupon clippers. The next largest item of relief was $80 million in additional medical expense deductions. In the case of expenses for working mothers, $40 million in relief was provided.

Mr. Speaker, when you add up all of the relief provided for individual income-tax payers generally in this Republican tax bill, you find that it does not equal the amount which the coupon clippers got.

In my opinion, Mr. Speaker, the Congress should in this session repeal the dividend credit and exclusion provision, and enact a bill for the relief of the millions of persons who barely got any relief at all under the 1954 Republican tax bill.

Following is the newspaper article referred to:

[From the Roanoke (Va.) World-News of December 9, 1955]

ANDREWS SAYS TAX LAW NEEDS TO BE SIMPLIFIED

The former United States Commissioner of Internal Revenue said here today the present United States income tax law is complicated, confusing, and in comprehensible to the average citizens and "probably should be repealed."

"There are many people," declared T. Coleman Andrews, "Who think there are simplier and more effective ways to raise money to defray the cost of Government than the methods now being used."

He said the income-tax law is becoming more and more complicated and should be rewritten.

"And it will become more and more complicated until something really drastic is done about it," he said.

Andrews elaborated today on a talk he gave before the Roanoke Rotary Club last night at Hotel Roanoke.

Although his main criticism was aimed at the income-tax law, he also was critical of two other tax laws—the gambling laws and the extension of social security to household servants.

"Many people wonder whether Congress ever meant these laws to be enforced," he said.

In his criticism of the income-tax law, Andrews said:

"Any tax law the average citizen can't comply with, without having to go to the expense of employing professional assistance, is a bad law."

He said the present administration and Congress tried "very hard" to simplify the law in working out the 1954 tax code.

"But they didn't accomplish their objective," he said.

"This law probably should be repealed," Andrews said. "In any event after 42 years of growing complication and obfuscation, it's high time for Congress to begin some research to see if there isn't something better instead of just continuing to patch up the old and highly unsafe boiler."

He said he believes the time has come for an objective look at the United States tax system.

The former United States tax chief also scored today's taxes as being too high—much too high and unjust and confiscatory.

These high taxes, he said, will destroy any country in any but the most prosperous times. And, he noted, even with the present high taxes the Federal budget still has not been balanced.

"Senator BYRD rightly asked when we can ever expect to balance the budet," Andrews said.

If we can't balance it in the present time of unprecedented prosperity, the fact is that with the public debt and spending at present levels no more than a mild recession might throw this country into a spin that would make the depression of the thirties look like good times.

Andrews also said the United States has too many tax laws.

"Congress," he said, "enacts tax laws that present enormous enforcement problems and makes no provision for additional manpower needed for enforcement."

Two good examples of such laws, Andrews said, are the gambling tax laws and the extension of social security to household servants.

Andrews, who recently retired from the top tax post to which he was appointed by President Eisenhower in January of 1953, said he is "happy to be home again in Virginia."

"This was one case where the realization was greater than the anticipation," he said.

He is now chairman of the board of the American Fidelity & Casualty Co.

Ducks Can Lay Golden Eggs

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1956

Mr. GATHINGS. Mr. Speaker, the utilization of lands diverted from control-crop production is most essential to our farmers. The Wynne Progress, of Wynne, Ark., carried a splendid editorial in a recent issue of that fine newspaper, titled "Ducks Can Lay Golden Eggs." I include this editorial for the information of the Members of the Congress:

DUCKS CAN LAY GOLDEN EGGS

Rice farmers, like other farmers, would like to find a new crop for their land. They want something that is in strong demand, that is highly profitable, that is easy and cheap to raise, that is drought and floodproof, that is in no danger from acreage controls and can be harvested while sitting on the back porch whittling or just settin'.

Does it sound like wishful thinking? It isn't. There is such a crop, and it can be raised right here in Cross County. The crop is ducks.

Many progressive rice farmers in the Hickory Ridge and Fair Oaks areas have already

seen the possibilities. All they do is get together with groups of sportsmen, either local or from out of State, agree to keep their rice fields flooded during duck season and lease their rice fields for the season. Many of them are making profits as high as seven to ten dollars an acre just for the few weeks when their land is otherwise idle.

It doesn't take any extra investment. The rice fields are usable as duck pounds just as they are. The only extra cost is in reflooding the land after the rice is harvested and in keeping it flooded.

It does not interfere with rice production. Most rice men who have tried "farming" ducks say the extra flooding helps kill out weeds, adds fertility and keeps the land in production longer. Some lands around Fair Oaks have been in a rice-duck rotation for 5 years and are still producing like "new" ground.

Bringing duckhunters into this area is a service to the community. Most of the hunters are business leaders. They get an opportunity to see the possibilities of this rich and industrially undeveloped area.

Duckhunters are good business for everybody. They have money to spend, are in a frame of mind to spend it, and they need housing, food, supplies, and equipment.

Sound like it has possibilities?

County Agent Troy Jennings has agreed to act as a registrar for farmers who want to get in contact with hunters. If you have land that can be used, tell Mr. Jennings the amount of land, location, and ask him to give some of these pond-hungry hunters your name. Then make your own deal, after consulting your lawyers.

If every acre of riceland in the county were kept flooded all during the duck season, it would not overcrowd the field. In fact, the more land under water, the better the hunting. It looks like a rice farmer's dream, and it is.

There Is Need for a Permanent Program for the Relief of Depressed Areas

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1956

Mr. VAN ZANDT. Mr. Speaker, for several years I have sponsored legislation designed to provide relief to those areas of the Nation that have become victims of economic dislocation with the result they have a labor surplus which classifies them as critical or depressed areas.

In support of such legislation the following statement was made by me before a subcommittee of the Senate Committee on Labor and Public Welfare, January 26, 1956, at which time I stressed the need for a permanent Federal program for depressed areas. The statement follows:

STATEMENT BY REPRESENTATIVE JAMES E. VAN ZANDT, MEMBER OF CONGRESS, 20TH DISTRICT OF PENNSYLVANIA, ON JANUARY 26, 1956, BEFORE THE SENATE COMMITTEE ON LABOR AND PUBLIC WELFARE REGARDING THE NEED FOR A PERMANENT PROGRAM FOR THE RELIEF OF DEPRESSED AREAS

Mr. Chairman, I appreciate the privilege of appearing before this committee for the purpose of discussing legislation designed to assist depressed areas.

As you probably know, I introduced legislation on the subject in the 83d Congress and reintroduced the same bill in the 84th Congress.

Speaking frankly, I was amazed at the lack of interest in this subject as far as the House of Representatives is concerned as I was unable to secure hearings on the legislation.

I was told in answer to my request that there was more important legislation on the agenda.

The result is that no action has been taken on my initial bill, H. R. 860, introduced when the 84th Congress convened January 5, 1955.

On January 9 of this year I introduced H. R. 8223, an administration bill which in my opinion is an improvement over H. R. 860 which I introduced last year.

At the moment, I am in touch with the chairman and Members of the House Banking and Currency Committee and have a commitment that hearings will be held on the general subject of depressed areas probably in March.

I am not here to claim pride of authorship for legislation to aid depressed areas but rather to give my support to any legislative proposal that will provide relief to those areas.

If you want my frank opinion, I think that legislation designed to relieve distressed areas is just as important as a lot of the legislation that today is being given front-page coverage by the newspapers of the Nation.

As many of you know, I represent a congressional district in Pennsylvania whose economy is dependent upon the coal and railroad industries.

Testimony taken in my congressional district at a public hearing of the Neely subcommittee last year described the plight of American citizens who find themselves unemployed and forced to exist on unemployment insurance, public-assistance benefits, and surplus commodities.

Since the end of the Korean war due to the transition from a wartime to a peacetime economy in the central Pennsylvania area for a period of over a year we had over 18 percent of our employables unemployed. This condition brought hardship and suffering to thousands of good American families. Happily, we have experienced a marked recovery and today unemployment is less than 5 percent in my congressional district.

Mr. Chairman, I feel I could be charged with base ingratitude if I failed to mention the coperation we received from various agencies of the Federal Government, as well as industries, in our efforts to restore our economy. But most of all, I want to salute the courage of the people themselves who united in forming community organizations with the result that they effected recovery literally by their own bootstraps.

The job of recovery, however, is not 100-percent complete for we still have the scars of depression, in ghost towns, dilapidated dwellings, blighted areas, and good Americans forced to live on public assistance and surplus commodities. To complete the job we require patience and an understanding of the problem by Government both at the State and National level.

As mentioned previously, I am glad to have the opportunity to testify to the immediate need of a Federal program to assist depressed areas, and if I am of any assistance in helping to focus attention on distressed areas I feel my time has been well spent.

Mr. Chairman, in conclusion, while it is true that the unemployment problem in my congressional district is not as acute as it was following the Korean war, and is improving generally throughout the Nation, in this pushbutton era, who knows when distressed areas will mushroom again and plague us with their evils of want, privation, and sorrow.

Therefore, by assisting the present group of depressed areas through the establishment of a permanent Federal program we are fortifying this Nation against area depressions at a time when the rest of the country is in a prosperous condition.

It is for that reason that I support any legislative proposal that will provide relief for depressed areas.

Urgent and Essential

EXTENSION OF REMARKS
OF
HON. LAURENCE CURTIS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1956

Mr. CURTIS of Massachusetts. Mr. Speaker, under leave to extend my remarks, I wish to call the attention of my colleagues to an editorial from the Boston Evening American of January 17, 1956, entitled "Urgent and Essential." I believe that it expresses sentiments widely held in the district which I represent. The editorial follows:

URGENT AND ESSENTIAL

An important piece of unfinished business has been called to the attention of Congress by President Eisenhower.

It concerns proposed changes in our immigration laws.

Specifically, it concerns the discriminations inherent in certain provisions of the Immigration and Nationality Act of 1952, generally known as the McCarran-Walter Act.

This legislation was in many ways constructive, and it contains many good features (screening out Communists who would sneak into the United States, for instance) favored by virtually all Americans.

But it also has provisions which create an urgent need for revision of the law, as the President put it in his state of the Union message. And it should be kept in mind that in calling for a revision of the act neither President Eisenhower nor this newspaper is urging or favors outright repeal of the McCarren-Walter measure. The distinction between "revision" and "repeal" is, we hope, clear to everyone interested in seeing that such an important act reflects the ageless principles of true Americanism.

The most pressing need is for revision of that section of the act containing the formula setting immigration quotas.

Whatever the original purpose of this formula may have been, it is in effect discriminatory.

Under the act as now written, immigration quotas are set up according to the national origins of the white population in the United States at the time of the 1920 census.

The practical result of this formula has been to assign about 82 percent of the annual immigration quota to the nations of northern and western Europe, and to discriminate cruelly against the others.

Another result of the present law has been to hold the immigration ceiling at the abnormally low figure of 154,000 a year, whereas we could, and should, admit more. (The figure of 251,000 has been suggested as suitable to the country's needs and capacities.)

What the present law says, in effect, is that an Englishman or a German, for instance, is welcome in the United States, but that a Greek, or an Italian, or a Jew from eastern Europe is not.

This, obviously, is notoriously contrary to the American concept of judging a man by his individual worth, not by his nationality or religion, and the contrast is so stark that the Communists have seized upon it to make propaganda against America all over the world.

Ironically, the present act is keeping out of this country literally thousands of worthy and distressed human beings—many of them fugitives from Communist oppression—whose presence in this country would be an asset to the Nation.

The refuge of our shores is withheld from those who need it, and held out to those who don't. Britain, to cite an example, now has an annual quota of 65,000, of which about 8,000 a year come in. Greece has a quota of 300—with more than 20,000 Greeks registered for immigration.

President Eisenhower wisely proposes that the Immigration Act be brought up to date so that the quotas are assigned on the basis of the 1950 census rather than that of 1920. And he has further urged that provision should be made to allow for greater flexibility in the use of quotas, so if one country does not use its share, the vacancies may be made available for the use of qualified individuals from other countries.

We hope Congress will act favorably on his recommendations.

Report of the Second Hoover Commission

EXTENSION OF REMARKS
OF
HON. PERKINS BASS
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1956

Mr. BASS of New Hampshire. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to insert a resolution received from the Troy Junior Chamber of Commerce concerning the second Hoover Commission report.

Their action herein is but one of a number of indications in my State of a growing awareness of the continuing need for efficiency and economy in Government, and adherence to constitutional principles:

RESOLUTION IN SUPPORT OF THE BIPARTISAN EFFORTS OF THE CITIZENS' COMMITTEE FOR THE HOOVER REPORT

Whereas the Commission on Organization of the Executive Branch of the Government, better known as the Hoover Commission, now has completed a series of bipartisan reports on the Federal Government; and

Whereas these nonpolitical reports offer the means of saving the United States billions of dollars while increasing efficiency; and

Whereas the United States Junior Chamber of Commerce in the past has spearheaded a great national project to publicize the Hoover Commission findings and to gain support for them; and

Whereas better government will result if the findings of the Hoover Commission are given wide dissemination among the public: Now, therefore, be it

Resolved, That the Troy Junior Chamber of Commerce and its members assembled in Troy this 28th day of November 1955, endorse and commend the objectives of the Hoover Commission, and urge the administration and Congress to work together, on a bipartisan basis, toward prompt and full consideration of the recommendations of the commission.

In particular I would like to commend Mr. A. Arthur McKew, Jr., State chairman of the New Hampshire Junior Chamber of Commerce Committee on Your State and Better Government, and the members of his committee for the efforts they have expended in studying this complex report and their work at a grassroots level to obtain better government.

Gen. Douglas MacArthur

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 25, 1956

Mr. MILLER of Nebraska. Mr. Speaker, under previously granted permission, I would like to insert in the Appendix of the RECORD, my own remarks, and include an article by Raymond Moley, entitled "The MacArthur Epic."

Mr. Speaker, today is the birthday of a great American, Gen. Douglas MacArthur. I am sure freedom-loving people all over the world join in wishing him many happy returns of the day.

His services to the country have never been fully recorded. The Congress should, without further delay, bestow upon him the coveted general of the Armies of the United States. He has earned and deserves this title.

[From Newsweek of January 30, 1956]

THE MACARTHUR EPIC

(By Raymond Moley)

The initial Communist thrust into South Korea was confronted by only a poorly trained constabulary force of South Koreans. The only other forces of the free world within thousands of miles were the American occupation troops in Japan and some elements of the American Navy and Air Force. But fate decreed that there was available a military genius whose peer has not been seen in our time. The test which faced MacArthur was twofold. He was compelled to use his slender forces in Korea and at the same time to continue the remarkable progress he had made in peacefully returning Japan to normal conditions. He was well on the way to a brilliant success in these efforts when the Red Chinese projected seven armies into the conflict. Once more, as in the early days of the Pacific war, MacArthur had to improvise a fresh formula for victory.

The fate of that formula, the virtue of which few except violent partisans of the Truman-Acheson regime will now deny, was the culminating act in a massive drama which originated at Bataan. A loyal and informed witness, Maj. Gen. Courtney Whitney, tells this story in his book, MacArthur, His Rendezvous With History.

Not the least of the marks of a military genius is his capacity to bend both subordinates and superiors to his plans of action. This stands out everywhere until MacArthur's last, fatal (to our prestige in Asia) conflict with the brass and the bureaucracy in Washington. Even F. D. R., who was no partisan of MacArthur, was won over in the famous 1944 meeting in Honolulu.

Moreover, MacArthur's opposite numbers in the Navy paid him the compliment of agreement except in a few notable cases. Concerning these instances, in which 2 high commands and 2 great traditions were at odds, there will always be dispute. Under the circumstances it is not surprising that Whitney should fail at times to give the Navy marks for its contribution to victory.

Ultimately there was glory enough for all. In meeting the acute problems of the occupation MacArthur was compelled to cope with the Soviet Union, the British, our own State Department, and the Japanese. The irony of it all is that he had the least trouble with and the greatest cooperation from the late enemy, the Japanese.

The war in Korea will always stand out as a cloudy page in American history, but a recital of its story adds new stature to the commander. His audacious delaying tactics before the Pusan perimeter meant the difference between maintaining a foothold on the peninsula and retreat to Japan. The Inchon operation was MacArthur's and MacArthur's alone. Against almost united opposition from Washington he won grudging consent to attempt what was praised by the British Chiefs of Staff as among the finest strategic achivements in military history.

Whitney's indictment of our State Department goes beyond a mere recital of the appeasement and fear which held back the arm of the commander after the Red Chinese hordes attacked our forces. The greater sin is that in some way the Red Chinese were able to commit their armies with the assurance that they would suffer no injury beyond the Yalu. Strong circumstantial evidence exists that Burgess in the British Embassy in Washington and MacLean in the United States section of the Foreign Office in London had a hand in this business.

MacArthur's final ordeal was the frustration of his plan for complete victory by Acheson, Marshall, the British, and Truman. Their substitute proved to be profound humiliation for American arms. But the views of MacArthur were left behind in the minds and spirits of Ridgway, Van Fleet, Stratemeyer, and Admiral Joy. Joy has this to say:

"Serious consideration was being given to extending United Nations Command military operations into Red China. Thus at the last, the one negotiating factor that Communists respect above all else was beginning to appear: Naked, massive power and the willingness to use that power. * * * It was as simple as that."

The Meat Ax

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1956

Mr. CANNON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the St. Louis Post-Dispatch showing that notwithstanding the enormous military buildup set in motion by the Korean war and the pledges of economy and $40-billion retrenchment made in the last presidential campaign, the average Truman budget for nonwar expenditures was $20.1 billion and the average Eisenhower budget for nonwar expenditures is $21.7 billion. The meat ax we have heard so much about is being used all right. But it is being used on the Treasury instead of the budget.

The St. Louis Post-Dispatch says:

SPEAKING OF SPENDING

As the Eisenhower administration passed its third anniversary in office last Friday, one thing at least was clear about its place in history. Whatever else may be said of it, this was the administration that formally signalized national acceptance of an active social, welfare, and economic role for the Federal Government.

For 20 years the Republican Party had attacked (except during election campaigns) the principles of social security, public housing, minimum-wage laws, support of farm income, compensatory fiscal policy, resource development, Federal activity in education, and medical care. Now, as President Eisenhower's state of the Union message made so clear, all these pillars of the welfare state are not only accepted but claimed almost as original discoveries.

Not that differences have ceased to exist. There are differences of emphasis, of degree, of administrative technique, and of substance, as on public power. The Humphreys, Bensons, and Weekses do not apply welfare-state principles in the same way as men like Secretary of Labor Mitchell and Presidential Assistant Stassen. And certainly experience shows that attachment to a liberal welfare policy is stronger in election years than in between.

Yet the existence of a broad base of agreement on general principles cannot be denied. Perhaps the most impressive manifestation of it is to be found in the Federal budget.

One of Mr. Eisenhower's principal campaign themes in 1952 was government economy. He loved to hold up an egg and tell how many taxes it carried. He lashed out at waste and foolishness, such as issuing official pamphlets on dishwashing. He talked of cutting expenditures by $40 billion within 3 years. But what is the record? In the last 8 Federal budgets, 4 under Democratic and 4 under Republican control, expenditures have run as follows, in billions of dollars:

Truman	
1950	39.6
1951	44.0
1952	65.4
1953	74.2
Eisenhower	
1954	67.7
1955	64.5
1956	64.2
1957	65.8

Seven of these 8 budgets were dominated by the Korean war and the enormous military buildup set in motion by it. The record shows that the Eisenhower administration's smallest budget is just $10 billion (not 40 billion) below the Truman administration's biggest budget. It shows that all of the difference is accounted for by reduction in military and foreign policy spending, while other expenditures have actually risen.

Eliminating expenditures for defense and international affairs—described in the budget as the "cost of national protection"—the Truman and Eisenhower budgets for other expenditures compare as follows, in billions of dollars:

Truman	
1950	22.0
1951	17.9
1952	18.7
1953	21.7
Average	20.1
Eisenhower	
1954	19.1
1955	21.8
1956	22.8
1957	23.4
Average	21.7

Thus the Eisenhower administration succeeded in cutting nondefense, domestic expenditures in its first year only. As planned for 1957, its expenditures of this type will exceed the 1950 peak.

As compared with 1950, the administration next year expects to spend $1 billion more for "labor and welfare," $600 million more for agriculture, $100 million less for commerce and housing, $600 million more for general government, $1,200,000,000 more for interest and $1,800,000,000 less for veterans' benefits.

Altogether, the net increase exclusive of the last two items, which are not readily controllable, amounts to more than $2 billion, or about 10 percent.

These figures do not mean that the Eisenhower administration did not try to economize. It did try. It brought in for the effort business executives who had been saying for years that the job could be done given competence and a desire to do it. Some administrative economies undoubtedly were accomplished, and they are all to the good. But the record shows that even under the most favorable circumstances big government cannot be distilled into small government.

The people expect their Government to perform a wide range of social and economic functions. Both political parties support the expectation. The Federal budget inevitably reflects it. How long will it take for political debate to catch up with these facts of life?

Truman Explains It All

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 25, 1956

Mr. SCOTT. Mr. Speaker, in order to shed some light on the facts surrounding former President Truman's explanation of the loss of China during his administration, to the Communists, I am inserting an editorial from the Philadelphia Inquirer of January 20, 1956, and David Lawrence's column of the same date:

[From the Philadelphia Enquirer of January 20, 1956]

TRUMAN EXPLAINS IT ALL

Former President Truman has launched a new installment of his memoirs, appearing in Life, with some startling explanations of his own for the loss of China to the Communists.

He chooses to lay most of the blame on Chiang Kai-shek's refusal to join a coalition government with the Chinese Reds, as urged upon him by Mr. Truman's emissary, Gen. George C. Marshall.

If Chiang had only been "a little more conciliatory," the former President states, he is sure an "understanding" could have been reached with the Communists. And he adds that if a coalition had been formed, there was no reason why Chiang could not have won out over the Reds in the long run.

In view of the world's sad experience with attempted appeasement of the Reds, including the formation of coalition governments, it is amazing to find Mr. Truman still upholding such a forlorn policy. Ironclad Soviet control of Poland, Czechoslovakia, and Hungary, to mention only a few countries, began with the coalition of Communists with democratic elements in their governments. The folly of trying to conciliate the Communists by opening the door to their seizure of power had been demonstrated in Europe prior to Mr. Truman's decision to force Chiang into collaboration with the Chinese Reds.

The Nationalist leader refused to go along on this surrender, but the Truman policy inevitably strengthened Chiang's foes. It was not long afterward that the Red tidal wave engulfed all the mainland.

That it could have been stayed by Chiang joining hands with the Communists simply does not make sense.

FINDS TRUMAN VERIFYING BETRAYAL OF CHIANG

(By David Lawrence)

WASHINGTON.—"O that mine enemy might write a book"—it's an old slogan and has its application to the 1956 Presidential campaign. For the latest installment of the memoirs of former President Truman seeking to defend the loss of China to the free world is about as useful a piece of political ammunition as the Republicans could acquire this year.

When, as Mr. Truman declares in the current installment published in Life magazine, the loss of China is due to the fact that Chiang Kai-shek wasn't conciliatory enough toward the Chinese Communists, the whole issue surrounding the Democratic administration's tragic policies in the Far East is revived.

The American people have not only been brought to the brink of a war in Formosa, but they lost 140,000 casualties in Korea in an actual war because the policies of the Truman administration turned out to be to the advantage of the Communist government in China.

Mr. Truman says that General Marshall tried to get Chiang Kai-shek to agree to a coalition government. The General, to be sure, was acting on the basis of detailed instructions prepared for him by experts in the Department of State whose fidelity to the best interests of the United States versus Soviet Russia came into question later in hearings before congressional committees. Nobody with a sense of fairness has ever suggested that General Marshall knew the sinister influence at work in the Department of State. For, as a good soldier, he followed orders. But the fact is that the idea of a coalition government in which the Communists and the Nationalists would participate was a hoax from beginning to end.

The coalition idea had already resulted in the sell-out of the people of Poland through the Yalta agreements, and it isn't hindsight, as Mr. Truman argues now, to recall that point. For the whole world knew the Communists were using the coalition trick to gain military supremacy. Indeed, they notified the American negotiators in China that they wouldn't integrate their armies under any circumstances. How could Chiang Kai-shek agree to a coalition government while his enemies were maintaining an armed force to continue their military pressures?

Mr. Truman says, in effect, that the Nationalists should have surrendered because they didn't have a chance militarily to win, and General Marshall thought so, too, but the opinion of other observers, including the American Ambassador, Leighton Stuart, an educator of wide experience in China, was that the failure of American aid to come at the opportune momment was the real cause of the weakness of the Nationalists and the disintegration of their armies.

The late Harry Dexter White, named in congressional hearings as a Communist spy, sat in the Treasury Department with full power to say when the money promised Chiang Kai-shek would be forwarded or held back. The former President commended Harry Dexter White in writing on April 30, 1946, even after J. Edgar Hoover, Director of the FBI, had in November 1945, and February 1946 called the President's attention to the questionable record of White's relations to the Communists.

On the subject of the loan, Mr. Truman doesn't identify the "Treasury experts" who held it up, but he writes:

"General Marshall devoted his brief stay in Washington (March–April 1946) to talks with Government officials regarding loans for China and aid in the form of shipping and surplus property. I instructed the Treasury Department to cooperate with him in every way, and an agreement was reached for an immediate loan to China of $500 million. Unfortunately, when nothing but the Chinese signature was lacking on this document, Chiang Kai-shek's representative, the Chinese Ambassador in Washington, insisted on changes before he would sign. And to complicate the matter further, the Generalissimo on the same day made a speech in China that was in effect a call to arms. It is no wonder that the Treasury experts felt that it would not be in line with our policy to make a loan if political settlement was not forthcoming in China. They were correct."

This is by no means all of the story, but it is a sensational paragraph nonetheless. It shows that Mr. Truman either didn't know how the loan was being squelched by some persons in the Treasury Department friendly to the Communists, or else that he naively accepted the superficial explanation which he now repeats.

Liberalization of Agricultural Credit

EXTENSION OF REMARKS
OF
HON. HENRY ALDOUS DIXON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1956

Mr. DIXON. Mr. Speaker, basically agriculture, in spite of low prices and declining farm income of the last few years, is in a relatively sound condition. For example, the market value of total farm assets is nearly $163 billion. This, Mr. Speaker, is only $3 billion less than the total of all farm assets in the peak year of 1955. Compared with total farm assets of $163 billion, total debt obligations of all farms is only 11 percent of the total assets, about $18 billion.

Also, Mr. Speaker, only 3 out of every 10 farmers have mortgage debt obligations, and over one-half of all farms mortgaged are mortgaged for less than 30 percent of their marekt value. In 1955, according to the administrative office of the Federal court system, only 386 bankruptcy cases out of some 59,404 involved farmers. Farm bankruptcies for the last 5 years have comprised less than one percent of the annual number of such proceedings. I believe, Mr. Speaker, these facts indicate the basically sound financial position of American agriculture.

However, Mr. Speaker, certain storm warning signals are beginning to appear which make it prudent for us to consider legislation at this time to help good farmers who cannot obtain credit from private of cooperative sources. For example, farmers in 1955 had to borrow $487 million from the Federal Lank Bank System and their 1,100 local farm loan associations. This was an increase of 59 percent in the amount of such loans over 1954. Also, $338 million of this money loaned in 1955 was "new money borrowed"—a 50 percent increase over 1954.

During the first 10 months of 1955, 498 production credit associations lent their farmer-members some $1.1 billion. As you know, Mr. Speaker, these associations lend funds obtained from investors in obligations held by the Federal intermediate credit banks.

You can see, therefore, Mr. Speaker, that even those farmers who have adequate collateral and satisfactory credit ratings are beginning to borrow in increasing amounts and at an increased rate. The Farmers' Home Administration of the Department of Agriculture, on the other hand, Mr. Speaker, has had the difficult responsibility of extending credit to good farmers who for various reasons simply cannot meet the standards set by commercial credit institutions, including the local loan and production credit associations I just referred to. The cost-price squeeze that farmers have been experiencing since 1951 has had the greatest effect upon farmers who find themselves in this unenviable position. But as Secretary Benson said at his address of last October 15, before the National Association of Mutual Credit Companies at St. Louis, Mo.:

When disaster strikes in agriculture, credit is urgently needed. If there is real distress, farmers often cannot meet the standards of commercial credit. Collateral is insufficient, terms needed for repayment are too long, and administrative costs are too great. It is in the interest of these farmers—and the Nation's interest—to help them get onto their feet. These farmers are good credit risks if the lender can afford to wait. Our Farmers Home Administration makes substantial loans to farmers who cannot meet the standards of commercial credit. Their records of 9 years of operation show 93 percent of the principal repaid.

So you see, Mr. Speaker, F. H. A. borrowers, as they are called in general are good farmers and they are good credit risks provided they are given adequate repayment conditions commensurate with their ability to repay. But many FHA borrowers throughout the country are having extreme difficulty meeting their present obligations. Many other would-be FHA borrowers, especially among the younger farmers, are not going to stay in agriculture unless they can obtain FHA loans on more liberal terms than the Farmers' Home Administration has authority to make at the present time. With these farmers in particular experiencing a great intensive negative effect due to the cost-price squeeze, it is essential that the terms of FHA loans be more readily adapted to meet their needs. Especially is this true in drought disaster areas such as those which have been designated in Utah.

Therefore, I send to the desk two bills for introduction and proper referral, which will expand the Farmers Home Administration's loan program.

The first would authorize the Secretary of Agriculture, through the Farmers Home Administration, to—

First. Make or insure loans for the purpose of refinancing, consolidating, renewing, or extending all, or part, of the existing debts of the applicant for farm operating and subsistence expenses, whether secured or unsecured by real or personal property.

Second. Such loans are to be made to farmers operating family type farms who are unable to repay their existing indebtedness in accordance with present repayment schedules and who cannot secure refinancing through private or cooperative sources on terms that they could be expected to meet under present circumstances.

Third. Such loans are to be repaid when it appears that the borrower can obtain a loan from cooperatives or private sources, including the local loan associations and Production Credit Associations under the terms borrowers can meet.

Fourth. Such loans are to carry such interest rates and conditions of repayment as the Secretary of Agriculture deems advisable under the circumstances, provided, however, that the total principal indebtedness of a borrower shall not exceed the fair value based on earning capacity or the normal market value of the farm.

Fifth. The aggregate total of such loans shall not exceed $45 million in any 1 fiscal year.

The second bill, Mr. Speaker, will permit the Farmers Home Administration to provide more effective assistance to production and subsistence loan borrowers by providing that—

First. The term of any such loan shall not exceed 11 years from the date the original loan was made. This extends from 7 to 11 years the repayment period.

Second. No person who has failed to liquidate his indebtedness in 11 consecutive years shall be eligible for additional loans until such indebtedness has been paid.

Why Tax North for Schools in Defiant and Shirking South?

EXTENSION OF REMARKS
OF
HON. MELVIN R. LAIRD
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 25, 1956

Mr. LAIRD. Mr. Speaker, I wish to call attention to the Members of the House of an editorial appearing in the Milwaukee Journal of Friday, January 13, 1956.

The editorial follows:

WHY TAX NORTH FOR SCHOOLS IN DEFIANT AND SHIRKING SOUTH?

In proposing a $2 billion Federal school building aid program, President Eisenhower says in effect that this violates sound principle but that the school emergency justifies that violation. There is no question but that he is right on the first score.

"Responsibility for public education rests with States and local communities," he reiterates, and "Federal action which infringes upon this is alien to our system." But he goes on to add that the American classroom shortage is one of those problems which States and communities alone cannot solve fully or rapidly enough.

There are many reasons to doubt that. In localities where little or nothing is being done to replace inadequate schools and provide needed new ones, it is rarely because States and communities together couldn't do it if they were willing to make the necessary sacrifice. Admittedly the sacrifice may be greater for some than for others.

The truth is that some of the "poor" States want new industries more than they want schools. So they use low taxes, freedom from taxes, free sites, etc., to lure industry from Wisconsin and other States which tax industries and individuals heavily to build schools.

Federal matching money now and for the next 5 years would often reward the laggards and penalize those who have already dug deep to provide good schools. And the President is utterly naive in believing that this Federal aid program could be ended, as he proposes, at the end of 5 years. The first 2 billion would just whet the appetites for more money wherever more school buildings and better ones were desired.

The President neatly avoids the school segregation issue which is bound to some up when Congress considers the school building aid question. Those very States and communities which are defying Federal authority to force desegregation of schools are the ones which would get the greatest relative benefits of Federal aid for their schools under President Eisenhower's proposal. Yet if Federal aid were to be denied them, because of their defiance, that aid would go largely to States which don't need it. Even by the President's plan much would go to States which do far better to keep school buildings dollars at home, without a depleting trip to Washington and back.

The principle that the Federal Government should keep out of the public school field as completely as possible is still sound in this time of abnormal school needs. And the sooner that State and communities know they won't get easy money from Washington, the sooner they will buckle down to doing the school job themselves.

Fluoridation of Public Drinking Water in New York City

EXTENSION OF REMARKS
OF
HON. ROY W. WIER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1956

Mr. WIER. Mr. Speaker, under permission to extend my remarks in the CONGRESSIONAL RECORD, I include a copy of a letter from Frederick B. Exner, M. D., Medical and Dental Building, Seattle, Wash., to the Honorable Robert F. Wagner, mayor of the city of New York, regarding the fluoridation of public drinking water in New York City.

The letter follows:

SEATTLE, WASH., *January 20, 1956.*

The Honorable ROBERT F. WAGNER,
Mayor, the City of New York,
City Hall, New York, N. Y.

DEAR MAYOR WAGNER: I want to call your attention that, in its recent report to you on fluoridation for New York City, your board of health made no investigation of the facts behind the promises of safety and effectiveness. Even as regards the admitted mottling of the teeth of children in nearby Newburgh (which will become more disfiguring as the children become older), your board made no investigation to determine whether the disfigurement is, in fact, unobjectionable to those who suffer it, or merely to the experimenters.

Instead, the board accepted the unsupported word of the experimenters, which is in conflict with their own data; and the word of a chemist from Arizona who had been permitted to examine representative children from each class.

Moreover the theoretical grounds on which danger is denied are based on such distorted concepts of physiology, toxicology, chemistry, and mathematics, that they can only be regarded as pseudoscience.

The report is a mere rehash of the already discredited claims of discredited proponents of fluoridation. One of these, known as "the father of fluordiation" testified last November before the California Public Utilities Commission. He offered in evidence some charts alleged to show what happens to teeth in communities with varying amounts of fluorine in the water. Under cross-examination, he was forced to admit that he knew when he made the charts that figures on which they were based were worthless.

Your board had been offered proofs of the worthlessness of these figures, but nevertheless accepts at face value the conclusions therefrom.

After the same hearing, another proponent of fluoridation came to me and said that false figures as to his own findings, which he published in the Journal of the American Dental Association in 1948, were a mistake in copying, and that he had not been aware of the mistake till I told Congress about them in May 1954. When I pointed out that he had more than a year in which to publicly acknowledge the error, he had nothing to say.

Again your board had been informed of the falsity of the published figures, yet conclusions drawn therefrom are contained in the board's report.

You will remember that during the period of the board's study, I sent you a carefully documented analysis of the "case for fluoridation" for the use of the board of health. Original sources and data were given throughout, so there was no need to take my unsupported word for anything.

Practically every statement in the recent report was refuted in my analysis; and I proved beyond reasonable question that there is no shred of respectable scientific evidence to support any part of the claims for the safety or effectiveness of fluoridation. I will send you, herewith, a copy for your own inspection.

My analysis was subsequently published by Northwest Medicine, and reprinted. It is highly regarded, and in great demand all over the world. In less than 2 months, a second reprinting is now in process.

Your board made no attempt to deny any part of my charges. My analysis and its content were simply ignored. This is nothing new. In fact, no statement of mine on fluoridation, in this report, in my testimony to Congress, or elsewhere, has ever been seriously challenged, much less refuted. Like your board, the rest of the fluoridators try to pretend I don't exist. Apparently they hope that, if they ignore me and my facts, we will go away. We won't.

Even your board, however, must know that eventually the chickens must come home to roost. Children will be disfigured. Later there will be systemic poisoning; and they will be responsible. They hope to avoid liability, for themselves and the city, through an opinion of the attorney general. They quote him as follows:

"No negligence could be attributed to * * * the city * * * on the introduction of fluorine into a city water supply * * * if the amount of fluorine introduced is only such as has been found by scientific studies to be safe."

This will not avail when it is shown that the board negligently failed to investigate the evidence offered in my analysis. If the board had investigated, it would know that there is no scientific evidence that any amount of fluoride in the water is safe for the users thereof. Fluorine poisoning is found where there is no fluoride in the water, and any at all that is added to whatever may be naturally present, is just that much too much.

I hope you do not mind if I make this an open letter. The public is entitled to these facts, and, if I make this letter public, it will save you whatever embarrassment there might be to you if you were to have to do so.

Sincerely yours,

F. B. EXNER, M. D., F. A. C. R.

Integration and Teachers

EXTENSION OF REMARKS
OF
HON. E. L. FORRESTER
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1956

Mr. FORRESTER. Mr. Speaker, the Monday, January 23, 1956, issue of the Washington Evening Star carried a most interesting editorial on page A–8 thereof.

The proponents of integration in our schools have for years argued that integration in the schools would materially alleviate the shortage of teachers and furthermore would decrease the cost of education. The opponents of integration have always denied those arguments. For some months now, the Washington public schools have been integrated, and apparently the school commissioners have found now that integration has multiplied their problems instead of decreasing their problems as promised, as will be found from that editorial.

That editorial reads as follows:

INTEGRATION AND TEACHERS

There may be no really new problem facing Washington's public schools. Integration, however, and the results of city-wide tests that emphasize an extraordinary variation in pupil achievement, have placed an old problem in new light. More teachers are needed to cope with it. More teachers must be supplied. The probability that they will be supplied depends in large measure upon the ability of the Board of Education and the school officials to present a convincing case.

They were not able to convince the Commissioners, harassed by the facts of deficit financing and unimpressed by the somewhat hazy and confused estimates of teacher needs as presented to them by the schools. There has been, moreover, a seemingly delayed recogntion, by school administrators, of what Dr. Corning now describes as "a new situation * * * which requires reconsideration of former practices."

Former practices have included estimating teacher needs on the basis of arithmetical average ratios of total teachers to total pupils, resulting in such slovenly generalizations as a finding that as high school classes average only 22 or 23 pupils per teacher—without considering the actual size of classes in basic academic subjects—there is an excess of high school teachers. As the school officials entrapped themselves by this unrealistic method of estimating teacher requirements, it is small wonder that they confused the Commissioners.

The chief reason supporting a substantial increase in teachers, aside from the growth of school population, is that our standards of educational achievement must

be raised. When tests show that of 4,155 tenth-grade (first-year high school) pupils enrolled last fall, 1,004 of them had reached only a sixth grade or under level in reading; that of 3,979 tenth-grade pupils, 1,798 had reached only a sixth grade or under level in arithmetic, it is obvious that educational standards are going to suffer unless this dangerous situation is remedied. The real issue now, as Dr. Corning told the Board of Education last week, is the "unquestionable need for additional teachers so that all the schools will be adequately staffed to serve ever increasing numbers of children with extremely varying abilities and achievement." The mere size of classes is not the real issue.

In presenting the need for more teachers to Congress, the effect of integration on hitherto accepted educational standards in the public schools should be presented in complete candor. The problem is realistic and requires realistic understanding and approach. The school authorities must get down to brass tacks in presenting the picture as it is, and in outlining a precise and detailed plan of how they propose to deal with it. That is the only way by which they can get the teachers they need.

The President, in congratulating the Commissioners and others on the speed with which they effected integration in Washington, following the Supreme Court decision, suggested that our progress in this regard should be a model for the country. It is not going to be any such model if it results in lowering educational standards because of a lack of the additional teachers now required to maintain such standards.

Now, Mr. Speaker, it appears that Washington has found from experience that it was mislead and that integration was not the Utopia as previously pictured. Washington has learned, as all communities will learn, that their educational standards are now suffering, inasmuch as they are now being confronted with the fact that those rosy promises were completely unrealistic, and that they now must get more teachers because integration has brought "ever increasing numbers of children with extremely varying abilities and achievement."

Mr. Speaker, it would seem that anybody with a reasonably fair degree of intelligence would have known that integration would bring those problems. It is amazing to realize that anyone could not have foreseen the inevitable result. Will we profit by the experience in Washington, or will this country continue to rush headlong into destruction. We yet have time to prevent this horrible but inevitable experience, if the people wish to preserve their school system.

Farmers' Income Down, Industrial Workers' Income Up—Due to Unions

EXTENSION OF REMARKS
OF
HON. ROY W. WIER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1956

Mr. WIER. Mr. Speaker, under leave to extend my remarks, I desire to insert in the CONGRESSIONAL RECORD an article appearing in the Honeywell News, Local 1145, United Electrical Workers, Minneapolis, Minn., entitled "Farmers' Income Down, Industrial Workers' Income Up—Due to Unions."

The article follows:

FARMERS' INCOME DOWN, INDUSTRIAL WORKERS' INCOME UP—DUE TO UNIONS

Much has been printed about the steady decline in the farmers' income in America. There is no question about it—the farmers' income has dropped considerably within the last few years and many farmers, particularly the small farmers, are in very bad way.

This is not good for anybody in this country. Farmers, unable to buy the product of the industrial worker in the city, can eventually mean the prelude to a real recession unless this condition is corrected, and at once, by the administration in Washington.

WHERE WOULD WE BE?

With this situation affecting the farmer, every American worker in a factory, every industrial worker, should recognize where he would be if it were not for the unions in America. I don't care whether he is organized or unorganized, the trade union movement of America is the only protection for the working people of this country against what the farmer is faced with today.

The organized worker, through negotiations with his employer, has steadily raised his wage rates—commensurate with the ability of the employer to pay. Even the unorganized worker has felt the effect of the trade union movement. He has felt it for two reasons: (1) His employer has been forced to raise wages to keep his employees; and (2) many of them have raised wages to prevent his employees from being organized.

There is no question about it. Wage rates would be considerably below what they are today in America if it were not for the trade union movement, both in the organized and unorganized shops. In fact, the industrial worker today would be worse off than the farmer if it were not for his unions.

This is made abundantly clear when we see what happened from 1925–29 when the worker in the factory was not organized. In that 4-year period, his wage rates rose a few cents an hour when they should have risen considerably more than that, as they have in the past 4 years.

GOOD FOR AMERICA

The raising of wage rates in America has been good for everyone. It has made the American worker capable of buying back the things that he produces. He has kept the wheels of industry and commerce operating through his purchasing ability.

Farm prices would even be down considerably lower if it were not for the ability of the worker to buy as much food as he does buy. However, we believe the main problem on that is that there is too great a disparity between what the farmer gets for his product and what the worker actually pays for it after it has gone through the processors and the food handlers.

The farmer sells pork as $15 a hundredweight while the worker pays 75 cents a pound for pork chops. Over production? Some people have said there is overproduction. There is certainly no overproduction in the world. There is no overproduction of foodstuffs while millions of people in the world are going hungry.

Something is wrong with commerce; something is wrong with the international situation. Yes, even here in America, millions of people suffer from malnutrition in the very low income groups. Even here in America there are many families living on less than $1,200 a year and those families making less than $1,200 a year aren't buying enough meat and dairy products.

Overproduction? Too much underconsumption.

Power for Freedom

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1956

Mr. VAN ZANDT. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting the following speech titled "Power for Freedom" delivered by Adm. Arthur Radford, Chairman of the Joint Chiefs of Staff, before the Women's Forum on National Security, Statler Hotel, Washington, D. C., January 20, 1956:

POWER FOR FREEDOM

(Address by Adm. Arthur Radford, Chairman of the Joint Chiefs of Staff, before the Women's Forum on National Security, Statler Hotel, Washington, D. C., January 20, 1956)

Good morning. Yesterday I returned from an extensive trip overseas where I visited and consulted with the national leaders and the United States advisors in some of the countries in Europe, in the Middle East, and in the Far East—areas where we share so many security interests in common.

Wherever I went, I was impressed with the fact that the United States has friends—good friends. By instances large and small, this was made apparent to me.

I was also impressed by some of the apprehensions expressed by our friends abroad. In some places, our allies actually fear we lack the elements of perseverance and stability in our efforts. They fear inconstancy may impair our resolution, and cause us to default in our commitments.

And while our allies fear inconstancy, the Communists seem to bank on it. They do not believe we are capable of the determination required to continuously and successfully contest their claims of invincibility for the future. They are not sure we have such determination even now. Nor, for that matter, are they sure that we don't.

For my own part, I believe that our greatest security lies, as it always has, in the hearts and the minds of people, both at home and overseas. It lies in their true unity of purpose and firm resolution; and in their willingness to make sacrifices, commit resources, and incur risks for the common good.

But, if we can be confused and divided; if we can be made to doubt the desirability of helping one another; if we can be brought to doubt the necessity for maintaining our own defenses; and if we can be made to cease being resolute—then we will be softened up.

The United States does not want war. What we really want is peace. Yet, we must constantly be prepared against the possibility of aggression of any kind.

In this sense, we must have power for peace, and power for freedom. We must constantly look to the improvement of our defenses—and do so now, not after a war has started.

DANGERS WE FACE

When I consider the security problems now before us, I see no reason for alarm but plenty of reason for us to be realistically concerned about the next 10 years.

We live in a world of turmoil. Constant struggle is the keynote of the Soviet orbit, and this struggle is worldwide. Its peoples are endlessly driven forward by their masters to more technical learning, higher production, and a more relentless opposition to free nations. Its leaders like to build up the idea that communism is inevitable—that it is the "wave of the future."

During recent years, there have been Communist aggressions in Korea, Indochina, and Malaya. Now the Communists utilize the more flexible tactics of cultural, economic, diplomatic, and technical assistance.

The danger to us is not lessened by their use of these devices. In fact, the danger may be even greater since the threat is not so readily apparent.

Today the Soviet Union is armed with nuclear weapons, and it is ringed by satellites. Communist forces are building airfields in North Korea in violation of the armistice. They are trying to infiltrate South Korea, southeast Asia, Africa, and South America. They are penetrating the Middle East with military and economic missions.

In addition, they are working to unrig American bases overseas, and they are constantly maneuvering to undermine the defense alliances which free nations have had to create for their own protection.

In the next 10 years, Soviet nuclear weapons will become more powerful. Their aircraft will go faster than sound. Their guided missiles will become increasingly effective weapons of destruction.

And their tactics probably again will be subject to change. We must never permit preoccupation with any one tactic to exclude from our consideration the other tactics open to them.

By contrast, our tactics are perfectly clear. We are steadfast in the defense of freedom, and we are continuing our work in the pursuit of peace.

For these purposes, our collective resources, United States and allied, are tremendous. But abundant resources could become liabilities rather than assets if we were to count upon them instead of upon the moral strength and resolve of free peoples.

The past years have had their perilous aspects, but even greater dangers could lie ahead, not entirely because of what our enemies may do to us, but because of what we may fail to do for ourselves. Will free nations maintain the resolution to keep themselves collectively strong for the long-term pull? Can we be sure we will not lose the technological race? Are we prone to take freedom too much for granted?

WHAT MUST WE DO?

These are some of the dangers we face. Now, what can we do to minimize them?

The determination of what we do is part and parcel to the development of national security policy. It involves somewhat a complex process, and is affected by many factors—by public opinion, foreign affairs, domestic needs, and by our traditions and beliefs.

In our democracy, military men do not make national policy. Due to the dangers which confront free nations, however, military and nonmilitary factors have become almost inseparable aspects of security planning. This is manifested in large military budgets and in policy planning in which military considerations have an important part.

First of our military criteria is: What is needed for defense?

At the same time, however, we do not forget that the economic health of our Nation is a prime military asset of the free world. Tensions do not constitute licenses for extravagance. For if the United States is to maintain long-term military power, then it must assume a position it can support—not just for a year or two, but for a decade or more. We have to be prepared for the "long watch."

With this in mind, and in answer to the 3 dangers just cited, 3 major tasks loom in our future:

First, let us always insure that free nations maintain a superior defensive strength—one which has the stamina and the skill to discourage and, if need be, to counter enemy surprise moves with convincing force.

Second, let us do more than just keep in step with scientific advances. Let us always keep ourselves ahead in this technological race.

Third, let us work hard to perpetuate our freedoms.

All three tasks emphasize the importance of a constancy and a stability that are unaffected in the main by short-term swings in the world situation—and are not materially disturbed by every psychological effort of unfriendly nations or by wishful thinking on our part.

I. MILITARY AID AND COLLECTIVE STRENGTH

The reason we must fulfill the first task—and have strong military forces over the long-term future—is primarily because of the massive military power, the pronouncements, and the demonstrated ambitions of nations which are basically unfriendly.

This became particularly obvious when Communist forces invaded South Korea in 1950. We could not find the pathway to peace by retreating from the danger, and military strength seemed to be one substantive item that an aggressor could readily understand.

Accordingly, we initiated not only a program to rearm, but also a program of greater association in partnerships. We made additional mutual security arrangements with other nations. We advanced billions in military and economic aid, and we provided equipment and training assistance to help fill deficiencies in the resources of our allies.

In the past year, free nations have experienced major gains in collective security: The addition of the Federal Republic of Germany to the North Atlantic Treaty Organization; the development of cooperation under the Southeast Asia Defense Treaty; and the formation of the Baghdad Pact.

Thus, the growing strength of the United States and its friends has become a key factor in improving the outlook for peace. It has become a persuasive argument to materially minded Communist leaders, and has served as a stabilizing influence.

It may interest you to know that we have been building this collective strength—land, sea, and air—in such a way that allied forces now complement each other, and generally constitute balanced forces on a global scale.

Were it not for this strength, generated by free nations collectively with the material help of our military-aid programs, the requirements for our own defense program would have to be much larger.

Resolutely, we must continue to build this strength. We must continue to encourage all nations to demonstrate collective unity and preparedness for self-defense. And in the final analysis, our own resolution and steadfastness must remain above reproach.

II. TECHNOLOGICAL RACE

Our next important task is to stay ahead in the technological race.

Perhaps the most insidious weakness a nation can have is complacency. This is the belief that we can do everything better than anyone else. It is something like the popular song called, Anything You Can Do, I Can Do Better. We propagandize ourselves in this belief in all sorts of media—advertising month after month that our products are the best and the finest.

To those who would subscribe to this, I would cite the recent Soviet advances in the development of modern long-range bombers, submarines, jet engines, and nuclear weapons.

Then I would add that: Any conclusion based on a premise that Soviet engineers are not as well qualified as ours just will not hold water. In fact, as I see it, there are no rational grounds to presuppose that American defense technology is invincible.

One of the more unpleasant facts recently became known is in the field of scientific and engineering education. Here, our main competitor, the Soviet Union, is passing us in their numbers of graduates.

According to our estimates, the Soviet system for increasing her scientific and engineering talent is more efficient than ours. It is estimated that within the next 10 years, she will have more engineers and scientists than we.

So far, the skills of their graduates have been largely invested in the development of modern bomber forces, warships, and nuclear weapons. In the meantime, their peoples must wait for that great millenium that the Soviet leaders hold out as a promised reward for their current sacrifices.

But because of their enforced concentration of technological skills, there is always the grave possibility that the Soviets could develop in some particular field, a weapon more radically advanced than what we have.

This makes the continuous flow of superior weapons to our military forces a tremendous challenge. It means our research and development programs will have to be prosecuted with even greater vigor.

Sometimes I am asked: "On whose side is time?"

My answer is that time is conspicuously impartial. It is not necessarily always on the side of those who are right. Nor has it always favored the civilized and just, over the evil hordes. No useful purpose would be served if I should intone: "Time is on our side." Time is only on the side which best knows how to use it.

This being the case, we need not be unduly discouraged or downhearted. There is nothing wrong with just plain hard work, and lots of it.

We must work hard to insure that our military programs meet the needs of the day. To maintain less would expose us to aggression. To build excessively could impair our long-term national well-being. Hence, it is best for us to organize our forces wisely and prudently, and then equip them with all the ingenuity we have.

For example, the United States must remain the No. 1, predominant airpower in the world. Nothing could be more important to our security in this air age.

Keeping ourselves the foremost airpower in the world does not envisage, nor require, the greatest airplanes in quality, the best aircraft carriers, the most efficient guided missiles, the finest crews, and a comprehensive system of bases.

In addition to the further modernization of our combat airpower, there should be increases in the capabilities of other selected forces. No one single element of power can provide the complete deterrent to every aggressive action. Just as there is no one pat answer to all our world problems, so is there no one easy way to stop an evil force.

Therefore we still envisage and require strong Army, Navy, and Marine forces—high-quality armored, airborne, antiaircraft, antisubmarine, and amphibious forces. We still envisage and require strong, ready Reserve forces to meet today's needs for rapid mobilization. All these forces are important to the total military strength of the Nation.

In essence, our military programs seek qualitative forces. We are not engaged in a quantity arms race. We have leveled off our military strengths for the long pull, and we seek to maintain a qualitative superiority in men, weapons, and equipment. In particular, we are striving to stay ahead in this decade's technological race.

WORK FOR FREEDOM

This leads to my final point. Let no one of us ever sit back and take our freedom for granted. Instead, recognize that for each freedom we enjoy there is a concomitant responsibility to be met. Each of us must highly resolve personally to meet that obligation.

Freedom is not free. Its costs have been high in human sacrifice, and unless we become militant about our liberty, we could

lose it. We are the children of freedom, and we cannot feel safe except in an environment of freedom.

Nor is our heritage inexhaustible. Our free institutions will survive only if they are constantly replenished by the faith that gave them birth.

The way to freedom and peace will sometimes be too hard a path to be traveled by the fainthearted who despair and are easily deceived by phony mirages of peace.

It can become too rough a path to be traveled by the impatient whose resolution must be recharged each fiscal year.

It may be too steep a path to be traveled by those who value their personal comforts more than they value their freedom.

Recently, President Eisenhower issued a widely publicized executive order to announce a code of conduct for the members of the Armed Forces. This code is even now being spread far and wide through the Armed Forces.

But has there been enough attention given to the necessary actions leading to a code for our conduct? Have we in our homes, schools, and churches a sufficient grounding in the basic fundamentals of liberty?

I am not certain we have.

Without question, we in the Armed Forces must do our part. In fact we have underway right now, programs to help fill the gaps we know exist today.

But this is not enough. It is not a task for the Armed Forces alone. It is an All-American task. It is, for example, a task for each and every Women's Organization represented here today.

In essence, we must call on the good influences of every American organization, and the home, church and school as well, in order to develop the sound minds and dedicated spirits upon which our national security is fundamentally based.

In this fashion, we can point up a liberty in which all people can believe. We can develop a method by which these principles can be explained as opposed to those of a totalitarian state. And we can emphasize that freedom and security belong to those who are militant in their convictions of liberty.

Freedoms are like plants. They do not grow unless they are cultivated and nourished by all the means we are provided. The Freedom gardens, committed by our forefathers to our stewardship, must be fed by our beliefs and eternal vigilance, cultivated by our actions, and weeded of complacency by continuous self-examination.

Finally, no garden is of value unless it yields a harvest. Our Freedom gardens must yield themselves in terms of Christion faith, and the good works we do for mankind. Let us always preserve the strength and the power to look at Freedom as the wave of our future.

Grain Dealers Association of Iowa Urges Action To Relieve Farm Price-Cost Squeeze

EXTENSION OF REMARKS
OF
HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1956

Mr. HOEVEN. Mr. Speaker, following is the farm resolution adopted by the Farmers Grain Dealers Association of Iowa at its 52d annual convention held in Des Moines (Iowa) on January 23, 24, 25, 1956:

DES MOINES, IOWA, *January 26, 1956.*
Hon. CHARLES B. HOEVEN,
House Office Building,
Washington, D. C.:

Following is farm resolution adopted by the Farmers Grain Dealers Association of Iowa at its 52d annual convention held in Des Moines, Iowa, January 23, 24, 25, 1956:

"We believe the most important resolution of this convention is the one that deals with the economic problems that now face the farmers of this Nation. It may be later than we think.

"There are many aspects now very similar to late 1928. Many of you remember it was then a dangerous situation. At that time we were in the midst of a great building boom and industry was enjoying unusual prosperity. That building wave ended in May of 1929 and the panic started in October.

"We urge that Congress immediately accelerate their efforts in solving the farm problem. This cost price squeeze must be ironed out now before our whole economy suffers from its tragic effects.

"The theorists in the USDA say that the population increase will take care of the situation within a few years. But a lot of farmers will perish in the economic quicksands of overproduction and low farm income before they ever reach the point where our consumptive capacity will equal our productive capacity. At the present time—

"Food production is increasing slightly faster than population growth, and there is no evidence to show that the Nation's population will increase faster than its food-producing capacity in the foreseeable future.

"The dollar received for Iowa hogs this winter has had very little more purchasing power than in the low times of the early thirties.

"The present farm parity index number is 80. This number continues to decline, and unless we have a bold new farm policy the end is not yet in sight. This present drifting can only lead to one end and that is disaster for agriculture and general economic stability.

"In 1947 the gross national income was $232 billion.

"In 1947 the gross national farm income was $17 billion.

"In 1955 the gross national income was almost $400 billion.

"In 1955 the gross national farm income was just over $10 billion.

"There has been a decline of about 40 percent in net farm income since 1951. Few people in any business can stand that without being hurt and demanding action.

"The world level of food and fiber stocks is now at the highest point in history.

"To meet this situation farmers must do the same as industry; that is produce to meet the effective demand and set up proper reserves against poor crop years and national disasters.

"We strongly urge Congress and the President to do the following:

"1. Adopt a soil fertility reserve or land rental plan that provides enough money to induce farmers to retire the needed number of acres from production. There is more sense in storing surplus crops in the soil than piling them up in warehouse. It would help achieve a sound social and economic purpose and aid in making the adjustment we have yet to complete, that is from a wartime to a strategic policy of long time strength and stability. The acres retired from production be used only for soil conservation and other natural resources. No crops to be harvested or pastured except in emergency areas.

"2. Install a rigid cross compliance policy to prevent shifting of surpluses of one crop to another or from one producing area to another. Some method should be devised to protect producers of basic crops from competition with so-called noncommercial areas. Diverted acres should be used only for soil building and conservation practices.

"3. Make crop loans at 90 percent of parity on basic crops. Farmers are entitled to an income comparable to their investment and hazards involved.

"4. Increase the school lunch especially on milk and other perishable commodities. Excess foods should be made available to welfare agencies and to the needy even in greater abundance.

"5. Make supplemental payments to farmers who have sold hogs since last October 1. These payments be made to bring the prices up to 90 percent of parity, and further that farmers receiving such payments comply in 1956 by reducing their hog numbers by an equitable reduction formula which would achieve a reduction of 10 percent with special consideration to be given to hardship cases and also comply with the 1956 corn acreage allotment.

"6. Continue to agressively explore all the possibilities of exporting grains and foods to other countries of the world.

"7. Eliminate the Federal tax on gas used in farm tractors."

MILFORD M. BEEGHLY,
President, Farmers Grain Dealers Association of Iowa.

Cotton Must Fight Back for Markets

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1956

Mr. GATHINGS. Mr. Speaker, County Agent Keith Bilbrey, of Mississippi County, Ark., points up some vital suggestions which, if heeded and put into effect, would increase the consumption of cotton. According to Mr. Bilbrey, finished cotton goods are not adequately marked or laveled. The story of the quality strength and wearability of cotton is not being conveyed to the consuming public.

The Blytheville (Ark.) Daily News carried a most enlightening article in its issue of January 11 entitled "Cotton Must Fight Back for Markets." This fine editorial is included as follows:

COTTON MUST FIGHT BACK FOR MARKETS

Our own beloved cotton is being outpromoted. In spite of the best efforts of the National Cotton Council and other interested groups King Cotton is taking a beating where it hurts most—across the counter.

Recently County Agent Keith Bilbrey and others interested in things like this, toured Blytheville's top dry goods stores. They gave particular attention to the way cotton is labeled and sold and the way salespeople told or didn't tell the story of cotton's better qualities.

It was here, in cotton's own capital, that they learned of the whipping our product is taking. They found it is often impossible to find cotton labeled as such. They found that synthetic fibers are riding on cotton's back. They found, in cases, it nearly impossible to tell just what fabric was composed of which fibers.

In Blytheville and elsewhere today shirts made up of cotton and synthetic blends are being sold for cotton. The labels often don't give even a clue, and honest salespeople sometimes frankly answer they aren't sure if

the article is all cotton, part cotton, or not cotton at all.

But the saddest feature of all their probings was the fact that cotton isn't selling itself. It isn't even trying. For instance, a bath towel, with only a thin nylon rib running around the outside, bears a tag which literally screams, "Nylon."

Ninety-nine percent of the material was fine cotton, able to withstand repeated washings. No tag pointed out this fact. Nylon, rayon, and other synthetics are boastfully labeled to contain those fibers. But they also point out, on labels and tags, that, though their fabric is launderable it must be done in lukewarm suds and mustn't be touched by a hot iron.

In other words, the synthetics, by their very shortcomings, are forced to list their liabilities as a fabric. Otherwise, the darned things would likely disintegrate.

On only one item did Bilbrey and his friends find any mention of cotton's launderability, and this an all-too-modest reference. Most cotton goods bore no tags or labels calling to the attention of the buyer that the product was made of cotton. There were no other mentions on tags of cotton's strong points—it can be washed in boiling lye and ironed with a Sherman tank.

And that's where the lack of promotion is most important. It's here that the sale is clinched. The entire cotton industry must increase its efforts to sell more cotton. Promotion can't be overlooked. Look what the synthetics have done with it, even though they must admit that their fibers simply aren't as good under all conditions as cotton.

Stop Whispering: Proclaim United States Story

EXTENSION OF REMARKS

OF

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 25, 1956

Mr. SCOTT. Mr. Speaker, under leave to extend my remarks, I am inserting an editorial which appeared in the Philadelphia Inquirer on January 20, 1956. The United States Information Agency is doing a fine job and is deserving of our support.

The editorial follows:

STOP WHISPERING: PROCLAIM UNITED STATES STORY

America has a selling job to do. That job is to "sell" our country and all it means to the peoples of the world.

For many decades the United States of America was a beacon in the minds of men. Our country was held high as a friend of the oppressed, helper of the needy, champion of human liberty.

Today all that is changed. We seem to have fewer friends abroad with each succeeding year. What friends we have too often are in high places; the peoples seem to have lost touch. They appear ready to believe Communist lies that distort American ideals. Never in human history has a country done so much to assist others as ours—only to be misunderstood and maligned.

The Inquirer believes there is one basic reason for this grave state of affairs: Failure to get the real story of the real America directly to the peoples of other countries.

That failure is the more lamentable when we realize that salesmanship has long been one of our strong points. We can sell United States cars, United States films, United States music, United States goods almost anywhere. But we have slipped up badly on selling the great Nation which produced those goods—and so much more that is precious in the world today.

Because citizens of the United States have not been conditioned to regard propaganda as a major and normal function of government, our country's information agencies have been working in slow motion, with inadequate funds, insufficient personnel, and indifferent public support. Even now the Voice of America is a whisper, not a shout.

Lacking, above all, has been that spirit of dedication to our cause which the Communists pour out in such measure in behalf of their campaign to enslave mankind.

Many United States Information Agency workers are doing a valiant job. But they struggle not only against their opposite numbers in Red agencies but against the work of Communists who have infiltrated schools, colleges and other institutions, especially in Asia and the Middle East.

At a time when the cold war is being renewed by Moscow with redoubled vigor—even on our Latin-American doorstep—it is time for Americans to face facts. It is just as important for us to win this war for the minds of men as it would be to win a war waged with guns, bombs and planes. The stakes are just as high. Yet we would not expect to win a shooting war with a piggybank budget. How, then, can we expect to win the cold war with that same sort of small-change financing?

We have been spending, with hardly any question, for defense and foreign aid. The new budget includes over $40 billion for those 2 categories. Proportionately, the job of selling the American story is almost ignored. Surely if we were to allocate for that purpose only one-half of 1 percent of that sum—or about $200 million—it would not be too much. General Motors alone spends an estimated $100 million a year to advertise and promote its products.

A drastically stepped-up expenditure to sell the American way would, in itself, be a valuable adjunct to the defense and foreign aid programs themselves. They are all part of the same struggle: to keep the free world free, and preserve our own freedom thereby.

The Inquirer believes that getting the truth about the United States to the peoples of other lands is one of the most urgent tasks we face. That is why a broadly expanded program should become part of our bipartisan foreign policy.

That is why we hope both the Republican and Democratic Party platforms for 1956 will include a pledge to that end.

We must stop whispering. We must proclaim the truth—in words that will be heard, and understood clearly, throughout the world.

Federal Surplus Property for Education

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1956

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an article by W. T. Frazier, of the Department of Health, Education, and Welfare entitled "Federal Surplus Property for Education." This article appears in the January 1956 monthly issue of the publication Higher Education.

It is very gratifying to me to learn that our higher education facilities are receiving large and much-needed assistance pursuant to the bill I introduced last session and which became Public Law 61.

The article follows:

FEDERAL SURPLUS PROPERTY FOR EDUCATION

(By W. T. Frazier, Chief, Division of Surplus Property Utilization, Office of Field Administration, Department of Health, Education, and Welfare)

Donations of Federal surplus property for education and health purposes have recently hit a new high. Since the passage of Public Law 61, approved by the President on June 3, 1955, allocations of personal property have increased from $13 million per month to $18 million, an increase of nearly 40 percent. Public Law 61 (84th Cong.) makes stock-fund property held by the Department of Defense and other Federal agencies available for donation before being offered for sale. Prior to June 3, stock-fund property was sold when it became surplus, and the receipts were deposited to the working capital or stock-fund account. This change in the law is particularly significant because stock funds cover items in common use, nearly all of which are usable for health or educational purposes.

Colleges and universities are now obtaining valuable equipment and supplies, much of which is new and unused and of types that have not been available for many years. This property includes jet engines, aircraft, laboratory equipment, electronic equipment of all types, textiles, machine tools, hand tools, maintenance supplies such as paint and hardware, office machines, surveying instruments, boats for marine research, construction material, and vehicles of all types.

SUPPLIES AND EQUIPMENT

Southern Illinois University reports that it has received well over one-half million dollars worth of surplus personal property, in addition to many buildings now being used for shops and for housing. The university representative says, "In fact, if all surplus items now used by the university were to be withdrawn without replacement, at least 50 percent of our operations would be brought to a standstill."

Floodlights formerly used by the Voice of America are now used in the Yale University Audio-Visual Center in teaching cinematography. Cornell University obtained a viscometer, when none were available on the open market, for use in the rubber research program of the School of Chemical Engineering. The College of Engineering of Princeton University is utilizing a surplus plastics extruder to conduct research in the field of plastics. Fordham University has converted a surplus Army searchlight into a solar-ray furnace. A carburetor test stand and a sheet metal brake with a 6-foot blade have made valuable additions to the laboratories of Clemson Agricultural College.

Atomic Energy Commission equipment has been donated to universities offering courses in nuclear physics. The University of Florida and the University of North Carolina have received AEC measuring systems. At the University of Maryland, a supersonic wind tunnel has been constructed by members of the Aeronautical Engineering Department from parts of a former Japanese wind tunnel and two large steel tanks formerly used by the Navy in conducting a diving school.

Expensive machine tools are being added to the college machine shops. Oregon State College has received a Cincinnati metal working shaper; the University of California, a Cincinnati No. 2 milling machine and a LeBlond lathe; and the University of Wash-

ington, three Fuller compressors for use in the construction of a combination transonic and supersonic wind tunnel.

Allocations of personal property are made by the United States Department of Health, Education, and Welfare to the various State agencies for surplus property, which in turn distribute the property to the eligible institutions. The pamphlet Acquiring Surplus Property for Health or Educational Use (for sale by the Superintendent of Documents, United States Government Printing Office, Washington 25, D. C., 15 cents a copy) explains in some detail the procedure followed by institutions in obtaining surplus property. This pamphlet also contains a directory of the Department and State agency offices.

REAL PROPERTY

Real property, consisting of land, land and buildings, or buildings for removal from site, is also available for educational and health purposes. Transfers are being made at the rate of about $1.5 million a month for school sites, additions to college campuses, student and faculty housing, vocational agriculture, forest management, and other types of educational and health programs. The volume of real property available is increasing because all Government agencies are being urged to dispose of property no longer needed for Federal purposes.

The University of Tennessee has obtained 27 buildings from Camp Breckinridge, Ky., for housing of married students. The University of North Dakota has obtained title to a small tract of land, with 4 buildings, formerly used by the United States Bureau of Mines in experimenting on lignite coal.

Three buildings from Love Field at Dallas, Tex., were transferred to the Southwestern Christian College to replace dormitories and faculty housing destroyed by fire.

Many colleges and universities have received their entire real property from Government surplus. The University of Corpus Christi occupies a former naval air station at Corpus Christi, Tex. The American Institute of Foreign Trade began its operations at the former Thunder Bird Field No. 1, near Phoenix, Ariz. St. Michael's College obtained a part of Bruns General Hospital at Santa Fe, N. Mex., to begin a new school. The Northington campus of the University of Alabama was a former Army hospital, and the Santa Barbara branch of the University of California was used previously as a marine air base.

A number of universities have obtained tracts of surplus land for experimental farming and research work. The University of Iowa conducts experiments on a part of the former Des Moines ordnance plant. The University of Minnesota established the Rosemont Research Center at the Gopher ordnance plant. Oregon State College experimental farm is a part of a former Army camp, while the University of Florida has established its forestry branch at a former naval air station.

The University of Utah has expanded its campus by taking over Fort Douglas. The Temple University Dental and Pharmaceutical School is housed in a former industrial plant in Philadelphia. The Norman campus of the University of Oklahoma is situated on a former naval air station; the College of Charleston and the Medical College of South Carolina share the former Fort Johnson property for research programs.

CONCLUSION

In the last 10 years more than $1.5 billion of Federal property has been transferred for health and educational purposes. This program of secondary utilization of Federal property by tax-supported or tax-exempt health and educational institutions is now recognized as one of the important Federal-aid programs for health and education.

If a college or university is not receiving its share of Federal surplus property, it should communicate with the appropriate State agency or HEW regional office and find out how it can participate.

Memorial to Senator David I. Walsh

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1956

Mr. PHILBIN. Mr. Speaker, under leave to revise and extend my remarks in the RECORD, I include therein a very remarkable, able, and significant sermon delivered by the distinguished Msgr. Oscar O'Gorman at the new chapel at Brandeis University on November 27, 1955.

Monsignor O'Gorman's remarks vividly bring to mind the extraordinary contributions of our late dear friend, Senator Walsh, for so long the first citizen of my hometown of Clinton and Massachusetts, and one of the most outstanding statesmen in American history.

The tribute paid by this eminent divine, powerful intellect, and eloquent voice, Monsignor O'Gorman, was delivered in the solemnity of a memorial mass for our late and beloved, distinguished friend.

It compresses into a relatively short address, brilliantly conceived and eloquently delivered, some salient qualities which marked Senator Walsh during his life and during his long political career. Senator Walsh had many God-given gifts, which inevitably brought him fame, respect, and admiration, and many personal qualities which endeared him to all those who ever had the privilege of knowing him. Foremost among these qualities was his profound spirituality and his broad spirit of tolerance. It was that spirit and the manner in which it was exemplified during his life that Monsignor O'Gorman so admirably treated.

To Senator Walsh, a man of deepest faith, irreligion, atheism, agnosticism, skepticism, and the whole range of materialistic philosophies which exclude belief in the living God, were puzzling, incredible, and greatly deplored. Senator Walsh's reliance in the Creator, his attachment to fundamental American principles, were distinguishing characteristics of this great man, whose toleration for others was never constricted or distorted by bigotry, narrowness or provincialism.

The warm friendship of Senator Walsh for the Jewish people which was memorialized on the occasion of Monsignor O'Gorman's admirable address was manifested in many ways during his life and it exemplified his deep-rooted spirit of toleration for all groups and for humanity as a whole. But it also pointed up some concrete instances of that friendship, particularly Senator Walsh's relationship to the late, esteemed Mr. Justice Brandeis—a relationship that endured for many years and that found these great men working together for great, human causes having to do with the betterment and improvement of the downtrodden and the underprivileged, with the rights of religious and racial minorities and the constitutional guaranties of individual freedom so highly prized and zealously guarded by these illustrious public servants.

If Senator Walsh's life of brilliant public achievement can be interpreted in any significant way, it demonstrated beyond doubt that a great man of public affairs could be an even greater citizen because of his religious faith and his love of God and his fellow man. Senator Walsh lived by his faith and his beliefs. He remained loyal to them to the end. He never faltered and he was never swerved from his high purpose.

These attributes not only marked him as a man of religious faith but as a believer in the American creed that enabled him to reach the lofty pinnacle in statescraft and thus add to the luster of American patriotism. It is fitting indeed that Monsignor O'Gorman's brilliant address should emphasize the nobility and greatness of Senator David I. Walsh.

The text of Monsignor O'Gorman's address follows:

MEMORIAL TO SENATOR DAVID I. WALSH

(Sermon delivered by Msgr. Oscar O'Gorman at David I. Walsh memorial mass November 27, 1955, Bethlehem Chapel, Brandeis University)

May I say a brief word of congratulation. This, as you know, is a memorial Mass offered by us all in prayerful memory of Senator David Ignatius Walsh. It is, of course, the ideal tribute, the very tribute Senator Walsh himself would have considered ideal while he was living, the tribute that he most certainly now considers even more perfect. It is a Mass offered in thanksgiving to God for a great leader and a great friend, offered also for the eternal repose of his immortal soul. And it is offered in a chapel on the grounds of a university named for one to whom Senator Walsh was a true friend and stanch supporter, a chapel which you have generously befriended in Senator Walsh's name, and in remembrance of his friendship for Mr. Justice Brandeis.

One who never knew Senator Walsh would inevitably be impressed by your remembrance. Men are not often so devotedly held in memory through the years. When faithful friends, themselves men of stature and intelligence, do prove so uniquely loyal, this is in itself no uncertain clew to the stature, the integrity, and the character of him who has engendered such loyalty. As for yourselves, some are friends while a man is living, while he is in power, while there is something to be gained from his friendship—you are friends without any of these things, most generous friends, lasting friends. God will surely bless your loyalty—it does you honor.

As we come here today we are no doubt struck, as indeed the whole Nation has been, by the meaningful juxtaposition of the three chapels of different religious faiths grouped together here in one spot. To everyone it symbolizes the important belief that in this Nation divergent faiths can coexist and live side by side in mutual respect. Here, as it were, a true picture is given by architectural arrangement. The differences and separation between the faiths are not concealed. But the great degree of their unity is also happily emphasized. While there is divergence there is also unity, unity which is precious to this Nation.

Difference in faith offers no real threat to our national strength and this fact deserves emphasis. There are well-intentioned

people today so impressed with the need of complete civic unity that they would have us give up even fundamental beliefs and practices in the interest of that unity. They would substitute for faith a pale and meaningless and, indeed, a fatal nonsectarianism. Nonsectarianism has become almost a religion with them—a manmade religion. They appear to believe that perfect unity is essential to the national welfare, that anything in the way of it must go, and though they may not say so, they really think that a religion that stands for anything is in the way. I submit to you that this is simply not true, that there is no great danger from our differences. We have always had differences and always will—if not in religion, in something else. But men of different faiths have lived and worked side by side throughout our history and our country has gone ever forward to unparalleled strength and unparalleled unity. The real threat to our well-being, and even to unity, lies not in the difference in our religious beliefs but in the fact that so many have no beliefs. The real danger is irreligion. And it is fatal to urge upon men unity at the price of religion. Nonsectarianism, which always labors under a handicap because it must be silent about the most important things, is necessary in some areas of our living. But when it invades the field of religious belief it becomes a contradiction, actually a betrayal of faith.

The relationship between Senator Walsh and Mr. Justice Brandeis well illustrates the point that the danger of religious differences can be greatly overestimated. I do not need to tell you that the Senator was a Catholic beyond the ordinary implications of the word. He was an exceptionally faithful and conscientious son of the church. More than most he knew and appreciated her. More than most he helped her. More than most he sought her guidance. Throughout life he paid a great price for his fidelity to her. His interest in her was keen, his association with her constant. None who ever spent even a minimum of time in his company could fail to realize this. Yet he found nothing in his religion which prevented his advocating the appointment of Louis Brandeis to the Supreme Court of the United States. Rather he found much that told him such advocacy of Mr. Brandeis' candidacy was his duty. It is of course but one of countless examples given by public men throughout our history proving that unity between men of different faiths has always been possible and has always been a fact. Nor is such unity confined to individuals. For years and years many large religious groups lived together here in our own community. During those years there were none of the deep-down, ugly trends such as threaten every neighborhood and whole Nation today. (Need I say that these present trends are not superinduced by religion?) The difficulties that did crop up in the past were, moreover, largely due to racial and cultural prejudice rather than to religion. The life of our Nation has never been seriously threatened by religious division.

Our religious differences exist and will continue to exist. They are real differences on important questions, and no one should pretend they are not. But we have religious unity, too. We think exactly alike on many important questions, and this is a matter of the greatest value. Many things will be sacred while we so agree. Our differences constitute no danger, and our agreements are a most valuable asset to the Nation. That is really the present situation.

But there is a danger: it is not religious difference, it is religious indifference—which has no standards, and, therefore, no conscience, no compassion, no possible basis, actually, for lasting unity. When for the sake of unity you set nonsectarianism above religion, you inevitably destroy religion. You produce indifferentism and irreligion, which are the real blight on the face of this Nation today. It is indifferentism and irreligion that spawn the conscienceless, wholly uncontrolled individuals and the ungodly hordes that prey upon the body politic. Among them any sort of disunity, of subversion, and of treachery is both possible and probable. Make no mistake: the current enthusiasm for unity at any cost, even at the cost of our most sacred religious convictions, would destroy the very things it seeks to save.

Let us not then be overafraid of our religious differences. Let us rather be on our guard against a nonsectarianism that would eviscerate all religion. Like the three chapels here, let us have our differences but let us also each sincerely stand for something. There will be much in what we all stand for, in our unities, that will be priceless to this Nation.

We do well to remember both Senator Walsh and Mr. Justice Brandeis this morning. No one who really knew Senator Walsh will doubt that his faith was actually the cornerstone of his whole personality. It permeated his mind, his heart, his conscience, and the very marrow of his bones. It informed and to a very real extent shaped his every decision, his every utterance. He lived in that faith and for that faith, he suffered for it, he died in it. His faith indeed more than any other single factor, made him the man that he was, a great American. Most probably there are those who can say much the same of Mr. Justice Brandeis with regard to his faith. If America is to remain great, there must be other Americans who are great not because they minimize or have only the vaguest ideas of their responsibility to God, but great first of all because they do walk humbly before God, because their convictions and decisions and whole course of action are rooted in a fervent belief in their direct responsibility not to some vague deity but to a definitely personal God. A personal God who has taught the world in some detail the right way of living, and clearly distinguished it from the wrong way. A personal God whose holy will is the basis of all morality, a morality that is therefore unchanging and unchangeable. A personal God whose values are eternal, and whose values must be our values, too. A God who is the only source of real religion. A God who can and does say, "Heaven and earth shall pass away but My words shall not pass away."

We need never fear men of such stamp. America has been built upon them. Though they have differed, they have been united in most fundamental and sacred matters. There has been difference, but there has been unity too. Let us not fear the differences of honest belief. Let us rather fear the indifferentism which undermines all standards and therefore destroys. Beware of any demand for unity which would incline you to place it above religious principle and practice. The friendship between Senator Walsh and Justice Brandeis, and these three chapels symbolically grouped here, may well remind us of the true situation and help us keep our perspective. "The just man liveth by faith." And true faith is no menace to this country but, rather, its richest asset.

San Juan Rabbits Threatened

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1956

Mr. WESTLAND. Mr. Speaker, in recent months there has been some agitation to pass Federal legislation banning the interstate or intrastate shipment of San Juan rabbits. Some proposals call for a Federal law to exterminate the rabbits.

The San Juan rabbits were originally brought into the San Juan Islands by British troops when these islands were occupied by them prior to the Oregon Treaty of 1846. Since that time the San Juan Islands, located in upper Puget Sound in the State of Washington and included in the Second Congressional District of that State, have supported great numbers of these San Juan rabbits.

These rabbits have provided pleasure both as sport and food for the people of the islands. The attitude of the people on the islands to the proposed legislation is shown by the following letter from a resident of the San Juans:

In regard to the article in the Times about the San Juan rabbits, these rabbits are a source of income for many people on San Juan. They are excellent eating and serve as meat for many people. As to the nuisance value the farmers that don't want them allow hunting and they have practically disappeared in certain localities. Others protect them for a cash crop. The size of these rabbits has been much exaggerated; they weigh between 3 and 4 pounds when fully grown. There are no natural enemies here to destroy them as foxes, etc., which is the reason we have them. We have had letters and read articles from Pennsylvania that these rabbits have not proved a nuisance there on account of the hunting pressure and predators and can't stand the cold winters.

We hope Representative CUNNINGHAM, of Iowa, knows all the facts about these rabbits before preparing a bill to outlaw them. As a farmer and taxpayer of San Juan Island, we would appreciate very much if you would do what you can to discourage this bill for shipment in interstate commerce. Please advise if there is anything we can do about this matter.

Yours sincerely,

K. F. DOUGHERTY,
Friday Harbor, Wash.

Don't Pick on Your Congressman

EXTENSION OF REMARKS
OF
HON. JAMES J. DELANEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1956

Mr. DELANEY. Mr. Speaker, the following remarks were sent me by James J. Flynn, doctor of philosophy, chairman of the department of social studies at Fordham University, who delivered them at the opening of a discussion session of the Fordham forum. It would be interesting to know what were the reactions of the students.

DON'T PICK ON YOUR CONGRESSMAN

(By James J. Flynn, Ph. D, associate professor of American Government, Fordham University)

The press, radio, and television have headlined the fact that the 84th Congress has voted to raise its own pay. The voice of the people in our daily newspapers have been filled with letters highly critical of what they call a salary grab. The panic is on, it is open

season on Congress. It appears as if anyone who can corral a publisher, a 3-cent stamp, or a soapbox will take a slap at our Nation's lawmakers.

It is not unusual to cast aspersions on the Senate of the United States or the House of Representatives as the "chowderhead clique" or the "windbag brigade." This approach seems always to assure an audience. It is possible that some of these that throw brickbats are sincere. Some are just simply abusive. But all of them suggest that Congressmen are jokers, loafers or just plain incompetent.

Accepting the position that Congress is not as efficient as it might be, it appears time that someone place the reason where it belongs—on the people.

Granting that what we say and think about the Senate and House are correct, then it must follow that the people who elect its members are equally to blame. If you bought your car the way you choose your Congressman you would probably blame yourself when the motor fell out. Before you signed the contract you would want a test ride. It is conceivable that you ask questions about gas consumption, tires, motor performance, and a hundred other things. But the average American voter spends little or no time attempting to know the man or woman who will represent him in Washington on such vital matters as peace or war, taxation, social security or his financial future.

The chance is better than average that most voters do not know how their Congressman stands on foreign affairs, or on the big domestic issues of the day. What is worse is that when some Congressmen try to discover how their constituents feel on national and international affairs they are fortunate if 25 percent of the questionnaires sent are returned. The real wonder is that in such a hit and miss system we get so many able men and women to represent us in Congress.

When the voter suddenly awakens to the realization that his Congressman has failed to vote some national or international issue as he thought he should, the voter does not blame himself. His normal reaction is: "What can you expect from a cheap politician?" In fact, he expects plenty from his representative. He thinks of his Congressman as an employment agency, errand boy, and lonely hearts adviser. He rushes to his Congressman to get his brother-in-law a job, get his boy into West Point, discover where his cousin is on a civil-service list, get him an introduction to Marilyn Monroe, and to buy tickets on his club raffle.

When John Q. Public comes to Washington he expects his Congressman to feed, clothe, and board him until he gets what he came for. If he goes broke while in the Nation's Capital the elected representative is expected to pay the carfare home. Some Congressmen claim as much as $3,000 is spent of their income yearly contributing to charity for their constituents.

The average visitor to Washington visits his Congressman and feels hurt if his elected representative is not prepared to spend the day with him. If he meets his Congressman as he is going toward his respective chamber for the opening of Congress at noon, he will expect to be taken to lunch. If he is going to visit a Government bureau to get a job, or land a contract he will demand that his Congressman come with him to plead his case. If he is in Washington on a vacation he expects his representative to entertain him by talking about anything from Formosa to Freddie Fitch, the home town character. It certainly appears as if he believes that his Congressman, like himself, has nothing to do.

Most constituents, if they think of it at all, believe that their Congressmen live a life made up of cocktail parties, dances, and White House dinners. Nothing could be further from the truth. Your Congressman works hard at his job. The number of deaths in the last Congress is grim proof of the truth of that statement. The average Congressman belongs to one major committee which might meet 4 or 5 times a week. If the Congress meets at noon, as is fairly common, committees must meet in the morning, or in the evening, or during the weekend when the Congress is no in session. A Congressman belongs to three of more minor committees which meet less frequently. From noon until 5 or 6 he attends debates on the floor of the House or Senate and discusses legislation with his colleagues or interested parties.

When a Congressman can get an evening at home he must expect to spend it reading legislation, mail from his constituents, or committee reports. A good part of a Congressman's evenings are spent going to dinners, dances, and receptions—for which he pays. Congressman USHER L. BURDICK, of North Carolina, discussing the night life of a Congressman states: "I kept up the rounds for a week, just to see what it cost a Congressman to live in proper style while performing his duties to the people * * * when the week ended I found I spent $500, and it just occurred to me that I would have to abruptly end this profligate system of expense, or I could not live in that fashion on $15,000 annually."

Most Congressmen receive from 100 to 200 letters a day from their constituents. Senator ESTES KEFAUVER states that when he first entered Congress he was told by Speaker of the House SAM RAYBURN that the most important single item in his work was to answer his constituents' mail. The mail will be from a farmer who has not received his check from the Agriculture Department, or from a young veteran who has not been able to clear his GI bill claims. There are a few letters from constituents who have been enlisted by a pressure group, and who demand to get a statement as to where the Congressman stands on certain pending legislation. Some constituents want free seeds, maps, or publications put out by various Government departments or bureaus. A budding inventor sends a new gadget and wants it patented. A hometown Carrie Nation will write to ask if it is true that her Congressman keeps a little liquor in his office.

Regardless of the type of letter it must be answered. Many of the letters require telephoning and legwork to get the answer. Some threaten openly that unless the answer is right they will get even at the polls.

All this indicates that there is little time left for a Congressman to do the real work he came to Congress for—legislate. In the 83d Congress 15,432 bills were introduced. This does not include resolutions which totaled 2,204. Such a volume would indicate that lawmaking is a full-time job.

In 1946 the Congress passed legislation that was supposed to streamline the legislative process. The new legislation cut the number of committees in both Houses, and gave appropriate staff aid to cut the errand boy work on the legislators. It has not proved too successful because a Congressman's constituents will expect him to give most of his time doing unimportant errands.

There is little true comprehension of what a Congressman is supposed to do by a constitutent who wants him to present the winner's trophy at the local golf club. Or the hometown songwriter who wants his latest opus copyrighted.

Freshman Congressmen quickly lose their energy and vigor to do a good job when they face such continuous badgering. The cynical attitude of constitutents toward their Congressmen is very often matched by an equally strong cynical attitude of the Congressmen for his constituents.

Congressmen work hard. The figures of the 83d Congress prove this fact. Congress was in session in the Senate for 294 days; in the House for 240 days. In this period of time 1,783 bills passed, of which only 52 were vetoed. Those figures are not unlike the work of other Congresses. A large amount of Federal legislation is enacted by each Congress.

Congressmen realize the importance of answering their mail. As one Congressman expressed it when asked the question, "What is the secret of long congressional tenure?" "It is a simple one. Give close and prompt attention to your mail." Some Congressmen write friendly notes on constitutents birthdays, send them notes when they travel outside the United States, and never forget a death of a sick cow, or a fire that burns down the old homestead.

Our form of government has placed the responsibility for action in the hands of elected officials. Aside from the President and Vice President these elected officials are primarily the 531 Members of House and Senate. It is the work of our Congressmen to maintain the balance of power. If they cease to do the job then be prepared for some type of presidential control.

The Constitution places the Congress of the United States in the No. 1 position in our Government—Article I is the legislative article. The Founding Fathers saw the future of our country in representative government. It will not survive if Congressmen must play down national welfare to be nursemaids to their constitutents. Congressmen will vote in blocs and as lobbyist direct, if they are not given time to study legislation. Because the people back home want special individual attention; they will pay for it in poorer laws.

The time has arrived when the public must begin to take their Congress seriously. The 531 men and women that we send to Washington are not the comic strip characters portrayed in Hollywood or the press. These hard-working people have in their hands your future—yes, your very destiny. They make war and peace—and at a time like the present should not be burdened with work that an ordinary businessman would assign to an office boy. The time is long past for the public to look upon the political career for their children as a black mark on the family's good name, "Politician" must become a word as attractive as doctor, executive, dentist. Our schools must encourage the student to make politics a career. You can't get good men and women to give up their lives in public service unless you make the career attractive.

Congress could stand a few changes that might make it a better place to work, and a place where its Members could feel as if they had performed a job well done. The recent salary increase is a step in the right direction. It might also be helpful to lengthen the term of Members of the House to 4 years. Most Members of the House spend the first year mending fences to be reelected in the second year. After the first 2 years they pretty well know the ropes. If a Member is not reelected it is a complete waste. Voters would think more seriously if they are to have a Congressman for 4 years than they appear to do under the present system.

It might be better to limit congressional terms to two and in that way clear the deadwood out of Congress. It would help make way for young men and women to become a part of the big job of making representative government work. Ex-President Truman has this to say on the subject:

"House Members should have a period of service of 4 years. That is, the House of Representatives should be elected with the President for a 4-year term of service. Then the country would be able to vote into or out of power a President, a legislative majority, and one-third of the Senate at every general election.

"A 12-year limitation for Members of the House and Senate would prevent the fossilization of the key committees.

"We would cure senility and seniority—both terrible legislative diseases nationally—if 12 years were the limit."

It is the public's obligation to permit Congress to do the job it has been elected to do. Congress will do that job when their constituents give them the time and desire to protect the Nation from creeping bureaucracy. With a higher wage the public can more carefully select the Members of our Federal Legislature who will face the domestic and international question with a new vitality.

North Dakota Needs Forest Research Center

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1956

Mr. BURDICK. Mr. Speaker, I have here a resolution setting forth the need of a forest research center in North Dakota, and requesting funds for its establishment. Establishment of such a center has been long overdue in this Plains State. The resolution speaks for itself; the names of those who signed it testify to the statewide support this project has:

RESOLUTION REQUESTING THE ESTABLISHMENT OF A FEDERAL FOREST RESEARCH CENTER IN NORTH DAKOTA

Whereas the value of trees for the protection of farm buildings, fields, and watersheds, for recreation, wildlife habitat and the availability of wood products, and for the enhancement of rural surroundings on the plains has long been recognized; and

Whereas such values have been a material factor in increasing the area of forest and established plantations in the State at a rate of more than 6 million trees per year; and

Whereas the problems of plains forestry are so distinct as to require special attention, including such studies as:

1. Develop planting methods and species arrangements better adapted to soils and climate.

2. Determine definite site requirements for each species.

3. Learn how to reduce damage from insects and disease.

4. Develop drought-resistant varieties through tree breeding and selection.

5. Find new uses for native woods such as elm, cottonwood, aspen and other species.

6. Determine the most effective plantings for watershed protection and the relation of North Dakota forest cover to stream flow; and

Whereas authority for the establishment of such research center is contained in the so-called McNary-McSweeney Act; and

Whereas no forest research program is conducted in North Dakota because of lack of funds: Now, therefore, be it

Resolved by the undersigned representing the respective statewide agencies listed, meeting in the State Capitol, in Bismarck, N. Dak., January 12, 1956, That the Congress be, and it is hereby respectfully petitioned and urged to provide funds for the establishment of a Plains Forest research center in North Dakota; and be it further

Resolved, That copies hereof be mailed to the President; Hon. Rowland R. Hughes; Director, Bureau of the Budget; Hon. Ezra Taft Benson, Secretary, Department of Agriculture; Hon. CLARENCE CANNON, Chairman, House Committee on Appropriations; Hon. CARL HAYDEN, Senate Committee on Appropriations; Senators WILLIAM LANGER and MILTON R. YOUNG; and Representatives USHER L. BURDICK and OTTO KRUEGER.

Robert Ellsworth, North Dakota Association of Soil Conservation Districts, Eckman; Fred J. Fredrickson, Greater North Dakota Association, Valley City; Norman Brunsdale, governor, North Dakota State Soil Conservation Committee, Bismarck; Norman Brunsdale, governor, North Dakota State Water Conservation Commission, Bismarck; Art Moehlman, Taylor Nursery, Taylor; C. L. Jensen, Jensen Evergreens, Esmond; Harold Souer, State Crop Improvement Association, Washburn; C. N. Nelson, president, State School of Forestry, Bottineau; Nick N. Boehm, Park Hill Nurseries, Bismarck; Lawrence Schubert, Oscar H. Will Co., Bismarck; Al P. Simon, Soo Line Railroad, Bismarck; J. I. Rovig, North Dakota Reclamation Association, Mandan; H. R. Morgan, commissioner, Game and Fish Commissioner, Bismarck; Art Thoraldson, North Dakota Wildlife Federation, Grand Forks; George A. Kary, North Dakota Association of Soil Conservation Districts, Fort Lincoln Nursery, Bismarck; Kenneth R. Norell, Northern Pacific Railway Co., St. Paul; Glenn J. Talbott, president, Farmers Union, Jamestown; Milo W. Hoisvenn, engineer, State Water Conservation Commission, Bismarck; G. J. Stafne, secretary, Farm Bureau, Fargo; E. M. Gregory, agricultural agent, Great Northern Railway Co., Fargo.

Ames Aeronautical Laboratory, Moffett Field, Calif.

EXTENSION OF REMARKS
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1956

Mr. GUBSER. Mr. Speaker, in my opinion the strength of our Air Force in the future and the progress of civil aviation is being determined today on the drawing boards and in the wind tunnels of the National Advisory Committee for Aeronautics.

Ames Laboratory at Moffett Feld, Calif., is one of the principal installations of the NACA. Since it is in my district I am very interested in its operation. I therefore asked its director, Mr. Smith J. De France, for a report on the effect which Federal pay has upon his recruitment of scientific personnel. He has answered my inquiry with the letter which I submit herewith:

NATIONAL ADVISORY COMMITTEE FOR AERONAUTICS,
AMES AERONAUTICAL LABORATORY,
Moffett Field, Calif., December 28, 1955.

Hon. CHARLES S. GUBSER,
Congressman, 10th District, California, Washington, D. C.

DEAR CONGRESSMAN GUBSER: I greatly appreciate the opportunity to answer your letter of December 15, 1955, by providing information on how the Government pay scale affects the recruiting of scientific personnel and the retention of the higher-salaried scientists at the Ames Aeronautical Laboratory.

As you know, the Ames Laboratory is 1 of 3 laboratories of the National Advisory Committee for Aeronautics. Since August 1939, Congress has most generously appropriated approximately $64 million for the construction, at the Ames Laboratory, of the finest and most modern aeronautical research facilities in the world. During this same period of time, we have built up an outstanding staff of scientists, many of whom are acknowledged national and international authorities. To effectively and efficiently utilize this fine research equipment we must maintain a professionally competent staff by retaining our outstanding scientists and by recruiting high-caliber college graduates; even the finest research equipment is worthless without the proper manpower to use it.

The unprecedented growth of the aeronautical industry in the past several years, coupled with a critical shortage of scientific and engineering graduates, has resulted in spirited bidding within the industry for the services of competent graduates. This bidding, which has greatly increased the average salary for technical graduates, plus the many fringe benefits, such as increased leave, educational opportunities, and increased freedom in conduct of research, which are now offered by industry has made it increasingly difficult for us to recruit college graduates and virtually impossible to recruit the outstanding graduates.

During fiscal year 1955 we were able to recruit only 33 scientists in grades GS–5 and GS–7 and none of those were in the upper portion of their graduating class. The predominate reason for our inability to recruit, not only the desired numbers but quality, was the disparity in the starting salaries offered by industry and the Government pay scale. Last spring when we were recruiting at the universities, the highest salaries we could offer were $3,410 for a GS–5 and $4,205 for a GS–7 position. Shortly before June graduation, the Civil Service Commission authorized the starting salaries in those grades to be increased to $4.345 and $4,930, respectively. At the same time the aircraft industry was offering as starting salaries $4,860 for graduates with a bachelors degree (equivalent to the Civil Service Commission requirements for a GS–5 position) and $5,940 for graduates with a masters degree (GS–7 equivalent). For outstanding graduates, bidding between companies further increased this starting salary and offers as high as $5,700 for a graduate with a bachelors degree and $6,850 for a graduate with a masters degree were documented in the spring of 1955. Not only were we unable to compete with the aeronautical industry on a salary basis, we were required to offer less than State, county and city governments. For engineering graduates with a bachelors degree, the State of California was offering $4,752; the city and county of Los Angeles, $5,232; and the city and county of San Francisco, $4,860.

An indication that the spring of 1955 differential in starting salaries offered by the Federal Government and the aeronautical industry still exists was apparent during our most recent recruiting last month when two students graduating in June 1956 with a bachelors degree refused our offer of $4,345 for offers by industry of $6,000 and $4,980.

As I mentioned, the problem of maintaining a professionally competent staff not only depends upon our ability to recruit outstanding college graduates, but also upon our ability to retain our leading scientists and engineers. The retention of this top-caliber scientific group intact is vital to the very existence of the laboratory since these specialists not only command the professional respect of each other, thereby creating the healthy research atmosphere with

high morale and technical strength which has characterized the NACA since its inception, but their presence also acts to enlist other specialists and to recruit outstanding college graduates to work with scientists having international recognition. Retaining this nucleus is becoming increasingly difficult because of offers currently being made to them by the aeronautical industry. I would like to cite a few of the offers, of which I am aware, that have been made in the past year:

A GS–15 at $12,150 has been offered 3 positions, one at $16,000 plus a $2,500 bonus, one at $16,000, and one at $15,000. A GS–15 at $11,880 has been offered full professorships at 4 prominent universities throughout the country, but because he was not interested salary was not discussed, and a position with an aircraft concern at a salary between $13,000 and $17,000 depending upon negotiations which he refused to enter. A similar offer of $13,000 to $17,000, depending upon negotiations, was also made to another GS–15 at $11,610. A GS–14 at $10,750 was offered $20,000; a GS–14 at $10,535 was offered $14,500; a GS–14 at $10,320 was offered $15,000; and a GS–12 at $7,570 has been offered a position at $11,000. Generally speaking, the offers to our top men amount to an increase of about 50 percent of their present salary.

All of these offers came from old and well-established companies. To date we have been able to hold the people to whom the above offers were made; however, we have lost in the last year 13 scientists in grades GS–9 through GS–13. All of these resignations resulted to accept higher salaries offered by the aircraft industry.

It is evident from the few resignations we have experienced in the higher grades that the opportunity to work with competent colleagues of national and international reputation utilizing excellent research facilities has, up to now, offset the premium offers by industry. However, since the difference between Government salaries and the offers of industry has been increasing with time, eventually some of our top men will be approached with an offer which they will not be able to refuse in all fairness to themselves and their families. Should we lose even a few of these scientists, it is my firm belief that other top men would follow and that a chain reaction of resignations would result extending to the scientists in the lower grades who are remaining solely because of the association with and the atmosphere created by this top group. If such a general exodus occurs, irreparable damage to the Nation's research effort would result. The competent staff and high morale that we now have would immediately disintegrate, and it would take many years of effort and much higher salaries to rebuild the organization to its present high standard.

The disparity between Government salaries and those offered by the aircraft industry and the effect upon the research efforts of the NACA was recognized by the Commission on Organization of the Executive Branch of the Government on page 73 of the Subcommittee Report on Research Activities, dated April 1955, which states:

"The National Advisory Committee for Aeronautics laboratories, for years, have had a competent staff and high morale. In recent years, the tremendous growth of the aeronautic industry, its demands for scientists and engineers, and the attractive pay levels established have combined to present a most difficult personnel problem to the National Advisory Committee for Aeronautics. There is great need of higher levels of pay for its civil-service professional staff and a larger number of higher level positions. Unless the compensation levels of professional positions in the National Advisory Committee for Aeronautics laboratories can be increased to a level more nearly competitive with industry, the quality of these laboratories will suffer."

The inequality of the scientific salaries of Government and the aircraft industry should be forcibly brought to the attention of the Congress especially since the same Government in reality is paying both salaries.

Sincerely,

SMITH J. DEFRANCE,
Director.

Mr. Speaker, this problem is too serious to trifle with. I have introduced legislation which will correct this problem and I urge the House to consider it or any other legislation which will make it possible to immediately recruit sufficient and adequate scientific personnel.

Hometown Television

EXTENSION OF REMARKS
OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1956

Mr. PHILBIN. Mr. Speaker, I desire to present my views on the UHF–VHF problem with special emphasis on the situation insofar as Massachusetts is concerned because there is an urgent need to get established a clear, realistic overall FCC policy on the assignment of television channels.

I think that certain facts ought to be carefully considered in connection with television channel allocations.

That it is most desirable—

(a) To have uniformity of reception in television sets so that as nearly as possible everyone in the country owning a television set can enjoy all of the programs.

(b) To provide a system whereby each community in its choice and discretion shall have a television outlet for its own culture and established patterns including an opportunity for the expression of political views and the conduct of charitable, social, and educational work. In the present situation which involves conflict, disputes, and controversy between the networks for position and markets, this important public service feature is in jeopardy.

I would address a few words to my own county of Worcester, Mass. For your information, this is a very important area combining industrial, mercantile, residential, and some farming areas. There is a single TV station located in the county, the signal of which cannot be received by the set owners without special technical adaptation entailing considerable expense. Of course, in such an area most of the popular programs of one of the major networks should be available.

I have read the brief filed by the Committee for Home Town Television on some of these points, and believe it contains suggestions as to how the above results can be accomplished without adversely affecting, but rather, effectively implementing, existing priorities.

Unquestionably, monopolistic groups are seeking to control the television field in some areas, and this would clearly be very harmful to the small local stations which could otherwise perform such valuable functions. Another anachronism in this picture is the present total number of unused channels as a result of the daily schedule for some stations which, when they go off the air, leave channels entirely unused. The effect of this is to add to the number of major cities in Massachusetts with no local outlets, and we are facing a situation which may result in greatly impairing television service in our State.

I think that the FCC has an obligation to correct such abuses in the television field and, obviously, if it fails in that primary obligation, Congress should act.

There are 22 potential UHF channels available to Massachusetts. About half of these channels have already been assigned by the FCC, but actually only four of these stations are now operating. Of these four, it is exremely doubtful that any one station is operating in the black. The financial outlook for these telecasters is far from encouraging in the face of entrenched VHF competition offering a varied fare of network programing. These stations are losing money, but they remain on the air with the hope that the FCC will allow more VHF channel assignments and that their past record of public service as an UHF station might perhaps work in their favor when a VHF channel is being assigned.

One UHF station, channel 14, WWOR–TV, of Worcester, up until recently provided programs of distinct interest to central Massachusetts. The station carried some network programing, but much of its telecasting was of a distinct community interest. Now, WWOR–TV is off the air after several months' operation in the red because it was unable to cope with the VHF competition from the Boston, Providence, and Manchester stations. All these VHF stations have good signals which can be picked up by viewers with regular television sets. WWOR–TV, while it did its best to offer worthwhile program material, was faced with this problem: How to get the average viewer to spend anywhere from $50 to $100 to convert his present television set and receiving antenna so as to pick up the UHF picture. The problem was doubly difficult for WWOR–TV because these same viewers could watch top network programing from the nearby VHF stations without any additional expenditures for special adapters or special antennas.

Actually, all UHF stations in Massachusetts, despite the huge television viewing audience, are still in the pioneering stage and are facing the same problems which beset our Boston VHF stations, WBZ–TV and WNAC–TV, several years ago. These two stations also operated in the red during those early days of television when a television receiver was truly a luxury. WBZ–TV and WNAC–TV rendered outstanding public service in those early days and are continuing this splendid public service tradition to this day.

The problems which face the UHF stations in Massachusetts are the same that have held back UHF programing all over

the country where VHF channels are already providing service: only a small proportion of the TV audience have sets to receive the UHF broadcast, networks are not too desirous to affiliate with them, and advertisers are loath to support them because of the small audience. Without network affiliations and advertising, UHF stations lose money, and without money they cannot offer the quality of local programing to build up an audience.

The only hope of the UHF stations to stay on the air is to obtain VHF channel assignments from the FCC. These stations already have the know-how, the technical people, the transmitters, the towers, and local program features to serve community interest.

I hope that the FCC will not longer delay the assignment of VHF channels to the UHF pioneers who have their personal fortunes and the money of their stockholders tied up in a losing battle. When these channels are made available, a new competitive era will begin in the television broadcasting industry to the distinct advantage of the viewers.

I urge continued consideration by the Congress of these matters and hope that in the not too distant future the present problems of the television industry will be adjusted so that it can more capably and adequately serve the public interest.

The foregoing is in substance my statement which I submitted today to the Subcommittee on Communications of the Senate Interstate and Foreign Commerce Committee. The subcommittee is holding hearings on the allocation of television channels under the chairmanship of United States Senator WARREN G. MAGNUSON, who is rendering outstanding service in trying to adjust this situation.

Liquor and the Airlines

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an article entitled, "Liquor and the Airlines," by Godfrey Sperling, Jr., which appeared in the Christian Science Monitor of Boston, Mass., on January 13, 1956.

The article is as follows:

An open letter to officials of the airlines that serve liquor:

Have you noticed the latest statement by the man who speaks for your stewards and stewardesses? Rowland K. Quinn says that for years the airlines were aware that a sabotage bomb explosion might occur. It was a real danger, he said; yet nothing was done to avert it—even after an incident of this nature occurred in Canada. Then came United's tragedy, and only now is some effort being made to prevent such incidents in the future.

Similarly, Mr. Quinn, president of the Airlines Stewards and Stewardesses Association, asserts that the airlines are fully aware of the dangers involved in serving liquor to passengers. But, he charges, "they will do nothing about it until we have some great liquor-caused plane tragedy."

Mr. Quinn expresses the opinion, gentlemen, of those who serve your liquor and care for your passengers. Your pilots, as you know, have taken the same firm position against the serving of liquor.

I should like to cite a statement from a letter by Ross Rizley, Chairman, Civil Aeronautics Board. Says Mr. Rizley in reply to Representative Thomas J. Lane's query on why no action has been taken by the CAB to outlaw liquor service on planes:

"Virtually all correspondence from the public on this matter is based on grounds of morality, good taste, or religion, and safety considerations appear to have been appended as a 'scare' factor to influence the board to regulate the practice on grounds of safety."

What sort of evidence does Mr. Rizley want? And what sort of evidence do you want, gentlemen, since you, too, take the position that safety has not been endangered? In fact, one of your releases to the public says this: "Transportation agencies have no right to prohibit the use of alcoholic beverages unless there is proof that such prohibition is required in the interest of safety. * * *"

Mr. Quinn, together with numerous stewardesses and pilots, can cite lists of incidents that mount up to a mighty indictment on safety ground of those responsible for the serving of liquor on planes. There are pilots who have had to land to get rid of drunks; drunks who have locked themselves in lavatories where they easily could start fires; and drunks who have gone berserk among the passengers. (Just recently a drunk drew a switch-blade knife on his seat-mate.)

The safety threat is compounded when you add to the most flagrant cases the daily incidents of ordinary drunks who harass their fellow passengers and the stewardesses.

Writes Mr. Quinn in his organization's magazine:

"Passenger control is more of a problem with nearly 100 passengers than it was with 21. The modern aircraft is a complex machine. The cockpit crew should not be expected to double as bouncer in the cocktail lounge.

"As a general rule, stewardesses today are younger and less mature than they were even a few years ago, when all applicants were required to be trained nurses. It is unreasonable to expect a young woman barely 20 years old to function as the enforcement agency in their flying saloons."

But back to a passage from Mr. Rizley's letter:

"When the board has received complaints in the past which indicate the slightest possibility of an adverse effect of drinking upon air safety, the board has investigated them; and as a result of these investigations we have found no evidence to show that safety of flight is jeopardized through present practices in this regard."

What kind of evidence does Mr. Rizley want?

Mr. Quinn says it is certainly tragic if we must wait for a case which shows conclusively the presence of the liquor factor in a plane disaster.

Further, he and his capable colleagues are not convinced that the liquor factor is likely to show up on an investigation of a plane wreck. "These probes are concentrated in the cockpit area," he says, "and the investigators are looking primarily for (1) pilot error or (2) engine failure. The plane-wrecking activity of a drunk would probably never come to their attention."

Mr. Quinn points out that in the recent bomb-explosion aloft there was an immediate suspicion of sabotage—a suspicion that directed the probe from the outset along unusual routes of inquiry. This suspicion probably would not be present in a liquor-caused disaster, he contends.

Thus, the terrible evidence the airlines and CAB seem to want may be a long time in coming. Perhaps, it is suggested, the drunk-caused accident will always come under the investigative heading: "Cause of Accident: Unknown."

What are your weighty arguments for serving liquor, gentlemen? Mr. Quinn says that he was to appear recently on a town-meeting-type program in Toledo, Ohio—a program on this very subject that was to be broadcast. Yet, at the last minute, the debate had to be canceled. Reason: No one, absolutely no one, was willing to argue on the side of serving liquor on our airlines.

You airlines' executives usually speak of competition when you explain your position on the liquor issue. T. F. Armstrong, president of Eastern Air Lines, expresses it this way: "Since we are a service organization catering to the public, we must give our passengers what they demand or they will go to competition where they can get it, and that would not be good for the future of our employees or our stockholders."

Yet we all know some airlines do very well without serving liquor. Moreover, if all liquor serving were barred on safety grounds no question of competition would arise.

Mr. Quinn says there is no connection between the serving of liquor to passengers and the use of the airlines by the traveling public. He feels that the "airlines have a special transportation service to give, one that no other mode of transportation can provide. That special service, not liquor, is what attracts the business."

"In fact," he adds, "I would naturally persist in my campaign against liquor on planes, for the safety factor is terribly important to us; but I would be deeply troubled if I thought for a moment that our position in this would, with victory, lead to a cut in airline business. That would mean fewer and fewer stewards and stewardesses, and we wouldn't like that."

But back to Mr. Armstrong. He was speaking about meeting competition by serving liquor aloft lest Eastern's customers go elsewhere. This leads to a final and what we feel to be a very pertinent observation: If the serving of liquor is a serious threat to safety, and there is ample evidence to support this view, isn't there an even bigger question that should be asked—and answered?

Gentlemen, I would like to know if you can conscientiously say that the continued serving of liquor on planes is good for the future of your crew members and your passengers?

I feel confident that once you clearly see that the choice can be reduced to these bare dimensions—making money as opposed to acting in the best interest of your crews and your passengers—you will take the right course of action.

It's Time To Push Ahead on Mental Health

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1956

Mrs. GREEN of Oregon. Mr. Speaker, the September 1955 issue of the Democratic Digest carried a most thought-provoking article entitled "It's Time To Push Ahead on Mental Health." Under

leave to extend my remarks in the Appendix of the RECORD, I wish to include that article:

OUR MINDS ARE OUR STRENGTH—IT'S TIME TO PUSH AHEAD ON MENTAL HEALTH

Jim Piersall, 22-year-old rookie with the Boston Red Sox, was reporting for spring training in Florida in January of 1952. He had played good baseball and was popular with the fans, but he was a problem child as far as his team was concerned.

"Sometimes I stormed and screamed if I couldn't play," he wrote in his book, Fear Struck Out, "and once I even cried in public like a baby." Then suddenly the world crashed around him. "I went berserk one day," he candidly admits, "and ended up in a mental institution."

Jim Piersall's story is a revealing one, dating back to a childhood filled with fears and conflicts. Its happy ending is told on the sports pages of the Boston Globe at the close of the baseball season in 1953, in these words: "More than any other player, the comeback big leaguer of 1953 is Jim Piersall, 23-year-old Red Sox right fielder. He came from farther back than any of them."

How many others will come back from that bleak, confused world of the mentally ill? How many can be saved before it is too late?

The National Mental Health Committee, a citizens' organization dedicated to promoting further research and more trained personnel in the field of mental disease, reports these statistics:

An estimated 9 million people in the United States—more than 1 in every 17 persons—are suffering from some form of mental illness.

More than half of the hospital patients in 1953 were suffering from mental and nervous disorders.

Unless new treatments and cures are found, more than 13 million people—one out of every 12 persons—will spend some part of their lives in a mental hospital.

Science now holds new hope that many of the tortured souls presently languishing behind the cold walls of a mental institution will be able to "come back," that many of the 250,000 men, women and children who slip into the disturbed and bewildered world of the mentally ill each year can be helped before it is too late.

Dr. William C. Menninger, the noted psychiatrist, reports that most mental illness, perhaps 90 percent, can be cured if treated properly and in time. He describes mental illness as the number one problem—number one in magnitude and neglect. "In many mental hospitals there is one doctor to every 311 patients," he reported recently. "Out of every 100 patients who enter institutions, 60 will never leave."

Dr. Menninger says: "It doesn't have to be this way."

There is tangible proof that it doesn't have to be this way in the operation of St. Elizabeths Hospital, located in Congress Heights in the District of Columbia, a short drive from the Nation's Capital.

Supported by Federal funds, and under the able administration of Dr. Winfred Overholser, its capacity is 7,500, presently filled. Since Congress has generally granted its requests for appropriations, St. Elizabeths has the specialists and trained personnel to administer newly discovered treatments; it has an excellent therapy program with an adequate staff, all adding up to the unusual and gratifying result of releasing two out of three patients admitted.

This is in contrast to the average State mental hospital where about 60 percent of the patients have been there from 5 to 45 years or longer; 25 percent have been there between 1 and 5 years; and only 15 percent have been there less than a year.

This situation can be explained partly by the fact that only in recent years has the increasing incidence of mental illness provoked widespread concern. Much of the recent interest was generated by passage of the Federal Mental Health Act in 1946. Authored by Democratic Representative PERCY PRIEST, of Tennessee, the law established the National Mental Health Institute in Bethesda, Md., in an effort to seek new treatment and cures through research.

Today, all 48 States, the District of Columbia, and the 4 Territories have mental health programs, while only 24 States had programs before enactment of the law. Forty-six State governors (excepting Bracken Lee, of Utah, and Frank J. Lausche, of Ohio) have joined with the National Mental Health Committee, with Mrs. Albert D. Lasker and Mrs. Florence Mahoney as cochairmen, in an effort to solve the problem on a national scale.

Working with the National Institutes of Health, the Public Health Service, and other Government and voluntary agencies, their emphasis is on "more funds for research from Federal and State Governments, and voluntary agencies" as one of the urgent needs in the mental health field.

The committee points out that research money brought the victory over polio and that additional expenditures in the mental health field will produce the means for reducing the number of people developing serious mental disorders. Emphasis is also given to the need for training additional psychiatrists, psychiatric social workers, and nurses, to help treat the increasing numbers of mentally ill.

Stimulation on the Federal level is rarely a one-way street. Since the first Federal grant in 1947, State and local funds for community mental health have steadily increased. In 1947 Federal grant funds of $3 million were matched by State and local funds of only $2.5 million. But by 1953, Federal funds of $2,325,000 were matched by $12,275,000 in State and local funds—nearly 5 times the 1947 figure.

Recently, workers in the mental health field have been hailing as almost a miracle the development of two new drugs—chlorpromazine and reserpine—the result of painstaking research and experimental work, which give bright promise of revolutionizing the treatment of the mentally ill.

In commenting on the success achieved with these new drugs, Albert Q. Maisel, well-known medical author, raises the question as to whether the war on mental disease is "to produce a major victory in the next few years—or only one that will help generations yet unborn."

Writing in the February Woman's Home Companion, he stated: "Strangely enough, the answer probably doesn't lie entirely in the laboratories of the new psychiatrist-biologist pharmacologist teams. These teams have no dearth of research leads. They know, by now, where they are headed. But the speed with which they move toward their goal depends upon the funds available for research."

While there is almost unanimous agreement that research be given top priority, many a State budget is being strained to build new asylums and facilities for the mentally ill in the face of the constantly increasing incidence.

Democratic Gov. Robert B. Meyner of New Jersey recently pointed out that a new mental hospital just opened in his State will be filled to capacity in a matter of months. Placing the need for research at the top of the list of requirements, Governor Meyner said that "many of our mental patients are merely in custody, meaning that they are fed, clothed and housed behind locked doors. They are not being treated at all. Indeed, for lack of personnel, even certain primary decencies of custody are being neglected."

In Pennsylvania, the administration of Gov. George M. Leader has recently called for $212,328,268 for a public construction program, with nearly three-fourths of the funds requested for new mental hospitals and improvements to existing institutions to meet the increasing hospital load.

In Michigan, Republican legislators retreated a step recently in their economy drive by restoring $808,407 of the $2,467,000 slashed from Democratic Gov. G. Mennen Williams' recommended budget for mental health.

More and more, the States are trying to cope with the problem, looking hopefully toward new treatments and cures.

In May of this year, the Nation observed Mental Health Week during which time appeals were made to contribute to the 1955 Mental Health fund, and newspapers around the country publicized the need for more funds to help combat the almost epidemic proportions of mental illness.

To mark the observance, the former Secretary of Health, Education, and Welfare, Mrs. Hobby, participated in a ceremony at the Department building in the Nation's Capital.

To signify the progress that has been made, Mrs. Hobby, in a dramatic gesture, rang the Mental Bell, a 300-pound bell cast from chains once used to shackle mental patients, with the hope that its message would "awaken a response in the hearts of all Americans."

To the struggling scientists and devoted workers seeking to develop new treatments to alleviate the immense suffering and torture of mental illness on both patients and their loved ones, Mrs. Hobby's ringing of the mental-health bell made a hollow sound.

The National Institute of Mental Health of the United States Public Health Service had requests on hand totaling $22,253,128 from 49 institutions throughout the country to increase their laboratory facilities for research in mental illness. The Institute was unable to fill these requests, since no funds were appropriated in fiscal 1954 for this purpose. President Eisenhower, during his first year in office, recommended a 37-percent cut in the Democratic budget request for mental health.

The efforts to economize at the expense of the Nation's health brought sharp criticism from even the Republican-dominated Hoover Commission. In a departure from its consistent pattern of recommending drastic cuts in many Federal programs, the Hoover Commission took the Eisenhower administration to task for economy in the health field. It pointed out that actual Federal expenditure applicable to basic research in the medical field is less than 1 percent of the total Government research and development expenditures; that there is a backlog of 723 projects totaling more than $7 million, which the National Institutes of Health predict will not be undertaken by them in fiscal 1956 because funds have not been requested by the Eisenhower Administration.

The Commission charges that this negligence suggests "a tendency to deemphasize basic and medical research." Underscoring the seriousness of this failure, it cites the dramatic results of research achieved in the discovery of the Salk vaccine and in the continuing quest for more effective methods of dealing with cancer and mental illness.

On June 6 the Democratic-controlled Senate voted favorably on a bill that would do more for medical research, hospital and health facilities, and public health than any bill ever reported. For mental health, the sum voted was $21,850,000, with new emphasis on research projects.

"This is a problem for the Nation as a whole," the Hoover Commission stated in criticizing the Eisenhower administration for its negligence in the health field. It recommended "that greater Federal support be given to basic and medical research."

In an address at the dedication of the New York University-Bellevue Medical Center June 3, Adlai Stevenson put it this way:

"The stakes are people's lives, and I hope it isn't heresy for a people's Government to take an interest in people's lives.

"We have answered willingly leadership's call for crash programs to build better instruments of death," Governor Stevenson continued. "And now we ask humbly for leadership—from the profession and the Government—for programs to build better instruments of life."

Naming Naval Vessel

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1956

Mr. PELLY. Mr. Speaker, I should preface these remarks by saying I firmly believe Congress should avoid attempting to name specific naval vessels by legislative action. That prerogative properly should be left to the Department of the Navy; although the overall plan or pattern as to type of name to be given to various classes of ships, of course, is well within the scope of appropriate congressional legislative jurisdiction.

Had I not held to such an opinion, I would have long since introduced a measure here authorizing the name of the city of Seattle to be given to the newly proposed 11,000 ton nuclear-powered cruiser. Instead, I have asked the Secretary of the Navy to give consideration to my request that our first atomic-powered surface ship be named the Seattle.

About 1902, the citizens of Seattle by public subscription raised a large sum for those days to underwrite a cost differential so that a local shipbuilder by the name of Moran could obtain the contract to build the old battleship *Nebraska*. I remember when I was a small boy she was launched—because there was a city holiday and a big celebration. Since then the people of Seattle have been enthusiastic about our Navy. The headquarters of the Thirteenth Naval District are located there and a year or so ago when Secretary Thomas addressed a Seattle Chamber of Commerce luncheon held on the hanger deck of a carrier, 1,800 businessmen came to hear him speak and a great many had to be turned away. That indicates the way Seattle people feel toward the Navy. Altoghether, it would be most fitting and most gratifying to these citizens to have a modern cruiser bear the name of their city.

Personally, I firmly believe that combat vessels of the Pacific Fleet should regularly be based in the Pacific Northwest. That day will come. Meanwhile, units of the fleet will be visting Puget Sound periodically, which pleases the local citizens. In Seattle and other Puget Sound cities, we are always glad to welcome the officers and enlisted personnel of the fleet.

The old armored cruiser No. 11, the ex-U. S. S. *Washington*, was called the *Seattle*. She was stricken from the list July 17, 1946. She had been authorized by Congress in 1902. She was built at Camden, N. J., at a cost of $4,035,000. In 1916, the name of the *Washington* was changed to *Seattle*. She was the first American warship to arrive in France after we entered World War I. In 1919, she joined the Pacific Fleet at Seattle, and for a number of years made visits to her namesake city on Puget Sound. The people of Seattle took pride in her and were always glad to have her visit that port.

The Chief of the Bureau of Ships, Admiral Mumma, mentioned to me once that the old *Seattle* was the first ship in which he served. She was the flagship of the Pacific Fleet in 1923. But, as I said, Mr. Speaker, the *Seattle* was stricken July 17, 1946, and rightfully and hopefully, the citizens of a great community earnestly hope the Secretary of the Navy will consider giving the newest modern cruiser which is expected to be authorized in fiscal 1957 the honored name of *Seattle*.

Plan for U. N. Commission To Seek Solution of Arab Refugee Problem

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1956

Mr. ANFUSO. Mr. Speaker, on June 29, 1955, during the debate in this House on the Mutual Security Act, I discussed the situation in the Middle East and our military and economic programs in that area. At that time. I warned against embarking upon a policy of appeasement in the Middle East to gain Arab favor. I called attention to the fact that Israel, our bastion of freedom in that area was being isolated politically and economically; that its national security was being threatened militarly by the Arab countries; and that, in fact, its very existence was at stake as the Arab States grew stronger militarily.

Mr. Speaker, that was the situation before Egypt had concluded its agreement with the Soviet bloc to obtain arms from the Communist countries. It has grown considerably worse in the last few months since the Communists are pouring arms into the Middle East. The military balance of this strategic area has been upset. If it leads to a renewal of the Arab-Israel conflict in the region, it would constitute a great blow to us and our allies because it would weaken a vital spot in our defense structure against communism.

Last June I urged our Government to take two steps. First, to grant military aid to Israel in order to maintain a balance of power in the Middle East and to give Israel the necessary arms for defense in the event of agrression against her. Second, to conclude a mutual defense pact between the United States and Israel whereby the security of the latter would be guaranteed and the integrity of its borders respected.

In the light of events which have taken place since last June, these two proposals are even more timely and necessary today. They are fair and just. They make sense. I am convinced that if these proposals are accepted and fulfilled, the tension in the Middle East will subside, the stability of the region will be strengthened, and a peaceful settlement on honorable terms could then be attained between Israel and the Arab States.

There is, however, one other major problem in the area which should be dealt with on a more practical and more realistic basis than it has been done until now. I refer to the problem of the Arab refugees which should be solved as soon as possible. This is a festering wound which is adding to the unrest and the instability of the area and is preventing a reasonable approach toward a peaceful settlement. I feel that if a sound and practical plan can be worked out toward a solution of the Arab refugee problem, the whole situation in the Middle East would become more hopeful as regards the future.

Consequently, I should like to propose that the United States suggest to the United Nations that it appoint a commission which shall undertake a study of the Arab refugee problem with the purpose of developing a new approach to this problem. This U. N. Commission is to visit the refugee camps in the Middle East, confer with the leaders of the refugees, as well as with the Arab governments in which the camps are located. The refugee problem should also be taken up with the Government of Israel.

The solution of the refugee problem should proceed somewhat along the following lines: Israel is to permit the repatriation of a limited number of former Arab residents, consonant with its security regulations and the possibility of integrating these people within its economy. Israel is to pay compensation to the other refugees who cannot be returned, and for this purpose an international loan is to be made to Israel on the basis suggested by Secretary of State Dulles in his address of August 26, 1955. The Arabs who cannot be repatriated should be resettled permanently in the Arab States. It is most advisable for the U. N. Commission to recommend plans for their permanent resettlement in those countries, and not to have to maintain these people on a permanent charity basis as is being done at the present time and prevent them from being used as pawns by the Communists to foment trouble in that area.

This is a problem for the United Nations. The U. N. must exert all efforts to solve it. In so doing, it will make a great contribution toward peace in the Middle East. To foment trouble and unrest in a given area is the Communist way. The American way is to find a solution through direct negotations with the parties concerned.

In the near future, I plan to introduce a resolution in Congress advocating the appointment of such a commission by the United Nations. In the meantime, I desire to bring the idea to the attention of the Congress.

Gas Facts

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1956

Mr. PATMAN. Mr. Speaker, I am inserting herewith an editoral that appeared in the Wednesday, January 25, 1956, issue of the Boston Evening American, of Boston, Mass. It has some interesting facts that I believe are worthy of consideration. It is as follows:

GAS FACTS

Fundamental facts of interest to the consumer are being obscured in the Senate controversy over Federal control of the natural-gas industry.

The natural-gas business falls in three divisions—producers who obtain the fuel at the wells and who operate mainly in six States; interstate pipelines which transport natural gas to consumer markets, the bulk of which are situated in 33 large importing States; and distributors, or in plain language, local gas companies. Pipelines and local gas companies operate as monopolies.

To protect the public local gas companies are regulated under State laws as public utilities. The Federal Government has no jurisdiction in this field.

Further to protect the public, Congress in 1938 passed the Natural Gas Act, giving the Federal Power Commission authority over the pipeline engaged in interstate commerce. The act specifically exempted producers at the well from Federal regulation.

In June 1954, the Supreme Court ruled, by a split decision, that producers were also subject to Federal control if any part of their production was sold across State lines.

In sum, the Court held that a law passed by Congress contained something that Congress had not put in the law.

This as in the preceding matter of oil-bearing tidelands, was a case of the Federal judiciary invading the legislative powers of Congress.

Congress nullified the earlier decision by passing a law that returned the tidelands seized by the Federal Government to the States which had owned them for 100 years without dispute.

Following that precedent, the Harris-Fulbright bill was introduced in Congress to rescind the natural gas decision and was passed by the lower House last year. The bill is now pending in the Senate.

The basic issue, therefore, is that legislative powers under the Federal Constitution belong solely to Congress and may not be usurped by either the executive or judicial branch.

Obviously, if the Federal Government has power to "regulate" the production of natural gas, then, as Senator BRIDGES has said:

"We must also extend Government control to the production of coal, lead, zinc, copper, and all other mining."

Opponents of the Fulbright bill assert that the production of natural gas is a monopoly from which the public must be protected by Federal intervention.

No reliable facts are offered to support this contention.

It is true that 197 companies produce 90 percent of the natural gas supply. But of these 197 companies competing with each other, none controls 5 percent of the total production. Moreover, in this highly competitive industry there are actually 8,000 producers operating 71,000 gas wells in 28 States.

That is hardly a monopoly.

Opponents of the Fulbright bill also allege that the consuming public is the victim of price extortion by the natural-gas companies.

There are some 25 million residential natural-gas consumers, mostly in the large cities, and the millions of families who read the Hearst newspapers are among them. Naturally, we are on their side; always have been and always will be.

But here are some facts:

Prices vary geographically, but taking New England for an example:

The producer averages only 10 cents per 1,000 cubic feet for natural gas piped into New England. The pipelines get only 50 cents. But the average home price in New England is $2.40 per 1,000 cubic feet, the local distributor getting $1.80. The distributor's price is thus 2,400 percent of the producer's price.

In Washington, D. C., a residential consumer pays $1.31 for natural gas for which the producer receives 12½ cents.

According to a congressional estimate, a local utility company collects 18 cents for delivering 2 cents worth of natural gas.

Plainly, the high costs to consumers are attributable much more to local service and distribution than to exploitation by producers; and local utilities are subject to State or municipal regulation.

Opponents of the Fulbright bill contend that Federal regulation, as unconstitutionally decreed by the Supreme Court, will increase the market supply of natural gas and reduce consumer prices.

Market statistics indicate exactly the opposite effects.

Expanding potential markets demand expanding supplies.

But the interstate supply is diminishing. Because of Federal regulation at the wellheads, many independent producers are selling their product only within their own States; where Federal control is absent. Likewise, "wildcatting," or bringing in new wells, is declining.

The long-range result of Federal control must be a future market shortage and high consumer prices.

I am also inserting herewith an interesting editorial from the Marshall News Messenger of Marshall, Tex., for January 22, 1956, as follows:

GAS BILL IS TOP DOMESTIC ISSUE

In an editorial this week the Saturday Evening Post observes that "there is a shocking absence of understanding about the potentially destructive results of governmental regulation of individual enterprise." It was referring to the Fulbright bill now being debated in the United States Senate, and its headline reads: "If Gas Can Be Regulated, So Can the Corner Grocer."

Under this bill, closely similar to one passed by the House last year, the Federal Power Commission would be stopped from regulating the price and production of natural gas at the wellhead. Congress never intended to grant this power to any Federal agency, and the FPC itself refused for years to seize the power, as the advocates of more and more Federal regulation and regimentation urged it to do. But the United States Supreme Court, that supergovernment which comes more and more to regulate our downsit-FPC should take over the regulation of natural gas anyhow, on the ground that since it moves to interstate commerce it is the Federal Government's duty to regulate its production and control the price at which it comes out of the earth.

Supporters of the bills to take this authority away from Federal bureaucracy argue that far from helping gas consumers in the big cities, it will tend to raise the price because it will adversely affect production, and thus cut down supply.

There is no Federal bureaucratic control of any other mineral in the same direct way FPC controls gas production, but as the Post argues if this unique and unprecedented policing of natural gas isn't stopped now, the time will come when even the corner grocer can be told exactly what he can do or cannot do.

The debate may drag on for weeks, but if in the end it means an end to a dangerous precedent in regulatory power it will have been worth the time and effort. No more important issue faces the country on the domestic front today.

Dulles' Policy of Boldness Vacillates

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1956

Mr. PRICE. Mr. Speaker, Secretary of State John Foster Dulles was not completely honest in the exclusive interview which he gave to Henry Luce's Life magazine in which he semed to be attempting to establish a political beachhead for the November elections.

His brink-of-war statement was full of misrepresentations conceived by the Secretary to cover up vacillations and bungling which lost Indochina, destroyed the confidence of our allies and gave to the Soviets the initiative in the cold war—a cold war, which Dulles turned into a "hot peace."

Secretary Dulles failed to give credit where credit was due—to congressional leaders. It was the alertness of leaders to Congress who rescued Dulles and Eisenhower when they were about to go over the brink in the Eisenhower plan for United States participation in the Indochina war in 1954. Dulles would have been over the brink and into war if congressional leaders had not applied the brakes.

Members of this House heard our distinguished majority leader, the Honorable JOHN MCCORMACK, relate over a year ago how the Eisenhower administration favored United States intervention on the side of the French in Indochina. But congressional leaders, meeting in Secretary Dulles' office in April 1954 advised Dulles and Admiral Radford to "come up with a full package" including agreement with Great Britain and France on what course to take. With no encouragement from the congressional leaders, Dulles was saved from going over the brink.

Under leave to extend my remarks in the RECORD I include herewith an article by Drew Pearson, which appeared in the Evening Telegraph of Alton, Ill., on Tuesday, January 23. It follows:

POLICY OF BOLDNESS VACILLATES

WASHINGTON.—Most important question raised by all the hullabaloo over the John

Foster Dulles brink-of-war statement is whether the United States is drifting into war, or can keep the peace.

All other questions are unimportant. The political feuding between Democrats and Republicans aroused by the Life magazine article doesn't amount to a hill of beans. Only important is the question of war and peace.

So let's take a careful look at the Dulles-Eisenhower score.

Before doing so, however, it might be well to recall that during the Hoover administration, when the world first started its downhill drift toward war, an internationally minded Republican Secretary of State, Henry L. Stimson, did his best to warn the United States and his own President that aggressors were on the march in Asia, and that this might lead toward war.

Stimson saw the landing of the Japanese Army in Manchuria September 18, 1931, as the first sign of eventual world war and he tried to do exactly what Dulles says he's doing now—take a firm stand which would prevent war. Stimson wanted the fleet mobilized, approached the Canadian, Mexican, and Chilean Governments for use of bases along their coast, was ready to use the threat of force to stop the Jap warlords.

But his President, Herbert Hoover, was opposed. So were strong isolationist elements within the Republican Party. In move after move proposed by Stimson, he was stopped by his own President and his own party.

History showed that Stimson was right, just as Dulles is right in his basic theory that war can be prevented if the United States takes a firm position and makes that position clearly known in advance.

However, the position must be so clear as to be completely unequivocal. There can be no vacillation.

When it came to Indochina, the Eisenhower administration vacillated all over the place, which was why we lost Indochina. It was not a save, as Life magazine and Dulles so glibly put it. It was a tragic loss, largely because NIXON said we would use troops, Eisenhower said we would not use troops. Dulles said one thing one week and another the next, and no one could get together. Result: The Chinese Reds, knowing how confused we were, kept right on advancing.

That, however, is history. Let's look at the future.

Life magazine and Dulles also claim that war was avoided against Quemoy and Matsu as a result of the Dulles' policy of boldness.

WAS DULLES BOLD?

However, it happens that the Red Chinese have been building airstrips and massing troops opposite Quemoy and Matsu for some time and despite Dulles' boldness, war certainly has not yet been avoided. On the contrary, three high United States officials have just visited this area, obviously worried about war—Secretary of the Air Force Quarles, Chairman of the Joint Chiefs of Staff Admiral Radford, and Air Chief of Staff Twining.

Now just what is the reason for the apparent Chinese disdain for Dulles' policy of boldness?

The answer is the same as in the case of Indochina: United States indecision and vacillation.

Here, despite the Life interview, are the inside facts as to what really happened:

On September 12, 1954, the National Security Council flew to Denver for an unprecedented meeting with the President in which it urged that a definite policy of boldness be adopted toward Quemoy and Matsu, and that authorization be given to bomb the Chinese mainland in case the Red Chinese attacked.

President Eisenhower, however, refused to buy this policy. He postponed any decision. It was a difficult one to make, and like Herbert Hoover, when pressed by Stimson in regard to Manchuria in 1931, he sidestepped.

Dulles, referring to the policy of risking war around Formosa and Korea, stated in Life: "It took a lot more courage for the President than for me. His was the ultimate decision. The President never flinched for a minute on any of these decisions. He came up taut."

That, however, was not what happened. Weeks passed, then months. No decision came from the White House. Meanwhile the National Security Council kept Quemoy-Matsu up in the air. Eventually this indecision was noted in the American press, the first exclusive facts being published by Chalmers Roberts of the Washington Post November 8, 1954.

Over-60 Employment Service of Northern Virginia

EXTENSION OF REMARKS
OF
HON. JOEL T. BROYHILL
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1956

Mr. BROYHILL. Mr. Speaker, the Soroptimist International of Arlington will launch the opening of the Over-60 Employment Service of Northern Virginia on Monday, January 23, 1956, at the Recreation Department, 915 North Jackson Street, phone Jackson 7-8888.

This service will seek to place all men and women over 60 who desire employment in full time, part time, or seasonal employment. The Virginia State Employment Service of Arlington and the recreation department have cooperated with the Soroptimist Club to set up this service. The State employment service is acting in an advisory capacity and the recreation department is furnishing the office space and phones.

The employment service office will be open each Monday, Wednesday, and Friday from 1:30 p. m. to 3:30 p. m. for over-60 applicants to register and to receive job orders. The office will be staffed by members of the Silver Age Group and supervised by the Soroptimist Club.

To date there has been no employment service or voluntary agency specializing in placement of the older age group of men and women in the northern Virginia area. The opening of this new employment service affords the businessmen of this area an opportunity to fill many personnel gaps.

In Virginia alone, 1 person in every 12 is 65. By 1960 it is estimated there will be 300,000 persons over 60 in the State. This group is one of our greatest untapped sources of employment and their usefulness is becoming increasingly recognized. They can make a contribution to the economy and regain the feeling of well-being that work brings, if the employers of northern Virginia will utilize their skills.

During World War II it was established that older workers lost less time for illness and other reasons than those employees in the younger brackets. They were more conscientious on the job and turned out, as a whole, a better day's work.

There is a definite need in northern Virginia for such an employment service and with its opening comes a challenge to the businessmen to make use of this great untapped source of experienced workers.

What does America's senior citizen want? Survey after survey emphasizes he or she has two fundamental desires: to continue to work in some form—to be active and useful and to be independent and maintain his own home. Through our employment service we can help them attain their goals.

Remarks Delivered by Rabbi Osher Zilberstein, of Los Angeles, at the Conference of Jewish Organizations at the Shoreham Hotel, Washington, D. C., January 18, 1956

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1956

Mr. MULTER. Mr. Speaker, I wish to call to the attention of our colleagues the following speech, delivered by Rabbi Osher Zilberstein of Los Angeles, Calif., at the Conference of Jewish Organizations at the Shoreham Hotel, Washington, D. C., on January 18, 1956. Rabbi Zilberstein is the dean of and principal orthodox rabbi of Los Angeles:

This is the 250th birthday of Benjamin Franklin, one of the founders of American liberty.

The Saturday Evening Post, which he founded, bears on its cover this week one of his famous statements or proverbs. It reads:

"If all printers were determined not to print anything till they were sure it would offend nobody, there would be very little printed."

To paraphrase Benjamin Franklin, let me say that if the Jewish people do not press their cause lest they offend the powers of the world, there will be little said and our cause may be lost.

You will remember that in 1894, when a military clique of France, out of racial motives, maliciously accused Captain Dreyfus of high treason and sentenced him for life to Devil's Island, Emile Zola, the forthright champion of justice, published his famous open letter to the President of France titled "I Accuse."

The impact of that letter reverberated throughout France and the entire civilized world. It took some time and justice was restored. Would it not be appropriate, then, for this worthy assembly, practically representing United States Jewry, at this crucial hour of Israel's adversity, to shout out from the depth of our anguish and distress, "We accuse"?

To the United Nations we should say:

"On November 29, 1947, you courageously proclaimed a sovereign Jewish state in Palestine.

"After 7 years of the existence of Israel, during which it has been attacked on so many occasions by its surrounding Arab antagonists, you could not, with all of your political and diplomatic facilities, determine who was the aggressor: Israel, who has always stretched out its hands in peace, or

Egypt and its cohorts, who speak incessantly of war with and annihilation of Israel.

"Now it appears that you are setting a new policy to tacitly permit Arab aggression but vigorously censure Israel retaliation.

"Why do you follow a course as though Arab aggression does not endanger peace in the Middle East but that Jewish retaliation does—unless it is because you have arrived at the insidious premise that peace in the Middle East can only come by the destruction of Israel, and consequently each retaliation on the side of Israel is destructive to that so-called peace?

"Has it been forgotten that the League of Nations, to which the Arabs owe so much for their present existence as sovereign states, mandated (as ratified by the United States Congress) all of Palestine on both sides of the Jordan as a Jewish homeland, not alone the present boundaries fixed by Israel's victory in battle?"

To our beloved country, the United States of America, to whom we owe so much, we should say:

"On May 15, 1948, the very day of Israel's founding, you solemnly ratified the existence of the Jewish state.

"Why, then, when that state is struggling desperately for its continued existence and stretches its hands to you for rescue, imploring you to permit it to purchase arms for defense, do you say that that will start an arms' race?

"But an arms' race is already in progress. England is racing with Soviet Russia to see who will find more grace in the eyes of Egypt.

"Doesn't this very fact eliminate the contentions that the arms granted Egypt are intended, first, for peaceful purposes and, second, as a bulwark against communism?

"Isn't it more realistic to believe that arms for the Arabs are intended for the destruction of Israel?"

Will this country, which has recently fought two wars for justice, for the good of humanity, and for the protection of smaller and weaker nations, be a partner to this political and moral outrage, by refusing to give arms to Israel for defense and refusing Israel political guaranty and protection?

I am sure that the founders of this great country of ours, if alive, would join in our cry: "We accuse."

Truman, China, and History

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 25, 1956

Mr. SCOTT. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting an editorial which appeared in Life magazine:

TRUMAN, CHINA AND HISTORY

Mr. Truman resumes his Memoirs with his account of the Marshall mission to China. That mission, itself a failure, laid the base for the archfailure of the whole Truman foreign policy, the loss of the Asian mainland to communism. Thus his version will arouse strong feelings on the part of all who opposed his Asia policy at the time—including the editors of Life.

Mr. Truman's account can be criticized for its omissions. For instance, he ignores the obvious reason why the Chinese Communists welcomed and for a time observed the truce which Marshall negotiated in China's civil war in early 1946. It was during those very months that the Soviet Army delayed its withdrawals from Manchuria to enable the Chinese Communists, unharassed by Nationalist troops, to take over this key province, including vast quantities of Japanese arms. But the main shortcoming of Mr. Truman's account need not be sought in its omissions. It is in his own words.

Mr. Truman outlaws "hindsight" in judging the reasons for Marshall's failure. But one of our valued ex-President's most valuable habits, so he often tells us, is the reading of history for its lessons. The Marshall mission, so read, contained the three major American mistakes which by 1949 had led to the communization of China.

The first major mistake was not to take communism seriously enough soon enough. A State Department memorandum, appended to Marshall's directive, called the Chinese Reds "the so-called Communists." Mr. Truman says that neither he nor Marshall was subject to this then fashionable illusion; in that case their mistake was fearful rather than wishful thinking. Marshall was afraid that the Soviets, despite Stalin's public and private promise, would come to the support of their fellow Communists. He urged withdrawing the United States Marines "to avoid the inevitable Russian recriminations similar to those today regarding the British troops in Greece." But only a year later, when the British had to withdraw from Greece, Mr. Truman correctly and courageously took over the British role in that civil war, Russian recriminations and all; and General Van Fleet helped the free Greeks win it without Soviet reprisal. Had the same determination prevailed in China in 1946, that civil war could have been won, too. The whole world picture today would be entirely different if, in 1946, we had had in China a General Van Fleeet with the right instructions instead of a General Marshall with the wrong ones.

The second major mistake was not to take China seriously enough, either then or later. Mr. Truman tells us that there was no authoritative Chinese Government after 1911—which, if true, was even truer before 1911. But, of course, there was a Chinese Government, grounded in the Sun Yat-sen revolution, battered by 8 years of war against Japan, weary but proved. Since 1937 this Government's internal weaknesses and external retreats show a rough inverse correspondence with the degree of support it has received from the United States. During the Marshall year this support reached its nadir.

As Mr. Truman relates, a $500 million loan was withheld (arms shipments were also embargoed) because the Chinese Government insisted on fighting the Reds. This reasoning sounds fantastic today. Behind it lay not only some pro-communism in the State Department, but, what was equally serious, an official defeatism and deafness toward Asia which extended from the Presidency down. Marshall was once heard to say he could not decide whether the Chinese masses were an asset or a liability to the free world. The Communists never had such doubts.

The third major mistake was to permit a personal distaste for Chiang Kai-shek to influence United States policy toward his government. This distaste shows through the scolding letter from Truman on page 90. From the beginning the Marshall pacification strategy treated Chiang and Chou En-lai as equals in status and wound up urging a "coalition" government. This strategy not only abetted the Communist purpose (as Czechoslovakia later showed) but was an insult to the legitimate head of a government against which the Reds were in armed rebellion.

What Chiang then needed was full moral and physical support, such as we now give him in his Formosan stronghold. Since 1946, to defend him and the free periphery of Asia, we have spent far more in lives and treasure than Mr. Truman says the American people would not have stood for at that time. It is hindsight to say this, but it is also a history lesson, similar to that of the Cumean Sibyl in ancient Rome. When King Tarquin thought she asked too much for 9 books of prophecy, she burned 3 and offered him the other 6 at the same price. Again refused, she burned 3 more, and Tarquin finally bought them for the same sum that might have purchased 9. Chiang Kai-shek is still considered untouchable by Mr. Truman, who still blames him and extremists on each side for Marshall's failure. But the smaller grows Chiang's realm, the larger he grows as the tragic hero of history's Asian tale, and the better look the bargains we refused to make a few short years ago.

In 1948 we called Mr. Truman's China policy one of "disastrous neglect half-hidden by irrelevant sermonizing." It still reads that way in his Memoirs. And the question of China is by no means settled. Even now the drive to scuttle Chiang's government from the U. N. and to recognize Mao's gathers force in the diplomatic world. The mistakes begun in Marshall's mission have persisted too long already. If history does not teach us anything, what is the use of reading it—or writing it—at all?

Albert Gallatin

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 25, 1956

Mr. ANFUSO. Mr. Speaker, to let go by without mention the birthday anniversary of Albert Gallatin, Congressman, great Secretary of the Treasury in Jefferson's time, banker, and resident of my State in his later years, is something I feel we in the House cannot do.

Member of our House of Representatives, Senator, Treasurer, foreign minister, banker, ethnologist, historian and writer, this illustrious and eminently useful citizen came to America at the age of 19 from Geneva, Switzerland, where he was born on January 29, 1761. At the age of 35, he was the acknowledged intellectual leader of the Jeffersonian Party in the House and the only man in his party competent to return to the people the right to determine how the Nation's money is spent. That he was able to do so, in the face of enormous opposition by Hamilton's Federalist Party, was a tribute both to his talents and to his fortitude.

The development of commerce in an atmosphere of peace was Gallatin's yardstick for the prosperity of the people of his adopted land. All wars, commercial or other, he called fatal to progress, though he was to experience both kinds during his life of service and to rectify some of the evil results which followed them.

Shortly after the War of 1812 with England was over, Gallatin succeeded in negotiating a treaty with America's former enemy ending all discriminatory tariffs. In 1818 he assisted United States Minister to England Rush in concluding a commercial convention.

As a result of his efforts in fiscal and foreign trade matters, the credit and

prestige of the United States in the opening decades of the 19th century were at a peak. And, it is at such a peak that I know all of us here want to keep them.

However, there have been some dips of late as a result of certain ill-conceived departures by the current administration from its own "trade, not aid" policy. In a period when it must be our considered aim to win as many new friends as possible, alienating the affections of our old ones cannot be condoned. Most especially, we have erred in offending the Swiss, excellent trade partners since 1850 when the Swiss-American Treaty of Friendship and Commerce was signed. Boosting the duty on watch imports and threatening other discriminatory tariff actions is certainly no way to hold the affection of our best cash customer in Europe. Moreover, this attitude upset our other foreign friends who were dismayed and made apprehensive.

As a Congressman from the State of New York, where most of the watch importing and assembly firms are found, I am more aware than most of the bad effects the imposition of the new tariff barriers on watch imports is having—or is threatening to have—on the legitimate businesses of a major segment of the American jewelry industry. For, since less than 5 percent of the total gross retail price of a watch returns to Switzerland, it is obvious that American importers, assemblers, and wholsesale and retail jewelers must bear the brunt of any discriminatory action which limits watch imports. And, because watches constitute the most important commodity group exported by Switzerland to the United States, any diminution of imports is bound to curtail Swiss spending for American products.

If we can learn from Gallatin's career the one thing of value which has particular relevance today, it is that harmonious commercial dealings with foreign lands provide our best insurance for peace and prosperity.

NATO Is a Strong Deterrent Against Communism

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1956

Mr. ANFUSO. Mr. Speaker, in July 1955 you paid me a distinct honor by appointing me as one of the six Members of the House of Representatives to serve as delegates to the NATO—North Atlantic Treaty Organization—Parliamentary Conference, which took place in Paris July 18 through 22. I am very grateful to you, sir, for this signal honor. My colleagues on that delegation were the distinguished Members of this House, WAYNE L. HAYS, of Ohio, FRANK J. BECKER, of New York, S. J. CRUMPACKER, of Indiana, LEROY JOHNSON, of California, and STEWART L. UDALL, of Arizona.

This was the first NATO parliamentary conference of its kind in which the representatives of the 15 countries associated in the North Atlantic Treaty Organization met together to exchange views and opinions pertaining to the maintenance of peace and security of the nations concerned, as well as to obtain closer economic, social and cultural relations between the peoples of the Atlantic community. There we had the opportunity to meet with many of the Western European leaders and statesmen with whom we discussed the present international scene. We were also privileged to be briefed by the top military leaders of NATO, including Gen. Alfred M. Gruenther, General Eisenhower's successor as Supreme Allied Commander of Europe, as to the military position of the NATO countries.

Mr. Speaker, I am not going to dwell at length on the proceedings of that conference at this time, or the role played by our delegation. That was already done by our distinguished colleague, Representative WAYNE L. HAYS, who so ably served as the chairman of our delegation, in a report which he submitted to this body on August 1, 1955. I merely wish to share some thoughts and observations which I have developed during and after that conference when I visited several Western European countries and had the opportunity to meet and discuss mutual problems with leading statesmen in those countries.

My tour of Europe lasted from July 18, when I arrived in Paris, until August 31, when I embarked from Spain for the United States. I visited France, Switzerland, Italy, and Spain. I paid official visits to SHAPE headquarters in Paris and the Allied Forces Southern Europe headquarters in Naples, where I was briefed by the Chief of Staff, Maj. Gen. Frank N. Roberts, United States Army, and officers of his staff, regarding the latest developments in NATO.

In my talks with European government leaders, parliamentarians, diplomats, military leaders and heads of major political parties, I stressed the deep and abiding interest of the American people in world peace and the security of the free nations. At the same time, however, I emphasized the urgent need for maintaining the military power and strength of the free world to assure its continued freedom. I noted that NATO constituted a strong force and a deterrent against communism in Europe and, hence, should be strengthened.

In each of these countries I emphasized that the presence of allied troops in the NATO countries is to prevent future invasion by Soviet Russia and to contain the Russian and satellite armies in Eastern Europe. "The soldiers from these 15 NATO countries are, in reality, 'soldiers of peace' and they should be welcomed by the people of those countries," I told our friends abroad.

Furthermore, I made certain specific suggestions which were received with considerable interest by our allies. For example, both in Paris and in Rome I recommended that some of the huge agricultural surplus in the United States be stockpiled in the NATO countries to be used in the event of war, also in cases of emergency—floods, earthquakes, famines, and other disasters—and for the purpose of strengthening European defense now.

At the time I was in Europe during July and August, the spirit of Geneva was in full bloom. It was on everyone's mind. People everywhere asked: Is it sincere, or is it a mask of falsity to cover up Soviet plans and maneuvers? They wondered whether Russia was in earnest in her desire for world peace, or was it merely a stalling device?

Today we pretty well know the answers to those questions. We are a bit older, though nonetheless wiser. The spirit of Geneva evaporated much sooner than even the most optimistic among us had expected. Even the most naive will admit today that Russian smiles and charm tactics cannot, and should not, be taken at face value. It was only a grand hoax to deceive the people of the world who are hungry for genuine peace. Russia's smiling diplomacy did not constitute a fundamental change in Communist tactics. It was only a temporary shift in the well-known zigzag line which Moscow pursues periodically for tactical reasons. These changes disappear as abruptly as they come. The leopard does not change his spots, he can only camouflage them for a while.

I am inclined to agree with the viewpoint recently expressed by General Gruenther, who feels that we should be cheered rather than depressed by the end of the spirit of Geneva. General Gruenther had become worried by the readiness of many Allied nations to reduce their defense efforts because of a few false Communist smiles. It is incredible how much damage was caused to NATO—to its morale and its physical structure—during the short-lived and unlamented period in which the spirit of Geneva was thriving. Who knows how much more serious and irreparable damage would have been caused to the security of the Western World if this will-o'-the-wisp spirit had lasted another 6 months. It was all built on deception. It was intended to give us a false sense of security, to cause us to relax our guard, to weaken our resistance, to prepare us for the time when communism could give the free world a final coup de grace.

The end of that elusive spirit is, therefore, not a cause for alarm; on the contrary, it is much more desirable this way, because it helps us to see the enemy of the free world in his true colors. It helps us realize the danger in which we find ourselves and to prepare for it. And this is where NATO comes in.

Fundamentally, NATO is a defense organization. According to the agreement signed by the NATO nations, "they are resolved to unite their efforts for collective defense and for the preservation of peace and security." With the development of nuclear weapons—over which we still maintain supremacy—with the establishment of strategic naval and air bases throughout the world, and with full command of the air and the seas—we are in a position militarily to contain

the Soviet empire. The 15 NATO nations are in a position today to strike at Soviet Russia and its satellites from any direction and to destroy its ability to wage war.

The Soviet leaders know this and for that reason they have made the dissolution of NATO the number one objective of Soviet foreign policy. Ever since the formation of NATO in 1949 the Soviet Union has been trying, first by the threat of force and later by cajoling and charming smiles, to destroy it. Let us not be deceived: the crippling of NATO still remains Russia's primary target.

May I remind all of my colleagues in this House that NATO was brought into being during the administration of former President Harry S. Truman, who acted quickly in response to the need of the hour and appointed Gen. Dwight D. Eisenhower as its first military head. The reason President Truman supported NATO was because he realized that Soviet imperialism was threatening to occupy by force the remainder of Europe. The creation of NATO was a major factor in stopping the imminent Russian advance across Europe.

We must continue to maintain this advantage afforded us by NATO. We must continue to help strengthen our allies, both militarily and economically because strength is the only thing which Soviet Russia understands, fears, and respects. As long as we have the power to restrain and contain the Russians, as long as we have the means and the strength to destroy them—they will never attack us. Furthermore, only if we maintain a strong position can we hope to negotiate with the Russians on an equal basis. When we are weak, they will talk with us from time to time and even sign agreements—but it is for the purpose of deriving more concessions from us. Besides, their agreements are worthless anyhow, as the history of the last decade shows so vividly.

Today 15 nations are united in a defense pact under the auspices of NATO. Each of these nations is contributing manpower, equipment, and resources. American generals wear the insignia of NATO which indicates that they lead men in 45 different uniforms—the army, navy, and air forces of the 15 countries. There is perfect harmony and understanding in this amalgamation of military power which is bent on preventing world war III. I believe that this spirit of unity and cooperation on both sides of the Atlantic constitutes one of the strongest influences for peace in the world today and one of the major deterrents against communism. I further believe that we would be wise in creating a similar organization in the Pacific area.

As I toured the countries of Western Europe and talked with the men who are trying to fulfill the NATO program and to make it work, I had the feeling that here were dedicated men who had seen all that they wanted to see of war and bloodshed, and that they would do anything in their power to prevent another world conflagration. I was pleased to learn that NATO was a practical organization, that it was geared for immediate and collective action, and not only in the military field but also in the political, social, and economic fields. And may I add at this point that both the Allied Command and NATO are prepared to use all their resources for the defense not only of Europe, but also of North and South America. All of our allies readily understand how important it is for our production plants in the United States to be protected at all costs.

I have come away from Europe with the conviction that the Russian bear is still a great menace and a tremendous challenge to the free world. It would be folly for us to relax our efforts even for one moment. Let us not be deceived by false smiles and sudden displays of friendship, which are turned on or off by the masters in the Kremlin to suit their desires. Yesterday, the lukewarm faucet was on, today we are getting the cold shower again and its stinging needles of hatred.

During the period of the great smile, Russia was busily engaged in consolidating its position in Europe all the way from Finland, through Germany, Austria, and Yugoslavia to the Mediterranean area. She sought, and to some extent, succeeded in neutralizing these countries, to alienate them from the free world, to divide the West, and to cripple the NATO organization, and all of it was done with the aid of a few smiles and honeyed words. Following the Summit Conference at Geneva, the Communist cry in many parts of Europe was: "See, the Big Four are now at peace, so let down your guard and let us all be friends." I have seen this type of operation, this new system of subversion and subtle sabotage, at work in France and Italy.

How are we to combat such tactics? Let me make a few suggestions and summarize my views on the basis of what I have observed abroad:

First and foremost, the Western Powers must develop a greater degree of realism concerning the present Russian leaders, their techniques, their ultimate goals. Unless we do so, we may suddenly discover that their methods and their ways of thinking are much more devious and treacherous than those of Stalin.

Second, it is most essential that we strive for greater unity of purpose, action and cooperation on the part of the free world, in order to act with resoluteness when dealing with Communist Russia. We have been outtalked, outmaneuvered and outbargained each time we sat down with its representatives to discuss world affairs, whether in Geneva or the United Nations.

Third, we must continue to strengthen ourselves and to strengthen our allies, militarily and economically, because only a position of strength will afford us the necessary security and enable us to survive.

Fourth, we should seek to develop diplomatic cooperation within the NATO organization. This idea was originally suggested by the Belgian Foreign Minister Paul-Henri Spaak, who believes that the NATO countries should discuss among themselves their respective differences and difficulties in an effort to present a common diplomatic front to the rest of the world. This diplomatic or political function would supplement the present military and economic structure of NATO and would serve as a means for diplomatic defense through consultation and cooperation among the Atlantic nations, just as 6 years ago it became urgent for them to pool their armed forces for common defense. In this complex world in which we live, more than military considerations are necessary to devise satisfactory defense. I believe that if NATO had had impartial working committees to investigate problems among its member-nations, many of these problems could have been resolved more satisfactorily and we could have avoided a good deal of the damage caused. The problem of Cyprus involving three NATO members, Britain, Greece, and Turkey, should have been handled by NATO. Perhaps also France's difficulties in North Africa. Potential difficulties between France and West Germany over the Saar is another case for NATO.

Fifth. I would like to see the establishment of a quasi-government agency which is to be entrusted with the task of disposing of some of our agricultural surpluses abroad to government agencies and private welfare organizations. This is to be done in a manner and only to such agencies that will aid the forces which are fighting communism. In our desire to help suffering people everywhere, we sometimes pour our help into the wrong places and to the wrong people. Those who accept our gifts must know that they come from the people of the United States and not from the Kremlin masters who want to enslave them. Let me cite one example. In Italy, where our aid is given on a government-to-government basis, there are about 2,500 local towns and communes which are controlled by the Communists. They receive a share of this help. Thus, we are helping them to stay in power and to control important areas, where actually it is not our intention to do so. Perhaps it would be best if we had committees in the various communities, including American members, to handle the distribution of our surplus commodities. Such committees would see to it that the United States got the credit and only the communities cooperating with the free world would receive such assistance.

Sixth. I believe the time has come to set up a private international organization to aid political parties and democratic institutions throughout the free world in their efforts to combat communism. This organization is to be composed of men and women, individuals and groups, institutions and foundations—in fact, every facet of life and activity of the free nations which can provide the necessary resources and the wealth to aid the forces of freedom in every country threatened by communism. Again let me cite the example in Italy which I observed during my trip. There is only one political party in Italy today, the Christian Democratic Party, which is capable of assuming power and preventing a Communist-controlled govern-

ment from taking over. With limited financial aid, this group and other like-minded groups in that country could drive the Communists out and preserve Italy on the democratic side. I am not suggesting a one-party government there. I am merely pointing out that with a little help this party, which is the largest democratic group in Italy, could accomplish the task. Unfortunately, other groups are too small or insignificant to undertake this job.

These are some of the ways and methods through which we can provide the free world with the mechanism to match the Communist propaganda machine, the deceiving smile and the cold war hatred. The observations and suggestions I have made here are not intended as a cure-all, but rather as a beginning, a basis from which to develop additional methods to deal with Communist infiltration tactics and subtle sabotage. They are intended to encourage our friends everywhere to build strong governments, solidly established, which will be able to resist Communist imperialism.

Shall we continue to talk and to negotiate with the Russians? Certainly, but let us remember at all times to have a gun at our side, while Russia carries a dagger.

Soviet Russia is dedicated to the philosophy of conquering and subjugating the world by war, subversion, and infiltration. Our philosophy of government is not to enslave, not to subjugate, but to guarantee to all men their individual freedom, their dignity as human beings, the right of each person to choose his own destiny under a benevolent form of government which extends equal opportunities to all.

In conclusion, let me say that our delegation to the NATO Conference was of the opinion that the interchange of ideas among the representatives of the parliamentary bodies of the 15 NATO countries was beneficial and constructive. It is our view that our country and this legislative body should participate in future meetings of this type to discuss problems of mutual interest and to seek greater understanding among the nations concerned. I appreciate the privilege extended to me to represent the United States House of Representatives at the NATO Parliamentary Conference.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate hearings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the official reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix, but this rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD Appendix the full report or print of any committee or subcommittee when said report or print has been previously printed.

10. *Official reporters.*—The official reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this restriction shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. The Public Printer or the official reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Illustrations.*—Pursuant to section 182b, title 44, United States Code (as shown above), requests for authority to insert an illustration in the RECORD should be submitted to the Joint Committee on Printing through the chairman of the Committee on Printing of the respective House in which the speech desired to be illustrated may be delivered. Illustrations shall not exceed in size a page of the RECORD and shall be linecuts only. Copy for illustrations must be furnished to the Public Printer not later than 12:30 o'clock p. m. of the day preceding publication.

13. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

Appendix

The Voice of Democracy

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Friday, January 27, 1956

Mr. ROBERTSON. Mr. President, recently the Junior Chamber of Commerce of Galax, Va., conducted a contest entitled "I Speak for Democracy." I ask unanimous consent that the winning essay, written by Miss Barbara Ward, of Galax, Va., be printed in the Appendix of the RECORD.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

PRIZE-WINNING ESSAY WRITTEN BY MISS WARD ON DEMOCRACY

(Published below is the essay on the Voice of Democracy, written by Miss Barbara Ward, daughter of Mr. and Mrs. Lonnie Ward, Galax, and which won for her the first prize, a $25 United States savings bond, in the recent I Speak for Democracy contest conducted by the Galax Junior Chamber of Commerce.—EDITOR.)

I am the voice of democracy. Listen to me, America; I am your heritage. You fought bloody battles to win me; bloodier ones to retain me. You deemed no price too high that would insure my being ever-prevalent with you. Scores of you were called to guard me, and I watched as life after life was given for my sake. Yet, it was good; for, though the loss was great, the gain was greater; and the sacrifices made for me established my place of prominence among the governments of the world.

How is it that you have managed to keep me alive these 150 years? No other nation which ever enjoyed a similar standard of living has been able to combat and crush the forces opposing my existence. How? And again, I ask you how? But wait * * * I know the answer. I cannot endure when great masses are poverty-stricken and illiterate, and where a chosen few are the rulers of many. Nor can I thrive where there are greed and malice. Rather, America, my being stems from your faith in God; your will to be free; and your determination which prompted one of yours sons to declare, "I would not be slave, so I would not be master."

In me you hold the secret to world peace. In me is no fear; no want; no ignorance. In me is security; happiness. In me lies the last hope for a dying world.

Count your blessings, America. In you I have wrought a miracle—a miracle that begins with a handful of native soil, the grains of which reflect a Nation of contrasts, the never-ending horizons of sweeping plains, burning deserts and rolling prairies; the tranquillity of snug harbors, quiet valleys, and shining lakes; the energy of thundering waterfalls, roaring cities, and the flaming red sky of steel mills. The neighborliness of old rail fences, railroads and highways tying a Nation together; the challenge of snow-capped mountains and giant, towering trees; the bountiful fields of waving grain; the light of a great city at night; the voice of factory whistles calling a Nation to work. * * * In this endless procession of your blessings is magnified many fold the self-evident truths of equality and the right to life, liberty, and the pursuit of happiness.

Because of me you may speak your mind openly and boldly. You may be freely taught, and free to inquire and to learn. You may vote according to the dictates of your heart, and you may worship God as you choose without feeling terror. You may live without fear that the coming moments may be your last.

Yes, America, you have truly been blessed with treasures of infinite value, the worth of which can never be expressed in dollars and cents. You are the Nation favored of God, not because he chose you, but because you chose Him as your Lord and leader. Yet, be cautious, lest you rely on your own strength, forgetting the strength upon whom I depend.

Listen well, America. I do not pride myself in what I am, but what you have made of me. There is no glory in my name alone; only in your application of the principles for which I stand.

I am yours to lose or to maintain; yours to hallow or to desecrate. My fate is in your hands and your future in mine. Together, we must see that the government of the people, by the people, and for the people never perishes from the earth.

Salmon Runs Can Be Increased

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Friday, January 27, 1956

Mr. MAGNUSON. Mr. President, my colleagues are aware of the hearings which the Senate Interstate and Foreign Commerce Committee held in Alaska, and along the west coast last fall. Shortly Senators will be hearing more about those hearings and recommendations in the form of legislation.

Two main problems confront our fisheries resource in the western United States and the North Pacific. One is what to do about the declining of salmon runs and the diminishing salmon pack; the other concerns our tuna and trawler fishing fleet, which have been discriminated against time and again through import agreements reached by our State Department.

Just as research has pointed the way for industry and agriculture, it holds tremendous promise in restoring our North Pacific salmon runs. In that connection I ask unanimous consent to have printed in the Appendix of the RECORD two articles on this subject, one written by Fergus Hoffman, financial editor of the Seattle Post Intelligencer and published in the October 16 edition of that newspaper, and another written by Paul Dumas:

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

FISH, WILDLIFE SERVICE FAILS TO ACT ON SALMON

(By Fergus Hoffman)

Buried deep in the files of the Fish and Wildlife Service in Washington, D. C., is a highly technical report which says, in effect, that something could be done about Alaska's diminishing salmon runs—if anybody wanted to do something about them.

The Service, which has been charged with responsibility for Alaska fish conservation for these many years, has given the report no publicity and no action. It was written by a Service researcher who made a scientific study of the problem and came up with some solid suggestions.

Why no action has been taken is a mystery. It would seem that the Fish and Wildlife Service, which cannot show that despite the millions of dollars it has spent it has added a single salmon to the Alaska pack, would be willing to try anything. Year in and year out, under Republicans and under Democrats, the Alaska salmon pack has suffered.

With the Senate Interstate and Foreign Commerce Committee, chairmanned by Washington's WARREN G. MAGNUSON, scheduled to open hearings in Seattle this Monday afternoon on rehabilitation of the salmon industry, perhaps some light can be shed on the technical and scientific aspects of maintaining what was once a tremendous natural resource.

It may even be possible to determine why nothing has been done toward adopting the procedure suggested by the Fish and Wildlife's own researcher.

The problem is not a simple one, admittedly, but the theory put forward in the scientific report is not difficult to understand. The salmon waters, it points out, are literally fertilized by the decaying carcasses of the parent salmon which ascend the rivers to spawn and die.

The carcasses, decaying into their component chemicals, provide nourishment for the native marine growths, the minute, sometimes microscopic plankton. These plankton in turn provide food for other plankton upon which salmon fry feed and flourish.

When a run is depleted, the natural food balance of the spawning area is depleted. The less salmon, the less food, the less salmon the next time. It is a vicious circle.

Each area will vary in its resources, of course. Food deficiencies resulting from an insufficient supply of certain mineral elements may be charted scientifically by testing each area. In some cases the deficiency will be almost entirely represented by the lack of a single chemical—so slight in amount but so vital in growth effect that perhaps 100 pounds of the mineral would be enough to restore the water's natural balance.

In other words, it is feasible to fertilize a salmon spawning ground just as a farmer fertilizes his fields. An area can be made to produce additional pounds of salmon just as a rancher can get additional bushels of wheat from his acres. Well nourished, the salmon will mature faster and will leave the stream earlier to feed in the sea—and return earlier to be caught and canned.

This is only one aspect of farming the sea, a sound, scientific project which could return many times its initial cost. Present conservation practice is—and has been since

1922—to allow some salmon to go upstream to spawn while the rest are packed. The theory is, "One for the stream and one for the can."

The result has been a steadily diminishing supply of nutrients in Alaska's salmon-spawning grounds—and a steadily diminishing Alaska salmon pack.

ALASKA FISH TRAPS FACE ELIMINATION

(By Paul Dumas)

JUNEAU, ALASKA, October 15.—Endorsement by Secretary of the Interior McKay of a bill providing gradual elimination of fish traps in Alaska presages a stiff battle between the Fish and Wildlife Service and trap operators when they meet for final hearings on 1956 fishing regulations in Seattle next week.

Concern about a possible gear dispute was expressed in Juneau yesterday by Don McKernan, FWS Commercial Fisheries Administrator. He said he feared one feature of the bill threatens his proposal that the 2-year-old 50-percent curtailment of total fishing effort be continued another year.

BILL ENDORSED

McKay last week endorsed a bill, authored by Alaska Delegate E. L. BARTLETT, which provides that established fish traps would be eliminated gradually over a 5-year period. It would become effective next year. McKay's endorsement adds weight to the probability the bill will be enacted in the next Congress.

When the FWS proposed a curtailed fishing-effort program 3 years ago, trap operators cooperated for two reasons:

1. Obvious necessity of permitting more salmon to reach stream beds for spawning purposes.

2. A promise by the FWS that once the salmon fishery showed signs of coming back rigid regulations of traps would be relaxed.

PENALIZED

Under the term "established" fish traps, operators owning traps inoperative next year through the FWS hold-the-line proposal would find themselves penalized and closed traps would be considered outside the established category and, therefore, permanently eliminated.

In 1953, when the traps moratorium program became effective, there were about 375 traps in Alaska, of which 256 were in southeastern waters. In the southeast, under the curtailed program, only 118 operated in the past 2 years. Others remained closed. A curtailment of 50 percent in the fishing effort by traps—and purse seiners—was possible because owners cooperated voluntarily.

Taxpayers Versus Pressure Groups

EXTENSION OF REMARKS

OF

HON. H. ALEXANDER SMITH

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Friday, January 27, 1956

Mr. SMITH of New Jersey. Mr. President, on January 20, 1956, Mr. George E. Stringfellow, senior vice president of the Thomas A. Edison Co., made an address before the Chamber of Commerce of Bloomfield, N. J., entitled "Taxpayers Versus Pressure Groups." This address is a tribute to former President Hoover and his Commission on the Organization of the Executive Branch of the Federal Government.

As a personal friend of Mr. Stringfellow, and as one who is very much interested in the furthering of the important series of reports issued by Mr. Hoover's Commission, I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TAXPAYERS VERSUS PRESSURE GROUPS

(Address by George E. Stringfellow, senior vice president, Thomas A. Edison, Inc., and longtime business associate of the late Thomas Alva Edison, before the Chamber of Commerce of Bloomfield, N. J., January 20, 1956)

The questions which I have selected as my subject are those posed by Mr. Herbert Hoover's Commission on Organization of the Executive Branch of our Federal Government.

No matter what any of you have thought of Herbert Hoover as a political figure, I am sure that you will agree that today, as a nonpolitical figure, giving abundantly of his time and strength to serve his country under both a Democratic and a Republican administration without pay, he is worth listening to. He is a conservative and does not go off half-cocked.

He was able to line up 325 able, distinguished, experienced citizens for his task forces, dealing with the various phases of the Federal Government's activities. They took time away from their businesses and professions and worked for many months without compensation. He didn't ask any one of them what political party he belonged to, but subsequent inquiry shows they have been about equally divided between the two parties. At any rate, neither their investigations nor their reports to the Commission have been in the slightest degree affected by any partisanship nor have they shown any division along party lines.

And those men, leaders in their respective fields, are in agreement as to the enormous sums which can be saved, and how the savings are to be effected.

The Commission has made 314 recommendations designed to obtain greater efficiency and economy in the executive branch. Hon. James A. Farley, a member of the Citizens Committee for the Hoover report, stated that "If fully applied these recommendations would yield eventual savings of more than $5 billion a year—enough to balance the Federal budget," he concluded.

Since 1949, through the adoption of 84 percent of these recommendations $7 billion has already been saved. This represents an annual savings of $1,750,000,000, leaving $3,250,000 still to be saved annually. It is obvious that the 84 percent represents only the small leaks. The biggest savings, yet to be accomplished, are meeting opposition from pressure and special interest groups.

Mr. Hoover tells us that much of the criticism from pressure groups is based on mere lack of knowledge arising from misunderstanding of the recommendations. The opposition has always vanished in the light of information and real understanding, and that is one place where each of you can help.

But some of the criticism comes from special interests which are, or consider themselves to be, affected, and is selfish rather than patriotic.

I need not tell you that many, if not most Members of Congress are influenced by the pressures that they encounter, especially when there is a strong, persistent, active pressure on the side of some well-financed, expertly lobbied, special interest. But Members of Congress want to get reelected, and although they are apt to listen to the siren voices of the pressure groups, they will also pay attention to the sweet tunes of the voters—and the general public. That is where you come in—to tune up your own sweet and convincing voices and those of your friends and neighbors, so that your Senators and your Representatives will get busy and complete the job that almost everybody, including all the unselfishly motivated citizens, think must be done and done soon. Congressmen are not going to resist selfish pressures unless they hear from the voters. That means you.

In that connection there is already a good start. Your fellow citizens all over the country have already organized on a big basis to back up the Hoover Commission's recommendations. Many of you have undoubtedly read about it. Some of you have already joined up. The name of this organization is the Citizens' Committee for the Hoover Report. They have prepared a series of short research memorandums, each on a separate phase of Federal activity, telling the story in a most readable and convincing manner and giving the names of the members of each task force and of the Senate and House committees which have jurisdiction over the various activities. The citizens committee will send you copies, and they want to join them.

I intend to give you a few rather striking examples of the Hoover recommendations and the situations that have occasioned them. However, you as good citizens must read some of the reports to get the whole picture. They will give you some laughs and some of them will make you want to weep when you realize what a beating you have been taking as taxpayers.

Everybody loves the veterans—nearly every family has one. The Congressmen both love and fear them, because they have lots of votes and are well represented in Washington. The Hoover Commission has recommended that every sick and really indigent veteran should be provided care in Veterans' Administration hospitals, even though his sickness is not related to his war service, and that regardless of his ability to pay, he should have free hospitalization if it was service connected. This alone runs into billions of dollars.

But the Commission has made a recommendation against what is known as goldbricking, which is free hospitalization to veterans able to pay for illness or injuries not connected with their war service. The Commission regards that as the greatest of all problems respecting our provisions for veterans.

Congress has enacted a law which limits the non-service-connected hospitalization to veterans who make a sworn declaration of inability to pay. But with a joker. The Veterans' Administration is prohibited from challenging the veteran's statement. A bill eliminating that joker and protecting your pocketbooks and the pocketbooks of millions of honest veteran taxpayers was defeated as a result of pressure on weak Members of Congress who had not heard from you independent, civic-minded taxpayers. Here is what Mr. Hoover said recently on that subject:

"The pressure groups, of course, are very vocal, and sometimes they atrociously misrepresent our recommendations. The veterans, for example, passed 12 resolutions of denunciation, 5 of which were absolutely false. We had never suggested anything of the kind. Four of these resolutions were distortions of what we recommended. That's the sort of stuff you have to meet."

I can in my limited time give you only a few out of hundreds of such "bugs" in our Federal administration needing your voices demanding their extermination. Here is a funny one:

It is a legitimate governmental function to pay for the transportation of the baggage and other goods of a Federal employee transferred to a distant station. But the Commission reports that millions are being

wasted through failure to adopt and enforce commonsense regulations. For example, an elaborate wooden packing crate was made to order to ship one old overshoe overseas. The cost of the crate was many times the value of the shoe. The records do not disclose whether the employee was a one-legged man (or woman) or what the official action was respecting the other shoe, if there was another one.

A wooden crate was especially made to ship a 10-cent store lamp and another crate was made to ship the paper shade which went with it.

While the Army was shipping 807,000 pounds of canned tomatoes from California to New York, the Navy was shipping 775,000 pounds of identical canned tomatoes from the East to California. I am more inclined to weep than to laugh at that one, perhaps because the figures are larger; but the figures run into millions even on the little funny ones when you multiply them by a few million similar instances.

The Commission estimates that $282 million a year can be saved merely by the disposal of unneeded storage facilities; another $50 million through avoiding the excessive rotation in the armed services which tend to make too many of the personnel, both military and civilian, into jacks-of-all trades, rather than developing specialized competence.

Nobody disputes that it would be crushingly expensive to lose the cold war. The cost in dollars would run into untold billions, besides tragic costs not measurable in dollars. Neither the Hoover Commission nor any other sane person objects to such foeign aid as really helps us with the cold war, and we have to leave to the President and to the State Department and Congress the selection of the objects of such expenditures. But, as Senator BYRD pointed out recently, the foreign aid we have recently been sending to Denmark has been applied to reducing the Danish national debt, and the foreign aid we have been sending to England has enabled her to reduce her taxes even though England's economy has been getting healthier at the previous existing level of taxes.

The Hoover report points out that we have been sending a billion dollars a year in general economic aid to countries which have already reached their peak of industrial activity.

The three armed services are supposed to "cross service" the beds in their hospitals. Yet in 1954 the Commission found only 2,255 cases of cross servicing in hospitals with a total of 102,280 beds, when more than half, or to be exact 52,760 of those beds were unoccupied. That sort of waste and inefficiency doesn't help toward winning the cold war or strengthen us for a possible hot war.

Small dry-cell flashlight batteries have, as you know, a relatively short shelf life. Yet the Army Signal Corps authorized an 8½-year supply of these.

I could keep going for hours, but here's just one more, and this is a big one: The Federal Government now has a capital investment of over $10 billion in industrial facilities—shipyards and railroads. Most of these were originally acquired as a war emergency. Some of them will continue to be necessary even in times of cold war or in times of peace. But the Commisison found that a very large percentage of these facilities are being continued merely because Government never likes to let go of a thing once it has got hold of it. The operating costs of these facilities total over $770 million a year.

Not only could we recover an impressive fraction of this money by disposing of what we don't really need, and save an impressive fraction of the huge operating cost, but we would be collecting taxes from their private purchasers and operators with whom the Government is now competing.

These instances and hundreds of other instances of unnecessary spending, that don't help win the cold war or help in any other way, add up to this:

The billions saved would:

1. Easily balance the budget without hazard to the Nation's survival and without impairing the efficiency either of governmental operations or of our national economy.

2. Reduce our national debt, without increasing taxes,

3. Avoid inflation, and

4. At the same time lower the enormous annual "debt service" which is now greater each year than the entire cost of Government was a few decades ago.

So let me end with this plea: Get the pamphlets from the Citizens' Committee for the Hoover Report, 777 14th Street NW., Washington 5. D. C..

Write to your Senators and your Congressmen. Get your friends to write.

Write to some of the members of the Senate and House Committees whom you may perhaps know personally.

Join the Citizens' Committee and get your friends to join.

Narcotics, Father and Son

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1956

Mr. CANFIELD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Paterson (N. J.) Evening News, January 24, 1956:

NARCOTICS, FATHER AND SON

Bitter irony and retribution indeed is the fate visited on a Newark man, long sought as an important kingpin of a major narcotics ring and finally caught up with.

Police had gone to the home of Thomas Campisi to arrest a youth, Peter, age 18, on robbery charges. Under the bed, they found the fugitive father, who broke away but was captured.

Facing the boy was a charge far more serious than robbery, wherein enters the bitter irony. In his pocket, he had a hypodermic needle and a packet of heroin. A wailing mother pleaded with the boy to tell where he got it.

Now he is held not only on suspicion of robbery, but for illegal possession of the narcotics and equipment.

The robbery angle is probably easy to explain. As in most such cases, the drug user turns to robbery to get the money to buy the drugs. The more of them he uses, the greater grows his desperation. Robbery follows robbery, then as the grip of the narcotics more tighly envelops him, murder is often at the end of the road.

And what of the father?

He is held on two Federal warrants charging unlawful sale of $30,000 worth of narcotics in Newark and Brooklyn.

Who knows how many helpless and hapless victims were served by the narcotics the elder had sold along with his gang? Or the countless counterparts of his own son who became addicted to narcotics use because of his nefarious practices and turned to crime to pay the sky-high price these miserable characters exacted as they pushed the drugs?

The story says that the father glared at the son as they faced each other in police court.

Why did he glare? Because the son had turned to drugs? Or was it because of self-pity and of remonstrance because of the son's carelessness in being caught so that the father, too, could be ensnared?

Tragic it all is, indeed.

Prison will probably beckon to this depraved father whose very drugs could have caught up with a young son now traveling the road to jail and even worse.

But sordid as is the thought, perhaps his worst penalty would be to witness the suffering of the boy he sired into the world begging and pleading for drugs to fill his craving.

There is certainly no penalty too severe for this type of human vulture.

Address by Hon. Alexander Wiley, of Wisconsin, on "Brink of War" Controversy

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, January 27, 1956

Mr. WILEY. Mr. President, last evening it was my pleasure to address the safe deposit section of the District of Columbia Bankers' Association. My subject was the so-called "brink of war" controversy.

I send to the desk the text of my address, and ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SENATOR WILEY URGES END OF "BRINK OF WAR" SQUABBLE, SAYS WE MUST GET ON TO MORE SUBSTANTIAL REVIEW OF OUR PROGRAMS AHEAD

I am pleased to address the members of this section on a subject which I know is of deep interest to you, as it is, of course, to all other thinking Americans.

I refer, of course, to the foreign policy of our country.

It will be my aim tonight to confine my remarks to but a few of the more basic problems confronting us.

THE MANY CRISIS AREAS ON THE WORLD SCENE

If time were to permit, it would be a pleasure for me to take a detailed view of some of the more crucial individual settings on the world stage.

One could devote an entire evening just to exploring such highly significant areas of crises, as those I will mention now:

North Africa, scene of continued serious tension and disturbances, as Morocco and Algeria move toward more self-government; North Africa, where our own strategic air bases represent a vital deterrent against world war III;

The ever-ominous Taiwan (Formosa) Strait area, where recent Red artillery bombardment, air and naval action, may indicate the possibility of the reemergence of the Formosa-Pescadores, Quemoy-Matsu problem to the No. 1 position of crisis on the world scene;

Troubled India, where civil strife over the states' reorganization has offered another example of treacherous Red meddling in disturbed waters;

The powder keg Middle East, where hands are still close to triggers on both sides of the Arab-Israeli borders, while arms shipments pour in from Soviet bloc and other areas;

Our ally, France, where the Communists are cunningly maneuvering to capitalize on

their 152-vote bloc so to form a so-called popular-front government in the badly splintered National Assembly;

Indonesia, where the Communists are also maneuvering to exploit differences within and between Moslem parties' ranks and thereby get a Red toehold in a new coalition cabinet;

South America, which, while fortunately not in crisis, per se, is studying the significant trade bait, dangled by Soviet Premier Bulganin; this is the latest instance of Red peaceful-coexistence strategy—penetration through "rubles now, revolution later."

PROBLEMS BEFORE CONGRESS

Or, getting still closer to home, one could review in detail the policy problems in the Congress, regarding mutual security legislation, key questions such as: "Should Congress write in a long-range declaration of intent, as regards future aid, or should it attempt the more unprecedented step of a direct, long-range commitment, as such, or should it cut out economic aid entirely, or what it should do?"

Or, too, one could refer to the proposed welcome increase in the appropriations for the United States Information Agency—an issue on which the President of the United States feels very strongly—an issue on which I personally feel very keenly, too, for USIA is our principal instrument in the worldwide battle for men's minds and, as such, the move to strengthen it is long overdue. USIA has had its ups and downs. Time after time, it has been pulled up from the roots, examined, investigated, cut, and then thrust back into the earth, as if it could quickly take hold once again, in its worldwide operations for the truth.

And one could refer to dozens of other specific problems as well.

WHY THESE PROBLEMS CONCERN US

Now, of course, I know that passing through your minds, as I have mentioned this brief list, may have been the question, "Senator WILEY, why should we be concerned with all these far-distant places? What business is it of ours if two far-off countries are quarreling over some bit of territory, say, the Saar, or Dutch New Guinea, or Kashmir, or if there are civil disturbances in some land?"

The answer is, I feel, very clear. The answer is that any situation which endangers the peace of any part of the world, may endanger the peace of the whole world.

There is no part of the world today so far distant from any other part as to be of no interest to us, and to other men of good will.

You and I read every day in our newspapers that the world has been shrunken by men's inventiveness. General Taylor has told how we have been developing a guided missile with a 200-mile range. Both the U. S. S. R. and ourselves have been pushing forward to develop the dreaded intercontinental missile, a ballistic—free—missile, or a guided missile controlled by electronic means.

Meanwhile, planes have been piercing the barrier of sound at better than 1,000 miles an hour. Jet planes are being introduced as well into commercial aviation, shrinking the oceans and land distances, still further.

All of these, and a hundred other factors in today's world, necessitate our close attention to once remote developments in the world scene.

BANKERS CONSERVE, WARS DESTROY LIFE

It is natural that you, in particular, as bankers, should be interested in this subject, because it is the banker's obligation to conserve. He is, of course, a trustee of other peoples' funds—funds which represent not only their life's resources, but their very lives themselves.

Nothing could be more contrary to the idea of conservation than war.

The 140,000 United States lives which we expended—in deaths and wounds in Korea—the $22 billion which were exploded on that peninsula on behalf of the defense of a free people—these are but the smallest symbols of infinitely worse costs which would be borne in the event of a third world war.

THE BASIC QUESTION BEFORE US

We come now, then, to the basic question of the evening: "Are we on the right path? Are we moving in the right direction toward heading off such a war?"

Has the foreign policy of your country and mine been a sound one, or has it, as some of its critics contend, been full of blunders?

Have we needlessly pushed to the brink of war, as some people falsely interpret and unsoundly contend?

The answer is as follows:

OUR COURSE IS SOUND

The basic foreign policy of our land is sound. It is sound because it has been molded and reviewed and refined by the best minds, the best hearts, the best capacities available to our Republic. Not just Republican leadership, but Democratic leadership as well, have contributed to every single major step which we have taken in recent years.

Under the great leadership of President Eisenhower and Secretary of State John Foster Dulles, we have basically moved not toward war, but toward an endurable and just peace.

Of course, we have been in danger. Of course, we have been at the edge of war at times.

But we have never been pushed to the edge by the design of any American.

On those occasions when we have been admittedly close to war, it has not been because of any American's foolhardy desire to get close to it. Rather, we have been pushed to the edge because of the reckless, aggressive actions of the Soviet Union and Red China.

Under those circumstances, we had the alternative of either retreating in panic, that is, committing an act of appeasement, or standing still in paralysis, tonguetied, unable to even speak our position.

Or we had the alternative of standing firm and announcing clearly and definitely that we would take whatever action we deemed necessary in our national interest and in the interest of the cause of freedom.

Thus, we proved we had no intention of retreating. We had no intention and never will have any intention of committing an aggressive act. But we did not propose and do not propose to run from danger like a coward or a slacker or a fool.

And, so, by our words and deeds of firmness, we have prevented war.

Our enemy respects nothing but firmness. Our enemy despises weakness. Our enemy capitalizes on indecision on its opponent's part.

All that we need do today is announce or imply that we have no intention of standing firm when the next crisis comes; that we will retreat pellmell in panic, and you can be sure that our enemy will immediately seize upon such explicit or implicit position, and commit some new acts of aggression.

That is why it is so absolutely essential that this brink of war controversy be dispensed with—promptly and completely. That is why we American must quit quibbling over the language used by a reporter in a magazine article, and get down to hard cases and hard issues and hard choices.

LET US HEAR OF ANY SPECIAL ALTERNATIVES

In recent days in the Senate we have heard a great many criticisms of the administration's foreign policy. We have heard a great many assertions to the effect that our foreign policy has no new ideas; it is not dynamic; it is not flexible, etc.

But we have not heard one single solitary word of recommendation of a constructive and specific alternative. We have not seen one single instance where any member of the opposition has stated that we should be doing something specifically which we are not doing now, either with some country or some group of countries or with the free world, as a whole or the Soviet bloc as a whole.

TRIBUTE TO SENATOR GEORGE

Lest my remarks be misconstrued, I repeat this point: In the past 3 years, we could not have made the progress that we have genuinely made without the magnificent help of outstanding leaders of the Democratic Party and the mass of Democratic legislators, as well.

Of course, I refer in particular to the universally esteemed work of the chairman of our own committee, Georgia's statesman, America's distinguished champion, Senator WALTER GEORGE.

Whatever foreign policy differences he may have with the administration—pale into insignificance before the strength of his basic teamwork in the past and, I am certain, his continuing, invaluable teamwork in the future.

This Sunday, he celebrates his 78th milestone. I know that the best wishes of the Nation are with him and with his dear wife.

And, if I may be permitted a word regarding what is, of course, an internal decision of a great State of Dixie, I know that the hopes of this Nation are that Georgia and America will continue to be represented by him in the years to come.

VITAL NEW PROBLEMS CONFRONT UNITED STATES

A mass of old and new international problems loom up before him and before all of us now—problems of America's participation in the Organization for Trade Cooperation; problems of advancing President Eisenhower's open-sky proposals in the U. N. Disarmament Commission; problems of strengthening SEATO; of preventing any erosion in the Middle East Treaty Organization (because in part of the disturbances in Jordan, whose possible entry into the Organization had previously been thought feasible, in some quarters).

We and our friends confront other problems, as well. There are internal difficulties like Turkey's domestic economic troubles; Greece's election struggle; the United Kingdom's trade gap; the Republic of Korea's heavy economic problems burdened by the awful destruction of the war she so bravely fought in defense of her freedom.

These are real problems, substantial, continuing problems, the sort of problems which should genuinely engage our and our friends' attention, rather than will-o'-the-wisp problems of interpreting an article in Life magazine.

What good will further bickering over the Life article serve?

THE HARM OF THE BRINK-OF-WAR CONTROVERSY

In point of fact, such bickering could do a great deal of harm.

Thinking Americans may genuinely be concerned lest Moscow and Peking misinterpret this whole controversy as allegedly signifying that part of the leadership of the United States is toying with the idea of spurning firm steps in protecting our national interests.

I say it will be a sad day for the world if the aggressive cliques in Moscow and Peking may get this false idea that many American leaders can be presumed so gunshy, so fearful about the chance of conflict, that they will want us to retreat pellmell in the event the Reds poise to throw their forces once more into some new aggression, as in Korea.

If the ruling cliques in Peking and Moscow get that notion in their head, then both local and international peace may be seriously endangered.

The fact of the matter is that my Democratic friends will soon realize, if they do not now, that we must not give any such false impression to Peking and Moscow.

Neither the responsible leadership of the Democratic Party nor of the Republican Party, of course, proposes to appease the Soviet Union.

Neither responsible leadership will sacrifice any land, as Czechoslovakia was sacrificed at Munich.

As you have noted, I do not want to prolong the "brink of war" controversy. But I feel I would be remiss if I did not set it into proper perspective by pointing out one further historical fact.

AN INTERESTING QUOTE DURING THE FORMOSA DEBATE

Many of us were interested in the remarks recently made by my eloquent friend from Minnesota, Senator HUMPHREY.

But it was also interesting to recall that back on January 28, 1955, at the time the Formosa-Pescadores resolution was approved so overwhelmingly by the Senate, that Senator HUMPHREY—then, as now, exceedingly active—said this on the floor of the Senate, as recorded on page 787 of the CONGRESSIONAL RECORD:

"Although the resolution involves a firm commitment—and we must realize it could lead to war—I believe that basically it represents high diplomacy backed up by strength."

I repeat, Senator HUMPHREY frankly said "it could lead to war."

The Formosa resolution could indeed have led to war, as its could still conceivably lead to war.

But war could not and would not have been the decision on our part; it would be the decision of Peking and Moscow. We don't want war. Do they?

Yes, Senator HUMPHREY was right. The Formosa resolution was, indeed, an act of "high diplomacy backed up by strength." It was and is a resolution to prevent war, not to bring war, a resolution of firmness—to prevent the world from plunging over the brink of war, if at all possible.

And exactly whose "high diplomacy" did the Formosa resolution represent? The high diplomacy, principally, of the Secretary of State of the United States, the very man whom my friend from Minnesota now takes to task.

It is good to take this look at the record; but it is even better to make our remarks today consistent with our words and deeds of yesterday.

The Secretary of State has been consistent, and he has been right in his consistency. He has stated time and again, in effect, that unless we post notice to an aggressor that his aggression will not go unpunished, we may anticipate that the aggressor may be willing to risk war.

We must make sure that the aggressor feels that there is definitely more to lose than to gain from his aggression; and then he will not dare ignite the spark that could lead to local war, and possibly to international war.

My friend from Minnesota has a great deal of constructive work to perform. He is, for instance, chairman of a very important disarmament subcommittee, and he has other pressing tasks, worthy of his energy and talents.

The Nation can benefit from his constructive work on constructive issues—issues of substance, and not of language, issues well justified for review from every national standpoint.

Of course, foreign policy is always susceptible to review. It is always subject to constructive changes. Our diplomacy is not and could not be infallible.

But, if there is to be a review, let it be a review worthy of this great Nation, worthy of its challenge, worthy of this critical hour, a review of substance, a review in which specific alternatives are suggested by those who choose to criticize and are carefully evaluated by all men of good will.

A legislator—Republican or Democratic—serves his party best as he serves his Nation best. My Democratic friends will bring greatest credit on their party as they bring, as many of them have brought so often in the past, credit on their Nation.

They have been, by and large, good teammates on our foreign policy, since the Republican regime took over in January 1953. I hope their teamwork will continue—uninterrupted. We need them, we want them. That is the message of our President and of our Secretary of State and of all responsible thought inside the Republican Party.

CONCLUSION

I have tried to review some of the principal challenges facing our country tonight. I have touched briefly upon some of the specific areas in which our country is heavily engaged.

I have not attempted to make my remarks on the brink of war issue all-inclusive, because they could not possibly do justice in complete detail to this subject.

I hope, however, that I have spelled out for you why it is so essential that we move beyond this issue; why we must keep united; why we must continue to advance with a firm, sure, foreign policy—one based upon the President's dynamic leadership and upon dynamic nonpartisan teamwork.

Thirty-eighth Anniversary of Ukraine Independence

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1956

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to insert the following salute to Ukraine on the recent observance of its 38th anniversary of its proclamation of independence:

Concerned as we are with our own efforts to seek out paths of action that will lead the world to peace, we must pause a while to salute those nations, which, although bound by the chains of Communist enslavement refuse to surrender in spirit, and fight, dream, and die for that hour when once again they shall be free.

Such a nation is Ukraine, which recently marked the 38th anniversary of its proclamation of independence.

The universal proclamation of the government and parliament of Ukraine was issued in the capital city of Kiev on January 22, 1918, and the new state was recognized as the legitimate nation of the Ukrainian people by many foreign governments, including Soviet Russia. But almost simultaneously, in spite of the fact that it had recognized the new government, Russia declared war and began hostilities against the Ukrainian Republic.

Since that day in 1918, Ukraine has spent about 35 years under the Russian yoke, but through all those long and bitter years, the determination of her people to be free has never faltered. The Ukraine underground is a strong, vital force, and it continues to fight even though its members know that death or the still worse confines of Russian slave and concentration camps are the fate of those luckless enough to be exposed.

In testimony recently brought back by returned German war prisoners, the fact was brought out that the Ukrainians constitute the largest number of inmates of Russian slave camps, and that the Ukrainians along with other non-Russians in these camps, are most active in organizing and leading anti-Communist resistance movements throughout the Soviet Union. As such they are a dynamic factor in the universal struggle to achieve a just and lasting peace for all nations.

The 38th anniversary of the proclamation of Ukrainian independence gives us an opportunity to again call to the attention of the free world, that Ukraine, and so many of the so-called republics of the Soviet Union, long bound by the chains of Soviet enslavement, deserve the support and encouragement of all of us who enjoy and know freedom and peace. May the day of their liberation be not too far distant.

Early Returns From Reclamation

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Friday, January 27, 1956

Mr. MAGNUSON. Mr. President, all too often we think of western reclamation projects from the standpoint of cost, engineering, long-range planning without taking stock and keeping abreast of the results as they become evident.

Last week, an editorial from the Seattle Daily Times of Monday, January 16, came to my desk which I should like to have printed in the Appendix of the RECORD. This editorial proves the wisdom my colleagues of the United States Senate displayed when they said yes, the Columbia Basin reclamation project should come into being and proceeded to loan the money through appropriations so that eastern Washington's rich soil could contribute to the Nation's market place.

What has happened since my fellow Senators provided this loan, which, incidentally, is being repaid ahead of schedule? At this point, I ask unanimous consent to spread upon the record the Seattle Times editorial of Monday, January 16.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IRRIGATION IN COLUMBIA BASIN ALREADY PAYING BIG DIVIDENDS

This State is beginning to reap the benefits of reclamation of thousands of acres of land in the Columbia Basin irrigation project. That was indicated by the Washington State Research Council's recent report showing substantial increases in assessed valuations of property and tax-collections in 20 eastern Washington counties.

According to the research council's calculations, real property taxes in these 20 counties will be 19 percent higher this year

than in 1955, and they will be based on assessed valuations which are up 4.9 percent above those of a year ago. The 1956 tax collections will be up 43 percent over those of 1952.

The increases are not attributable to any general lifting of standards of property evaluation and assessment, though in some of the counties, notably Spokane, improved assessment programs have been in force. Increases in school revenues, produced by the new State law requiring property valuations by the State tax commission rather than county assessors for school levies, may be partly responsible. But the tremendous new developments in the Columbia Basin and the neighboring tricity area along the Columbia River must constitute the chief factor in the changing tax picture east of the mountains.

In the Columbia Basin project, more than 104,000 acres of fertile land have been brought under irrigation. The gross value of agricultural crops in the Columbia Basin area in 1954 was $16,253,000, an increase of 79 percent over 1953. The average value per acre was $155.43. When it is considered that only a few years ago most of this land was virtually a sagebrush desert, it is not surprising that property values have soared and tax collections with them.

The Columbia Basin reclamation and irrigation project ultimately will embrace an area of some 600,000 acres. Already it is possible to contemplate what the completion of this huge undertaking will mean to the economy of the entire State.

Address by E. Smythe Gambrell, Atlanta, Ga., President of the American Bar Association, at Banquet of the Georgia Bar Association in His Honor

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1956

Mr. DAVIS of Georgia. Mr. Speaker, Mr. E. Smythe Gambrell, of Atlanta, Ga., is serving during the current year as president of the American Bar Association, the great national organization of the legal profession. The fine talents of Mr. Gambrell are recognized not only in his home city and State, but nationally, and by those in other professions and in all walks of life.

On December 8, 1955, in Atlanta Mr. Gambrell spoke at a banquet given in his honor by the Georgia Bar Association, and sponsored by the Atlanta Clearing House Banks. His address on that occasion was one which demonstrated in high degree the eloquence, the learning, the integrity, and the devotion to principles of sound government which have characterized this outstanding lawyer during his career at the bar.

In his address Mr. Gambrell has reemphasized to us that Government should be kept close to the people; that the National Government should not be called upon by the States to do for them those things which can do themselves, and that no government should do for a man what that man can do for himself. He points out in eloquent but understandable language that our separate departments of Government should be independent, and neither should be servile to the other, and that through the power of patronage of the executive department and paternalism, the independence of the legislative department is being destroyed.

He eloquently pleads for recognition of the constitutional rights of the States.

I have obtained permission of President Gambrell to place this very worthwhile address in the CONGRESSIONAL RECORD. Pursuant to unanimous consent previously granted, I take pleasure in inserting the address herewith:

President Bowden, Mr. Floyd, Mr. Smith, my lawyer and banker friends and neighbors, ladies and gentlemen, this lovely and beautiful gathering is a gracious gesture on the part of two great professors, the lawyers and the bankers of this city and State. The occasion is too much and too meaningful to belong to any one of us, it belongs to us all.

May I at the outset disabuse your minds of any possible misunderstanding as to the facts behind this meeting. Bob Troutman and our other fine bar leaders, with equal or greater justifications, could have advanced many Georgians other than me for the national recognition which this year was due the progressive bar of this State. The honor and the responsibility of this year's leadership of the American Bar Association belong to all the lawyers of Georgia, and I am so grateful for the splendid way they have rallied to the undertaking.

I take it we are here in an attitude of thanksgiving, because the Almighty has cast our lives in happy circumstances, has given us unlimited challenges and opportunities and the talents and stout hearts to make good in our beloved Georgia. It is not srange that bankers and lawyers who have worked side by side for hundreds of years contributing orderliness, regularity, and responsibility to our way of life should meet together on such an occasion as this.

I wish absent ones could have been here with us tonight. I wish all the great lawyers of Georgia, past and present, could have been here—they whose work and achievements over the years are at the heart of this celebration.

This State and the entire South are on the march—in law, in banking, in medicine, in agriculture, in industry, in education, and in other fields of endeavor. More and more this area is giving to our Nation and to mankind the pace setters in the things that count.

I wish Henry Grady could have been here—Grady, the great spirit, the great voice, who, before his untimely passing at 38, had bound up the wounds of the Confederacy, had lifted the faces of our broken people from the ashes left by Sherman, had renewed their courage and their self-respect, and had pointed the way to glorious contemporary achievements. In New York City in 1836 he said in part:

"I want to say to General Sherman * * * that from the ashes he left us in 1864 we have raised a brave and beautiful city; that somehow or other we have caught the sunshine in the bricks and mortar of our homes; and have builded therein not one ignoble prejudice or memory.

"* * * we have sowed towns and cities in the place of theories and put business above politics. * * * We have fallen in love with work. We have restored comfort to homes from which culture and elegance never departed. * * *

"The new South is enamored of her new work. * * * She is thrilling with the consciousness of growing power and prosperity."

I wish that he and many other great Georgians of the past and present could have been with us tonight—for this is their party, their celebration, too. This lovely gathering, so beautifully arranged by the Georgia Bar Association, and so graciously sponsored by the Atlanta clearinghouse banks, is equally a tribute to the great men and women of our State who have lived and wrought and passed on, and to the many who are still achieving.

I can only stand here with a heart full of humility and gratitude that it has been granted me to live here and now and in such a setting. It is easy to see that we all are parts of one great procession. We are but passing instruments of a process that outlives this fleeting hour. Whether in common law or in civil law, and in whatever land, we serve as one great priesthood the common cause of justice. Ours is the happy privilege of calling men everywhere to worship at the shrine of liberty under law.

Tonight one thinks back to August 1878 and Saratoga Springs, where the American Bar Association had its modest beginning. Savannah's Gen. Alexander R. Lawton and George A. Mercer, Macon's L. N. Whittle, and Atlanta's N. J. Hammond and James J. Hook were in attendance at the organization meeting. And one remembers that General Lawton 4 years later was to become president and that Savannah's Gen. Peter W. Meldrim followed in his footsteps in 1914. One thinks of William Howard Taft, Elihu Root, John W. Davis, Charles Evans Hughes, and the more than 70 other presidents who over the years made their contributions to the ABA and left their imprints upon it.

Tonight many thoughts well up out of a lifetime and seek expression: My early days as a young lawyer in Georgia, and how gracious and helpful the older lawyers and judges and all the people were to me, how Emory took a chance and made me a law professor 33 years ago, and how warm and stimulating has been the fellowship in local, State, and national bar organizations over the years. I'd like to make some acknowledgments for all of this—but time will not permit. I've never had a dull moment; it all has been challenging, exciting, and rewarding, and my only regret is that the sun already is setting and there is so little time to enjoy one's friends and have a part in all that is going on around us.

I particularly would like to say something tonight about our Atlanta banker friends, the great work they are doing and the celebration they will have here next year—and what is going on in so many other important groups in this State. But this is not the time or place.

My remarks tonight must be about law and the legal profession. And on an occasion such as this, one can only generalize and state a point of view.

In the history of the common law, society discovered its need for lawyers 10 centuries ago and gave us an exclusive status, conferring special privileges and charging us with important responsibilities. We point with pride to the fact that we are not tradesmen in the market place but a learned profession working in the spirit of public service. As lawyers, we have a public duty to see that law and its administration keep pace with rapid developments in life about us. In a democracy lawyers are more than craftsmen in the service of their clients—they are the natural leaders from whom and whose conduct the attitude of the community toward the law ought largely to be derived. The prestige and authority of law as a social force at any time is very much what the lawyers make it. They should be stirred by an enlightened self-interest, for the people will neither patronize nor endure a system of justice that is tardy, inefficient, or insincere.

We occasionally are heard to challenge the right of enterprising laymen to encroach on what we call our exclusive domain. We should be reminded that the legal profession exists for the benefit of the public and must justify itself by its service to the public, not overlooking the fact that in the long run the

public will purchase service in any particular field from those who provide the best service regardless of whether they belong to a profession or are laymen. We should ask ourselves how well we as a profession are keeping abreast of the times, how seriously we are considering the convenience, tastes, and growing needs of the public. Are lawyers, in the spirit of the times, conducting research to keep legal services responsive to current requirements; are we as much concerned about pleasing and satisfying those we serve as the manufacturers are about their customers? If not, we are in default.

It hardly can be denied that if we lawyers claim an exclusive privilege in the rendering of certain services in and out of courts, in derogation of the common right of everyone to work, we must be able to demonstrate that the public will best be served by the limitation of that right. We would do well to remember that we have no divine right to practice law—that long ago society created our profession to meet social needs, and that society can and should eliminate us if, in character or in competency or in the convenient availability of our services, we fail to measure up to what is expected of us. It is a sad commentary on the legal profession that 75 percent of the people who need legal services never go to a lawyer.

Whether we as an exclusive profession are to continue in existence in the face of rivalry of imaginative laymen in various activities depends upon what we as the organized bar of America do about it. It is within our power to preserve the legal profession if we wake up to our responsibilities and keep in mind that, in return for the exclusive privilege which soceity has granted us, we are under a lasting obligation to maintain our character and our services at the highest possible level.

Spasmodic and single-handed efforts on our part are not enough. Beyond our fine local and State bar organizations we need a robust and all-inclusive national organization. Broad and intensive research and many other bar activities must be conducted on a national scale at costs beyond the resources of the smaller groups. The American Bar Association seeks to rescue the profession from lethargy and guide it into a future of broader and richer service and usefulness. It is now the largest organization of lawyers in the entire world, but the 24 percent of the American lawyers who are now members of the association cannot do the job. It is a matter of deep concern to us that lawyers are woefully behind members of other professions in group organization and group action on a national basis. It is startling to discover that in sharp contrast with our 24 percent in the ABA, the doctors stand at 83 percent, the dentists 86 percent, the accountants 50 percent, and even the osteopaths 72 percent in membership in the national organizations. We need more than 58,000 of the 241,000 American lawyers; we need more than 1,000 of the 4,500 lawyers in Georgia; we need the personal participation of a substantial majority to claim public respect, to have influence and to finance the continuing legal education, research and publications which are so vital to our great objectives.

There is no room for snobbishness in the national organization of the legal profession. We cannot consistently say that a licensed lawyer whom the State holds out to the public as trustworthy is not good enough to associate with us in our efforts to improve the bar and the administration of justice. We Georgians, during this year of our leadership, are determined to broaden the base and the outlook of the ABA. We are determined to help the ABA do a better job in helping rank and file lawyers of this country serve their clients.

Under current Georgia leadership, the American Bar Association has embarked upon a campaign to double its membership and its personal and financial resources before March 1, 1956. This dramatic movement is the most far reaching and significant in the 77-year history of the ABA, and the universal enthusiasm with which the lawyers throughout the length and breadth of our country have rallied behind it assures its success.

The growth of law and legal service must be as unceasing as life itself. Law depends upon social progress, and social progress, in a very real sense, depends upon the correct creation, interpretation, and administration of law. In my current travels, I am endeavoring to discuss with American lawyers everywhere the many problems which now beset our profession and the public. Human freedom transcends all else in importance. The deepest issue of our time is whether civilized peoples can and will maintain a free society.

The history of Western civilization is essentially the history of the development of human freedom. The common law is the law of free peoples. It has never flourished except in nations which are free and I don't believe it can be received by any nation until that nation has come into full enjoyment of liberty. While in England last month, making plans for our 1957 London meeting, I revisited Runnymede—the scene of Magna Carta—with a view to our placing a granite marker there to be unveiled as a feature of our 1957 pilgrimage in recognition of our great common-law heritage of liberty under law.

Why is it that only the people occupying less than 10 percent of the surface of the earth have had what might be termed adequate food and clothing and the other comforts of a full life? The answer is that they are the people who set themselves free—free from physical restraint; free from ignorance and superstitutions; free from the illusion that rulers had infinite wisdom; free from political doctrines that held men in bondage to governments; free to work out their own destiny with their own minds and their own hands and in their own way, subject only to rules that would prevent them from interfering with the freedom of others. In the process of the emancipation of that portion of humanity, there has been released in society a driving force, an individual initiative, and an aggregate accomplishment previously unknown in the history of mankind.

For 300 years the American people have cherished the spiritual concept that the rights of man to freedom are personal to him from the Creator, not from the state. It was written in our Declaration of Independence. This concept has guided us not only to a life of human dignity, but to material abundance.

The great truths of humanity do not spring newborn to each new generation. They emerge from long experience. They are the gathered wisdom of the ages. They are renewed in times of conflict and danger. In this sense, the current challenge to our political institutions may prove to be a kind of blessing in disguise. If the times in which we are now living do not bring a further understanding of the great traditions of our civilization and a deeper desire to affirm them, we are not worthy of our heritage.

The American creed is premised upon a simple belief; that each human being is a creature of God and endowed by Him with the dignity of individuality. Each must be free to shape his own integrity and to seek his own destiny. It follows that he may not be treated as a statistic on an economic or sociological chart. Respecting this right of the individual man to realize his own potential, we have pledged ourselves in the most solemn compacts of government to allow to our fellows the greatest freedom of choice possible in the exigencies of living together. Where choice must be limited to preserve the freedom of others, we have sought to assure that each shall have the greatest possible voice in making the collective decisions that will control his life, by keeping the powers of government as close as circumstances will permit to those subjected to the power. We have chosen to erect the structures of government in the belief that no national government should do what the States can do, that no State should do what the local government can do, and that no government should do what a man can do for himself. The movement for home rule for municipalities, the concern for States' rights, and the demand for limitations of the Federal treaty power, all are variations on this persistent theme—that government should not be removed from the hands of the governed, that choices which must be made collectively and not individually should be made by the smallest feasible group according to its own needs.

It is almost trite to observe once more that these principles were enshrined in the Constitution by the wise men who gathered to lay the foundations for the Government under which freedom has flourished and our people have prospered. The Central Government was to be entrusted with limited and specifically delegated powers. Only those matters that required uniform treatment, only those problems that demanded a national solution, were delivered up to the centralized power.

The great catalog of human liberties contained in the first 10 amendments to the Constitution endeavored to transmute the dignity of man into a living reality. In the turmoil of our time several of these inalienable rights have been brought to the forefront of our national conscience. Freedom of speech and of the press, the right to assemble peaceably and the privilege against self-incrimination have all found their stanch and vocal advocates. We have heard much of the first 8 amendments, but in the clamor of controversy over these our people seem to have suffered from a mass amnesia concerning the 9th and 10th amendments.

A power most frequently and most flagrantly abused in the circumvention of the limitations on the Federal Government is the power of taxation. Only by the most elaborate and disingenuous pretense can we maintain that many so-called taxes have any relation to supplying revenues for the legitimate operations of government. Still our courts have replied that if an exaction appears on its face to be a tax, we must close our eyes to its motive. To me the gravest of the threats to American ideals is presented by the inordinate and pervasive power of the purse, the power of bounty, the power to spend. Tax collections far exceed the legitimate costs of operating the Federal Government within its delegated bounds.

Government by largesse has begotten a centralized authority of monstrous proportions, and it has at the same time broken down the fundamental design within that Central Government for forestalling the corruption of absolute power. The doctrine of separation of powers, the system of checks and balances, teaches that neither the legislature nor the executive should be servile to the other. It was our plan that the legislative branch, representative of and responsive to the popular will, would formulate policies which the executive would put into effect. But through the power of patronage, the plums of public works, and the bounties of benevolent paternalism, the legislature has been brought to heel. Too often the executive has determined the national policy, and at best the legislature has become a censor of his programs, and at worst, a rubber stamp. Ironic though it may be, the powers by which the administrator has brought down the legislator were conferred by that same legislator.

At the same time, the powers constitutionally reserved to the States have been

gradually usurped through this power to disburse, through what are euphimistically referred to as "grants-in-aid." Under more than 40 separate programs, the governments of the States have been offered the bounty of the Federal Treasury in return for the surrender of their constitutional rights to provide for the interests of their peoples. It is an affront to the dignity of the States, and in contempt of the principles of the Federal system, to assume the States to be incompetent to handle their own affairs. And the notion that the Central Government is somehow providing aid when it drains the sources of tax revenue and doles out a minor share to the States upon bureaucratic conditions is a mischievous fiction. A government is not a productive enterprise—it does not create wealth, it does not contribute to the sum total of economic goods. If there is a single well to fill a community's needs for water, the man who drains it dry and then distributes the water to his fellows upon conditions he chooses to lay down is not providing aid to his neighbors. Recognizing this simple truth, the Legislature of the State of Indiana in 1947 resolved:

"We have decided that there is no such thing as Federal aid. We know that there is no wealth to tax that is not already within the boundaries of the 48 States. So we propose henceforth to tax ourselves and take care of ourselves. We are fed up with subsidies, doles, and paternalism."

Ideally, each person, or more accurately each family, should control the spending of what it has earned. In the long run, no one else can comprehend as well the family's needs and aspirations, and no one can see to it that the fruits of their labor are put to better use. Responsibility for earning begets responsibility in spending. The further the power to spend is removed from the person whose toil and sweat created the power, the greater the likelihood of economic waste, to the detriment of our common standard of living and to the benefit of no one. The concentration of vast wealth in the hands of a remote and centralized government penalizes thrift and encourages waste. The money is there to be spent, the thinking runs, and unless we get our share someone else will. A community which would reject out of hand a proposal that a public building should be financed by voluntary contributions or by a tax laid by the townspeople upon themselves will nevertheless clamor for Federal funds for the purpose. It is difficult to respect money that has come from someone else's pocket.

Today there are still uncharted frontiers—physical, spiritual, and intellectual—standing as our constant challenge. We may well lose our will and our ability to cope with these challenges if we develop and accept the habit of being satisfied with the meager crumbs of material security which some form of benevolent government would dole out to us. To the extent that we permit ourselves to be so dependent upon government that we can no longer think or achieve on our own, dependent on government for those things which traditionally we have provided for ourselves, we defeat the very meaning of democracy and permit government to rule rather than to serve the individual. By every step we take toward making the government caretaker of our lives, we move toward making it our master.

Let us not fall into the error of thinking that the outcome of the struggle between communism and freedom will be determined by military and economic power alone. The greater war is the war of ideas, a spiritual war of moral and religious values. In this war we must deal with the minds and hearts of men and women and demonstrate to them the blessings and satisfactions that come from freedom. They must learn that man is not a slave of the State but that the State is his servant.

Liberal education is the keystone of freedom. The search for truth is, as it has always been, the noblest experience of the human spirit. We are false to ourselves and to our best instincts if we turn our backs on truth or close our eyes when it beckons.

But the recent White House Conference on Education troubles me. Well intentioned, no doubt, it poses a serious threat to democracy and freedom. Although we may have great respect and genuine affection for the present occupant of the White House, we should remember that changes do take place, and we should ponder well the lessons to be learned from Hitler's complete domination of the German people through the perversion of education.

Although the unequal distribution of wealth throughout the 48 States might constitute some argument for a limited program of Federal aid to education, it would be error to deliver the direction of the educational systems of the several States to a Federal board or bureau which ultimately would supervise teachers, prescribe curricula and subject matter, and otherwise condition the education of our oncoming generations. I feel very deeply that the independence of education is essential to the life of a democracy.

The best safeguard against the constant threat of the enemies of liberty to pervert and enslave the minds of our youth by mass propaganda is to support a sound program of public education on a decentralized basis, under the control of the several States, counties, and local school districts—keep it free from mass manipulations, free from subversive control.

Reassurances that State and local schools receiving Federal support will be protected in their autonomy are not enough. The folly of relying on such is indelibly written in the shameful abuse and misuse of Federal powers in the past 25 years. Someone long ago wisely observed: "Whose bread I eat, whose song I sing." To allow our fine independent public-school system to become hopelessly addicted to, or dependent upon, Federal aid would be nothing short of a national calamity.

History teaches that liberties are seldom lost in a frontal attack leveled against them. The threat lies not in open challenge, but in apathy and complacency. Unused, our great freedoms may atrophy and weaken, and their enemies, through cunning propaganda and small but constant steps, may overtake us unaware. We should not be so much concerned, then, about the danger to those liberties for which the defense has already been rallied. But there are other principles, no less basic to our form of government, which have been largely ignored.

We have submitted more and more in recent years to governmental control of the pursuit of our livelihoods. We look more and more to government to satisfy our every want and need. And we are relinquishing the precious right of a man to make those choices which, if he is to be a man, he must make for himself. The right of man to be let alone has been relegated to a lower order in the scale of our common values. But it is a fundamental article of our national faith that we shall not destroy the ancient landmarks in our effort to accommodate the demands for government authority to cope with modern needs. Our principles of freedom must stand as fixed and immovable monuments above the ebb and flow of the currents of change. Paramount and above all other considerations, we must channel the flow of progress within the order and limits of the law; the bulwark of the rule of law must hold firm.

I do not mean to paint the picture too darkly. The people of America still enjoy a degree of liberty unsurpassed among the nations of the world, and they share a material abundance unknown to the past. There are signs of a returning sense of responsibility and of a renewed respect for principle in the Federal administration and among the leaders of both great political parties.

But we can glean small comfort when we recall how easily and how quickly the basic propositions of government gave way in the recent past. The teachings of experience are plain. Our hopes are futile if we entrust our liberties to the written word alone; the Constitution alone is not our salvation. Nor can the courts forever stem the tide. It has fallen to the lawyers, trained in the traditions of government of law and imbued with its spirit, to preserve for all the world the light of human liberty, set with such shining promise by our forebears. We must not only reaffirm our faith in the social and moral order which has made us a great Nation, but we must go out and implement that faith with action. As Thomas Paine said: "Those who expect to reap the blessings of freedom must, like men, undergo the fatigue of supporting it."

Now on behalf of all who are so fortunate as to be here tonight, may I again thank the Citizens and Southern National Bank, the First National Bank, the Fulton National Bank, and the Trust Company of Georgia for their gracious sponsorship of this lavish hospitality, and may I from the bottom of my heart thank the Georgia Bar Association and all the lawyers of this State for this magnificent expression of friendship and good will. I shall never forget it.

Our Strategic Stockpile

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Friday, January 27, 1956

Mr. MAGNUSON. Mr. President, this 84th Congress will wrestle long and mightily with the farm problem. Some will raise the question of surpluses and their effect upon the agricultural economy of our Nation.

Others will contend that those surpluses constitute one of the greatest weapons at our comand now and in the future. In this vein, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Our Strategic Stockpile," from the Lynden Tribune of December 29.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OUR STRATEGIC STOCKPILE

While the Russians grinned at peace discussions during 1955 they were building submarines and jet bombers as fast as they could. Your Uncle Samuel hasn't been exactly asleep himself, yet he might follow the suggestion of one wise Lynden farmer in regard to storing his strategic stockpile of food.

Much of this strategic stockpile of food is commonly referred to as farm surplus now overflowing in Government warehouses. If a war were to break out, these warehouses would be emptied practically overnight and this food would be needed by our allies.

Our farmer friend asks why the Government doesn't play it wise and ship some of this strategic food and fiber stockpile to England to have it close at hand in case hostilities begin. In every war in modern times the strategy has been to try to starve England out. Why not send it over now, creating a rotating stockpile that can be used by the British people?

During World War II docks were congested with food and munitions. Many lives were lost in the sinking of ships bringing vital cargoes of food to England.

Our farmer friends suggests that such a stockpile in England might add sufficient strength to induce an enemy to think twice before attempting a blockade. The farmer may have an idea that isn't as full of straw as the barnyard where he thought it up.

Incapacity Not Shown—Drawbacks on Federal Aid

EXTENSION OF REMARKS
OF
HON. MELVIN R. LAIRD
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 25, 1956

Mr. LAIRD. Mr. Speaker, I wish to call attention to the Members of the House two editorials, one appearing in the Wausau Daily Record-Herald, Wausau, Wis., January 21, 1956, and one appearing in the Shawano Evening Leader, Shawano, Wis., under date of January 25, 1956.

The editorial follows:

INCAPACITY NOT SHOWN

In a nationwide poll of the 48 States on the question of Federal aid to education, the Associated Press obtained these results from ranking officials:

Those in 22 States said the people in their States need or want help from the Federal Government to build more schools.

Those in 20 States said they either do not want or see no present need in their States for Federal aid.

Those in six States refused to take a stand.

One of the States where ranking officials were listed as seeing both a need and desire for Federal aid for schools was New York.

Recent news dispatches from that State have revealed, however, that both the Democrats and Republicans in government in New York State have announced plans for cutting State taxes by $50 million.

It looks from here that any State which can afford to cut taxes $50 million can afford to spend more to meet its educational needs.

The New York situation appears to give emphasis to the finding of the White House Conference on Education that no State has demonstrated financial incapacity to build its schools.

DRAWBACKS ON FEDERAL AID

Since President Eisenhower proposed his Federal school-aid program there has been outcry from the political left of "too little, too late."

The President suggested $250 million in school aid each year for 5 years.

Now comes Mr. George Meany, of the AFL–CIO, with the demand that Congress vote four times that amount in Federal aid for the schools; he called on the Congress to provide at least a billion dollars a year for the next 5 years, with the money to be used to assist States and local school districts build needed facilities.

"Labor believes that stinting the schools is the height of false economy," Meany said. "Since the State and communities cannot cope with this immense problem on their own, the Federal Government must assume its fair share of the burden."

The union chief knows well that Uncle Sam can deliver in school aids only what he first seizes in the way of taxes; in fact, the Federal Government connot even return to the localities as much as it seizes, for who does not know the fabulous inefficiency of Federal administration?

A federalizer even more aggressive than Mr. Heany is Mrs. Agnes Meyer, of the Washington Post, a sort of second Eleanor. She suggested to an education association that teachers become politically active, obtain the help of liberal friends and they could get classrooms and almost anything else they desired. She would have teachers press unceasingly for all-out Federal aid to schools.

Mr. Meany and Mrs. Meyer need to be reminded that if the history of Federal aid shows anything, it shows conclusively that where there is Federal money, there is Federal control.

Federal aid for school building implies Federal control—control of the curriculum, standards of teaching, administration, as well as building supervision.

Educators do not want this. It would be saddled on them, however, if the Meany-Meyer attitude were to prevail in the Congress.

United States Airpower

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1956

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend and revise my remarks I wish to present herewith an editorial which appeared in the Shreveport Times of Wednesday, January 25, entitled "It's No Time To Skimp on the United States Air Force." I feel this editorial presents important views and I commend it to the attention of the Members of Congress.

IT'S NO TIME TO SKIMP ON THE UNITED STATES AIR FORCE

Congress should not shrug off the charge, made by two aviation magazines this week, that the sum allocated for the Air Force in President Eisenhower's budget is inadequate. This is no time to permit skimping on vital Air Force needs.

To the layman, the $16½ billion allotted to the Air Force is a tremendous sum which ought to buy a vast array of air defense.

However, Aviation Week declares that the defense budget "is not a budget of airpower progress as billed by Defense Secretary Wilson but a budget of airpower stagnation followed by inevitable retrogression." Aviation Week adds that if Congress does not increase the Air Force allocation "it will serve notice to the Communists that our military airpower is again on the decline and that our policy of massive retaliation is being built on bluff and bluster rather than superior weapons."

These opinions may not be valid. But in view of our country's past failure to maintain its airpower, notably in the period from 1930 to World War II, Congress should not indulge in the assumption that the budget figure is sufficient.

If the will of the American people were heeded, the budget for the Air Force would lean toward the side of overstrength rather than toward the minimums deemed essential by the budget makers. Whenever Americans have had a chance to express their views, over the past three decades, they have emphatically declared for Air Force supremacy over any possible enemy.

That is unquestionably what they want now, and the military committees of Congress should make sure that sufficient Air Force funds are contained in coming appropriations recommended to the two Houses. Let any doubts which may exist be resolved in favor of a solid margin of the security which dominant airpower provides.

The Senate's New Investigator

EXTENSION OF REMARKS
OF
HON. EARLE C. CLEMENTS
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Thursday, January 26, 1956

Mr. CLEMENTS. Mr. President, I believe that every Senator—regardless of his affiliations—feels a warm glow when deserved tribute is paid to a Member of this body for public service of the highest order.

Such tribute has been paid in increasing volume to our beloved colleague the Senator from Arkansas [Mr. McCLELLAN].

Senator McCLELLAN is a quiet man, an unassuming man, a modest man. But he has a mind as keen as a surgeon's scalpel, an integrity as solid as granite, and a moral fiber strong as the finest steel.

These qualities have elevated him to a leading position in public life. He has used that position in such a way as to reflect credit upon his State, his country, and the Senate.

I ask unanimous consent to have printed in the Appendix of the RECORD an excellent article which appeared in the Saturday Evening Post some time ago. It sets forth the qualities of Senator McCLELLAN which have made him so beloved by his colleagues and so respected by his fellow Americans.

I am informed by the Public Printer that the article will make approximately 3¼ pages of the RECORD, at a cost of $260.

There being no objection, the article was printed in the RECORD, as follows:

THE SENATE'S NEW INVESTIGATOR

(By Milton MacKaye)

Arkansas has changed a lot in 40-odd years, but there have been no changes for the better in the temperatures of its July afternoons. In 1954, JOHN L. McCLELLAN, running for a third term in the United States Senate, fought for his political life in a statewide primary. A veteran in politics, he had once traveled from crossroads to crossroads by horse and buggy; now he traveled from town to town by helicopter. Science had abbreviated distances, but when the helicopter came to rest in a courthouse square or a cow pasture, Arkansas was just as hot as it had been back in 1912.

On a blistering July afternoon in that year, 16-year-old JOHN McCLELLAN was playing third base for the Sheridan town team. Sheridan was opposing a club from Saline County, the Black Hawks. It was the 9th inning. Two men were out and there was a runner on second; Sheridan led 4 to 3. On the first pitch to the next batter, the base runner bolted for third and the catcher threw. McCLELLAN covered the bag, caught the throw and tagged at the runner. Yelled the umpire, "You're out"

The runner protested at once. He said McCLELLAN had not touched him with the ball. The umpire stood firm until the third

baseman walked over and said, "He's right. I did miss him." The runner was then declared safe. The batter then hit a home run and Sheridan lost the game 5 to 4.

This story was told me by the man—hardly a promising rookie any more—who pitched the homerun ball. Since that hot, sticky, remembered day, he said, he had never questioned the honesty or fairness of JOHN MCCLELLAN.

Partisan politics being what it is in Arkansas—a sort of legalized knife fight and perpetual stomping contest—the ethical judgment of one man is certain to be disputed by a legion of others. Dissent is usually considered the constitutional right of a minority; in Arkansas dissent is so habitual that the articulate minority often finds itself an embarrassed majority. Yet last year enough people shared the opinion of JOHN MCCLELLAN'S boyhood friend—or had other compelling opinions of their own—to send him back to the Senate and to his present post as chairman of the Permanent Subcommittee on Investigations.

Before its redoubtable days under the chairmanship of Senator JOSEPH R. MCCARTHY, this was a quiet, useful, and somewhat obscure committee. MCCLELLAN was a useful and somewhat obscure Senator—at least insofar as the general public was concerned—until the Army-McCarthy hearings last year rocked the national airwaves. As spokesman for the Democrats at that zany carnival, MCCLELLAN did not remain obscure long; millions of Americans at their television sets came to know him well.

They may recall him as a man of dour visage, of dark and funereal aspect—the camera, unlike the dog, is not every man's best friend—but they also recall him as one actor in that unlikely melodrama who continuously made sense. He did not preen himself when the magic lens turned his way, but, with a trained prosecutor's skill, he usually managed at each session to elicit at least one cogent bit of evidence. Whenever the hearings went haywire, as they did daily, his was the muezzin voice which called the participants not to prayer—although that might not have been a bad idea—but back to the factual points at issue.

The Senator's voice is a memorable one. Washington Reporter, Mary McGrory once called it the voice of doom. It is as deep as that of a bass singer in a Baptist choir—the Senator is a Baptist—and, in a day of microphones, needs no mechanical stepping up to be heard in any company. The Senator, however, is no declaimer; ordinarily he speaks in level, moderate tones. Perhaps his success lies in intangibles. A famous actress of a generation ago, asked for her secret of reaching topmost galleries, said, simply, "I carry." MCCLELLAN carries.

Since MCCLELLAN succeeded MCCARTHY this year as chairman of a much-publicized committee, he has been a judicial and patient moderator. He has not dramatized himself; he has not hankered after sensation, and he has not called witnesses solely to make headlines. There has been no bullying of witnesses, and the gavel has seldom sounded when there was amiable laughter in the hearing room. It has sounded when there was disorder or when a point was being worried. In a congressional inquiry points are predestined to be worried. MCCLELLAN likes to get on.

But given a recalcitrant witness, a foolishly jaunty one or a plain wrongdoer, MCCLELLAN'S voice takes on the authority of an Old Testament prophet or a southern revivalist explaining the doctrine of original sin. There is in his Biblical and lawbook rhetoric a hint of the imminence of Armageddon, and in his deep-set eyes a glimpse of the controlled and banked fires within the man himself.

The Arkansas Senator has been in Congress now for almost 17 years, he served 2 terms in the House of Representatives during the 1930's, but it would be difficult to find a colleague who could honestly say he knew him intimately or well. This is not to suggest that MCCLELLAN is withdrawn or is anything approaching, to use an overworked phrase, a mystery man. His relations with the brethren he sees every day are casual and friendly. He has few close associates on Capitol Hill, and he simply keeps his own counsel.

There can be little doubt that, under the fumed-oak protective coloring that most individuals in public affairs take on JOHN MCCLELLAN is one of the most complex and contradictory personalities in the Senate, and one of the most interesting.

Arkansas during his boyhood was part of the South and part of the frontier. The McClellans were Scotch-Irish and sharecroppers. "So far as I know," the Senator told me, "my grandfather never owned a foot of land in his lifetime. But he plowed a whole field when he was 75." The family emigrated from Mississippi and avoided the rich delta coton lands of Arkansas where Negroes did the work. They chose a hill section where a white sharecropper was lucky to get a bale of cotton to 10 acres, but could be independent.

The Senator's mother died when he was 3 weeks old, and he went to live with his grandparents. In later years their place was to be a second home and he remembers the struggle to bring in cash money. His grandfather managed it from timber. Hickory could be fashioned into ax handles, pine into planks and shingles. Young JOHN would go into the woods with his grandfather for white-oak saplings. When these were split, thin lengths of 8 to 10 inches could be cut from the soft, pliant wood. His grandfather wove these into baskets worth cash or credit at the crossroads store. Home handiwork required sharp, cared-for tools—each in its place—and the Senator credits his own disciplined work habits to the strict orderliness his grandfather demanded of him.

But the stronger influence was that of his father, who wanted something more than farm drudgery in a backwoods community for himself and his son. Between crops of corn, cotton, and potatoes Isaac McClellan served as a country schoolteacher, studied borrowed lawbooks when he had a chance, and reveled in the robust politics of the era. When JOHN was three his father remarried and the youngster went to live in the new household.

"I felt sorry for that little motherless boy of mine," Isaac McClellan, now 84 years old, told me not long ago. "When I was teaching I took him to school with me. He would listen to the older classes recite—they were all in 1 room—and when he was 4 he could read, write, and do some arithmetic. When he was six he was in the fourth grade. And then I taught him at home at night; I pushed him."

Life, events, and his own dauntless, driving ambition were to continue to push JOHN MCCLELLAN for a good many years and to give him little peace. Rivals in his own State often accuse him of being vindictive toward trampled opponents, and the Senator answers the charge with a sardonic smile and a shrug: "Well, it is true that when I'm unjustly attacked, I do not forget." The frontier campaigning he knew as a boy saw little quarter asked and less than that given.

Politics in ruder, simpler days was an emotional outlet for the public, and the idol of MCCLELLAN'S youth was Jeff Davis, three times governor and a crowd swayer of monumental proportions. Davis, though no kin of Jefferson Davis, President of the Confederacy, always wore a sombrero and Prince Albert suit made of Confederate gray material. His simple platform: "I am a hard-shell Baptist in religion. I believe in foot washing, saving your seed potatoes, and paying your honest debts."

It was Jeff Davis, long before the day of Harry S. Truman, who said, "To me, my friends are always right." His friends were the farmers, the mountaineers, the boys at the creek forks, and, including himself in their ranks, he admiringly called them "rednecks," "hillbillies," the "Wool Hat Brigade." He made it an article of sectional faith that the best of all possible supper menus is hog jowls, turnip greens, hot cornbread, and cold buttermilk.

Davis believed in large families, pointer dogs, the malevolence of the rich. He once said of the esteemed Arkansas Gazette, oldest newspaper west of the Mississippi River, and one with which MCCLELLAN later was to feud, "I'd rather be found with a dead polecat in my pocket." A favorite of many students of Davisiana is a statement he made concerning the domestic crisis in the governor's mansion during a period of high—and thus conspiratorial—meat prices.

"Now you take bacon," he said. "I just buy one little slice, hang it up by a long string, and let my eight kids jump and grease their mouths and then go to bed."

When JOHN MCCLELLAN was 8 years old, his father took him to a rally at which Davis was the principal speaker. Under the spell of that sonorous presence, watching wool hats sail in the air when Davis made a telling blow, the boy had rosy visions of his own future. The next day his father discovered him in the back yard, surrounded by upright sticks of stove wood. JOHN stood on the "chop block" reciting to the stove wood—his audience—an impressive reprise of the Jeff Davis speech.

From there to an inexorable decision required only a brief interval. Isaac McClellan's bright party loyalty was evidenced by his christening habits. JOHN LITTLE MCCLELLAN was named for John S. Little, Arkansas Governor and Congressman. As JOHN'S half brothers came along, one was named for the late Senator Joe T. Robinson, another for William Jennings Bryan, and a third for Woodrow Wilson. In Arkansas, Democrats might abuse, defame, and scandalize one another, but they stood as one man against the common enemy. At the close of a summer session of school there were always class-day exercises. JOHN'S teacher suggested the boy recite a standard southern selection, The Georgia Volunteer. But Isaac McClellan would have none of it. For reasons now forgotten, the male teacher had recently given JOHN a whipping—and the teacher was a Republican.

Outraged that any Republican should lay a hand on a birthright Democrat, the father wrote for the son a partisan speech which was calculated to, and did, make the schoolhouse rafters ring. A national election was almost at hand and the speech, as written, ended with the clarion call: "Vote for William Randolph Hearst, a great and noble man." But the Democratic National Convention of 1904, meeting a few days before the school exercises, failed to nominate Hearst. Young JOHN'S speech, like many another in political history, was hastily revised to name another great and noble man, Judge Alton B. Parker, who subsequently ran against Republican T. Roosevelt.

Nevertheless the occasion was a great success. JOHN gave the speech again at the Democratic county convention, and a copy of it was sent to Congressman Little. In a letter, Little predicted that someday the boy would succeed him in Washington. MCCLELLAN never forgot.

Rarely has a man chosen his career so early and stayed with it so stubbornly. The Senator dedicated himself to politics at the tender age of 8, and to the legal profession at the mature age of 12. Recently, sitting in his Washington office, he confessed smilingly that the inception of his love affair with the law was not entirely selfless. A sawmill company owed his father $200 for

the wood rights on a plot of land. When the company changed hands, Ike McClellan decided to send a young attorney to Pine Bluff to collect the debt. The lawyer left Sheridan in the morning, came back in the evening with the money and received from the elder McClellan a $25 fee.

"Up to that time," the Senator told me, "I had had only one ride on a train. The idea that anyone could make $25 in 1 day, and also have his expenses paid for a train trip, opened up rich, new horizons of which a country boy had not dreamed."

Soon after that his father was himself admitted to the bar, and the boy had the run of his office. The joy and fascination other adolescents of the period found in Jules Verne and G. A. Henty, JOHN MCCLELLAN found in Blackstone and the Arkansas statutes, Wigmore on evidence, and Story on constitutional law. His father, like other lawyers in that vicinity, traveled a judicial circuit of three county seats, and the son frequently went along. At 13 he was a veteran of jury trials and a familiar of the courts. At 14 he could argue abstruse points with respectful elders, and, out of school hours, was doing most of his father's abstracting and paperwork.

In Arkansas, at that time, a court could remove the "disabilities" of a minor and permit him to stand for examination for the bar. In 1913 Ike McClellan took his son to Benton, a nearby town where court was in session, and asked the presiding judge to appoint a committee of lawyers to examine him. "Don't shirk your duty," Ike said confidently. "Put it to him all you want to." The lawyers did, and reported later he had come up with the best oral examination of their experience. As a result, JOHN MCCLELLAN, then 17, became the youngest practicing lawyer in Arkansas history, and his father's partner.

Four years later, World War I took the boy out of the small town and some of the small town out of the boy. MCCLELLAN credits his Army experience with teaching him a self-reliance he had not known before. In 1917 he was accepted at Officers Training School. Most of the candidates were college graduates; although he was an attorney, his formal schooling was about equivalent to a 10th-grade education. He had never seen a military drill. Yet, somewhat to his own surprise, he emerged with the silver bar of a first lieutenant—1 of 96 men out of a class of 226 who received commissions. He saw most of his Infantry service in Texas, and was mustered out in 1919.

Once at home, MCCLELLAN had an overpowering desire for independence. Purchasing—for $125 down—the library of a recently deceased judge, he opened practice on his own in Malvern, 25 miles from Sheridan. He had few acquaintances and no political backing in the new county, but he soon made his presence known. In 1926 he was elected prosecutor of the judicial circuit and in 4 years of office created a solid reputation for himself and a loyal political following.

Friends recall with amusement that father and son not infrequently found themselves on opposing sides in a courtroom, and that no punches were pulled. Father and son, however, continued affectionate and loyal, and are today. Ike McClellan, whom I interviewed at Sheridan, has served as county judge, but is now retired. He has never visited Washington. "JOHN asks me," he said, "but I just don't want to go."

The Senator is now 59, and his love affair with the law persists. Those who have watched MCCLELLAN in action agree that he is admirably equipped, always painstaking in preparation, quickly analytical, fast on his feet. A fierce fighter in a courtroom or a public hearing, a searching prosecutor, he has also that singular respect for due process of law which belongs to advocates who have steeped themselves in the Anglo-American judicial tradition.

These attributes made him unusually valuable to the Democratic Party when the decision was made to close ranks on JOE MCCARTHY. As the recognized spokesman for the minority, during the Army-McCarthy hearings, he handled himself with wisdom, dignity, and imagination. And yet the situation had, for political observers, a sardonic and humorous aspect. A few years before, the name of JOHN MCCLELLAN would have been anathema to a good many of the so-called liberal Democrats who, as anti-McCarthyites, now found themselves in his cheering section.

The real reason for the antipathy of the Fair Dealers was MCCLELLAN'S unyielding enmity to President Truman during the greater part of Truman's administration. This is evidenced by the remarkable number of times he voted with the Republicans between 1946 and 1952. There is a story behind this vendetta. In the Democratic National Convention of 1944, conservative Democrats built up favorite-son strength hoping to block the renomination of Henry Wallace for Vice President. On the second ballot, MCCLELLAN switched Arkansas' votes from Bankhead, of Alabama, to Harry Truman, and the landslide began. "I'll never forget this," MCCLELLAN quotes Truman as saying.

It is the Senator's contention that Truman not only forgot that but also private political pledges made to him. The Senator has an elephant's memory for what he considers broken pledges. He refused to campaign for Truman in 1948; although he was running on the same ticket; his close friend, former Gov. Ben Laney, of Arkansas, was one of the organizers of the Dixiecrat revolt. In 1949, MCCLELLAN proposed reduction of Truman's foreign-aid program and the slicing of his domestic budget by $2 billion.

On foreign policy, however, MCCLELLAN, like most southerners, has generally gone along with the internationalists. A friend said, probably accurately: "He wants to cooperate with the rest of the world if it doesn't cost too much money."

MCCLELLAN first went to Washington in 1935. In depression-haunted Arkansas men who were willing to work for 50 cents a day could not find jobs. In the House of Representatives he supported most of the early New Deal measures, including the Wagner Act. Later, fear of a controlled economy began to chill his enthusiasms and turn him gradually to the right.

In 1938 MCCLELLAN announced for the Senate in opposition to the incumbent lady, Senator Hattie W. Caraway. MCCLELLAN had little money going into the campaign, and he had a good deal less when it ended. Sam Watkins, one of the Senator's oldest and most loyal friends in Little Rock, remembers that one of McClellan's creditors of the 1938 campaign received a check every month for 4 years—sometimes as small as $25—until the total obligation was paid off. This bleeding of family prosperity for public office is more common among politicians than the public suspects. Even today MCCLELLAN is a relatively poor man; he owns prosperous business properties in Malvern, but, outside that, has only his salary.

Mrs. Caraway won the primary by about 10,000 votes. She was actively supported by President Roosevelt, and reporters surmised that the ballots of most of the State's 50,000 WPA workers went her way. After the defeat, MCCLELLAN was invited to join a prominent law firm in Camden, and there he practiced, happily and profitably, for the next 4 years.

The year 1942 saw him back on the hustlings. Again he was handicapped by lack of campaign finances—he spent $17,000 and owed $5,000 of that—but this time he was elected. His earlier adversary, Mrs. Caraway, was defeated for reelection 2 years later by the present junior Senator, J. WILLIAM FULBRIGHT. It may interest those who accuse MCCLELLAN of grudge-holding that it was he who went to the White House, pounded on Roosevelt's desk, and demanded that a post in the Federal Government be found for the elderly and indigent lady who had been so loyal to the New Deal. She was appointed to the Employees' Compensation Appeals Board, a job she held until her death.

There was no opposition to the Senator's renomination in 1948, but storm signals had been flying a long time when MCCLELLAN went into last year's primary. His chief opponent was Sidney S. McMath, twice governor, a personable and magnetic World War II veteran, an audience pleaser and campaigner of no mean talent.

Politics is full of ironies. When McMath was discharged from the Marines as a lieutenant colonel, he came into MCCLELLAN'S Washington office to announce that he was going home to enter politics. The Senator was favorably impressed; at the time he was dallying with the idea of leaving public life in a few years. When McMath departed, MCCLELLAN strolled out of his office and said to his administrative assistant, "That young man might very well succeed me in this job."

The flame of friendship flared briefly, then died. Actually the two men espoused diametrically opposed philosophies of government and a head-on collision probably was inevitable. Three years ago, convinced that McMath had his political destruction in mind, MCCLELLAN threw his influence to McMath's opposition and helped defeat him for a third term as governor

Weighing the situation in 1954, MCCLELLAN decided McMath would enter the primary with 100,000 to 125,000 assured votes. McMath would possess organized labor; MCCLELLAN had voted for the Taft-Hartley Act. McMath would have the Ozark farm cooperatives and a heavy percentage of the younger progressive voters. Few Negroes had taken part in earlier primaries, but in 1954 some 60,000 were voting and the Senator expected little help from them. His own rock-bound strength would come from Main Street, the business interests of the State, and the cotton planters of east Arkansas.

The McCarthy hearings ended June 22. The primary was set for July 27. MCCLELLAN had about a month to raise money and woo the voters. After his quiet years in Senate halls MCCLELLAN had dreaded the physical beating a vigorous campaign entails. Temperatures in Arkansas were 102 to 114 degrees in the shade, and his plastic-enclosed helicopter was a flying bake oven. ("Cost $4,500 to rent, and worth that in publicity alone," said the Senator.) MCCLELLAN didn't depend on radio and television to do his campaigning; he delivered just as many stump speeches as he would have delivered 30 years before. Visiting 7 or 8 towns a day, with a speech for every town, MCCLELLAN found that, instead of wasting away, he had gained 5 pounds.

The Senator was running on his record. Arkansas is one of the have-not States, and Federal assistance is important. The record showed Washington had appropriated $225 million for flood control and water-resources development during MCCLELLAN'S 12 years in the Senate. He had assisted in obtaining over $350 million for defense plants, Air Force installations, and the veterans' hospital at Little Rock.

The campaign was slam-bang, but there were surprises for both candidates. It was an open secret that McMath, who has a genius for needling and attack, expected the repressed but high-tempered Senator to blow his top before the campaign ended. The Senator never did. McMath made light of MCCLELLAN'S role as MCCARTHY'S adversary, but the electorate was impressed when all except three of the Democratic Senators in Washington signed a letter commending MCCLELLAN'S work in the hearings, an unprecedented thing in a party primary.

McMath was the avowed enemy of the Arkansas Power & Light Co. and he pictured

McCLELLAN as the friend and tool of the utility. The A. P. & L., in a monumental blooper of utility diplomacy, chose to raise its rates in the dying days of the campaign, and the dismal new monthly bills reached the voters as they were about to go to the polls. This undoubtedly cost McCLELLAN many votes.

Sid McMath polled about 128,000 votes, McCLELLAN about 164,000, and 2 minor opponents about 32,000 between them. This gave McCLELLAN a majority of nearly 4,000 over his 3 adversaries. A recount made minor adjustments in the figures, but no McClellan-McMath run-off was necessary.

All his life McCLELLAN has been as independent as an Arkansas razorback on ice. He welcomes information, but his associates know he does not welcome too much advice, and they are chary with it. He decides issues for himself. He has an almost irrational revulsion to the fictional and to make-believe dramatics.

This was evidenced last fall when the minority—Democratic—report on the Army-McCarthy hearings was released. McCLELLAN and Senators JACKSON and SYMINGTON had already signed it. Then the photographers gathered at McCLELLAN'S office for a reenactment of the signing. This is a customary Washington tableau—long hallowed by White House custom. McCLELLAN would have none of it. It was phony.

This, perhaps, represents a delicacy in ethics difficult for coarser spirits to understand. But the Senator himself is no easy riddle, and life has not treated him gently.

McCLELLAN married as a high-school boy; the marriage was unhappy and ended in divorce. His first wife died many years ago. There were two children, Max and Doris—now Mrs. Dale Elliott. After his removal to Malvern he married Lucille Smith; they had three children, John L., James, and Mary Alice.

In 1936 Congress held on into the summer, and Mrs. McClellan decided to drive the children home to Arkansas herself. The second night of the trip they stopped at the home of kinfolk near Memphis. Mary Alice shared a bed with her mother, and she remembers, although she was only five, that she could not wake her next morning. Mrs. McClellan was taken to a Memphis hospital in a coma and died of spinal meningitis.

After Lucille McClellan's tragic death, the then Congressman drew further into himself. He no longer had any interest in a personal social life. Work was the answer. Office associates of the time tell me he ate two meals a day—a sandwich at his desk for lunch and a sandwich at his desk for dinner. And long after the office staff left, his lights burned on at Capitol Hill. The children remained at the modest bungalow in Malvern, where they could live a small-town life among friends and relatives, under the care of Mrs. Willia Ritchie, a practical nurse and housekeeper to whom the Senator still feels deeply obligated. This regime—he got home as often as possible—lasted 3 years.

His eldest son, Max, an infantry corporal, died of illness during the north African campaign. His second son, John L., Jr., served in the Navy in the Pacific and was in his last year of law at the University of Arkansas in 1947 when Max's body was brought home for reburial in Sheridan. John L., Jr., and his father were very close; both had a dream of a law partnership. The night before the military funeral at Sheridan, John L. was injured in a traffic accident. His injuries were at first considered superficial, but a few days later he died.

The Senator's present wife is the former Norma Myers Cheatham, known affectionately to his children as Bittie. They now have been married 17 years. Mrs. McClellan, a North Carolinian, was a widow with a young daughter when they met in Washington. Today, with the children grown and married, the McClellans live in an apartment at the Fairfax Hotel, which Mrs. McClellan has furnished charmingly. She is a collector of old silver and fine china, but not of the spotlight. At one Army-McCarthy hearing she discovered she had been hunted out by the television camera, and never went again.

Norma McCelllan is a small, pretty, vivacious woman. When the heavy schedule of a politician's wife permits, she is an indefatigable player of bridge and a confusing card game called Bolivia, which is presently engaging many Senate ladies. In Arkansas last summer she helped to organize a woman's movement to support her husband's candidacy, and, to her surprise, even made several speeches. In fact, the whole family was active. Jim, the Senator's only surviving son, commuted in a friend's small plane between headquarters and the university at Fayetteville. Jim, now 27, went to West Point for 2 years and then married. From 1950 to 1953 he was in the Army in Germany, serving as a liaison pilot along the Czech border. He was graduated in law last autumn, and now he and Mary Alice's husband, Harry E. McDermott, share bandbox offices as a fledgling firm of Little Rock attorneys.

The McClellans had learned earlier that the demands of constituents are unfathomable, but the visit of one 11-year-old boy during the war still remains a high water mark in their memory. His arrival was preceded by a telegram from his physician-father asking the Senator to meet the youngster at the station. The McClellans did not know the boy and they did not think they knew the father. In this they were right; he was a Texan who had just moved to Arkansas.

It quickly became evident the boy intended to spend his Washington holiday with the McClellans. In the smallish house they then occupied there were 3 teen-age children. Maids were unobtainable; Mrs. McClellan was doing all the cooking. The boy had $2.50 in cash and no ration tickets. A tactful inquiry about the length of his stay brought the careless reply, "Oh, until I get tired."

One of the McClellan sons, under parental pressure, grumpily gave up his bed to the little wayfarer. Each morning Mrs. McClellan handed the boy $3.50 and put him on a sightseeing bus. After a week, the Senator made a desperation telephone call to the Arkansas doctor. He said truthfully that Mrs. McClellan was ill and about to undergo surgery at the Mayo Clinic. What should they do with the boy?

"Send him home," was the cheerful answer.

"But he has no railroad ticket."

"Don't worry about that," said the father of the 11-year-old. "He'll write you a check. And it'll be good."

It was.

By reason of his seniority and his leadership in the investigatory arm of the Senate, JOHN McCLELLAN has now become an important national figure. He is a member of the Appropriations Committee, the Internal Security Subcommittee of the Judiciary Committee, and is chairman of the Government Operations Committee.

The latter is the parent committee of the Permanent Subcommittee on Investigations, of which he is also chairman. The original job of the subcommittee was not to hunt down and lasso Communists, that's what the Internal Security Subcommittee of the Judiciary Committee, once headed by JENNER, of Indiana, and now by EASTLAND, of Mississippi, was set up to do, McCLELLAN'S subcommittee, on the other hand, was designed to investigate improper procedures and graft in Government departments. It was JOSEPH McCARTHY who sent it hallooing off in other directions. Under McCLELLAN'S leadership the subcommittee achieves fewer headlines, but it now sticks closely to its proper task, and under revised rules which protect the rights of witnesses, and which have abolished one-man control.

The Senator from Arkansas is still a man whose chief interest is work. Recently, he and his wife have gone out more, and he shows visible evidence of thawing. His schedule is just the same. He breakfasts at 7 a. m., is off to work at 8, returns home at 7 or 7:30, never earlier. Unless the Senator and his wife are going out, they dine on trays before the TV set, and then he goes back to the documents and reports he has brought home.

Arkansas reporters told me the Senator was as brave as a lion in his campaign helicopter, even when there was, on one occasion, a forced landing. But he is nervous in a motorcar. Mrs. McClellan usually does the family driving, but not long ago she left the car at the Senate garage and asked McCLELLAN to drive it home. Pondering some issue of the day, he found himself in the middle of an intersection before he saw the red light. When a policeman reprimanded him, the Senator said simply and with resolution, "Officer, if you will let me get it home, I won't drive this car again." He is a man of his word. He hasn't.

Religion and Race

EXTENSION OF REMARKS

OF

HON. JAMES C. DAVIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mr. DAVIS of Georgia. Mr. Speaker, in the latest issue of the Goal magazine, Editor Lawrence W. Neff published a talk which he made to a men's Bible class on the subject of Religion and Race.

His approach to the question to separation of the races is from a standpoint of religion and Christianity. I was so impressed with his handling of the subject that I have asked Mr. Neff's permission, which he has kindly given, to insert this article in the CONGRESSIONAL RECORD. Pursuant to unanimous consent previously granted, I insert this article on Religion and Race herewith:

RELIGION AND RACE

(A talk by the editor to a men's Bible class)

If I had been consulted about being restored to the teaching staff of this class, I would have advised against it. The trouble seems to be that I have never learned how to shoot off a gun easy. Today I shall try to do it, with some misgivings.

Fifty years ago this month I was in process of deciding whether to take religion seriously or continue to play along with it in the approved manner. A few weeks later I was enrolled in a school of theology, where I found the study of religion so interesting and exciting that I have kept it up ever since.

I may add that during more than 30 years of membership in this class I have got more light on some crucial subjects through our informal discussions than ever from any other source. Last Sunday, for example, there were several good impromptu sermons.

From the beginning of my new life I formed the habit of putting as much truth as I could in the fewest possible words, writing them down for future reference.

Now I have a barrel of them, and do nearly all my thinking in that form.

The one thing I abominate above all others is contradictions. No authentic fact ever contradicted another fact. So, I have spent a great deal of time attempting to weed out discrepancies, with some small measure of success.

The memoranda I have made pertaining to Jesus would fill a considerable book. Since the topic for today is "The Meaning of the Master," we will begin with a brief look at some of these notes.

First, a few of the things Jesus was not, despite ancient and bewhiskered teaching to the contrary:

He was not a goody-goody sentimentalist, or a shallow optimist. No one ever faced the stark realities of existence so frankly and fearlessly as he. Narrow was the way, he said, and strait the gate that leads to life, and few there are that find it. That is perhaps the saddest truth ever put into words.

Jesus was not a spectacular wonder-worker, but turned away from many more than he healed. He poured contempt on miraculous signs and those who craved them. Religion can have no weaker foundation than miracles, which cannot be proved and would not prove anything if they could.

Jesus was not a lamb led to the slaughter as a sacrifice. Do you suppose the Scribes and the Pharisees and the Herodians and the money-changers regarded him as a lamb, or rather as a dangerous revolutionist? I cannot imagine a less lamb-like person.

I am persuaded he was not, as the Christian cults have taught since the third century, though not before that time, the second segment of a three-way split personality, sitting on his own right hand and pleading with himself in our behalf, with groanings that cannot be uttered.

Instead, he was just himself—an integral personality—the most glorious personality imagination can picture—and the one peculiar glory of our human nature is the privilege of becoming even a little like him.

To understand him adequately we would have to be equal to him.

He was immeasurably greater than the fragmentary records of his ministry, which but dimly convey the tremendous impact of his personality.

He put eternity into the present tense, and placed the seal of immortality upon the human spirit.

The thing I claim for him, and the most I know how to claim, is that he was in step with the eternal purpose, attuned to the divine goodness, possessed of a compassionate understanding of all human needs.

My utmost hope is to touch the healing hem of His garment.

If He had not come, I would not want to be here.

On a practical level, we must accept the pronouncement of Matthew Arnold, a great scholar and an avowed skeptic, that the truest test of right and wrong is whether Jesus would approve or disapprove what was done.

I accept that challenge unreservedly. The first and last question about any course of conduct is, "What would Jesus do, here and now?" But I am going to give it an application which, alas, some may find unpalatable.

The people of the South, and indeed some other portions of our country, are agitated over a word that has recently come to the forefront—a perfectly innocent word that has taken on a strained and sinister meaning. The word is "segregation." It merely means selective separation.

We exercise that faculty habitually and even unconsciously. If Jack Spratt eats no fat and his wife eats no lean, each is simply segregating the undesirable.

If you find limburger cheese a bit too rancid for consumption, you segregate it. I knew a very fine man in this community—he often taught this class—who dearly doted on limburger. But he had to wait until his family had gone visiting to bring it into the home.

Some topics of discussion are like that—including the one I am about to introduce.

Two key words function in any fair consideration of human rights.

The first is opportunity. I declare without hesitation that I am heartily in favor of full and equal opportunity for every individual of whatever race or color. Furthermore, they should all be encouraged to achieve their possible best.

The second and far more important word is "fitness." Privileges or opportunities that fail to flower in fitness become doubly dangerous. We must clarify the two terms in our thinking.

Segregation, or selective separation, is a privilege we exercise constantly.

A few days ago I decided that I needed a minor surgical operation, intended solely to improve my looks, because they needed improvement.

Did I go out on the street and ask the first man I met to see what he could do for me with his pocketknife? Presumably he had as much sense as I did, maybe more. All he lacked was the opportunity to prove it. If he messed up my face learning, maybe he could do better for the next victim. Just give him a chance. But I discriminated against him. I was unfair to him. In fact, I segregated him, and turned instead to a skillful surgeon, who happened to be the president of our class, with fine results.

If we planned to found a university, and wanted to be perfectly fair about it, we should go down to the slums for our faculty. They are natively as intelligent as our doctors of philosophy, we are assured by the doctors themselves, and in time would learn to operate a fine university, if they had the chance. But we just don't do it that way.

The acid test is always fitness. It was constantly in the mind and on the lips of Jesus as the goal of all high endeavor. The man who put his hand to the plow and looked backward was not fit. The 1 lone talent was taken from the unfit individual and given to the one who already had 10 talents. To him who had, much would be given, because of his fitness.

The primal law of life is survival by reason of fitness.

God seems more concerned about quality than quantity.

Now, we face the decisive question: "What would Jesus do about segregation?" Whatever the answer, it is what we must do.

The integrationists have shifted the emphasis to religion. Very well.

They speak smugly about the example of the gentle Galileean. Right here in this room I heard one declare solemnly, "That does not sound like the Man of Nazareth." We get it on all sides, from every direction.

The fact is, they have got many of our best people on their knees at the mourners bench repenting of imaginary transgressions. Even the very elect may sometimes be deceived, or deceive themselves.

If we had to conjecture and speculate about what Jesus would do, this course might be defensible. But such is not the case. We have records so clear and unanswerable that he may run that reads.

I affirm calmly and deliberately that Jesus was the most consistent and the most inflexible segregationist the world has ever known. From many instances in the gospels I take only a few illustrative examples.

There is no record of more than the most casual contact of Jesus with any non-Jew. He avoided them studiously. The purported conversation with the Samaritan woman at Jacob's well is recognized by such authorities as Dr. Schweitzer, and many others, as a pure invention of second century Greeks. So, we may drop it.

In commissioning the 12 immediately after they were chosen, and sending them forth to proclaim his gospel—his good news—he said to them: "Go not to the Gentiles, and into any city of the Samaritans enter not."

So far as the records show, the only Gentile who was healed by Jesus and then begged to join the inner circle of the disciples was positively turned away, with the admonition to go to his own home and friends—his own people—and tell them what God had done for him. This might well serve as a hint to some who are trying desperately to break out of their own group and into another.

The avowed goal of integration is intermarriage.

Jesus would have turned you and me away, just as he did the Gadarene, and for the same reason.

As a climax, there is His astounding declaration that He was not sent but unto the lost sheep of the house of Israel. That puzzled and worried me for long years. It was here, in this class, that the satisfying explanation was found.

Jesus came to earth for a specific purpose. He came to the Jews because no other people would have received Him. In Athens, Alexandria, or Rome he would have failed so signally that we would never so much as have heard His name. Even among the Jews He must segregate the multitude and concentrate on a dozen men.

Human progress has always gone forward on the feet of a meager minority.

We of the South—and, in rapidly growing measure, those of other sections—are confronted by a dilemma similar to that which Jesus faced and settled so decisively.

We have a great work to do, despite any and all interference. For me, the South is a land of sunshine and song and high aspiration—a land to love, and live for, and, if so be, to die for.

Sometimes they refer to us as the Bible Belt. It is barely possible that America needs a Bible Belt, to replace its Babel Belt.

Ours is the most wholesome social and spiritual heritage on earth, and we do not purpose to throw it away.

I have good friends among the Negroes. Some of them wave at me as far as they can recognize me, and I am happy to wave back.

The nub of the race problem—as of many others—is the attempt to deal with it through mass, rather than individual, adjustments.

We believe that if a horde of colored boys and girls, however deserving of opportunity, were injected into the white schools of Atlanta, the schools would be set back 50 years, if not wrecked—probably the latter. The same thing will prove true everywhere it is tried.

Nothing could bring greater joy to the Communists and other subversives.

This is far more than a sectional, or even national problem. Very interestingly and vitally, the whole world is facing up to it, in confusion. The United Nations, supposedly the citadel of freedom, is actually the bulwark of segregation. As the backward peoples clamor for their rights, the Caucasian group hold the whip hand through the arbitrary power of the veto, which we would never dream of surrendering.

You may now be surprised when I say that, so far as we of the South are concerned, the facts I have stated are of but transient importance. Our dilemma not only will settle itself, but is already far on the way to an interim solution through economic and social forces. Much of our disquietude appears to be vain.

What we think, or say, or do, is almost irrelevant.

I learned this truth from a man whom all of us have known and admired and loved—who taught this class often and helpfully. That man was the late Dr. Franklin Parker—university professor, dean, and chancellor; twice elected to the office of bishop and twice refusing it.

We had a number of conversations on race relations. I deeply respected his character, and ability, his wide experience, and lifelong intimate familiarity with the subject. He grew up in Louisiana.

It was in our last conversation before his passing that he spoke the half dozen words which took my breath away, but gave me a much clearer perspective.

Looking earnestly into my face, he said with deep feeling and conviction:

"The Negro will leave the South."

If that is true—and it is—a vastly different situation is presented.

The departure will be voluntary, though somewhat induced, and apparently inevitable.

Several controlling factors will contribute to that result. I mention a few:

One is the growing economic revolution. Whenever a big plantation operator buys a cottonpicking machine, 20 field hands are thrown out of work. So of tractors and other mechanical equipment. The obvious recourse of the workers is a move to the great industrial centers. Millions have gone, and more millions are on the way.

Generations of good will between the races is already giving place to agitation and hostility, foreshadowing an immediate cold war, with some already very warm spots steadily heating. If integration of schools is rammed down our throats, it will get hot in a hurry, as widespread violence flares. The impulse to go elsewhere will be irresistible.

After all, a move to a more favorable environment is not necessarily objectionable. Abraham set the pattern in Ur of the Chaldees more than 3,500 years ago. In reconstruction days my parents went from Kentucky to Texas in a covered wagon. Forty-two years ago I moved 2,000 miles to live in Georgia, and I have not been mad at anybody about it.

In their new home the Negroes may hope to enjoy a measure of freedom unattainable here.

The natural, logical and desirable sequence is that they, as a group, seek the fulfillment of that hope in a more auspicious setting.

I add, however, that the problem is not being solved, but merely moved.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shall be paid into the Treasury and accounted for in his annual report to Congress, and no sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate hearings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the official reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix, but this rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD Appendix the full report or print of any committee or subcommittee when said report or print has been previously printed.

10. *Official reporters.*—The official reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this restriction shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. The Public Printer or the official reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Illustrations.*—Pursuant to section 182b, title 44, United States Code (as shown above), requests for authority to insert an illustration in the RECORD should be submitted to the Joint Committee on Printing through the chairman of the Committee on Printing of the respective House in which the speech desired to be illustrated may be delivered. Illustrations shall not exceed in size a page of the RECORD and shall be linecuts only. Copy for illustrations must be furnished to the Public Printer not later than 12:30 o'clock p. m. of the day preceding publication.

13. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

Appendix

The Successful Martin Family of Princess Anne, Md.

EXTENSION OF REMARKS
OF

HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Wednesday, January 25, 1956

Mr. BUTLER. Mr. President, America continues to be the land of opportunity. As evidence of this lasting tradition, I ask unanimous consent to have printed in the Appendix of the RECORD, a very heartwarming article entitled "Degrees by the Dozen on $40 a Week," which was contained in the September 19, 1955, issue of Life magazine. This is the amazing story of the family of Mr. and Mrs. Louis Martin, of Princess Ann, Md., and it forcefully demonstrates the perseverance, sacrifice, and spirit of a family which have made this Nation great.

The Public Printer informs me that the cost of printing this article in the RECORD is $214. Nonetheless, the story is so remarkable in its narrative of family life in the face of obstacles and difficulties,, that I ask it be printed in the Appendix, and recommend it to my colleagues for their reading.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DEGREES BY THE DOZEN ON $40 A WEEK

(By William Brinkley)

To Mr. and Mrs. Louis Martin, who live on a small farm near Princess Anne, Md., an incident that happened last week would seem routine were it not for the fact that it is the culmination of an extraordinary achievement. The Martins' youngest child, Grant Bartholomew, age 21, registered for his senior year at Maryland State Teachers College in Bowie, Md. What made an exception of this seemingly ordinary September event was the fact that completion of Grant's senior year will swell the total of college graduates among the Martin children to 10 and the number of degrees to 13, 3 of which are master's.

This record is one which even an affluent family could consider remarkable. But for the Martins the record approaches the miraculous since Louis Martin, who is 66, has worked most of his life at a salary not in excess of $80 a week—and a good deal of it for only $30.

The Martin parents have always believed in one thing above all, namely: "Life is a struggle. But it is good to have a struggle. It strengthens your character." This is a theme many philosophers have challenged, but the Martins are one brilliant case for the affirmative. The feat would never have been performed at all had not they—and their children as well—been able to endure almost continuous lifelong doses of character strengthening.

Louis Martin's character strengthening started almost at infancy. His father died when Louis was 3, and shortly after that he was helping his mother support the other five children. When Louis was 10, his mother died too and the boy was deposited in the Eighth Ward Settlement House in Philadelphia's industrial section. Despite its rather forbidding name, this institution in no way resembled the classic Oliver Twist orphanage depicted by Dickens. Supported by a businessman named William Frazier, the settlement house was conducted by Miss Frances Bartholomew, a young Philadelphia Main Liner who had scandalous ideas, for the year 1899, concerning the upbringing of orphan children. "Ma Thol" took her orphan charges to operas and taught them to waltz and two-step. On two subjects she had really fanatic views. It was upon the intersection of these two subjects that Louis Martin was to make his life.

"Now, you children must get an education," Miss Bartholomew was incessantly telling her orphans. "And by education I mean all the education you can get." Her other bug was that city children should get out of the city. In the summers she hustled them off to a large farm near Willow Grove Park owned by "Daddy" Frazier, who had set aside a stone house called "Happyland" for the children. Before his first visit to Happyland at age 11, Louis had never spent an hour outside Philadelphia. Inhaling his first deep breaths of unsooted air was the equivalent for him of a high-school girl's first slug of champagne. "I felt as if I was running on air," he recalls.

By going to night as well as day school under Ma Thol's prodding, Louis was ready at 19 for Hampton Institute in Hampton, Va., where he majored in agriculture. He was a bright student and after graduation found himself with several job offers. Some were relatively comfortable teaching positions. But the one that promised the least comfort interested him most.

This job under the University of Maryland extension service and the United States Department of Agriculture entailed working with the Negro farmers of the Eastern Shore of Maryland, getting them to use scientific farming methods and improve their living conditions. Farm extension work was new in those days and farmers resented "young educated foreigners" who tried to teach them what they had been doing all their lives. Louis would be the State's first Negro county agent and his province would be vast—the entire Eastern Shore, 9 counties stretching some 125 by 40 miles from the Chesapeake Bay to Delaware and the Atlantic Ocean. Four hours after he was offered the job Martin took it.

He married Irene Polk, 1 of 10 children in an Eastern Shore family. She had worked her way through a home economics major at Hampton over the objections of her mother who did not think it worth while since she had not gone to college herself. Martin had bought a model T and the newlyweds took off for Princess Anne, Md., and Martin's $1,000-a-year job.

On the Eastern Shore in 1916 most of the Negro farms were on the brink of ruin. The crop yields were fantastically low. An average acre of corn yielded a miserable 19½ bushels, an acre of sweetpotatoes only 16 bushels. The hogs were scrub razorbacks. Mongrel chickens laid when they felt like it. Rags or old coats were stuck in place of windowpanes, brush grew around the houses, the yards were littered with tin cans.

When Martin arrived the farmers were in a state of panic. Hog cholera, a disease for which the farmers knew no remedy, was ravaging the shore. Hogs were dying by the thousands. The cholera had spread to the farm adjoining Col. Harry Waters', a lawyer, a "Princess Anne blueblood" and a gentleman farmer. The colonel heard that a Negro county agent had just arrived, and sent for Martin, who told him about the new serum which had been successful in preventing cholera—Martin had used the serum on pigs at the Hampton farm. Soon Louis Martin was shooting the colonel's shoats and brooding sows with serum. When several days passed and none of Colonel Waters' hogs developed cholera, the word of this magic spread through the countryside. No one spread it more eagerly than Colonel Waters himself.

Overnight Louis Martin became the most sought-after man on the shore. Assisted by the "hog cholera minutemen" which he organized—teams of farmers whom he taught to administer the serum—he inoculated thousands of hogs and the epidemic was broken.

This success put Martin high in the graces of the farmers of the eastern shore. Shortly his happiness was doubled. At Hampton, Mr. and Mrs. Martin had decided that they would have one dozen children and that each of them should go to college. The day before Independence Day 1917 they were off to a running start on at least the first section of this ambitious program. Louis Frazier Martin was born, followed 10 minutes later, to the Martins' surprise, by Lourene Frances Martin. Like all the children, Louis and Lourene were born at home for reasons of economy. For the same reason Martin, as he did with all of them, served as hot-water carrier and general assistant.

The happy Louis Martin set out with great enthusiasm to change the fast-fading land. On the wave of the proof furnished by the hog cholera serum, he visualized sailing right in and inducing the farmer to use modern methods all the way around.

He was quickly set to rights. Up and down the land, a familiar figure in his Model T stopping off at farms, Martin gave his pitch about rotation, seed selection, liming, tree pruning and purebred lines. Up and down it he found himself smack against a phenomenal prejudice. With their hogs the farmers had been desperate, but all this new-fangled stuff was something else. He was a foreigner; and what was worse, a young foreigner; and what was worse, an educated young foreigner.

For a year he experienced nothing but defeat. The Nation had gone to war. Prices soared but Martin's salary kept its low-slung course. One night after he had come in at 1 o'clock in the morning from a farmers' meeting, Martin and his wife sat over an oil lamp in their kitchen at Princess Anne.

"My salary is so small," Martin began to talk, "and we can't begin to get all the things we need—we need and the children need. The children now—and the ones we want to have. I've tried, or I think I've tried, but I'm walking in the same spot I was when we first came. Up north," he said slowly, "I hear the war factories are paying big wages. Eight dollars a day I hear—three times what I'm making here."

Then he got it out, quickly. "Would you rather we just stopped all this and went north?"

Her husband was not a man who discouraged easily and to Mrs. Martin this was an alarming measure of his sense of defeat. But across the kitchen table she looked him squarely in the eye.

"Mr. Martin," she said firmly, "we didn't go to school so you could work in a factory."

October 31, 1918, Mary Alice. December 2, 1919, Walter Theodore. October 19, 1921, Martha Rebecca.

As the little Martins came swiftly on, the two big Martins found their character being strengthened from all sides.

They bought no clothes. Mrs. Martin made them all. Except for staples such as flour and sugar they bought no food. Mrs. Martin was able to make a daily family stew which was both elastic and nourishing. The meat part came from pigs (purebred) which they raised at Mrs. Martin's father's place nearby. The rest of the stew came from Martin's agile diplomacy on his rounds with the farmers.

"My, those wonderful tomatoes." he would exclaim, studying a row of plants. "Such elegant onions. That delightful-looking cabbage. Such good eating they must make, I would imagine."

"You mean you don't have any of these things?" the farmer would say in sympathetic tones. "You mean all that family of yours, and—here, now, let me get a basket."

Martin would come home bearing a basketload of wonderful tomatoes, elegent onions and delightful-looking cabbage—pointing out adroitly to the farmer as he took them that the farmer would raise even more of them if he would only apply these modern, scientific.

At home Mrs. Martin seized the products and let no morsel go to waste: "We either ate it, dried it, brined it or canned it." Every year there were 1,500 jars of sweet potatoes, white potatoes, turnips, onions, peppers, string beans, lima beans, Henderson beans, corn, squash, broccoli, okra, eggplant, cucumbers, celery, cauliflower, asparagus, cowpeas, black-eyed peas, apples, peaches, kale, collards, Swiss chard, beet and turnip greens and pork loin.

"Mercy, if you don't feed a child while he's growing you might as well not feed him," Mrs. Martin has always believed, "because then it won't do any good."

With all their improvisation Martin was obliged to adopt a system of financial maneuvering which brought his only serious disagreement with his wife. Mrs. Martin looked upon credit as the machination of the devil. To Martin cash only was a lovely idea—but what if there was no cash? Being unanswerable, this logic prevailed. After a dozen or so bills had racked up, Martin would take off for a bank and execute a loan to pay them all off. Then he would devote the next few months to paying back the loan, meantime amassing more debts to a point where he must repeat the system. Martin estimates he has negotiated literally hundreds of bank loans in his life.

The financial gymnastics of bringing up a platoon of children on $28.75 a week was very simple, as Martin recalls it. "If I had ever sat down and listed my income on one side of a page and my expenses on the other, I would have been scared to death. Therefore I never troubled to list them. I just scraped around."

But by the time the sixth child was en route, Martin had begun to have his qualms about the great goal. When he had to start breaking in two the penny lemon sticks he always brought home to the children it came over him that perhaps a dozen would be carrying things too far.

March 9, 1924, June Celestial.

Martin decided they would have to get farther out in the country to keep pace with the mounting food consumption. He bought an uncleared 18-acre tract near Princess Anne with a 3-room cabin on it—1 room for himself and Mrs. Martin, 1 for the boys, 1 for the girls. The cabin had no plumbing, no lights, and no heat but Martin christened it after the place outside Philadelphia where the orphanage children had visited summers—Happyland. Through the years it was to improve, with a bathroom, electricity, added rooms with added children.

May 16, 1925. Harry Bosworth.

Meanwhile, the other Martin battle—with the farmers—was in full clamor. Martin knew only too well that the farmer was set in his ways. But what about the farmer's son, he wondered, who would one day take over the farm?

Presently Martin began organizing the farmers' sons into clubs and talking to them about modern farm methods. Instead of stubbornness and suspicion he found the boys eagerly insterested. Martin then persuaded local businessmen to lend farmboys the money to buy something the boy could call his very own, namely a purebred pig. When a year passed and the boys' purebred pigs tripled the fathers' scrub razorbacks in meat production, the effect on the grownup farmers was quite arresting.

Riding his advantage, Martin talked several farmers into letting their sons buy purebred hens. When these hens outlaid the fathers' mongrel hens 2 to 1, the effect was electrifying. Then he persuaded several farmers to give their sons 1 acre and let them plant it according to Martin's methods. When 1 son got 33 bushels of corn on his acre compared with his father's 17 alongside it, the effect was almost revoluntionary.

All of a sudden, as Martin covered the countryside in his Model T, he began to notice strange sights—grownup farmers liming their fields, pruning their trees, planting in vetch or clover after the harvest instead of leaving the land dry and unnourished.

It was not until a meeting in a Methodist church on the lower part of the shore, however, that Martin was sure. As the chairman of the meeting rose to introduce the speaker, Martin suddenly became aware that he was being described in the most glowing terms. "Friends," the chairman concluded solemnly, "we are very happy to have our famour farm demonstrator with us today, Mister Doctor Professor Martin."

This was the long-awaited breakthrough.

After Mister Dr. Professor Martin gave his half-hour talk on hog cholera, its history and prevention, a wizened old man popped to his feet. "I had 2 or 3 of my best setting hens fall off their nests dead," he blurted out. "Professor Martin, do you know what's the cause of that?"

Another farmer jumped up. "Professor Martin. My cow got bloated all of a sudden. What can I do?"

"Professor Martin. My chickens, they all seem to get naked. No feathers on their backs."

For 3 hours Martin answered questions—and where he could not answer he said he would check on it and let them know. The meeting ended on a sonorous singing of Beulah Land, and the people pressed forward eagerly to shake the professor's hand. Martin sang all the way home in his model T:

"I've reached the land of corn and wine,
And all its riches freely mine;
Here shines undimmed one blissful day,
For all my night has passed away.
O Beulah Land, sweet Beulah Land,
As on thy highest mount I stand,
I look away across the sea,
Where mansions are prepared for me."

February 17, 1927, Jewel Elizabeth. December 2, 1928, Elbert Hubbard.

Steadily the Martins moved toward their family goal.

"We were going to do everything we could do," Martin remembers the plan. "The children would do everything they could do. And the Lord would just have to take care of the rest."

The children's part was working as soon as they were able to pick a bean. Louis started picking strawberries in farmers' fields when he was 5. At that age he would eat greedily as he picked but even so he would harvest 10 quarts of strawberries a day, which swelled the family treasury by 20 cents.

The days in the fields began early, as Lourene, who is now an Army captain of nurses, very distinctly remembers.

"It would be 2:30 in the morning. And there Daddy would be standing over us. 'O. K., kids, let's go,' he'd say. 'It's picking time!' "

The Martin children don't remember objecting to this program. "The reason," says Lourene, "was Daddy and Mama. 'There is dignity in work'—I'll never forget Daddy saying that. It wasn't just a saying. They were always to bed after us and always up before us. Lots of times Daddy would be up all night with some farmer's sick hog or calf. Mama never had any stockings because we always had them. She wore the same coat for 20 years. When food was short she'd say, 'You take mine. I'm not hungry.' But the main thing was they somehow made us understand, even at a very early age, that college was at the end of the bean rows."

When the family couldn't afford to have someone come in and plow their land with a mule, Daddy, Mama and eight or nine small Martins energetically hitched themselves to the plow. Sometimes the children joined in the battle for survival with actual gusto.

"In winters," remembers Walter, who today is working on his doctorate, "Harry and I would go down to the railroad tracks about 300 yards from the house. We'd get a pile of rocks ready. When the freight train came by we'd let go with them at the engine. Quite a volley would be returned at us by the fireman. We'd pick up the chunks of coal and have heat for the house."

At night the Martins would sit around their dining room antique mahogany table, a gift from "Daddy" Frazier, shelling beans for the local huckster at 3 cents a quart. The Martins are a very singing family and they would govern their rate of shelling by their singing. If they wanted to shell faster they sang a molto allegro like You're Gonna Reap Just What You Sow. When they needed a coasting period they took a slow number like He's Got the Whole World in His Hand.

HARVARD CLASSICS AND NO BATHROOM

Frequently during a beanshelling session Martin or one of the older children would read to all hands from the Harvard Classics. Some of the beanpicking money had gone to purchase this set, which Martin picked up second hand and was paying for $5 down and $5 a month. The Martins never thought of books as a luxury, buying them sometimes when they were hardest up. The 3-room house had no bathroom for a long while but it had Shakespeare and Dickens and Thackeray, Robert Burns, and Robert Louis Stevenson and Mark Twain and Aesop's Fables and several sets of encyclopedias.

Believe it or not, the children found time and energy to get into scrapes. There was the day when Martin came upon 6 of them atop the 60-foot water tower in Princess Anne, and with a horrified crowd gathered below. Some of the children were gymnastically swinging by one hand and one foot from the tower, above an open steam well which adjoined it. Martin's voice summoning them down shook through the town like the sound of cannon. Simultaneously with their descent he began removing his favorite weapon of discipline, his belt. It may have been during one of the lean-eating days. In any case Martin's pants fell to the ground.

Recovering them with some dignity, he belted up again and dispatched the six

children for a switch each. After that he always used switches.

Often, instead of corporal punishment, the Martin children received something they considered infinitely worse, called whipping our consciences. If they had stolen the forbidden apples from the family trees instead of being content with the ones that had fallen to the ground, Martin would take the children aside.

"We are all struggling to care for all of us," he would say in his quietest tones. "We have to share with one another. The apples are for the benefit of us all, so your Mama can make applesauce and apple pies—for all of us. Don't you think," he would say, his voice almost mournful "that it is very selfish of you just to satisfy your own stomach?"

Pretty soon the offending Martin child would be bawling at the top of his lungs.

Always Martin preached the value of education. "If you're going to dig a ditch" he would tell his children, "you can dig a better ditch for having an education."

Louis was barely eight before he wanted to be, not a cowboy or a fireman, but something that Daddy made sound very wonderful called a "Ph. D." Today he is on his way to being one. Walter was so hipped up about school that when he was 3 he was sneaking into the kindergarten operated for the faculty children at Princess Anne Academy, now Maryland State College.

April 5, 1930, Oswald Edward. September 18, 1931, Justelma Houston.

Just as Martin was barreling along in both departments—his family and the farmers—the great depression smashed down like a tidal wave.

Martin's work was doubled. He ranged the countryside studying markets with the farmers, visiting banks to stall them out of farm foreclosures. At the same time his own salary was cut. The prices the children got for their work plummeted. The Martin family dug in.

Providentially, around this time feed sacks were beginning to come in print patterns as well as in white and when they were empty of chicken mash they were filled up with Martins. One feed sack made a dress for a small Martin, two or more for a larger Martin. Other feed sacks became tablecloths, placements and napkins. Several sewed together became sheets.

Many families, fighting to exist, now took their children out of school during the picking season or sent them to work in the canneries. But the Martin children did their picking first and then went to school, and after school picked again until dark.

As if to strengthen the family's character further, the main highway north that ran in front of their house was filled with men roaming the land, seeking work, seeking a sandwich. The children got used to seeing 2, 3, or 4 hollow-cheeked strangers sharing their already overtaxed family stew. "Mama would never have even thought of turning anyone away," Lourene remembers. "And she always fed the stranger the most heartily of all." The last Martin dollar often went to some farmer Martin considered worse off than themselves.

May 26, 1934, Grant Bartholomew.

The first section of the Martin's family program, a dozen children, drew to a close.

Almost simultaneously, at probably the hardest point in the family's life, the time came to start the second section. The first two children were ready for college.

Martin sold his last 4 purebred shoats for $35 each. Paying their tuition with the money, he packed Louis and Lourene off to Hampton.

Now, with the fresh avalanches of college expenses, Martin found himself making a record number of trips, even for him, into bank offices, where he would begin his conversation with the banker. "My son Louis needs" or "My daughter Lourene needs." Louis and Lourene worked at college, Louis stevedoring on the Hampton Roads docks and Lourene working as a nurse's assistant. To keep them in college the children at home got up earlier and stayed up later, picked more cucumbers, shelled more beans, hoed corn, did maid work, felled trees, worked in the canneries, went out selling strawberries from their own garden and apples from their own trees.

As their turns came, others of the children went off to college. Each time it got harder.

Almost bottom level was reached after Lourene had entered Mercy Hospital in Philadelphia to study nursing. One day she wrote home that she had only 19 cents left.

"I got a letter back from Daddy," Lourene recalls. "He said he had only 15 cents right then but he was enclosing a dime of it. He wrote that there would be some more along as soon as everyone shelled some beans tonight. That was the only time I ever sat down and cried."

PICKING BEANS AND FELLING TREES

Summertime all the Martins worked furiously. One day found Louis picking cucumbers at Elliott, a few miles from home; Lourene doing housework in one home at Salisbury, 6 miles away, and Mary Alice in another; Walter pitchforking bean hulls at Dulany's food factory; Martha and June caring for children in a migratory workers' camp on the far side of the shore; Harry in the swamps felling trees for a lumber mill; Jewel picking lima beans; Elbert and Oswald hoeing corn; Justelma and Grant picking string beans.

And finally the day came. The Martins went to their first commencement.

"We sat there," Martin remembers that day, "and watched Louis walk across the stage in his cap and gown and we remembered the time he had picked strawberries when he was 5 years old and eaten more than he picked—then we remembered that he had, at that, picked 10 quarts for 20 cents and some of that 20 cents was right up there on that stage."

As Louis walked off the stage clutching his bachelor of science diploma, Mrs. Martin whispered to her husband.

"Mr. Martin," she said, "just 11 more to go."

The first ones "out," the original Martin plan went into its next stage of operation. These began helping the younger ones through school. Louis helped send June; Lourene helped send Harry; Walter helped send Jewel; Martha helped send Justelma, the younger ones also continuing to help themselves by summer work in the canneries and the fields. Martin constantly primed the flow of help from the older ones by letters which began, "Your poor old dad has a little financial problem for June needs * * *" or "I wonder if I could borrow a few pennies from you since Justelma needs. * * *" The word "borrow" was a great family joke along with what the Martin children long ago adopted as their family motto: "Daddy's always broke."

With the plan now at full throttle the Martin children were knocking off degrees wholesale in a half-dozen colleges and universities, including Maryland State College, Maryland State Teachers College at Bowie, State Teachers College at Elizabeth City, N. C., Michigan State College, the University of Illinois, and Columbia University. The Martin parents became commencement habitués. Among their neighbors there was soon a regular question along about May: "Well, how many do you have coming out this year?"

Today, everyone else having gone to college, Grant, as the baby of the family and the target of help of all of them, is finding himself living quite high off the hog. When, for example, he needs a new suit for a prom, Grant will dispatch identical letters to 9 or 10 sisters and brothers. From a given set of letters he will customarily receive three or four times enough to cover the specified item, since he has learned not to let his sister know what his brother doeth.

Recently Martin retired from his county agent job. If he were inclined to look for eulogy on that part of his life, which he is not, he need only look about him. Today the Eastern Shore farms that had been on the brink of ruin when he came upon them are virtually bursting with their bounty of tomatoes and strawberries, asparagus and broccoli, beans and peas. The pens are full of fat hogs and the brooder houses a swarm of purebred poultry.

And the children?

Louis: a master's degree in agriculture, teaching horticulture at Florida A. and M. University, still working with beans. Only now, instead of picking them he is crossing them to make them better.

Lourene: captain of nurses in the United States Army.

Mary Alice: a bachelor's degree in home economics, married to a businessman on the Eastern Shore.

Walter: a master's degree in agriculture, teaching mathematics and science at Denton, Md. high school and working toward his doctorate.

Martha: a master's in home economics, teaching at Savannah (Ga.) State College.

June: a bachelor's degree in home economics, married and working as a school dietitian.

Harry: a bachelor's degree in agriculture and certificate in elementary education, teaching grade school at Pumphrey, Md. and doing farm youth work.

Jewel: a bachelor's degree in education, married to a State Department employee and working there herself.

Elbert Hubbard: the maverick in this family, went to college for a year "just to keep up the record" and then decided he wanted to be a barber. Soon he hopes to have his own shop in Washington. He is known among the other children as "our businessman."

Oswald: a bachelor's degree in building construction, a construction engineer in Bellevue, Md.

Justelma: a bachelor's degree in science, married to a high school teacher and doing substitute teaching.

Grant: the "one more to go," a college senior studying to be a teacher.

And Mrs. Martin? Well, she has been going to college again herself at Maryland State, studying "family relations."

"Oh, mercy," she says, "the older I grow the more I see that there is to be learned. You can never get enough education."

The Sermon of the Red Mass

EXTENSION OF REMARKS
OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1956

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include an inspiring sermon that should be as widely read as possible, delivered at the red Mass on Sunday, January 29, 1956, at St. Matthews Cathedral in Washington, D. C., by the Reverend Father Robert J. White, J. C. D., rear ad-

miral, Chaplain Corps, United States Navy, retired, and former dean of the Catholic University Law School.

The red mass is formally known as the solemn votive Mass of the Holy Spirit, and has been celebrated since the 13th century, having its inception in European countries and later in other countries to invoke God's blessing on the administration of government and upon all public officials in the performance of their duties in the interests of their people. It is a Mass which is usually celebrated at the opening of a governmental year.

The celebrant of the solemn votive Mass of the Holy Spirit celebrated last Sunday was the Most Reverend Patrick A. O'Boyle, D. D., archbishop of Washington.

The sermon follows:

THE SERMON OF THE RED MASS

(By Rev. Robert J. White, J. C. D., rear admiral, Chaplain Corps, U. S. Navy (retired), St. Matthew's Cathedral, Washington, D. C., January 29, 1956)

Once again we welcome you as friends to join with us in the observance of the ancient tradition of the red Mass. In a brief respite from the urgency of our daily tasks, we pause to meditate together upon the enduring meaning of our labors in the law. In humble acknowledgement of our human frailty and intellectual limitations, we pray earnestly together for new strength and enlightenment from Almighty God, the true source of all wisdom, government, and law.

As the colorful red vestments of the holy mass symbolize the flaming love and divine inspiration of the Holy Spirit, so, too, the music and prayers of the liturgy speak with reassuring hope of God's promise of enlightenment to those who humbly seek His wisdom and dutifully walk in His law. To them, the Holy Gospel of the mass promises the bread for which men most hunger, His peace that the world cannot give, and His heartening counsel, "Let not your heart be troubled nor let it be afraid."

Now manifestly God has ordained that man work out his life and destiny in civil society, for only thus can the individual provide himself with the necessities of life and develop his mental and moral faculties. Since authority is necessary to direct such efforts for man's good, law and government trace their source to God himself. Consequently, the great responsibilities which your fellow citizens have entrusted to you as makers, interpreters, and administrators of the law carry indeed a divine sanction and, when well and honestly performed, merit God's benediction.

Happily you need no argument to convince you of the powerful religious influence through faith in God and through the recognition of the divine positive and the natural law in American history. Our needs of today call for a strong reaffirmance of that traditional guiding principle, for contemporary problems of the law and government present many formidable difficulties. The seeming paradox is true—that even our blessings, the richness and diversity of our natural resources, the complexity of our economy, our startling scientific advances, and, finally, our position among the nations of the world—add heavy burdens and pose novel and difficult problems upon legislation and government. Indeed these tasks appear sometimes so overwhelming that men of little faith and courage become weary and afraid to grapple with the resulting legal and governmental problems of such complexity and magnitude. But, fortunately, they are only the faint-hearted few who have forgotten the surpassing achievements of American Government "Under God and the law."

Considering the long span of human history, this Nation is still a relatively new experiment of Federalism with its unique contribution of the Bill of Rights. Yet such a constitutional democracy was envisaged in religious and moral terms centuries before it assumed a political terminology. Our glory is that these basic ideals of government have endured and shaped the course and the development of American law.

For one notable example: What other nation in its entire history has accomplished—by peaceful steps through the force of law—the forward measures of social justice enacted into law by our American Government in the last half century? Such a Christian and humane advance—peacefully through the force of law—to meet and to overcome the hazards of employment, the afflictions of physical and mental infirmities, and the destitution of old age writes an illustrious chapter for our Nation in the history of humanity. Nor does this achievement lose its bright luster because such advances seemed sometimes painful and slow. Nor should religion be blamed because some mistaken or even evil men sought to block social reform and to perpetuate an unconscionable status quo by distorting the true meaning and application of the natural law.

Patently, such evils are not the exclusive property of any group or time. Shifting balances of power between political parties, and shifting balances of power between capital and labor, bring similar temptations to men who in their selfishness would trample underfoot the basic truth that our Government must always be an equal partnership of all its citizens in law and in justice and never degenerate into a complex of competing selfish interests devoid of a moral imperative.

For another example of American progress: In contrast to today's tragic violence in some other countries because of racial differences, our progress—though admittedly slow and, as yet, far from perfect—gives eloquent testimony of the power of peaceful steps through the force of law in establishing as a reality the American constitutional profession, founded upon the Christian teaching that "All men are created equal."

Conceding as we must that this laudable progress in American Government was brought about by many forces and individuals, we still may rightfully maintain that the basic ideal of this social justice and of this racial equality was rooted in the Christian belief in the inviolable dignity and eternal worth of every individual created in the image of his Maker. The enduring power of this religious ideal is but one of many examples of the salutary influence of our Christian constitutional heritage upon succeeding generations, even upon those who neglect or even deny the duty of formal religious worship.

Happily there is evidence on many sides of a renaissance of religious faith and restoration of the Christian teaching of moral values. Even intellectuals who rejected the authority of the divine positive and natural law, after the long dark night of groping among intellectual shadows, have seen as in the full brightness of the morning light the universal truth that man is not sufficient unto himself and that the moral ordering of society is accessible to human reason and is indispensable to the maintenance of sound government.

Moreover, there is discernible a growing realization that the sound effectiveness of law and government is critically dependent upon the people's religious faith and practice of morality in such basic institutions as the home. For cumulative evidence proves that, when marriage is violated and parental authority is neglected or abandoned, then appalling additional burdens fall upon law and government in functions which are alien to the true nature of the state.

What are the causes of these evil results? Surely we may properly indict that spurious teaching of an exaggerated personal freedom which sometimes seems to condone even license under the guise of protecting the constitutional guaranty of personal liberty. The true measure of constitutional freedom is not absolute liberty. That teaching is dangerous which fails to inculcate the duty of a willing self-discipline which is the only justification and firm foundation of American freedom. Some of our courts have not been immune from the effects of such a false philosophy when they attempt—without the support of history or logic—to impose the innovation of a hierarchy of constitutional rights to the prejudice of religion and morals. In a few leading cases, such courts have minimized the historic positive moral purposes of law and struck down statutes aimed at evils threatening to corrupt morals and to encourage licentiousness and degeneracy. Semantics became the cunning instrument for voiding such reasonable and necessary laws. The sound good sense of the masses of the people is not deceived by such techniques. For they remember, in contrast, the traditional ability of common law courts—without statute, to punish criminally those assaults which would weaken and destroy the moral fiber of the people and, in particular, would corrupt the morals of the young.

Our constitutional democracy can survive only if there be acceptance not only of the supremacy of the law but as well the interpretation of laws and governmental power in terms of the highest moral insights regarding man's true nature in relation to God.

Hopefully, we are awakening as from a drugged slumber to an acute realization of the shocking damage to law and government by those who have ridiculed religious truths, denied moral values, and dismissed traditional ideals of law and ethics as no longer useful. There error is fatal even if their purposes are sincere. For when the rationalists declare that the only basis of law and government is "a compact of force or utility," or the historic evolutionists defined government as "the blind unfolding of an inexorable pattern"; or the pragmatists dismissed basic principles and ideals in favor of "the unfettered experimentation of expedience"—all were advocating, whether consciously or not, a philosophy which leads inexorably to state absolutism and the essential evil of Communism which we abhor—the reduction of the individual to a puppet of the tyrant state.

Fortunately, there is widespread evidence of a deepening ground swell of reasoned conviction which repudiates such false philosophy and demands a greater emphasis upon the ethical training of all our youth including law students who will be our future lawyers and judges. These unmistakable signs point to a renaissance of ethical ideals and the strengthening of moral standards in law and government. Such a praiseworthy trend may well be an integral part of the contemporary phenomena of a growing awareness and appreciation of religious values in American life which we pray may became a permanent reality.

Only a few weeks ago, several hundred judges, legislators, lawyers, and historians met at the Harvard Law School for several days in a conference on "Government under Law" on the occasion of the two hundredth anniversary of the birth of Chief Justice Marshall.

Now, it is of historic significance that this large and notable group were united in enthusiastic reaffirmation of three historic Christian foundations of American law and government:

First, the affirmation that the purpose of government and society is the good of the individual;

Second, that constitutionalism is a moral precept; and

Finally, that there must always be a vigilant concern for "the criteria of goodness in law and in government."

Well, may we ask the reason for this surprising unanimity among scholars of so many varied schools of jurisprudence.

Perhaps it was because they had come to the realization that no greater evil can befall a nation than the denial of the reality of evil.

Or, perhaps they, as all of us, have learned that the defiance of any moral authority—parental, school, or community—leads to the swift decline of the rightful authority of law and government and leads even to disloyalty to the nation itself.

Or, perhaps it was due to the tragic realization that materialism, victory in war, and trust in the cooperation of allies in peace had successively failed to fulfill our hopes and instead brought bitter frustration.

Or, finally, perhaps it was because in the anguish of their souls they saw clearly that the only hope for the survival of our way of life or the alternative of the holocaust of civilization lies in the restoration of the moral foundation of law and justice between nations.

Whatever be the reason or reasons of this solemn profession of faith, we rejoice and thank God that in these critical days good and humble men are not afraid to proclaim their trust in God and His moral law. Surely, then, this becomes our prayer in this Red mass and always that God may enlighten our minds and strengthen our wills to enshrine this criteria of goodness in this our beloved nation of free men as we work out our destiny "under God and the law."

Our National Security

EXTENSION OF REMARKS
OF

HON. CHARLES E. POTTER

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Friday, January 27, 1956

Mr. POTTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by David Sarnoff, chairman of the board of RCA, before the National Security Industrial Association on January 26, 1956. I invite the attention of Members of the Senate to the proposal of Mr. Sarnoff for a national educational reserve. Mr. Sarnoff's address is very challenging, and I commend it to Members of the Senate for study.

I am informed by the Public Printer that the manuscript will make approximately 3 pages of the RECORD, at a cost of $240.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

OUR NATIONAL SECURITY

(Address by David Sarnoff, chairman of the board, Radio Corporation of America)

I am deeply and humbly grateful for this high honor the National Security Industrial Association has chosen to bestow upon me.

The James Forrestal Award is an accolade of unique distinction. It bears the name of a great patriot and symbolizes a great ideal to which he was devoted: The ideal of free and full cooperation between industry and Government, in the interests of the Nation's security. The fact that its first recipient was President Dwight D. Eisenhower adds a special luster to the award for me, as it will for all subsequent recipients.

Like so many others here tonight, I had the privilege of knowing and admiring James Forrestal. He was a man of immense talent, energy, and insight, and these he gave unstintingly to his country. In a time of general complacency after the war, when our military might was being dispersed in an excess of optimism and fatigue, he had the wisdom to discern the Soviet threat and the courage to fight for renewed preparedness. He was among the first to see the true face of communism and to recognize that only an alert America, morally mobilized, militarily strong, and economically sound, could hope to preserve freedom on this earth. He understood the tremendous power of America when Government and industry are marshaled on a common front. That is why he founded this association as a bedrock of national security, and it stands today as a living memorial to his foresight.

THE BASIC CONFLICT

The central reality of the present-day world is the struggle between communism and freedom—a struggle in which the United States and Soviet Russia are cast as the chief protagonists. The past year has demonstrated once more that this reality cannot be wished away or smiled away.

Now the brief summer of Moscow's bogus cordiality is over. The more dangerous of the illusions which flourished in the balmier climate are dying in the wintry blasts of renewed Communist attacks clear around the world. Everywhere the Soviets are today sowing mischief, sharpening existing troubles, tossing lighted matches into powder kegs.

The challenge being spelled out in Asia and Africa, in the Near East and Latin America, in the recent French elections and the spreading rash of so-called neutralism, is one that will impose upon us heavy burdens and sacrifices for a long time to come. Meeting it calls for clear heads, bold measures, and patriotic dedication. The reality is grim, but it is less dangerous than wishful thinking and delayed planning.

Such is the background as we gather to think together about our national security, in the spirit of men like James Forrestal.

The United States has given abundant evidence of its deep desire to maintain peace and of its devotion to the ideals of freedom and individual dignity. Unfortunately, however, we must face the fact that there are others in this world who are not motivated by the same high principles. And the bitter facts of experience in the present struggle place certain obligations upon all of us.

MILITARY PREPAREDNESS

Our first and obvious obligation is to achieve the strongest practicable military power and to maintain it "at the ready." This is indispensable survival insurance, whatever else we may do to contain and resist communism

This is the obligation not alone of government but of the entire citizenry. Modern weapons and methods of war-making have become too complex to be determined solely by budgets and appropriations. They demand many-sided cooperation by every segment of our economy and our society. We must be prepared to fight on land, sea, and in the air, and under the sea. We dare not settle for less than adequate well-balanced land power, sea power, and air power, impregnable in their efficiency and mobility.

In his state of the Union message to Congress, this month, the President spoke of "an effective flexible type of power calculated to deter or repulse any aggression and to preserve the peace." He spoke of "the maintenance of this strong military capability for the indefinite future." All Americans, I believe, subscribe to this basic concept and program.

There is a growing body of opinion which discounts the possibility of war on the theory that it has become too obviously suicidal. No doubt there is an element of truth in this view. Even Soviet Russia would think long and hard before unleashing the final catastrophe. But the stakes are too high to justify a gamble on this logic. As long as ruthless fanatics who disdain human life and over regards themselves as the chosen instruments of history control modern weapons, we dare not rule out the risk of a surprise attack upon us geared to confidence in a quick victory.

We know that the embers of limited local wars are smoldering at this very moment in a dozen highly inflammable regions. We know that the masters of the Kremlin are deliberately using the bellows of their propaganda to blow little fires into major conflagrations. We have no guaranty that small wars can remain localized. On the contrary, every one of them packs the danger of an unlimited global showdown.

Besides, the argument that war is outmoded because of its supreme destructiveness rests on the premise of a military stalemate, an equilibrium of forces between hostile worlds. But, merely to maintain that stalemate, based on a concept of dreadful parity, calls for unflagging military preparedness, especially in weapons still in the experimental stages.

What might have been the rate of the world if Soviet Russia, rather than America, had enjoyed a monopoly of the atom bomb for a number of years? What may be its fate in the future if the Kremlin should come into possession of even more devastating weapons before we do?

I was in the Army in London when German buzz bombs rained from the skies of Britain. But those bombs, terrifying in their day, seem like BB-gun pellets compared with modern ballistic missiles that can carry thermonuclear bombs and soar through space at fantastic speeds. The fact is that oceans, hemispheric distances, and Arctic wastes have been turned into highways for carriers of weapons that can destroy cities and their populations on a scale never before experienced by man. Scientific developments have wiped out the last margins of the immunity once enjoyed by our American Continent. But the habits of complacency bred by the long immunity still linger. Here, our obligation is to recognize the changes which have come upon us so suddenly and to adjust our sights accordingly.

GUIDED MISSILES

I have in mind especially the challenge of guided missiles, not only the intercontinental ballistic missile but the types, of shorter range but no less destructive, that can be launched from submarines.

The guided missiles—the so-called ultimate weapons—will greatly influence political as well as military thinking throughout the world, until and unless a reliable defense against them is achieved.

Our able Secretary of Defense, the Honorable Charles E. Wilson, was reported in the press on December 20, 1955, to have "estimated that the intercontinental ballistic missile, capable of carrying a nuclear bomb for a warhead, might be attained in 5 years." The same press reported quoted Mr. Wilson as having said that he did not know whether this country was ahead or behind Russia in guided missiles. He pointed out that Russia had taken a great interest in this field since 1945.

Five years is a very short time, even as measured in the life of individuals, let alone nations. And we know that dictators can and do use their power to force the last ounce of strength from their people on crash programs. Standards of life, places of residence, choice of occupation, hours of labor, and rates of pay, are determined for the workers by their masters.

By these brutal methods, supplemented by stealing secret information from free people, Soviet Russia advanced its time schedules and achieved a position in the field of nuclear weapons and airpower that endangers the survival of freedom in this world.

We abhor these brutal methods of compulsion practiced in the slave world. We want not part of them for ourselves or for others. But to secure the blessings of freedom and to preserve the dignity of the individual we must be willing and ready to make whatever sacrifices may be necessary. We must meet the menacing competition whereby world communism has perverted science and technology to its evil purposes.

It would be folly for us to take too lightly the warning by Soviet Premier Bulganin, only a few weeks ago, that "rocket missiles which have been developed, particularly over the past few years, are becoming inter-continental weapons." This long-range missile—the so-called ICBM—carrying a cargo of nuclear devastation, is expected to be able to leap the Atlantic in a matter of minutes.

For the sake of our own security and the survival of our civilization, we dare not permit the Kremlin to acquire even a temporary monopoly of such horror weapons. The Moscow leaders would not hesitate to exploit the advantage in order to blackmail the rest of the world. Not necessarily the use of these weapons, but the mere threat of their use could serve the Soviets' purposes in the cold war they wage so relentlessly.

Under President Eisenhower's stimulation, certain organizational steps are now being taken to improve the coordination of our efforts and to accelerate practical developments in this area. It is conceivable that the time can be cut. And we have reason to fear that it is being cut by the enemy. The crucial factor is the degree of acceleration that can be brought to bear on this critical problem. The question is how quickly will the new organizational concept be translated into dynamic action at all working levels?

The peculiar nature of the missile-bird—especially the ICBM—poses extraordinary problems of research, development and production, all at the same time. This calls for the mobilization of men with the best brain power, imagination, ingenuity, initiative and drive, that can be found and obtained. Fortunately, a number of such men, directly and indirectly connected with our armed services, already are hard at work on this project.

Responsibilities can be delegated and organization charts can show them clearly. But leadership and decision are not supplied by charts. The system for securing the required results—in good time—must be built around men as well as departments. This is especially true in huge and complex establishments.

The dividing line between research and production is always a difficult problem that calls for wisdom and experience. In this extraordinary situation, it calls for even more. It demands bold, prompt, and definite decisions if a useful product is to be made available in time to meet the possible emergency.

We are fortunate that our Nation has the men, the resources, and the experience with which to meet this pressing problem. In the existing circumstances and present stages of development, it would be impractical to duplicate the physical and operational setup of the Manhattan project which developed and produced the A-bomb, or to create a new agency independent of the Department of Defense, such as the Atomic Energy Commission which developed and produced the H-bomb.

But the lessons learned and the experience gained in producing these nuclear bombs—where happily we did win the race—must not be ignored in our present efforts to develop and produce guided missiles. They indicate the type of leadership, direction, coordination, and supervision that must be supplied continuously by the topmost echelons. They emphasize the urgency of avoiding interservice rivalries and of resolving them promptly where they do appear.

As commander in chief and chairman of the National Security Council, the President should have presented to him, at frequent intervals, realistic reports which would enable him and the Council to keep a close check on progress or lack of progress in this area. Their superior authority permits them to take whatever action may be necessary to expedite results.

Because of the incalcuable importance of the guided missiles program, I believe that an informed public and an informed Congress will understand and support whatever it may take to meet the pressing and dangerous situation. It was Lord Nelson who said long ago, "Five minutes may make the difference between victory and defeat." Today we must edit his dictum to read: "The first 5 minutes may make the difference."

TECHNICAL MANPOWER

In this and in all fields affecting our national security, research and engineering are of surpassing importance. There is no substitute for brains, or for practical training in a technical age. Our safety and our industrial strength rest upon our success in expanding the Nation's reservoir of physicists and scientists, trained engineers and technicians. Our economy and national security alike will suffer seriously unless we solve this problem promptly and vigorously.

Science and technology are the very hallmarks of American civilization. It comes as a shock, therefore, to be told that Soviet Russia is turning out engineers at a higher rate than we are. Rear Adm. Lewis L. Strauss, the able Chairman of the Atomic Energy Commission, is in a good position to appraise the problem. His warnings must be taken seriously.

"Too many of us," he said recently, "have fallen into the easy attitude of assuming that the Russians * * * could never match use in scientific initiative and progress. This was dangerous self-delusion. Actually, the emphasis which the Soviets are placing on science and particularly on the training of new young scientists and engineers, presents a real and growing challenge to the free world." He summed it up well when he said: "This is the cold war of the classrooms."

According to one study, Soviet Russia in the 26 years between 1928 and 1954 graduated 682,000 engineers as against 480,000 in the United States. Last year Russia graduated twice as many engineers as we did. One reason for this, of course, is that a police state can compel its youth to enter careers most useful to the state. It conscripts brains even as it conscripts bodies.

A lack of qualified teachers has developed at grade levels for subjects like physics, chemistry, and mathematics. In some areas, New York City for example, teacher recruitment in mathematics and the sciences is causing considerable concern. Certainly the fact that teachers are underpaid, that the ablest of them can do better in private jobs, is an important factor in the present situation that needs to be remedied. But we cannot wait for long-term remedies. Unless the immediate lack is met quickly, it will show up a few years hence in an even more critical shortage of trained personnel.

NATIONAL EDUCATIONAL RESERVE

In the presence of so many leaders of industry, I wish to offer a suggestion. It may not solve the problem completely but could go a long way toward a solution.

I propose the establishment of a National Educational Reserve comprising qualified teachers in mathematics, physics, chemistry, engineering, and related subjects, to be drawn from the technological ranks of industry. I have in mind the release—and with full pay for at least a year—of a reasonable number of men and women for teaching assignments in their local schools. This unique reserve could also mobilize those who have reached the retirement age but whose knowledge and experience would make them inspiring teachers. In addition, it could include qualified people willing to volunteer their services to teach in night schools without giving up their industry jobs.

The number of teachers recruited from any single organization would be too small to entail hardship for any one—but the total number comprising the corps could be drawn from such an extensive list of organizations that it would be large enough to give new impetus to teaching of the sciences in our school system. This would be especially true at the high-school level which is our present major bottleneck.

This educational reserve would, of course, have to be strictly an interim program, let's say for 5 years, to help meet an immediate situation. Moreover, whether the initiative is taken by industry or government, the plan itself would naturally be drawn with the consent and cooperation of school authorities who would prescribe the courses and regulate the instruction.

In some degree, such a plan would amount to the restitution by business of personnel it has siphoned off from the school system. Men and women who normally would have become teachers of the sciences have instead gone into industry, where the rewards are more enticing. I think it is fair to say, in fact, that in the current crisis industry has an obligation to help develop this kind of educational reserve.

Obligation aside, industry would be well advised as a matter of self-interest to help replenish the reservoir of trained men and women by stimulating relevant studies at the lower educational levels. Industry will need more and more technically trained people for its own expanding operations.

Because of their practical experience, teachers in the educational reserve corps would bring the breath of living reality into the classroom. They would help restore the sense of adventure to technical careers and inspire many an able and imaginative student to follow the scientific and technological disciplines into the college years. Enthusiasm is contagious.

To make the project attractive, teachers in the reserve corps should be given recognition and status, through membership in an organization somewhat similar to the various military Reserves. It should be set up on a national basis, perhaps created by an act of Congress.

I have presented this concept in broad terms. There are many details to be discussed and formulated by educators, representatives of industry and interested official agencies. But I trust that the basic idea has enough potential merit to justify closer examination.

MILITARY RESERVE FORCES

This reference to an educational reserve brings to mind the no less vital problem of military Reserves. When we think and plan for robust defense, we cannot overlook the need for large and strong Reserve contingents. These are essential elements in any long-range military planning. Indeed, the traditional American scheme has always been a relatively small active force backed by trained civilians who can be mobilized on short notice to meet an emergency.

The tremendous importance of this aspect of our security has been sharply impressed upon me in recent months, since my appointment by the President as Chairman of the National Security Training Commission, which has specific duties to perform under the Reserve Forces Act of 1955.

It is common knowledge that our Military Reserve strength is now far below requirements. The purpose of this act is to recruit and train enough civilians to make our country safe and strong over the long pull. The job is to get the story more clearly and effectively to our young manhood and their parents. Efforts in this direction are now underway and we hope for a better response than there has been so far.

CIVIL DEFENSE

No discussion of national security would be complete without earnest consideration of the knotty subject of civil defense. We have a solemn obligation to be as well prepared as possible to cope with any emergency caused by war, and especially with the consequences of a surprise attack upon us with nuclear weapons.

It is true, alas, that we cannot prevent colossal destruction of life and property. But that, far from canceling out civil defense, makes it more important. Its job is to reduce the magnitude of the destruction, to guarantee the country's ability to carry on, and to maintain its capacity for effective retaliation regardless of the extent of the damage inflicted. We must be geared to absorb losses and to minimize their effects.

A negative, defeatist attitude has no place in a program for victory. The fact that there are limitations on what even a well-prepared civil defense can accomplish is certainly no excuse for failure to plan as effectively as human foresight, ingenuity, and devotion allow.

The very existence of a first-rate civil-defense program would serve as a deterrent upon a would-be aggressor tempted to seek conquest through a surprise attack. He would hesitate if he knew that, no matter how deadly his initial blows, nothing could prevent us from striking back and carrying on.

Some months ago I was asked by the Governor of my home State—Gov. Averell Harriman, of New York—to outline my thoughts on this subject for presentation to the governors' conference held in Chicago on August 5, 1955. In response to his request, I prepared and submitted a memorandum on civil-defense planning. I pointed out that our present effort suffers from at least two basic weaknesses:

First, despite the fact that nuclear bombs do not respect State lines, there is no comprehensive and coordinated national plan. Instead we have a confusion among three largely autonomous levels: Federal, State, and local.

Second, we lack clarity in the relations between civil and military high commands, though under the new conditions the problems of military and civil defense are practically inseparable.

It seems to me imperative that these weaknesses be cured promptly. I think you will agree that civil defense, involving the entire population, demands as much discipline and as clear lines of authority as does military organization. The alternative is chaos. Today the penalty for failure in civil defense, too, can be defeat.

COLD WAR

I come, finally, to the phase of national security which has long seemed to me second in its urgency only to purely military preparedness—the cold war.

As I said at the outset, the Soviet masquerade of moderation is ended. We have learned that the Communists, like Hamlet's uncle, can "smile and smile and be a villain still." The cold war—pronounced dead prematurely by some—is alive and on a rampage. It is back to monkey business as usual, and bursting through our defenses into ever new regions tagged for Communist conquest.

We are faced squarely and sharply by what the President has just described as methods of "division, enticement, and duplicity." We can anticipate new explosions of Communist-inspired subversion and civil strife, new and more vicious anti-American lies, riots, bluster, and blackmail.

Do we have the clearheaded wisdom to meet this crowding menace as resolutely and as massively as we would meet a hot war? Evidently President Eisenhower had this in mind when, in his state of the Union message, he prescribed: "The waging of peace with as much resourcefulness, with as great a sense of dedication and urgency, as we have ever mustered in defense of our country in time of war."

James Forrestal was well aware that a nation's security is not measured by military factors alone. "The great mistakes we made during the war," he wrote in his diaries, "were caused by America's failure to realize that military and political action must go hand in hand."

This insight into the last World War is even more pertinent to the present world-wide cold war. The challenge to our civilization is posed by an enemy whose most effective weapons are political and psychological. His victories are being scored primarily by propaganda, infiltration, incendiary diplomacy—and occasionally through our own mistakes.

Precisely because we are determined to head off a nuclear showdown, we must forge adequate counterweapons in areas where we are being outmaneuvered and routed by the enemy. Last April I submitted a memorandum to the President outlining "A program for a political offensive against world communism." It received considerable attention at home and even more in Soviet Russia, where their attacks upon me in their press and over their radio flattered and amused me. The Kremlin hierachs are understandably alarmed when anyone trespasses, even in words, upon their dominance in cold-war strategy and tactics. In that memorandum I said: "The primary threat today is political and psychological. That is the active front on which we are losing and on which, unless we reverse the trend, we shall be defeated. For the United States and other free nations defeat of this sort would be as catastrophic as defeat in a shooting war. Whether we freeze to death or burn to death, our civilization would be equally finished."

Everything that has happened since Geneva seems to me to have underscored the reality and urgency of that threat. The American people have never refused to make sacrifices in time of emergency. They should be apprised that the cold war is a real and continuing emergency. We must avoid the wishful thinking that seeks refuge in theories of peaceful coexistence or hopes that the mad bear will somehow evolve into a gentle lamb.

Our responsibility is to bring to the conduct of the cold contest the necessary efforts and brains and resources for clear-cut victory. Our political counter-strategy has to be at least as broad, as intensive, as minutely planned and as flexible as the enemy's

One of the recommendations in my memorandum suggests the manner by which I believe such a mission could best be accomplished:

"We should organize our efforts to win the cold war on a basis comparable to our organization for winning a hot war which we seek to prevent. To this end it is recommended that a Strategy Board of Political Defense be set up to function as the cold war equivalent of the Joint Chiefs of Staff, on the military side. Top representatives of the State and Defense Departments, CIA, and USIA should be members of this Board. Its activities must be effectively coordinated with all departments and agencies of our Government concerned with this effort. This new strategy board should function directly under the President and its head should have Cabinet status."

I am aware that committees already exist to coordinate the efforts of Government departments and agencies in the field of psychological warfare, or, as I prefer to call it—psychological peacefare. However, these committees function at subordinate levels and their authority is correspondingly limited.

Of course, it is wise to coordinate, but it is vital to create new ideas, to initiate new plans, and to devise new methods for meeting the shifting scenes and the constant challenge on the global fronts of the cold war. That is why I recommended a Strategy Board for Political Defense whose responsibility and authority would be equal to those now assigned to the Joint Chiefs of Staff for Military Defense.

With an affirmative policy to win the cold war and an effective organization to implement that policy, I firmly believe we can win this battle for the minds of men. We can crash through the fogs of falsehoods and curtains of jamming. We can make the truth more productive than the Kremlin's lies.

Our country's voice—not only the Government's but that of our trade unions, farmers, veterans, women, religious and cultural leaders—should be heard around the world. We must speak for the silenced in the dark expanse of Soviet tyranny, and enable those who have escaped to freedom to speak to their countrymen.

The foremost American spokesman for labor, George Meany, said recently in urging an all-out cold war offensive:

"We must exploit the political differences and economic difficulties within the Soviet empire. We must do nothing to ease Moscow's difficulties with the satellites. * * * In the diplomatic field, we should do nothing to help build up the authority of the new regime among the Soviet peoples."

Only this kind of thinking, translated into courageous and imaginative action, can keep us from losing the cold war which the Communists now wage on economic as well as political fronts. The ruble now competes with the dollar and our economic Marshall plan is being imitated by a Marshal Bulganin plan.

What the Kremlin fears most is a forthright alliance between the free world and the restive, discontented masses in its prison-empire. Comrade Khrushchev jumped as if he had been stung when the President and other Americans beamed Christmas messages to the satellite peoples holding out the hope of ultimate liberation. That's the most vulnerable spot in Moscow's political anatomy.

Let the West and its allies make it clear that they will not permit the fulfillment of the Soviet boast that this will be the century of Communist triumph. Let them proclaim, as clearly as the Communists proclaim their intentions, that the victory of freedom for people in the entire world, the Russian people included, is our inflexible goal.

Let us reaffirm our conviction that the free-enterprise system, operating under a free government, can defeat any economic offensive launched by the Communists. We must carry that conviction, particularly to peoples in the critical and strategic areas, by wise and bold policies and by resolute and diplomatic actions in the fields of foreign trade and foreign aid.

Any intelligent American who surveys the world we live in knows that the conflict between communism and freedom is the problem of our time. Because we do not hear the thunder of falling bombs, we sometimes find it hard to grasp that a decisive conflict

is now underway, and that if we lose it mankind may need a thousand years to escape from the ensuing nightmare.

It is not my intention to spread alarm. I am simply urging that our young and vigorous Nation, the strongest on earth, resolve not to lose its own freedom and thereby the freedom of all humanity by doing too little too late. This applies to political strategy, military strength, civil defense, economic and scientific vitality, and the challenge of the cold war.

These and more comprise the elements of a gigantic and closely intermeshed task confronting our Nation as the year 1956 gets underway. It will test to the limit not only our physical stamina and material resources but our moral fiber.

I do not doubt that we shall meet this test as America has met and fulfilled other major obligations on the road to greatness. We enjoy one supreme advantage. Unlike the enemy, we do not have to rely on distortion and chicanery. The weapons we can wield are freedom, justice, peace, faith in God.

Let me conclude by drawing on the wisdom of James Forrestal, to whose memory this gathering is dedicated. This is what he said in October of 1947:

"The surest way to avoid war is to make it clear to any possible group of enemies that the risks of engaging us are too great to make it worthwhile. At the same time we must exercise the patience that should also accompany the possession of strength."

American Prestige Here and Abroad Demands a Home for the National Collection of Fine Arts—I

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, on the opening day of the present session I introduced a bill, H. R. 7974, to amend the joint resolution of May 17, 1938, to provide for the construction and maintenance of a National Collection of Fine Arts Museum on the site set aside for an art gallery thereunder, and for other purposes.

My reasons for introducing this measure and some facts regarding the National Collection of Fine Arts are developed in the following statement:

AMERICAN PRESTIGE HERE AND ABROAD DEMANDS A HOME FOR THE NATIONAL COLLECTION OF FINE ARTS

(By Representative FRANK THOMPSON, JR., Democrat, of New Jersey)

It is because I believe that the few thoughts and hopes I am going to address to you today are deep in the heart and the conscience of every American that I shall speak with candor and, I trust, with conviction the feelings I have long nourished for the creation of a national collection of fine arts museum.

It is because this is an audience sympathetic to American art and its flowering tradition that I am convinced I can embark on my adventure of this afternoon and know that I shall have henceforth cooperative allies in you—men and women of the arts.

For this is a scheme to establish here in the Capital of the United States the world's greatest reservoir and monument to the artistic values of civilization.

We propose—while including all great art—to emphasize in the national collection of fine arts museum the genius of America.

We are emerging—I said I would be candid—from a dismal, long-held national inferiority complex.

Against this setting on the cultural side we have seen radiating to mankind everywhere from this sacred soil in the Capital of the United States, a vast consciousness of the grave and profound responsibility for leadership that rests on our people and on their elected leaders, in the limitless struggle we are now in between the slave and the free world. The immediate weight of this leadership and this responsibility is expressing itself in a congeries of programs that serve to protect the free world globally.

It is expressing itself in diplomatic arrangements of the most vital consequence. Upon these factors the survival of our kind of world depends. We see its focus in the United Nations. And again we are making our passion for peace and freedom manifest by a system of giving and helping which, for our purposes this afternoon, we may simply call: Foreign aid.

All of these extraordinary acts of American leadership since World War II, history, I believe, will applaud down through the ages and as long as the chronicles of our time are written and read.

But at the base—as of now—we have one major, one shameful, one incredibly witless blank, one zero, in our national life. I prefer to believe that we lack on the art front of American life the business aggressiveness and the habit of attack and success we have so brilliantly cultivated in our commercial, our industrial, our financial levels of action. As an American I rather regret than John Singer Sargent and James A. McNeill Whistler found life abroad so much more hospitable to them than life in America. I rather regret that American genius had first to be recognized in London and Paris before it won appreciation in the United States.

How many generations is it now that we in the United States have been harboring a depression of the arts, and a rude and unjustified self-abasement toward American culture?

It is this we now propose to remedy.

For it is my conviction that the United States—and particularly the Capital of the United States—stand at this moment on the threshold of a great American renaissance. These beginnings of a golden cultural dawn are manifest in our national concern for architecture related to our own environment. They are manifest in our genius for the creation of new materials, art serving as the handmaiden to utility. We manifest it in our concern for art collections as national treasures in contradistinction to individual holdings. The renaissance is dynamically manifest in the sweeping proposals for bold architectural changes in the Capital, in the rehabilitation of whole areas, in proposed changes to the Capitol Building itself, and in plans for expansion and improvement on all sides with an eye both to the artistic and to the utilitarian.

For wherever it is fitting we propose to join beauty with usefulness in a single mold.

This manifestation of the American renaissance is not lacking certainly in science, which is a corollary of art in the advance of civilization. And it is brilliantly apparent in American literature where we have always been strong and where today we have an increasing number of Nobel prize winners. Will it be denied that we stand now perhaps in the forefront in the art of the theater and its related fields, and foremost in the field of communication media?

For the fine arts in their many fields we have an ambitious project afoot. It forms part of the over-all plan for the Capital. It comes under the aegis of the recently established District of Columbia Auditorium Commission, to plan a national civic and cultural center in Washington. The project I am discussing today, however, is limited to a National Collection of Fine Arts Museum. Those of you who attended the hearings held by the District of Columbia Committee on my bill and others to create the new Commission may recall that I said it was my hope, as the original sponsor of the legislation, that the Commission when established would assist in the early building of the National Collection of Fine Arts Museum. I said at that time that it was this great museum, authorized by the Congress in 1938, that I had in mind for the fine arts part of my proposal which called for a national "civic auditorium, including an Inaugural Hall of Presidents and a music, fine arts, and mass communications center." These projects, and others, such as the Zeckendorf Southwest Redevelopment Plan, for beautifying our Capital City form part of the superb sweep of ideas that accentuate what I have been perhaps extravagantly calling the American renaissance.

All I ask as an elected Representative of the people, and all that is asked by the dedicated Americans in Congress, in the arts, in the civic, the industrial, the financial life of this Nation, who are joined with me in this great endeavor—all that all of us ask—is that this dynamic upsurge of valid American pride in America, be given its logical focus here in the Capital of the United States of America. Here all the 48 States, here all levels of American life, can be united and joined in a common endeavor for the prestige our people have earned by their own striving and achievements. It is this prestige in the arts, mostly the American arts, that we hope to use as a counterbalance to the enormous progress we have made as a Nation of wealth and production. Thus we can display what we have known all along, but what the rest of the world has been induced to ignore: That this is a Nation devoted as much to greatness in the arts—its own and the arts of other peoples—as it is devoted to democratic government, to creature comforts, to the internal combustion engine, and to unprecedented progress in invention, in industry and in finance.

There are two points I must clarify at once lest we fall into the great error of undignified self-adulation and act as if this proposal for a National Collection of Fine Arts Museum is some happy, bright idea we have suddenly and accidentally stumbled upon.

The emphasis to be sure will be on American art.

But the distinguished people already active in this project and who, of course, understand its magnitude, do not propose that we shall in our museums and galleries here in the Capital, juxtapose a collection of American art, in any spirit of competition or rivalry with European and world art. For of course European art goes back into antiquity; ours is only 150 years old. We aim rather to show each to its best advantage, permitting the whole to reveal the universality of art. We propose giving American genius its due as we have so lavishly given European and other genius their due. In giving the fullest regard for the high points in all civilization we shall at the same time give some courteous recognition to our own, providing it with a niche for itself commensurate with its distinction, and with our means. We want a magnet here in our Capital, a magnet of cultural eminence which mankind everywhere will appreciate and honor.

We have already done all this for European art through the Mellon Gallery and other galleries. What—if we succeed—we are doing now, is giving at long last to our own, our American art, a uniquely national home, on a uniquely national plane of dignity and grandeur, compatible with our po-

sition as the Nation which Winston Churchill has described as the greatest since the Roman Empire.

There you have broadly the essence of the idea.

Far from being a bright idea that just happened along it has, in principle, a long history:

The Congress directed more than a century ago that the Smithsonian Institution, then being established, form a gallery of art for the Nation. The Congress had even before that granted an act of incorporation to the National Institute, a private society, whose collections were later to be given to the United States. In 1840 this chartered association began its assembling of art objects. In 1849 the Smithsonian Institution began the collection of painting and sculpture.

These were united in 1862 in the Smithsonian.

Now it happens that the Smithsonian, because of its congressional sponsorship in 1846 under the terms of the will of James Smithson, of London, England, and because of the high caliber of its administration down through the years and at present, has always been the organizational center and keystone of the Federal outlook on American art. It is built into the American tradition and it has built into it the executive, the legislative and the judicial authority. Its head is the President of the United States. Its membership includes the President's cabinet, the Vice President, and the Chief Justice of the United States. It is governed by a board of regents which includes representatives of the three branches of Government and six private citizens. Policy is carried out by an executive officer who is the Secretary of the Institution. The present incumbent is Leonard Carmichael, a former college president.

Thus the seed for a National Collection of Fine Arts Museum took root a full century and more before our day. In time the Institution's art collections—as they grew—began to earn recognition. Names like Mrs. Harriet Lane Johnston, niece of President Buchanan; Charles L. Freer, William T. Evans, Henry Ward Ranger, Alfred Duane Pell, Ralph Cross Johnson, and others, are identified with bequests that won the Smithsonian national and international fame. In fact, by 1920 Congress decided to provide the Smithsonian collection with a director and staff.

Here, even before the beginning of the Mellon Gallery, was one of the signs that Federal guardianship of American art and other art had come of age. I cannot find in the history of the relationship of Congress to American art, that Congress has been penurious, or limited, or narrow in its horizons. On the whole I incline to the feeling that in this area at least Congress has even been ahead of the public consciousness. I find that in 1924 Senator Henry Cabot Lodge, a forbear of the present Representative to the United Nations, tried to author a project approximating what I am recommending today and might have succeeded but for his untimely death. In 1930—which was not a good year—the Smithsonian struggled and failed to get funds to house its collections, greatly increased by the $5 million Gellatly bequest of the year before. This failure had the effect of turning the only space the Smithsonian had into a monumentally cluttered attic and an overcrowded curiosity shop.

America's relationship—governmentally—to American art had now come to an impasse.

We had the artists.

We had the art.

We lacked the space.

American Prestige Here and Abroad Demands a Home for the National Collection of Fine Arts—II

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, the Congress directed, more than a century ago, that the Smithsonian Institution, then being established, form a gallery of art for the Nation. The Congress had even before that granted an act of incorporation to the National Institute, a private society, whose collections were later to be given to the United States. In 1840 this chartered association began its assembling of art objects. In 1849 the Smithsonian Institution began the collection of painting and sculpture.

These were united in 1862 in the Smithsonian.

The text of my bill, H. R. 7974, "to amend the joint resolution of May 17, 1938, to provide for the construction and maintenance of a National Collection of Fine Arts Museum on the site set aside for an art gallery thereunder" appears at the end of my statement.

The concluding portion of my statement regarding the need for a gallery to house the $10 million worth of art represented now in the National Collection of Fine Arts follows:

That was the situation until 1937. Then the Andrew W. Mellon collection and a magnificent $15 million building—modeled after and much bigger than the Emperor Hadrian's Pantheon in Rome—broke like a new dawn on the melancholy status of art in the United States. That, and the impetus of the world situation since then, projecting the United States into a position where the leadership of mankind was thrust upon her, compelled a mantle of dignity which clothes us today. It is to this new height that we are now raising the stature of our pride. The dual Mellon gift—the collection and the building—is what we know officially today as the National Gallery of Art, on the north side of the Mall between Fourth and Seventh Streets, in Washington, D. C.

It is an incomparable palace of mostly European art.

It too is an integral part of the Smithsonian Institution of which it is one of the Bureaus.

Thus the Mellon gift is now the National Galley of Art. The Smithsonian's collections come under a separate and independet heading as the National Collection of Fine Arts. For this we now propose to establish a museum. That explains the name: National Collection of Fine Arts Museum.

Neither the National Gallery of Art nor the proposed National Collection of Fine Arts Museum impinges on the other. Each has its special emphasis which marks a place for it in what you have noticed I delight, it seems, to call the American renaissance.

The two galleries joined together would be incongruous, culturally, and artistically undesirable, even if it were feasible.

Separately they make sense within the complex of bureaus constituting the Smithsonian Institution.

But my idea for a National Collection of Fine Arts Museum has even firmer and more positive roots in recent legislative history. The 75th Congress on May 17, 1938, authorized an appropriation of $40,000 to secure, preferably by competition, designs for a Smithsonian Gallery building on public ground on the Mall (S. J. Res. 599). Congress wisely authorized—and I hold this one of the most important features of this legislation—that private funds be accepted for its construction. Private funds were also authorized for the purchase of works by living artists. The legislation made possible the right to acquire private funds for the financing of exhibitions everywhere in the country both of current and of past works of art.

Consequently the Alice Pike Barney Memorial Fund—now $34,000—poured into the Smithsonian to encourage American painting, sculpture and design through exhibition and purchase. In 1951 a traveling exhibition service was established. This is today cooperating with the Department of State and the United States Information Agency to present American art, historical and contemporary, abroad.

Here is one phase of the free world's struggle for the minds of men.

But this congressional authorization which goes back 18 years has lain fallow. It is my aim to spearhead in this Congress measures which shall breathe the breath of life into it anew. It is one of the abiding satisfactions of my career in Congress that I introduced House Resolution 21, calling for a music, fine arts and mass communication center and that this legislation, signed by the President, is now Public Law 128. This measure established the D. C. Auditorium Commission.

The posture of this whole Capital picture is therefore this:

We have, as a matter of tradition, the Smithsonian Institution, created precisely for—I quote—"the increase and diffusion of knowledge among men." We have the National Gallery of Art, the Mellon Gallery. We have in prospect, under remarkably competent and public spirited leadership, the civic center and auditorium for the Capital, another $15 million enterprise, for the support of which I am proud and eager to give—as I already have—all my heart and all my effort. We have in the Smithsonian collections some $10 million worth of art looking desperately for a decent home, a collection to which we propose to give as much as possible a definitively American emphasis. It is for this that we are recommending the proposed Capital domicile for these neglected art treasures to be called the National Collection of Fine Arts Museum.

It is with this project that we shall be bringing to realization the legislation of authorization of 1938. As it stands now this legislation is a dead letter and a reproach. It stands as a document proclaiming that the will of the Congress was never implemented. What we have is a form of words that turned its back on the deed and made the Congress say what never bore fruit.

To rejuvenate this 1938 legislation, to give it body, strength and action, I have myself as recently as January 3, this year, introduced into the Congress H. R. 7974. My resolution asks that the Board of Regents of the Smithsonian Institution shall utilize the assistance and advice of the Commission of Fine Arts, the District of Columbia Auditorium Commission, the National Capital Planning Commission, the Board of Commis-

sioners of the District of Columbia, the District of Columbia Recreation Board, and the District of Columbia Redevelopment Land Agency. The task is to be borne of mutual understanding and the settlement made upon expert and pertinent advice. There are 21 members of an advisory board to be appointed by the President from among our private citizens. The resolution authorizes the appropriation of such sums as may be necessary, in addition to the funds otherwise received, to carry out the purposes of this joint resolution.

That's the story as of now on the action front.

What my plan strives for is the elimination quickly of all ground for dispute and differences of view by common consultation on plans for geography, for financing, for organization. It is to be integrated with kindred projects on a grand scale. We seek to keep this sweeping design for the expanded grandeur of our Capital above the clash of politics and aloof from battle. This proposal bears the imprimatur of the Congress of the United States expressing what we all feel is the will of the people. It will be welcomed by the owners of the great private art collections all over the world, many of whom may become its benefactors. The President, himself an amateur artist, is not without consciousness of this project, and, on the basis of his past actions, is certainly sympathetic. Former President Truman has always had a warm spot for planning of this sort.

It has, of course, the support of such men as Chairman David E. Finley, of the Commission of Fine Arts; of Secretary Leonard Carmichael, of the Smithsonian Institution; of Lloyd Goodrich, chairman, Committee on Government and Art; of Harold Weston, vice chairman, Committee on the Arts and Government; and of many other cultural leaders. Many of its stanchest devotees are among my colleagues in the House and the Senate.

But, unless I guess the American people wrong, it is they who have the awareness that will seize upon this American renaissance and make it work for the good of America and the world and for the prestige and dignity of the Capital of the United States.

When it is all said, what are we asking for?

We are asking that America, in the arts as in other fields of human endeavor, live up to the great destiny that is now hers. No American city as of this hour can lay claim to being the art center of the United States. But the Capital of this country should be. New York City has wealth and diversity. Its art collections are enormous and highly worthy. But they are lost in the vast and overwhelming traffic of commerce and business, banking and industry, shipping and municipal affairs, and the hurried and harassed problems of New York's own enormous population. We know that we cannot by legislation setting up a museum of art collections turn on a faucet that will yield us a generation of artistic genius. But we can provide what genius we have with a hospitable environment and thus nurture a climate in which greatness may develop. The project is in keeping with our greatness. The time for lifting ourself as a nation out of the doldrums of artistic depression is now.

Here the Capital of the United States presents a plateau which has architectural majesty. It is nationally representative. It signifies prestige. It cannot be blurred by the rivalry of great trade and the concentration of industry, finance, and enormous populations in congested zones.

Here it is elevated into an atmosphere of national dignity.

It is this dignity that overwhelms the visitor to the Capitol.

What in the end we shall have is an art center both national and international, just as our influence as a Nation has become global. We shall have a national collection of fine arts museum that will be expressively American. It will supplement and complement the National Gallery of Art which is essentially European in its content.

Both will grace our Capital as our Capital will grace the art center.

Dare we in this age of conflict for men's minds—dare we neglect the opportunity for education and persuasion offered us by the 10,000 people who daily come to see the Capital of the United States—2 million every year—18½ million of them having visited the National Gallery of Art alone in the last 10 years? Visitors—our own and from abroad—should always be persuaded to think of us as a people devoted to their political self-respect, to a high standard of living, and—eminently—to an enthusiasm for the best of western civilization.

There is the core of the argument that will earn us the respect we must have to fulfill the requirements of our leadership.

This art center, this National Collection of Fine Arts Museum would therefore not be just a cultural ship that, so to speak, merely passes in the night and is faintly remembered. It would not be a library hopefully shipped abroad on a sea of controversy. It would not be an exhibit even that goes on for a week and disappears. All of these strivings I am sure have their worth and are not to be disparaged. But this National Collection of Fine Arts Museum would be an enduring monument. It would serve as a sublime gravitational force made up of man's noblest achievements attracting here, on a note of respect and esteem, artists, scholars, art lovers, admiring peoples from everywhere, the world's youth and its students.

It would say its say in the language universal, the language of art against the background of the Capital of the United States and in rhythm with the very heartbeat of its Government. This city would then carry the message of America—that has been so sadly neglected—showing all peoples that ours is a Nation indeed of progress and of power, of respect for the individual, and of political justice, and it would—with great impact—show them that this progress is interwoven with our reverence for the greatness of the past, and our devotion to the art and the culture that testifies to the freedom of the spirit of man.

H. R. 7974

To amend the joint resolution of May 17, 1938, to provide for the construction and maintenance of a National Collection of Fine Arts Museum on the site set aside for an art gallery thereunder, and for other purposes

Be it enacted, etc., That section 2 of the joint resolution entitled "Joint resolution to set apart public ground for the Smithsonian Gallery of Art, and for other purposes," approved May 17, 1938, is amended to read as follows:

"SEC. 2. (a) The Regents of the Smithsonian Institution (hereinafter referred to as the 'Regents'), in consultation with the Administrator of General Services, are hereby authorized to appoint an architect or architects and other necessary experts and consultants, and to secure appropriate designs for a building to be constructed on the site above described. Such building shall be designed so as to permit its future expansion, with adequate parking arrangements and provision for landscaping its surroundings.

"(b) In carrying out subsection (a), the Regents shall utilize the assistance and advice of the Commission of Fine Arts, the District of Columbia Auditorium Commission, the National Capital Planning Commission, the Board of Commissioners of the District of Columbia, the District of Columbia Recreation Board, and the District of Columbia Redevelopment Land Agency, which shall upon request render such assistance and advice.

"(c) There is hereby established an advisory board (hereinafter in this joint resolution referred to as the board), which shall advise and consult with the Regents in carrying out their functions under this joint resolution. The board shall consist of 21 members appointed by the President from among private citizens of the United States who are widely recognized for their knowledge of or experience in, or for their profound interest in, one or more of the arts. In making such appointments the President shall give due consideration to the recommendations for nomination submitted by the leading national organizations in the fields of the fine arts represented in the National Collection of Fine Arts Museum. The term of office of each member of the board shall be 6 years; except that, of the members first appointed, 7 shall be appointed for terms of 2 years, 7 for terms of 4 years, and 7 for terms of 6 years. No member of the board shall be eligible for reappointment during the 2-year period following the expiration of his term. The board shall meet at the call of the Regents, but not less often than twice each year. The President shall from time to time, on the basis of the recommendations of the board, designate a member of the board to be its chairman."

SEC. 2. (a) Section 3 (c) of such joint resolution is amended to read as follows:

"(c) The name of the building shall be the National Collection of Fine Arts Museum (hereinafter referred to as the 'Museum'), and it shall be under the supervision and control of the Regents and the secretary of the Smithsonian Institution."

(b) Section 3 of such joint resolution is further amended by adding at the end thereof the following new subsection:

"(d) There are hereby authorized to be appropriated such sums as may be necessary, in addition to the funds received under subsection (a) of this section, to carry out the purposes of this joint resolution."

SEC. 3. Sections 4 (a), 5, 6, 7, and 8 of such joint resolution are amended by striking out "Gallery" wherever it appears and inserting in lieu thereof "Museum."

Address by Senator Potter at Salute to Eisenhower Dinner

EXTENSION OF REMARKS
OF
HON. CHARLES E. POTTER
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Monday, January 30, 1956

Mr. POTTER. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an address I delivered at the Salute to Eisenhower Dinner in Chattanooga, Tenn., on January 20, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The first thing I want to say to you folks tonight is "thank you." It is a real pleasure and a great honor to be here with you tonight.

Right at this moment in more than 50 cities across the country over 70,000 persons have gathered with one purpose in mind and that is to render a well-deserved salute to a truly great man, our President, Dwight D. Eisenhower.

I have always been a hearty supporter of President Eisenhower and extremely fond of him as a man and an individual and I hold the greatest respect and reverence for him as the most inspired leader of our day. The

record of Tennessee's support of Mr. Eisenhower proves that you feel as I do about him. And so I say "thank you" for the signal honor you have conferred upon me in inviting me to be here with you tonight.

The historic significance of this area forms a great chapter in the history of our country. Your land is beautiful, your recreation facilities are unlimited, the enthusiasm and progressiveness of your industrial and civic development is outstanding.

So my visit here is not only an honor but a real personal pleasure. Again I thank you for the warm and genuine welcome you have given me.

I'm willing to stand up here or anywhere and tell anyone that I think we've got the best political system in the world. Right away I'll agree with you that it's not perfect and it may never be perfect, but in this day and age it's far better than any other system anywhere in the world. It's a system that will involve everyone in the country if they're willing to be involved. It welcomes the participation of any and all.

Our political system is responsive to the participation of its citizens. It is flexible and it is sensitive to changing times and, as we all know, it's even good for a few laughs once in a while. One of the chuckles that I get out of our present political system is the fact that we can always seem to find members of our particular party not only at any place in the country but at any time in history. All we have to do is read a history book, pick out someone we like in times past and say, "Well, now, he is a good Republican." Funny thing about it is, a Democrat can pick up the same book and say, "Why, he's a good Democrat."

It is a natural desire to want to associate ourselves with the men who have been great leaders. It is history itself which outlines to us the great men of past ages but it is not always easy to see the great men of our own times. It is only occasionally that a man of our own times stands out so distinctly by his own character and his own accomplishments that he is known and acknowledged as a great man during his own lifetime.

It is a happy thing that our President today is such a man. It is a happy thing that our President is such an outstanding Republican. It is a happy thing that we can point today to his own outstanding personal achievement and to the outstanding achievements of the Republican Party under his leadership. Fortunately it is not necessary for us to wait for history to outline these achievements for us.

President Eisenhower in his own day has brought to this Nation the accomplishment of the Republican standard of "progress, peace and prosperity."

And so our purpose here tonight is not the erection of a great stone monument to a great leader of past history—ours is the much more pleasant task of merely throwing the spotlight of attention on the great monument of achievement which has risen before our very eyes under President Eisenhower's inspired leadership.

I can think of no better way to direct our attention to these achievements than through the President's own words in defining the Republican Party as the party of progress, peace and prosperity.

Said the President last September in Denver, "We want to be known for what we are—the party of progress. And if we are the party of progress, we must be the party of peace and prosperity because this is implicit in the term progress." Now progress is a relative thing. We have to know which direction we are heading, where we came from, where we were yesterday, where we are today and where we hope to be tomorrow.

One of the most discouraging things to a man cast adrift on the ocean in a lifeboat is the fact that the ocean looks all the same and as his boat drifts helplessly along he does not know whether he has progressed in any particular direction—he does not know how far he might have gone and he certainly does not know where he is going.

So to clarify our position, we need landmarks or stars upon which we can sight to determine our progress. There's no simpler way of doing that than to turn to the pages of our recent history and compare where we were 3 or 4 years ago with where we are today.

First of all, when the Eisenhower administration took office, we were at war. The Korean war which some chose to characterize as a police action was daily claiming the lives of American servicemen and claiming untold dollars that should have been devoted to constructive purposes rather than destructive purposes. Yes; we were involved in a Korean war which we dared not lose but which through a weird shackling of our own hands by the administration in office then we were forbidden to win.

When the Eisenhower administration took office, we were suffering from a certain kind of bigness. Now from time to time we've heard comments criticizing big business or big labor or something else that's grown so big as to endanger our public and national welfare. The bigness we suffered from then was big government. The Government was the biggest thing in the country and proud of it. It was a government whose instinct was to solve every problem through Federal interference, through Federal control or policing. Taxes and Government spending were the biggest they had ever been in the history of our country. And at that time government was trying to get even bigger.

Plans were being promoted which would have injected government into areas of private lives and private enterprise. Yes; big government was growing even bigger and crowding itself more and more into the lives and interests of the individual citizens of our country. And those were the landmarks just about 3 years ago.

Today we are at peace. The Korean war was concluded and we can thank God that an enlightened foreign policy under President Eisenhower's able guidance has prevented us from being swept over the brink into any more disastrous wars or police actions.

Today no lives of American servicemen are being sacrificed in futile combats anywhere in the world. Today no American dollars are being thrown into the bottomless well of destructive warfare. And today, although the cost of national defense has been cut, we have developed the most powerful United States Armed Forces the Nation has even maintained when not in a shooting war. This administration has discarded a crisis policy and adopted a policy of continuous combat steadiness for any contingency and in the President's own words, "Our security posture commands respect."

And as peace was secured, peacetime prosperity replaced wartime inflation in our national economy. We have experienced the highest employment in history. Our economy is approaching the $400 billion mark. It is at an all-time high. Inflation has been halted. Today people have more dollars to spend and each dollar buys more.

The decline in the buying power of the dollar has been stopped under President Eisenhower's Republican administration and it has not required big government to accomplish this. As a matter of fact, the Government has been removed from many activities competing with private business. For instance, the Government has sold synthetic rubber plants, sold the Inland Waterways Corporation (which incidentally had been operated for years at a loss). The Government no longer is competing with coffee roasting plants, has gotten out of the bakery business and the laundry business.

This Republican administration has stopped numerous Government commercial activities such as clothing repair shops, furniture repair shops. It is closing numerous activities of the same nature. And what's more, all Federal agencies continue to survey their commercial-type operations to recommend those that can be terminated.

The nature of the Government of the United States is important not only to the citizens of this country but to all peoples all over the world. As President Eisenhower has said, "Our world policy and our actions are dedicated to the achievement of peace with justice for all nations."

He has suggested positive moves to prevent further inroads of communism. His realistic program contains such points as continuing to maintain an effective system of collective security—use of the awesome power of the atom as a guardian of the free world and of peace—keeping in the forefront of human consciousness grave injustices which are still uncorrected, such as the bondage of millions of persons.

To sum it up, the President has said, "We must act in the firm assurance that the fruits of freedom are more attractive and desirable to mankind in the pursuit of happiness than the record of communism."

Now in order to maintain the peace and the prosperity which we enjoy, the President has set forward very realistic ideas. He says, "Over the long term a balanced budget is a sure index to thrifty management in a home, in a business or in the Federal Government."

"I earnestly believe that a tax cut can be deemed justifiable only when it will not unbalance the budget."

To anyone who has ever been responsible for keeping the books of the company or corporation or even for the housewife who keeps count of her own expenses in the home, that is clear thinking.

These things that I relate are only a few of the many major points on which our peace and prosperity rest today. Now you know that you can't enjoy such things as peace and prosperity by pure chance. The United States did not stumble into these conditions that we enjoy today. Peace and prosperity are the result of progress. And progress has to be based on philosophy.

In President Eisenhower's own words, "I don't believe that you can sloganize the kind of honest philosophy that the Republican Party is trying to promote in the United States. If we can live by that philosophy, however, then I think we have proved our worthiness to be the instrument through which the people of the United States carry on the job of government of the people, by the people,and for the people."

And he also referred to another quotation of Lincoln's to this effect, "The function of government is to do for the people what the individual cannot do at all or so well for himself and in all those things which the individual can do for himself the government ought not to interfere."

Experience in our own country has proved that when we free ourselves of unnatural governmental restrictions, then the intelligence and the initiative of individual people, and individual companies, and individual organizations will make us prosper.

And the Eisenhower Republican administration has redirected focus of authority so that it bears on the welfare of the individual. It has sought to lift up the American farmer, the American businessman (both large and small) and the American workingman, to change them from being just a unit in a big impersonal plan. Instead—to make each individual secure with his own human personality and dignity has been its goal.

That's a mighty good philsophy to have and there could be no greater man to carry it out than President Eisenhower.

The Presidency of the United States is today the most important and most exacting job in the world. By the grace of God we have a man who more than meets that task.

After a long and distinguished military career and after distinguishing himself in the field of education, now in three short years Dwight D. Eisenhower has proved that he is the world's greatest leader.

In the face of complex problems, highly divergent opinions, and controversial issues, he has built a teamwork in Government unlike anything ever before achieved.

If we will think back just a few years, we can easily remember that it was his great capacity for creating teamwork that so vitally influenced the outcome of World War II—welding together the often divergent policies of the many countries who were allied in their efforts to defeat nazism. He led the team onward until victory was achieved.

Now his Republican administration has established policies that have set this Nation on an unprecedented upward course. He has solidified our Nation's position as the indisputable leader of the free world.

In Dwight D. Eisenhower there is that combination of qualities which this troubled world of ours needs so often and finds so seldom. A man among men—a leader among leaders.

The President is indeed a remarkable man.

He has great reverence, great wisdom, and enormous patience for important things. He commands the respect of millions and the devoted loyalty of his close associates.

He dreams great dreams for the advancement of the people of his country and for all mankind, but is practical in their application.

His eyes are on the far horizons but his feet are firmly on the ground. He has a friendly and disarming smile and a delightful and contagious sense of humor which draws people to him.

In short, he has all the stature and yet all the humbleness of a truly great man.

Our progress under his administration has been great and we can expect that progress to continue to be great as we follow the enduring objectives of the Republican administration as outlined by Mr. Eisenhower in his recent state of the Union message. Here they are:

1. The discharge of all world responsibility.
2. Constant improvement of our national security.
3. Fiscal integrity.
4. Fostering of a strong economy and
5. Response to human concerns.

"Progress," Mr. Eisenhower said, "will be realized only as it is more than matched by a continuing growth in the spiritual strength of the Nation. Our dedication to moral values must be complete in our dealings abroad and in our relationships among ourselves.

"We have single-minded devotion to the common good of America.

"Never must we forget that this means the well-being, the prosperity, the security of all Americans in every walk of life."

He continued, "The vista before us is bright—the march of science—the expanding economy—the advance in collective security toward a just peace. In this threefold movement our people are creating new standards by which the future of the Republic may be judged."

Mr. President, there is real happiness in our hearts today because of your remarkable recovery since you were taken ill last fall. There is real happiness in our hearts for your great and undimished leadership of the Republican administration and of the United States.

Mr. President, there is great happiness in our hearts that we are able to recognize your greatness now, and that we may express this happiness that we have—and our thanks to you today.

Mr. President, we salute you for the unparalleled contribution which you have made to your country and to the world.

Address by Senator Lehman Before the Nationalities Division of the Democratic National Committee

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, January 30, 1956

Mr. LEHMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of an address I delivered at the congressional dinner of the nationalities division of the Democratic National Committee, held at the Mayflower Hotel, in Washington, D. C., on January 28, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH OF SENATOR HERBERT H. LEHMAN AT THE CONGRESSIONAL DINNER OF THE NATIONALITIES DIVISION OF THE DEMOCRATIC NATIONAL COMMITTEE, MAYFLOWER HOTEL, WASHINGTON, D. C., JANUARY 28, 1956

Tonight the nationalities division of the Democratic National Committee has come of age.

This notable gathering is an assembly not only of the nationalities division, but of the Democratic Party itself. It is an eloquent reflection of America, proud of its varied heritage, rich in its far-flung roots and traditions.

I am personally much moved and deeply gratified. Throughout my political and public life, which spans almost half a century, I have tried to represent in the councils of the Democratic Party the common interests of those many national strains which have poured into America across the years, and which made America. Tonight I see in this assemblage as impressive a cross-section of the Democratic Party, and of the Nation, as I have ever seen gathered in one group.

In this room I feel one of the strongest pulses of the Democratic Party. In this room I sense the heartbeat of America.

The nationalities division, and its leadership, are to be congratulated for a fine job of mobilization, and of inspiration too.

I congratulate that young and still rising star of the Democratic Party the four-times chosen governor of his State, who, in the brief period of his leadership of the nationalities division, has shown not only a deep understanding of its potentialities, but has given it a truly dynamic leadership—Gov. G. Mennen Williams.

My congratulations, too, to that patient, persistent, and pioneer worker in this field—an old, tried and true friend of mine, the mainspring of the nationalities division, Mish Cieplinski, our executive director.

And, of course, all praise to the chairman of this dinner, the first chairman of the nationalities division and now its honorary chairman, my beloved colleague and the dean of us all, Senator THEODORE FRANCIS GREEN.

And finally, but perhaps preeminently, congratulations are due to those devoted and dedicated men who make possible the achievements of the nationalities division, the day-in and day-out captains of the troops, the section chairmen, representing the individual nationalities.

But we are not gathered here tonight to exchange congratulations. This dinner, after all, is not the summit of achievement, but only the beginning of it. This gathering is but a mobilization for action in the field. The real work of the nationalities division is carried on, and must be carried on, at the State, district, and precenct level. The people who need to be informed, to be aroused, and to be politically activated, are there.

And so we come to the fundamental question: What is the appeal of the Democratic Party to those who can be reached through the nationalities division? What are the issues which will bring the American citizens represented here tonight to rally to our cause?

What do we stand for?

First of all, we of the Democratic Party accept, with our whole hearts, the premise that all who are American citizens, regardless of race, creed, color, or national origin—regardless of how recent or distant their roots in America—are equal before the law, and are equally good Americans.

We, of the Democratic Party, reject absolutely the concept of second-class citizenship, whether by law or by administrative practice.

I am not so sure that the Republican Party rejects this concept, too. For instance, it is alleged that there exists a pattern of discrimination, in Government employment, against naturalized citizens, and second generation citizens. And nothing very effective is being done about it.

And still today, after 3 years of Republican rule, the discriminatory citizenship provisions of the misbegotten McCarran-Walter Act stand unamended on our statute books. Nor has a single proposal been made by this administration to amend or modify those provisions.

Those proposals for amendment of the McCarran-Walter Act belatedly proposed by President Eisenhower, in this election year, make no mention whatever of the degrading status of second-class citizenship impressed on our naturalized citizens by that shameful law.

I shall not rest, you will not rest, and the leading spirits of the Democratic Party will not rest until the discriminatory citizenship provisions of the McCarran-Walter Act are amended. We are going to wipe out the insidious distinctions between naturalized and native-born American citizens now established in our law.

We are going to restore the status of American citizenship to what the Founding Fathers originally conceived it to be—a charter of equal membership in a great society of equals. Today, under the McCarran-Walter Act, citizenship is a kind of temporary license held at the pleasure of the Immigration and Naturalization Service of the Justice Department and the Passport Division of the State Department.

Let me tell you—you who do not know all the evils in the McCarran-Walter Act—that even native-born citizenship is not left undisturbed in this law.

If a native-born citizen goes abroad and gets a job with a foreign government, or with a company owned by a foreign government, he may be stripped, without even knowing about it, of his American citizenship.

I know of the case of a man born in Texas by the name of O'Brien who went to Mexico for a year and took a job with the Mexican National Railway as an engineer. Our Government ruled that under the McCarran-Walter Act, because the Mexican National Railway is owned by the Mexican Government, Mr. O'Brien, of Texas, has forfeited his American ictizenship.

A native-born citizen can lose his citizenship by voting in an election abroad. Some of you may recall how the State Department urged Americans of Italian extraction to return to Italy to vote in the Italian elections a few years ago and then took away the American citizenship of those who had voted.

Yes, my friend, these provisions of the law have got to be amended. And if they are going to be amended, it will take, I believe, a Democratic administration to do it.

I have referred only to the citizenship provisions of the McCarran-Walter Act, and to only a few of those.

There are also, of course, the immigration provisions. At long last, in this year of 1956, President Eisenhower has made some recommendations for the amendment of our basic immigration law. Some of these proposals are good. Most are inadequate. But I want to see the specific legislative amendments which the administration will advocate and support. So far we have heard only the President's general words on this subject.

Is this administration move to amend the McCarran-Walter Act going to be just a political show? Or is the President going to make a real effort to see that the act is amended? Is he going to use what the newspapers call his tremendous personal prestige to fight for these amendments? Or will he, having said some of the right words in his state of the Union message, sit back and let nature take its course? Which means, let the matter die—until campaign time? Will we have just some more pledges, and more hedges?

I hope, with all my heart, that President Eisenhower will, in this case, take a fighting stance and battle a bill of substantial amendments to the McCarran-Walter Act through the Congress. I will support him, insofar as the amendments are substantial. This is not a partisan matter. This is a matter transcending all considerations of politics and partisanship.

I want to say, however, in regard to one of the President's recommendations for amendment of the McCarran-Walter Act—the so-called pooling of unused quota numbers—that I regret very much the President's failure to recommend the total elimination of the discriminatory and bigoted national origins quota system. What a shame that we should have on our statute books a proclamation that we consider a Greek only one-two-hundredths as good American citizenship material as an Anglo-Saxon, and an Italian only one-twelfth as good. Yet the administration is not even willing to recommend that these disgraceful provisions be expunged completely from the law of the land.

If we are going to wipe out the national origins quota system and eliminate it completely in favor of a system of selection based on individual worth and merit, and not on the discriminatory ground of national origin, we shall need to arouse the American people. And then we shall need to elect a Democratic President to lead the fight that must and will be fought to achieve success and victory.

This entire benighted law, with all its discriminatory and unjust features, must go. It must be replaced by a fair and humane law which bars the undesirables and subversives yet opens the gate wide to the worthy and desirable. We must pledge ourselves, and the Democratic Party must pledge itself, to this task.

I said a few moments ago that the question of amending the McCarran-Walter Act is not a partisan question. I would be less than fair if I did not point out that there are, unfortunately, some Democrats who strongly favor this discriminatory law in its present form. There are Democrats who are just as blind and as xenophobic as many Republicans. But the spirit of our party strongly denies this narrow attitude and affirms a high faith in America, the melting pot; in America, the refuge of the oppressed and the downtrodden; in America the home of equality and opportunity.

There is another issue—which is also nonpartisan in theory—but where the hope of the future, in my judgment, also lies in the Democratic Party. I refer to foreign policy.

I judge that there are none in America who feel the importance of our foreign policy more keenly than Americans of foreign birth and recent foreign descent. There are none more vitally interested in our relations with the rest of the world, and in the victory of the cause of freedom over the cause of totalitarianism.

All of us, I know, wish only for that which is good for America. The goal of America in foreign affairs is peace, justice, and security for all nations—strength, unity, and understanding for the nations of the free world—and freedom, fulfillment, and well-being for all men and women everywhere.

All of us, or at least most of us, subscribe to these goals, regardless of party.

But these are ultimate and general objectives. Concerning them there is no real controversy. The real questions at issue involve specific policies toward specific areas of the world and toward specific countries: specific policies in terms of military and political strategy, trade policy, and foreign aid.

These will be the foreign policy issues of 1956. These will constitute the heart of this year's great debate.

President Eisenhower has urged that foreign policy should be excluded from the arena of political debate. And only this week Secretary Dulles came forth with a proposal that specific aspects of foreign policy, such as our policy in the Middle East, should be so exempt.

As to the first proposal, it is most unwise and, I may say, somewhat presumptuous. First, the administration takes us three times to the brink of war, or so Mr. Dulles—or his ghost writer, Henry Luce—says. At the same time, the same administration proclaims that it stands for peace, peace above everything.

Indeed, the Soviet leaders have, in recent days, declared their confidence in President Eisenhower's sincere desire for peace. I am willing to agree that President Eisenhower wants peace, although I would rather not base my conclusions—and I hope the American people do not—on words emanating from the Kremlin. I do not think they know or understand the meaning of either truth or sincerity.

But still I want to know: Is the policy of our Government the one expressed by President Eisenhower at Geneva, or the one expressed by Secretary Dulles in Life magazine? Who is the architect and who is the conductor of American foreign policy? It would seem from Life magazine that it is Secretary Dulles.

The administration wants to be all things to all men, especially to all the voters in the United States. The Republican Party wants to be the party of peace, and, at the same time, the party of massive atomic retaliation.

Having merchandised these slogans throughout the Nation, the administration now wants to call a halt to political debate, and to maintain the status quo. Of course they do. That would be a good bargain, if ever there was one—good for them but not good for the country.

This transparent proposal has been, of course, forthrightly rejected by most of the leaders of the Democratic Party.

As for Mr. Dulles' latest stratagem, the proposal to exempt the Middle East situation and the administration's policy in the Middle East from public debate and criticism, I hope that we Democrats are not going to accept that either.

I, for one, will not be a party to it.

In the Midlde East, the administration has permitted us to be projected into a most dangerous situation—dangerous to our most vital interests, dangerous to the cause of peace, dangerous to the security of the free world, and dangerous to the very existence of our sister Republic of Israel.

Communist influence is suddenly running rampant in the Middle East. The Arab nations throb with riot and unrest. Anti-Americanism has been given a new impetus throughout the area. And in the face of all this the administration can manage only to wring its hands and appeal for bipartisan silence and immunity from criticism.

It seems to me that the administration is pleading the fifth amendment on its past mistakes in this area.

Speaking for myself, I am willing, not to shut off debate nor to exonerate past errors, but sincerely to support the administration, if it is ready to steer a new course and follow a new and positive policy.

I am ready to praise and advocate an administration policy that promises peace in the Middle East—peace, well-being, and security for all nations, without sacrifice of any, without appeasement of any, but with aid and assistance to all.

I will support such a policy. The American people will support such a policy. But I am not willing to seal my lips and leave it trustfully to this administration to get us out of the mess they have gotten us into.

For me, this is not a partisan nor a political matter. In this situation the lives of millions of people, the fate of democracy in the Middle East, and the peace of the world are at stake. I will not seek political advantage, and hope no Democrat seeks political advantage, from this common peril which confronts us all.

But we cannot speak of bipartisanship in a situation in which the administration has deliberately altered the course followed by previous administrations in the Middle East, has excluded Democrats from participation in the formulation of this fallacious policy, and now asks for a Democratic moratorium on criticism.

I could say almost the same thing about other vital aspects of our foreign policy.

Many of you here tonight are especially concerned about the problem of our relations with the Soviet Union, first as it affects peace, and, second, as it affects the enslaved peoples of Europe—the subjugated peoples behind the Iron Curtain.

All of us are becoming aware that all-out war is an impossible solution for any of our international problems. There is simply no practical alternative to peace. The thought of war, using hydrogen bombs, is too shocking today to entertain, unless we have reconciled ourselves to the suicide of civilization as we know it.

In our continuing conflict with the Soviet Union and the forces of communism we have no alternative but to engage in vigorous but peaceful competition—the competitive use of nonviolent means—to achieve our objectives.

Our objectives must include bringing to an end, as soon as possible, the enslavement of the satellite peoples. We must actively and persistently support their desire for freedom.

Our efforts must be directed to loosening their chains, so far as is possible, to giving them hope for the future, comfort in the present, and the assurance that we will never abandon their cause for any reason whatever.

We must avoid raising and dashing their hopes in alternate strokes, as this administration has so consistently done. We must not promise to do that which these peoples know cannot be done. We must not speak brash and meaningless words about liberation in a context which implies all-out war, and means total destruction.

And certainly we must not make any agreements with the Soviet Government which would lessen the enslaved peoples' prospects for freedom, or impair their confidence in our true concern for their condition.

What has been the administration's record on this front? It has not been a bright one. It has been a shadowy one, made up again of brash words and weak actions, a policy of inconsistency and of weakness.

Even our policy toward the free nations of Europe has deteriorated from what it was. A strong and united free Europe, with complete confidence in our motives and in our leadership, is the strongest deterrent to the spread of communism. But we have fumbled, and blustered, and have illustrated in general the maxim of too little and too late.

This administration has not departed entirely from the Truman-Acheson policy in Western Europe, but has weakened it. That policy must be renewed and strengthened. A Democratic administration can and will do it.

In Asia and Africa, we have again fallen between the stools of indecision. We have failed to make clear our strong hatred for colonialism—we who once knew what it was to be a colony—180 years ago. We have failed to give comfort to the reasonable forces of nationalism, and the legitimate aspirations of colonial peoples for independence. We have failed to identify ourselves with the traditions of independence and anticolonialism, in which our own Nation was conceived and born.

We could do this and win the hearts and minds of these newly awakening peoples, while yet defending the basic interests of our western allies. But we have done neither.

A Democratic administration will, I am sure, do differently and do better.

Take Cyprus, for example. Our great and good ally, Britain, holds Cyprus and wants to keep it. And, indeed, the free world needs Cyprus for security purposes.

But the will of the people of Cyprus must surely be taken into account—or doesn't this administration believe in the principle of self-determination?

Of course the security interests of the free world must be considered. Of course the rights of the Turkish minority in Cyprus must be safeguarded. But within the framework of these considerations, we should and must stand staunchly with the people of Cyprus for their right to have a voice in their own future status.

Atrocities against minorities must be forthrightly condemned and denounced, wherever they occur, whether in Asia or Africa, or behind the Iron Curtain against the Czechs, the Poles, or the Ukrainians.

But our Government is as silent about some of these specific acts as it is about the Genocide Pact still gathering dust in a pigeonhole of the Senate Foreign Relations Committee.

A Democratic administration will, I believe, do differently.

There is much more to be said about foreign policy. Much more must and will be said in the months ahead.

If the Republican administration really wants to isolate certain subjects and place them beyond the pale of debate, there are, indeed, certain things on which both parties can agree.

We can agree that neither party is soft on communism, and that both parties are opposed to communism, both domestic and international.

We can agree that neither party is opposed to free world unity, and that both desire to achieve it.

We can agree that both parties support the United Nations, and neither seeks to destroy or undermine that organization.

We can agree that both parties desire peace, and not war.

These can and should be above debate. On these four points, at least, and perhaps more, there could be a perfect bipartisanship.

But as for the means of opposing Communism, the means of unifying the free world, the means of supporting the United Nations, and the means of achieving peace—these can and should be subject to full public debate and review.

And in the months ahead, these means are going to be discussed. These issues are going to be aired. As far as I am concerned, the public is going to be consulted and taken into our confidence.

Of course we must avoid extreme, or irresponsible, criticism. We must avoid narrow partisanship. We must avoid criticism for the sake of criticism, and attack for sheer political advantage.

Our criticism must be restrained, factual and constructive.

Our Party must continue to show that it is a responsible Party, careful in its judgments, worthy of leadership, and more concerned about policy than power.

If we follow such a discipline, and keep faith with our traditions—if we reflect the humanitarianism which is our Party's heritage, and our faith in the people's wisdom, which is our pride—then we will deserve to win, and we will win.

School Construction Assistance Act of 1955

EXTENSION OF REMARKS
OF
HON. JAMES O. EASTLAND
OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Monday, January 30, 1956

Mr. EASTLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very outstanding address made before the Georgia General Assembly by Representative JOHN J. FLYNT, JR., a Member of the House of Representatives from the Fourth District of Georgia, before a joint session of the Georgia General Assembly on January 24, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY JOHN J. FLYNT, JR., MEMBER OF CONGRESS FROM THE FOURTH DISTRICT OF GEORGIA, BEFORE A JOINT SESSION OF THE GEORGIA GENERAL ASSEMBLY, JANUARY 24, 1956

Lieutenant Governor Vandiver, Mr. Speaker Moate, members of the senate and house of representatives of the general assembly, my fellow Georgians, I bring you greetings from the Georgia delegation in the House of Representatives of the United States Congress—the distinguished and charming lady from the Eight District and the nine men, including myself. I shall not attempt to speak for any of them in my remarks which follow—but I know at least some of them concur in the thoughts I shall bring to you.

As for myself, I stand here in complete humility, fully cognizant of my many shortcomings, my faults, and my failures. At the same time, a feeling of pride pulsates through my body. This feeling of pride is motivated by the fact that I once served as a member of this general assembly and that my colleague, Judge DAVIS, and I now have been invited to address you in joint session—an honor and an invitation which, so far as I know, has never before been extended to a Member of Congress from Georgia. I am truly honored, and I am deeply and sincerely grateful. I hope that I deserve it—I pray that I always shall.

A moment ago I reminded you that I once served in this general assembly. I would be derelict in my duty to you if I did not tell you that I considered it then as I consider it now—one of the greatest privileges and honors which can be conferred on a Georgia citizen. I have been a member of many groups and I bear witness to the fact that I have never served with nor known a finer or more dedicated group of men and women than the 258 other members of the general assembly with whom I served in 1947–48. I know you of this present general assembly measure up to or surpass the general assembly in which I served.

You are the equal in ability, in intelligence, in appearance, and in courage to any house and senate in the Nation, including the Senate and House of Representatives of the Congress of the United States—and I believe you are superior to most.

But, my fellow Georgians, you did not invite me down here to conduct a lodge meeting of a mutual admiration society. You invited me to come back home, among my home people, and to discuss with you, and I emphasize to discuss with you, the bill now pending in Congress known as H. R. 7535, called the Kelley bill, sometimes called the Federal aid to education bill, sometimes called the School Construction Assistance Act of 1955.

Let's briefly discuss this legislation.

Very seriously, if I could be shown one good reason why I should support this legislation, I might do it. However, I've studied this bill backward and forward, up and down, front to back, back to front, from cover to cover, left to right, right to left, from Rabun Gap to Tybee Light; from Vogel Park to Attapulgus, from the Okefenokee Swamp to Lookout Mountain; and I cannot find one thing in it that looks like good legislation to me.

On the contrary, it has the earmarks of the most insidious, treacherous and vicious group of words ever assembled as one document since Karl Marx wrote Das Kapital and Earl Warren wrote the Supreme Court opinion which he delivered on that black Monday, the 17th of May 1954. In my opinion, these two documents can be very close compared upon careful analysis, and the philosophy of the one is just as communistic as the philosophy of the other.

This bill, which in a sense is an effort to bolster the weak position of the Supreme Court decision, is a hydra-headed, five-fanged, cloven-hoofed and forked-tailed combination of polecat, mad dog, and rattlesnake. It strikes not only at the vitals of our way of life in Georgia, but stabs cold steel into the heart of the United States Constitution. It tolls the death knell of State sovereignty; all the while shedding alligator tears, and at the same time laughing the hyenalike laugh of a madman who has just destroyed his dearest possession and now envisions its total and permanent destruction.

A reckless charge? Listen to this language—and I quote from the bill itself:

"SEC. 103 (a). Any State which desires to accept the benefits of this title shall submit to the Commissioner, through its State educational agency, a State plan which shall * * *" and then proceeds to specifically list seven subparagraphs including "a provision for fiscal control and establishment of certain standards."

My fellow Georgians, need I tell you and need I define their definition of "fiscal control" and the "establishment of standards"?

Under this same provision, section 103 of the bill as drawn, the Commissioner of Education is empowered and authorized to write

any regulations he desires and to require any such reports from State education departments notwithstanding the language of the statute and notwithstanding any other provision of law.

Why, this places more power in one man, the Commissioner of Education, than a Caesar, a Hitler, and a Mongolian potentate ever had all put together. Its advocates say there is a right of appeal from any unjust decision. What kind of an appeal? One that would wind up in the Supreme Court of the United States, and you know what that Court would do, since they have shattered the Constitution of the United States, destroyed the Bill of Rights, overturned every known legal precedent, and have adopted in their stead the crazy, pseudo-sociological reasoning of a Swedish Communist named Gunnar Myrdal, who by his own admission hates America and everything which forms a part of the American way of life.

That unlimited and unrestricted power it gives the Commissioner of Education is bad enough, but that is the least of the three principal objections to it.

Number two of the principal objections is that it would confirm by an act of Congress the line of the Supreme Court decision which says each State must integrate its public schools, and destroy every element of local self-government and local self-determination—including the greatest of all freedoms—the freedom of choice. It would destroy the right of a sovereign State and its people to be let alone by outside meddlers and interlopers who are interfering with a matter of which they have nothing but a smattering of ignorance.

To force Georgia and 11 other sovereign States to comply with that decision and with the philosophy embraced in this Federal Aid to Education bill would destroy the progress we have made in both education and solution of race problems and shatter beyond repair the educational, social, religious and economic life of every State where integration and desegregation is forced on a people against their will, and I believe I speak accurately and correctly when I say against the will of the overwhelming majority of both the white and Negro people in every State in the South.

And before I go any further, I want to state without any reservation, or evasion, that I am here and now willing to take a solemn oath that I hold no malice, hatred or prejudice whatsoever in my heart or mind or soul against any man or group of men, living or dead, because of his race or the color of his skin. I think I have demonstrated and proved that by nearly 20 years as a lawyer, an assistant United States attorney, as a soldier in the United States Army, Solicitor General, member of the General Assembly, and Member of Congress. In each instance over these 20 years—indeed over the 41 years of my life—I have sought to give to every man and woman every dignity to which he is entitled as a human being and every right to which he is entitled as an American citizen.

And yet, I just as firmly and sincerely believe that to completely integrate in communities and States where each race constitutes a large proportion of the population would unquestionably weaken both races and even destroy one or both.

No nation in the history of mankind has ever mixed and amalgamated two races without destroying itself, all of its people, and both races in the process. Carthage, Egypt, and Rome are examples. People now inhabit each of the areas once populated by the Cathagenians, the Egyptians, and the Romans, but they are no more like their ancient counterparts than day is like night, and their national strength and power are long since gone and forgotten.

Yes, I'm willing to take such an oath that I have no prejudice, malice, or hatred against any person or race; and I'm willing to take yet another solemn oath—that I will expend every ounce of my strength, every drop of my blood, even my life itself to resist the efforts of the United States Supreme Court to force complete integration on the people of Georgia against our will; and I'll not knowingly vote for a bill in Congress which I believe is designed to do just that.

Those are two reasons why I oppose the Federal aid to education bill, but they both fade into insignificance compared with reason No. 3, which I'll come to in just a minute.

But before I go to reason No. 3, I want to say this to the thousands of school teachers and school administrators:

If and when the Federal Government and the United States Commissioner of Education take over control of our schools that this same United States Commissioner of Education in his little white tower will take charge of the hiring and firing, standards of teaching, prescribed courses of study, salary scales, and every phase of our educational systems; and in my considered opinion and in my best judgment, we shall be not nearly so well off in Georgia as we are now.

There is not a State in the United States which has made the progress in education that has been made in Georgia in the past 10 years. We can only judge the future by the past. I am confident that the progress in education in Georgia will continue and that in Georgia our educational system will be equal to any and superior to most.

Georgia is a desirable place in which to belong to the teaching profession. I'll make this statement and let the statisticians tear it apart—there are more alumni of schools located outside of Georgia teaching in and seeking employment in Georgia schools than there are Georgia college graduates teaching in at least 20 other States. They come into Georgia from all over the United States, because (1) Georgia is a good place in which to live; (2) it is a good place in which to teach; (3) they like it better here than anywhere else; and (4) they are here by their own choice and of their own free will and accord. This applies to white and Negro teachers alike.

Now about the Negro members of the teaching profession in Georgia. There are more Negro school teachers in Georgia and South Carolina together than there are in New York, Pennsylvania, Indiana, Ohio, Illinois, Minnesota, Wisconsin, California and Machigan combined; and the combined population of that latter group of States has over ten times the total population in Georgia and South Carolina.

I once asked a Negro school teacher friend of mine why he came to teach in Georgia instead of going to some other State. He was a good teacher and a highly intelligent person, and his honest reply was this: "I couldn't get a job up there teaching. Up there they love me as a race and hate me as a person; down here you segregate my race, but you respect me as a person and as a human being." He might have added, but he didn't, that he and his wife and children are not a race—they are people and human beings.

If Georgia should be suddenly forced to desegregate, the group which would suffer most would be the thousands of Negro teachers in Georgia and the many more thousands of Negro school children who are today getting a better education than they would anywhere else in the world. My fellow Georgians, the results would be utter chaos and you know it.

Now comes reason No. 3 why I expect to vigorously oppose H. R. 7535 and any companion bill, substitute, or counterpart:

There is absolutely no constitutional authority for it, either expressed or implied. Nowhere in the Constitution of the United States of America is there any delegation of power to Congress or to any branch of the Federal Government to operate or support a public school system. That is a right and also a power absolutely reserved and guaranteed to the several States to operate, support and maintain as each of the several States shall determine and decide.

Congress has absolutely no constitutional authority, power, or right to appropriate money to operate schools within the States or to support them and exactly no constitutional authority, power, or right to use tax money to pay such an appropriation.

The skeptics and the wide-eyed dreamers will immediately shout—"What difference does it make whether it's constituional or no?"

And I'll just as quickly reply, "It makes all the difference in the world. If the Federal Government, by act of Congress, can support, operate, maintain, or construct schools in the school systems of the several States and have that declared to be constitutional and a part of either the expressed or implied powers of Congress—then grab your hats, and let's go; it's all over. The lid has blown sky high and there is no limit or restriction on the power of the Federal Government."

If that happens, the last stanchion, the last bulwark, the last symbol of the sovereign rights of a sovereign State, like Georgia, is gone and gone forever. There'll be no calling it back.

If that happens, they might as well abolish all 48 State constitutions, all 48 State general assemblies, the courts of law and order of the 48 States, and the rights and privileges of every individual citizen. If that happens they might as well close up all 48 governors' offices and tell all 48 State governors, it's all over boys—you are out of a job.

If that happens, the American Bill of Rights is shattered and gone too—because if they can effectually abolish State control of schools, they can just as easily abolish habeas corpus, trial by jury, freedom of speech and press, freedom of religion, and every other personal right and emblem of liberty which no human being ever had guaranteed before the American Bill of Rights was added to the United States Constitution.

And when that time comes, we'll be a totalitarian government like Germany under Hitler and Russia under the Communists.

The thing that has made and preserved us a great Nation is the fundamental premise that the United States is an indissoluble Union of indestructible States. Our Federal Government is based upon the inviolate concept of separation of powers so that neither the executive, the legislature, nor the judicial branch can go completely wild and destroy the sovereign rights of the sovereign States.

And there'll be no one left to stop it. The supposed defenders of the Constitution—the black-robed justices of the United States Supreme Court will be leading the carnival parade riding the chargers of dictatorship and tyranny like the four horsemen of the Apocalypse. I hope that time never comes—I humbly pray that it won't. I believe our United States Constitution is a sacred thing—the most sacred and devinely inspired instrument produced by the brain and purpose of man since God gave the Ten Tablés of the Laws to Moses on Mount Sinai and since the Man of Galilee delivered His sermon on another mountain nearly 2,000 years ago.

Yes, the United States Constitution is a sacred thing. It protects and defends the weak and the oppressed against tyrants and would be tyrants of strength and power; it protects the minorities from the vastly greater majorities; it protects the humblest cottage and the most stately mansion with equal sanctity; it protects the least of us from the powers of tyranny and despotism.

It has caused us to have the greatest way of life ever experienced, ever known or ever dreamed of by the mind of man.

It has been defended by many thousands of Americans who have died to save it, and yet who died with smiles in their souls because they had helped save it; and it has been defended by countless millions more who have lived and so lived that our Nation, a Nation under God and under a divinely inspired Constitution, might be strengthened, and might never perish from this earth.

Let me urge you to give serious consideration to two propositions.

Firstly, whether you wish to go on record urging all of your Members of Congress to unanimously oppose Federal aid to education and thereby do all you can to urge the citizens of other States to so urge their representatives to do likewise.

Secondly, let us join hands with our nearby States of Virginia, Alabama, Mississippi and others and consider the adoption of a resolution of interposition.

Since May 17, 1954, Georgia has led the way under the courageous leadership of our Governors and State leaders, including an overwhelming majority of the members of the general assembly of this State. We took a courageous stand when we ratified amendment No. 4 in the general election in 1954.

I believe that if Georgia had failed to take a firm position and courageous stand on this subject that the rest of the Southern States would have lost heart and abandoned the fight. Some of my friends from Virginia, who believe in constitutional government and who believe in the rights of soveign States, have very recently told me that their fight in Virginia was made much easier and was crowned with success because of the example which had been previously set by Georgia.

Two weeks ago, yesterday, the Commonwealth of Virginia voted by more than a 2-to-1 majority to call a constitutional convention to write into the Constitution of the State of Virginia what we in Georgia did with amendment No. 4 in the general election in 1954.

Let the General Assembly of Georgia express its firm resolution to maintain and to defend the Constitution of the United States, and the constitution of this State, against every attempt, either foreign or domestic, to undermine the dual structure of dual government, and to destroy those fundamental principles embodied in our basic law, by which the delegated powers of the Federal Government and the reserved powers of the respective States have long been protected and assured.

Let this general assembly explicitly declare that the powers of the Federal Government result solely from the compact to which the States are parties, and that the powers of the Federal Government, in all of its branches and agencies, are limited by the terms of the instrument creating the compact, and by the plain sense and intention of its provisions.

Let the terms of this United States Constitution, and its plain sense and intention, apparent from the face of the instrument, be that the ratifying States, parties thereto, have agreed voluntarily to delegate certain of their sovereign powers, but only those sovereign powers specifically enumerated, to a Federal Government thus constituted; and let all powers not delegated to the United States by the Constitution, nor prohibited by it to the States be reserved to the States respectively, or to the people.

Let the State of Georgia declare in positive language that the Supreme Court of the United States has no authority to amend the United States Constitution by judicial order or judicial decree.

By its decision of May 17, 1954, in the school cases, the Supreme Court of the United States placed upon the Constitution an interpretation, having the effect of an amendment thereto. Georgia emphatically disapproves this interpretation.

The State of Georgia did not agree, in ratifying the 14th amendment, nor did other States ratifying the 14th amendment agree, that the power to operate racially separate schools was to be prohibited to them thereby; and as evidence of such understanding of the terms of the amendment, and its plain sense and intention, the people of Georgia know that the very Congress which proposed the 14th amendment for ratification established separate schools in the District of Columbia; further we know that in many instances, the same State legislatures that ratified the 14th amendment also provided for systems of separate public schools; and still further, we know that both State and Federal courts, without any exception, recognized and approved this clear understanding over a long period of years and held repeatedly that the power to operate such schools was, indeed, a power reserved to the States to exercise "without intervention of the Federal courts under the Federal Constitution."

With the Supreme Court's decision aforesaid and recently approved acts of the General Assembly of Georgia, a question of contested powers has arisen: The Court asserts, for its part, that the States did, in fact, in 1868, prohibit unto themselves, by means of the 14th amendment, the power to maintain racially separate public schools, which power certain of the States have exercised daily for more than 80 years; the State of Georgia, for its part, asserts that it has never surrendered such power.

This declaration upon the part of the Supreme Court of the United States constitutes a deliberate, palpable, and dangerous attempt by the Court itself to usurp the amendatory power that lies solely with not fewer than three-fourths of the States.

We in Georgia, mindful of the resolution by which we ratified the 11th amendment to the United States Constitution, and cognizant of similar resolutions adopted by other States, both North and South, again assert this fundamental principle: That whenever the Federal Government attempts the deliberate, palpable, and dangerous exercise of powers not granted to it, the States who are parties to the compact have the right, and are in duty bound, to interpose for arresting the progress of the evil, and for preserving the authorities, rights, and liberties appertaining to them.

Failure on the part of this State thus to assert its clearly reserved powers would be construed as tacit consent to the surrender thereof; and such submissive acquiescence to palpable, deliberate, and dangerous encroachment upon one power would in the end lead to the surrender of all powers, and inevitably to the obliteration of the sovereignty of the States, contrary to the sacred compact by which this Union of States was created.

In times past Georgia has remained silent—we have remained silent too long—against interpretations and constructions placed upon the Constitution which seemed to many citizens of Georgia palpable encroachments upon the reserved powers of the States and willful usurpation of powers never delegated to our Federal Government; we have watched with growing concern as the power delegated to the Congress to regulate commerce among the several States has been stretched into a power to control local enterprises remote from interstate commerce; we have witnessed with disquietude the advancing tendency to read into a power to lay taxes for the general welfare a power to confiscate the earnings of our people for purposes unrelated to the general welfare as we conceive it; we have been dismayed at judicial decrese permitting private property to be taken for uses that plainly are not public uses; we are disturbed at the effort now afoot to distort the power to provide for the common defense, by some Fabian alchemy, into a power to build local schoolhouses.

We in Georgia, as American citizens, anxiously concerned at this massive expansion of central authority, nevertheless, have reserved our right to interpose against the progress of these evils in the hope that time would ameliorate the transgressions; now, however, in a matter so gravely affecting this State's most vital public institutions, we can remain silent no longer. Recognizing, as the people of Georgia do, the prospect of incalculable harm to the public schools of this State and the disruption of the education of her children, we are in duty bound to interpose against these most serious consequences, and earnestly to challenge the usurped authority that would inflict them upon our citizens.

Therefore, we must invoke that Divine guidance impleaded by our people on July 4, 1776, when first they declared themselves a free and independent State, and appeal now to our sister States for that decision which only they are qualified under our mutual compact to make; and we respectfully request them to join us in making proper application for interposition.

We pledge our firm intention to take all appropriate measures honorably, legally, and constitutionally available to us to resist this illegal encroachment upon our sovereign powers, and to urge upon our sister States, whose authority over their own most cherished powers may next be imperiled, their prompt and deliberate efforts to check this and further encroachment by the Supreme Court, through judicial legislation, upon the reserved powers of the States, and that all laws and the Constitution of the State of Georgia shall and do remain in full force and effect within the confines of this State.

Let us state in no uncertain terms that we shall not be bound by an unconstitutional act, decision, or decree of the Supreme Court.

Let us say in language that cannot be misunderstood that we swear allegiance to the Constitution of the United States of America, reaffirm our faith in it as the guardian and defender of our most sacred rights, and that we shall scrupulously obey its provisions, its orders, and its mandates.

Let us also clearly state that we respect and will obey all lawfully constituted decrees of all courts and that we reaffirm our abedience and allegiance to the principle that the Government of the United States of America is a government under law and not a government of men alone.

Let us clearly state that we in Georgia respect and will obey the Constitution and laws of the United States, but that we also expect to respect and obey the constitution and laws of the State of Georgia and demand for every other State the right to have its constitution and laws respected, as the constitution and laws of a sovereign and indestructable State as part of an indissoluble union under the Constitution of the United States.

And, finally, let us unmistakably state in language that cannot be misunderstood that we have always, do now and shall ever obey laws; but that we as part of a sovereign people in a sovereign State will never subject ourselves to nor will we obey men—even nine in number—however white the marble of the building which houses that once hallowed courtroom or however black their judicial robes or their pseudo-sociological hearts—so long as they disregard the Constitution, overthrow judicial precedents and admittedly base their decisions on the insane rantings of that Swedish Communist named Gunnar Myrdal.

Let us take renewed courage in our fight; let us be of even stouter hearts than before; let us move onward and forward to and for a greater Georgia, a stronger America, and a future even brighter than our glorious past.

Let us convince the people of all other States of the rightness of our position. Let us exhort them to put aside prejudices they

may hold against us because of geography, latitude, or ignorance.

Let us urge them all to join us in our desire and our efforts to preserve a constitutional government.

We know we are right. Your recent unanimous votes on bills designed to reaffirm our position is ample proof of that.

The people of the State of Georgia have placed confidence in you, their chosen representatives in this general assembly, as they have placed confidence in those of us who serve as Georgia Representatives in the Congress of the United States. The future of our State and the future of our Nation depend on the positive action which we must take in fulfilling our responsibilities, our duties, and the oath which each of us takes when we assume the elective office to which we have been chosen.

We shall not falter, and we shall not fail.

Cargo Preference for the American Merchant Marine

EXTENSION OF REMARKS

OF

HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Monday, January 30, 1956

Mr. BUTLER. Mr. President, frequently in recent months it has been alleged that the cargo preference law, Public Law 664, has retarded the disposal of surplus agricultural commodities. It will be recalled that the cargo preference or 50–50 law requires that at least 50 percent of Government financed or Government owned cargoes be transported by the American merchant marine.

Since, in my humble opinion, these suppositions are based on misinformation, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Facts for Farmers and Other Americans," which I prepared for the November 1955 issue of the Forwarder magazine.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FACTS FOR FARMERS AND OTHER AMERICANS

(By Senator JOHN MARSHALL BUTLER, Republican, of Maryland)

In many respects the last 2 years have brought encouragement to those of us who believe in an adequate American merchant marine. On the legislative side, we have seen the enactment of new laws to encourage shipbuilding and ship operation; on the administrative, the development of new designs and formulas to facilitate ship replacement. Within the industry, decisions have been made to replace many aging passenger vessels, and long-range building programs are being formulated. New operating techniques involving roll-on, roll-off vessels may revive the coastwise and intercoastal trades.

While all these signs of maritime progress quite properly gratify us, we would be imprudent to assume that our merchant marine has now been, or is about to be, extricated from its perennial problems and difficulties, and that we now have in prospect only clear sailing and prosperous trading. Several sobering facts must be kept in mind, as warnings and incentives to further effort. One is that, in spite of everything, these favorable developments have not arrested the shrinkage of the privately owned fleet, which now numbers 1,101 ships as against 1,255 just 24 months ago. A second, even more disturbing, is that the percentage of our foreign trade which moves in American-flag ships has also continued to decline. For March 1955, the latest month on which figures are available, it is 24.5 percent as against 29.3 percent for March 1953.

More serious than either of these is the very real threat of a major legislative attack on American shipping within the next few months; a blow which might well have disastrous consequences not only for the maritime industry but for the country as a whole. This is the danger that the continuous sniping at our 50–50 law by both native and foreign opposition may create misunderstandings of sufficient magnitude as to suggest crippling legislative revisions in the next session of Congress. This is an immediate threat. It demands immediate action.

To be effective, this action cannot be that of the few. It must be a united effort of every friend of American shipping, whether he draws his livelihood directly from the industry or not. It should, in fact, be the effort of every politically informed citizen, for on the outcome of this controversy depends a part of the security, and a part of the well-being, of each individual American.

Our efforts should, I believe, have three objectives: (1) To explain to American and foreign critics why this country needs a merchant marine and why the 50–50 law is essential to the fulfillment of that need; (2) to explain, especially to foreign maritime nations, why the law does not deserve the condemnation and denunciation which their shipping interests have so piously bestowed on it; (3) to explain to American agricultural interests exactly how the law works, and the manner in which they are being misled by this propaganda.

Under the first heading, it should scarcely be necessary, in the light of contemporary history, to assert the positive necessity of an American merchant marine. From the defense aspect, our failure to recognize that necessity in advance cost us approximately $20 billion in two world wars to provide makeshift tonnage at breakneck speed. It cost our allies (and present critics) countless lives and agonizing delays, because we lacked the ships to throw into the battle when they were needed.

From the commercial aspect, we need American ships on the sea routes, and American lines in the shipping conferences, in order among other things, to protect American importers and exporters (including farmers) against a deadly variety of economic missile. Commercial export markets are highly competitive, and the control of such markets can be manipulated by foreign dominance of the ocean freight structure in a manner which will automatically operate against any trading country which loses a voice in the forum where rates are set.

Fully as evident as the need for American-flag shipping is the fact that it cannot prosper unassisted in a world where shipping under every other flag operates at much less than half the cost which our wage and living standards entail. The Merchant Marine Act recognizes this disadvantage and the 50–50 law represents the indispensable minimum of Government assistance. A merchant marine cannot survive without cargo, and if our Government desires to have one, the least it can do is to assure that a reasonable proportion of its Government-generated business goes to support American vessels. In my opinion, cargo preference is the most practical method of extending such assistance.

Under my second heading, the primary tactic of the act's foreign opponents has been to condemn 50–50 as flag discrimination. When it is emphasized in reply that a careful line has been drawn between governmental and commercial cargoes and that the 50–50 rule applies only to the first class, the critics shift their ground and concede the general principle. However, they assert that the application of the rule to agricultural surplus disposal transactions, involving payments in foreign currency, infringes on the principle and invades the realm of bona fide commercial sales.

So weak is this argument that it must be taken as only a subterfuge for detaching what is at present a most substantial and lucrative segment of public cargo from the coverage of the 50–50 rule—after which the complete repeal of the law will be much easier to attain. Actually, the agricultural disposal transactions (under title I of Public Law 480) have almost none of the features of commercial sales. There is no prospect of profit involved, the object being to dispose of something which we ourselves cannot use but which can be of great benefit to other countries. The agreements of sale are between governments, not commercial traders. The surpluses sold were originally paid for by all American taxpayers, and are now disposed of for much less than cost. Finally, well over half of the foreign currency accepted in payment is loaned or given back to the purchasing country to be applied in economic improvement programs either for its own benefit or for that of a designated third nation. In other words, these sales are just as much a form of "foreign aid" as those involved in the original Marshall plan, except that a somewhat smaller percentage of the payment is returned to the purchasing nation forthwith.

However, this contention, transparent as it is, has been strenuously pressed in this country, and has been echoed by several agricultural organizations, along with other objections to the 50–50 law as applied to agricultural surpluses, all of them equally ill-grounded. Unfortunately, such arguments are just plausible enough to be convincing to people who have little direct contact with shipping and no knowledge of the actual administration of the 50–50 law to date. The following are some of the most serious of these charges, on which we must get the true facts to the American people, and particularly to American farmers:

(1) That application of the law is delaying the agricultural surplus disposal program. Available data indicate that, so far, the program is ahead of schedule. Two-thirds of the original 3-year authorization was committed under agreements signed during the first year. In fact, sales are going so well that the Congress, at its last session, was asked to increase the ceiling from $700 million to $1.5 billion. This was done.

(2) That the program will be obstructed by unavailability of American ships. This is impossible under the terms of the act itself, which makes the 50–50 rule applicable only to the extent that American-flag tonnage is available. So far, there is no shortage.

(3) That application of the law will increase the cost to the purchaser and thereby restrict the sale of agricultural surplus. This charge, also, is contradicted on the face of the act. Purchasing nations buy at world market prices. Our Government makes up any difference.

(4) That the financing of ocean freight which stems from the 50–50 rule will so increase the cost of the disposal programs as to reduce seriously the quantity of surplus which can be disposed of under the authorization. This contention rests initially on the false assumption that all ocean freight costs which are dollar financed stem from the 50–50 act. This is untrue. Actually, one-half of all of the ocean-freight costs incurred to date are the result of dollar financing undertaken as a condition of

sale completely independent of the 50–50 rule. Furthermore, on berth liners, which are expected to carry a substantial portion of the cargo, rates established by conference agreements are identical with those of foreign vessels plying the same routes. Hence, the only real difference in shipping costs arises from the differential between American tramp rates and the rates which would have been charged by their foreign competitors. The added cost resulting from this differential has amounted to about $2.15 million to date. This item of expense is therefore running at about 12 cents per dollar of ocean freight financed by the United States, and somewhat less than 1.5 cents per dollar of total program costs.

(5) That the 50–50 law forces farmers to subsidize the United States shipping industry. This is related to the foregoing costs which, it is claimed, are a subsidy of shipping by the farmer. How can this be true when the commodities involved in the disposal program are owned by the Government, not the farmers? Any cost involved is paid by the Government—i. e., all the taxpayers—not the farmers. Moreover, the legislation from which the surplus disposal sales originate is in a large measure foreign policy legislation. For example, the major portion of the local currency proceeds are disposed of in the mutual security program in furtherance of our foreign policy. It has always been the policy of our Government to have various segments of our economy, including ocean shipping, benefit where possible in the carrying out of such programs. To the extent a subsidy of American shipping is involved its costs are met by the public from Government funds.

Furthermore, any reduction in the total of sales which might be attributed to expenditures incurred by the 50–50 act could not take effect until the cost ceiling ($1.5 billion) established by Congress is about to be reached. Actually, because of certain revolving fund characteristics the ceiling of total sales may well exceed this amount by as much as 20 to 25 percent—the added financing coming from funds appropriated to other Government agencies. Thus, it is not only difficult to establish any point at which it might be claimed the total of sales would be affected by the cost of cargo preference but, even if established, the sales affected would be those stemming from other than agricultural appropriations.

As one of the principal users of ocean shipping—even though he is often not aware of his reliance upon it—the American farmer stands to lose as much as any other citizen by the loss or breakdown of our merchant marine. The foregoing facts must be made available to him, and soon, before he is led by skillfully disseminated misinformation into supporting legislation which could cause such loss or breakdown.

Birthday Tribute to Mrs. O. D. Cook, Veteran Oregon Union Organizer

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, January 30, 1956

Mr. NEUBERGER. Mr. President, democracy can succeed only when devoted citizens work for good government. After all, it was Elihu Root, a great Secretary of State in President Teddy Roosevelt's Cabinet, who said that "politics is the practical exercise of self-government, and if we are to have self-government, somebody must be in politics."

In my community of Portland, Oreg., one of the most devoted and sincere citizens in politics and public life is Mrs. O. D. Cook, who, on January 21, 1956, celebrated her 76th birthday anniversary. She is a notable Oregonian.

Portland Central Labor Council, under its president, William H. Way, paid a deserved and merited tribute to this grand and stalwart crusader for democracy.

Mr. President, I ask unanimous consent that a news story and an editorial from the Oregon Labor Press of January 27, 1956, describing this event in honor of Mrs. O. D. Cook, be printed in the RECORD.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

CENTRAL LABOR COUNCIL—COUNCIL HONORS MRS. COOK WITH 76TH BIRTHDAY PARTY

A 76th birthday party for a grand young lady was the highlight of this week's Portland Central Labor Council meeting.

The guest of honor was Mrs. O. D. Cook, veteran union organizer and delegate from the Commercial Telegraphers' Union, who had celebrated her 76th birthday on January 21.

A standing ovation greeted Mrs. Cook when she was introduced by council president Bill Way. She was presented with dozens of letters, honoring her 53 years of service to the labor movement, from local unions and councils, from Senators WAYNE MORSE and RICHARD NEUBERGER and from Congresswoman EDITH GREEN.

Vice president Glenn Blake, who had organized the birthday party, presented a handsome gift to Mrs. Cook (who is universally known as Cookie.)

Sam Kimeldorf, president of Cookie's own local union, presented her with a life membership in Commercial Telegraphers Local 92. It was the first life membership ever granted by the union Mrs. Cook helped to organize.

George Brown, executive secretary of the Oregon CIO Council, joined in the tribute.

Briefly, Mrs. Cook told of her career in the labor movement which began in 1903 when she joined the Telegraphers' Union in the deep South. She told of her early work as an AFL organizer in the South, of bitter strikes and terrorist strikebreaking, of her long personal friendship with Samuel Gompers, founder and president of the AFL, and of her last meeting with Gompers in Portland in 1923.

"I have gone through hell for this labor movement," she concluded, "but the bread I cast upon the waters has been returned to me tenfold."

The council's tribute ended with the delegates singing, "Happy birthday, dear Cookie, happy birthday to you!"

WE'LL THINK OF COOKIE WHEN TEMPTED TO COMPROMISE

Mrs. O. D. Cook celebrated her 76th birthday on Saturday, January 21, and 2 days later the Portland Central Labor Council had a birthday party in her honor. It was a great and heart-warming occasion.

Letters poured in from dozens of local unions, from Senators MORSE and NEUBERGER and Congresswoman EDITH GREEN, praising Cookie for her 53 years of service to the labor movement.

All too briefly Cookie recalled some of the highlights of her union career which began when she joined the Telegraphers' Union in 1903. She told of her career as a union organizer in the Deep South in the years when bullets and starvation were the standard strikebreaking weapons—of her close personal friendship with Samuel Gompers, founder of the AFL—of the strikes, the organizing campaigns, the victories and defeats.

She concluded with these words: "The bread I cast upon the waters has been returned to me tenfold. My purpose in life is to serve the labor movement, and I'll do that until the day I die."

To us who are comparative newcomers to the labor movement Cookie's example of courage and devotion is valuable beyond all price.

When we are tempted to play it safe or to take the easy road of compromise with principle we hope we will have the courage and good sense to follow her example. There is no such word as "compromise" in Cookie's vocabulary.

She has made our labor movement a finer and stronger instrument for economic justice and social progress.

A Farm Program That Works

EXTENSION OF REMARKS
OF
HON. GEORGE D. AIKEN
OF VERMONT
IN THE SENATE OF THE UNITED STATES
Monday, January 30, 1956

Mr. AIKEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "A Farm Program That Works," which appeared in the January 1956 issue of the New England Dairyman, reprinted from the Boston Herald.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A FARM PROGRAM THAT WORKS

Next month the price of milk to farmers serving the Boston market will take its most precipitate drop—about 2 cents a quart. In March, April, and May there will probably be other cuts, so that by May 1 the price will be 4 cents under the present. If all this is passed along to consumers, milk that now costs 26 cents a quart delivered, will fall to 22 cents.

This reduction conforms to a formula which takes into account costs of production, the buying power of consumers and the balance of supply and demand. It is an impartial, impersonal adjuster now well accepted by producers, dealers and consumers.

What stands out like the sun in the fog of our national farm problem is that here is a farm program that works.

There is an overproduction of milk today, and we are heading into the flush spring season of higher production. But we meet this, not by some expedient of subsidizing farmers at this excessive level of production, but by a built-in price incentive for a better balanced production.

In the next 5 months the farmers are going to suffer a 28-percent cut in the price of that part of their production sold for fresh fluid milk. This offsets price increases they have enjoyed since last summer, but it is still hard to take. Yet the farmers are willing to take it, just as the consumers took last year's price increases.

The result of this system is that we are getting enough milk without any unwieldy surplus. New England is nearly self-sufficient in dairy products. We used to import our cream from the West, but last year we had to bring cream in only in July and August.

Our farmers are not adding to the $7,700,000,000 mountain of CCC stored commodities. Yet they are making a living, and we are getting plenty of good milk.

What's wrong with that?

Statement by Association of Catholic Trade Unionists on Proposed Immigration Policy of the United States

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, January 30, 1956

Mr. LEHMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent statement dealing with our present immigration policies. The statement was prepared under the direction of Mr. Frank Andolina, national director of the Association of Catholic Trade Unionists. Since its foundation in 1937, the association has rendered meritorious service in industrial areas, conducting labor schools, and providing assistance and advice to workers. Indicative of its dedication to a just social order is this fine statement dealing with a subject of concern to us all.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

The Association of Catholic Trade Unionists and I as its national director would like to express our gratitude for the opportunity which this subcommittee has presented to us to put forth our views on the immigration policy of this Nation.

In order for you to realize the factors which prompt us to make a statement on this matter, allow me first to briefly describe the nature of our organization and the basis of our interest in this subject.

The Association of Catholic Trade Unionists is composed of Catholics who are members of various trade unions in this country interested in the promotion of just and sound ethical principles and the application of these principles to the social order. We have banded together, united in the understanding that matters affecting the social and economic realms are not divorced from the norms and standards of morality.

We have consistently struggled for the creation of a social order based on and cognizant of these norms. We seek in particular to apply them to the trade-union movement as a whole and the trade unions of which we are members.

To avoid any possible misconceptions, may I state explicitly that we do not seek for this reconstruction of the social order through the medium of so-called Catholic unions. Recognizing the pluralistic nature of American society, we rather attempt the accomplishment of our aims by the modification of existing institutions and the creation of new ones as the necessities of justice and charity for all men dictate.

Thus desiring to create a sound social order, firmly established upon the twin foundation stones of justice and charity for all, we are concerned with many aspects of such a social order. A part of this picture includes the capacity of this society to welcome newcomers to its ranks and integrate them effectively into its tradition, enriching both the newcomer's way of life and the established tradition as well. The effect of the newcomer's migration upon the society, the labor force, and productive capacity of the society and himself is a matter of vital national concern. The question of immigration policy has been of much interest to the association, not only because of the reasons cited above, but also for the very human reason that we are all immigrants or the descendants of immigrants ourselves.

Our position on the McCarran-Walter Act, which constitutes the present immigration policy of the United States, has been clearly and univocally stated on a number of occasions. We believe that this law is unjust in the assumptions upon which it is based, unsound as a matter of foreign policy, and unwise in its detrimental effects on American society and the American tradition.

Our objections to this law are primarily prompted by the national origins quota system which lies at the heart of the act. This type of a quota system has stood in sharp contradiction to the ideal of democracy and equality of opportunity for all men which has characterized much of American history. It was a scandal to the Nation when first introduced into our immigration acts during the 1920's and remains so to this very day.

The national origins quota system is blatantly discriminatory, even in theory. It rests upon the fallacious argument that some ethnic groups are inherently superior to others. Gross intolerance for the inhabitants of certain areas of the world is imbedded in the system by design. The only appropriate word to describe this theory is racism.

We firmly maintain that all men are created inherently equal. To assume the native supremacy of one race or one ethnic group is a direct blasphemy upon the goodness and intelligence of its Creator. Such an assumption of racial supremacy is an affront to our religious faith as well as our democratic heritage.

The workings of the national origins quota system in practice confirms our judgment against it in theory. We see here the flagrant mockery of our faith in the dignity of man. This is shown, for example, by an assignment of quotas which results in India's having the same quota as Iceland.

Coupled to this system which expresses the trust of the Nation in the worthiness of only those who reside in western Europe or the British Isles, we find an added insult given to the nations of the eastern half of the globe. This is created in the act through the medium of a provision covering the so-called Asian-Pacific triangle. Not only are the national quotas of the countries in this area as near a minimum as possible, but all those who are related by as little as half of their ancestry to residents of the "triangle" are forced to enter the United States through the quota of the nation within the "triangle" where that half of their ancestors resided. As if the quota system by itself was not restrictive enough, we find that the policy of "mortgaging" quotas embodied in the refugee legislation has completely barred the doors to this land for the people in many nations.

To further amplify our position on the national origins quota system, I would like to make reference to an editorial which appeared in the Labor Leader, the national organ of the association, on November 15, 1952. The editorial states in part:

"The present system of quotas is unjust, hypocritical, and wasteful.

"It is unjust because it does not meet the needs of all men. In the old Immigration Act, upon which the McCarran Act is modeled, Italy is given a quota of 5,000 immigrants a year, Great Britain had 65,000, and Germany 26,000. During the past 18 years, less than 44 percent of the quotas of the northern European countries have been utilized. In the meantime, millions of Italians were deprived of the opportunity of coming to America. Since the big quotas of Germany, Britain, and Ireland were not used, only about half the amount of people were admitted to the United States as could have been. This is a violation of justice.

"The McCarran Act is a two-headed hypocrisy. While one head tells the world our foreign policy of 'equality of all men,' the other head talks 'nordic supremacy.' We are discriminating against our allies on the basis of an arbitrary formula founded on the fanciful notion that the 1920 racial composition of American was supreme. These people desiring to immigrate ask one gift—American citizenship. McCarran says: 'No.' This is a violation of charity.

"It is uneconomical to refuse immigration. In a recent Department of Labor survey it was proven that the States with the highest number of immigrants had an average annual per capita income of about twice the income of the States with the smallest number of immigrants. This is a violation of man's reason."

Though the national origins quota system prompts our most basic objection to Public Law 414, it is by no means the only provision of the law that cries for revision. We may cite, for instance, the status of the naturalized citizen under this act. A sharp and unwarranted distinction in citizenship is established between the native-born and the naturalized citizen. The latter, whom we might add in many cases takes greater pride in his citizenship, is placed in constant jeopardy of losing that citizenship for reasons that may only be the result of human oversight.

An enumeration of all the other inequities of the McCarran-Walter law would be so lengthy as to preclude its inclusion here, though I trust that the witnesses before the committee will have pointed them out in detail.

Aside from this consideration of the basic violations of the Judeo-Christian precepts of justice and charity and of the traditional role of the United States as the haven of the oppressed which are embodied in the present immigration policy of this country, I would be remiss in my duty if I did not make mention of the necessity for a change in this policy in the immediate future.

First of all, a complete revision of the present policy and a reversal of many of its facets is called for, if only on the grounds of correcting the inequities of the existing act. Our duty to ourselves demands this change.

Moreover, our position as a bastion of freedom in the present world crisis also makes such a change mandatory. How can a nation command the respect of large and vitally important areas of the world, when she has so flagrantly expressed here discriminatory attitude toward their peoples? A national policy of intolerance and an assumed attitude of racial superiority is fundamentally inconsistent with our proud struggles against the twin totalitarianisms of communism and fascism.

Thirdly, we are discriminating against ourselves in our adoption of the present immigration law. In effect, we are depriving ourselves of the talents and cultural contributions of many peoples. It was through the importation of such talents in the past that has made possible our achievement as a Nation. To continue such a policy seems certain to lessen our potentiality for further accomplishments.

Having established the necessity of this change, the only question remaining is the direction which this change should take. The examination of this issue has been exhaustively undertaken by many groups and at this point I would merely wish to record the Association's endorsement of the recommendations contained in the report of the President's Commission on Immigration and Citizenship and as embodied in the bill presently before the Senate sponsored by Senator LEHMAN and a number of his colleagues (S. 1206).

I would point out that this bill strikes at the core of the injustices in the McCarran-Walter law by abolishing the national origins quota system and replaces it with a set of "preference groups" which would effectively aline our immigration policy with the goals and needs of this country. In addition, many of the other hardships of the

present policy have been corrected or substantially alleviated in this bill.

I would conclude by again expressing grave concern for the necessity of immediate change in the Nation's immigration policy. In conscience we owe it, not only to the rest of the world, but also to ourselves as well, to reassert our belief in the equality of all men and the bond of brotherhood that exists between them under the fatherhood of God. It is urgent that we undertake this task at once, preserving the tradition so assiduously developed by our immigrant forebears.

The Rhodes Scholarships

EXTENSION OF REMARKS
OF
HON. ROBERT HALE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1956

Mr. HALE. Mr. Speaker, so many false and misleading articles are published from time to time about the Rhodes Scholarships that it is a pleasure to read an editorial on the subject that is well ifnormed and fair. Mr. Speaker, Rhodes scholars differ in their political opinions just as any other group of citizens. It was a Rhodes scholar, Frank Holman, of Seattle, who, I believe, did more than anyone else to initiate the idea of the Bricker amendment. Other Rhodes scholars will take leading parts in opposing it. This is only one illustration of the absurdity of supposing, as some people have, that Rhodes scholars represent a bloc of opinion about public questions.

I am happy to append the following editorial from the Boston Herald of January 21 last, entitled "Rhodes' 2,633 Pass Test."

RHODES' 2,633 PASS TEST

The Rhodes scholarships are now entering their second half-century, an occasion to take stock.

The record is one a sensible person might have predicted in 1900. These scholars were bright boys, the scholarships were and are generous and Oxford was, and is, a great university.

The top achievements are achievements indeed: the Order of Merit, a share in a Nobel prize, peerages, knighthoods, membership in Supreme Courts of the Dominions and of the United States, and, especially in the Dominions, high political leadership. Even in the United States, however, the Rhodes scholarship has not proved the kiss of death in competitive politics. Witness Senator FULBRIGHT, of Arkansas; our own Yankee Congressman, HALE, of Maine; and a number of others from Congressmen to mayors.

The general average is high. In law, in medicine, in journalism, in academic life, Rhodes scholars have attained distinction. Twenty-four are heads of institutions of higher learning. There are Anglican bishops, missionaries, foundation executives—naturally—poets, novlists, a sculptor, and even an officer of the FBI.

There are certainly failures among them. Still, the chances are that that seedy fellow who cadged a drink on you in a Paris bar was not the Rhodes scholar he claimed to be, nor even a Harvard man.

Statistically, the 2,633 Rhodes scholars from this country and the Dominions have clearly done better for themselves, and, one trusts, for the world, than any but the most carefully selected groups of promising lads anywhere.

So might a sensible commentator have predicted at the start of the scholarships. But in early 1900's there were, especially in the United States, many not very sensible commentators, and some are still apparently afraid that the Rhodes scholars are going to bring the British Hanoverian dynasty back to rule this country.

One thing is clear from the record: American Rhodes scholars have not become the kind of innocent, tweedy, lovers of things British it was fearfully predicted in 1900 they would turn out to be. Among so many there were, of course, a few snobs. Oxford sometimes went to the heads of young Americans, just as Harvard or Princeton sometimes goes to the heads of young men from west of the Alleghenies (Yale, of course, never does). But there were very few, and most of them got over it.

Organized plotters for undoing the work of the American Revolution the Rhodes scholars never were.

One is, indeed, a leading writer and lecturer in the cause of Union Now, union between the United States and the free peoples of the world, English-speaking or not. This may be the residue of truth that remains in the accusation that the American Rhodes scholars are not "100 percent Americans."

In spite of the insistence in Cecil Rhodes' will establishing the scholarships that his scholars be picked for character, potential leadership, and love of sports as well as for conventional, bookish scholarship, the fact is that American selection committees, especially after the first few years, have always put scholarship firmly first.

Now it is also a fact, regret it though we may, that in this century bright bookish American boys tend, as a group, toward Leftish nonconformity. They are not Communists, not for the most part perhaps even "Liberals" in the American sense. But they are likely to be internationalists, even New and Fair Dealers, and not good rock-ribbed Republican isolationists.

This must seem to most of us, however, well short of treasonous.

Personalities of Those Delivering "Friendly Letters"

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, January 30, 1956

Mr. MARTIN of Pennsylvania. Mr. President, during this trying period in the world's history we should carefully consider the personalities of those delivering "friendly letters." The Pittsburgh Press of January 26 comments very forcibly on this subject. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MESSENGER OF PEACE?

The White House says Soviet Ambassador Zarubin delivered a "friendly letter" from Premier Bulganin to President Eisenhower on the general subject of peace.

Pending more information about the contents of that letter it may be appropriate to look at the messenger of this peace epistle—Zarubin.

If Hollywood were casting about for a big tough-looking muscle man in a gangster film, Zarubin would fill the bill. He not only looks the part but has had considerable experience in the shadier side of international life.

He was ambassador in Canada when the Soviet atomic spy ring operated there.

He was ambassador in Britain when the Fuchs atomic spy case was broken.

He has been identified by a Polish colonel who escaped the Katyn mass slaughter of Polish prisoners of war as an NKVD secret police general in charge of the prison camp where the victims were kept before being murdered.

An appropriate background for a messenger to deliver a Soviet "peace" message.

Communism and How To Combat It

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Monday, January 30, 1956

Mr. SPARKMAN. Mr. President, a friend of mine who is very active in one of the great organizations of this country, the Knights of Pythias, has called my attention to a list of recommended reading on communism and how to combat it.

I ask unanimous consent to have a statement issued by the Knights of Pythias and the suggested reading list printed in the Appendix of the RECORD.

There being no objection, the statement and reading list were ordered to be printed in the RECORD, as follows:

SUPREME LODGE KNIGHTS OF PYTHIAS,
Cincinnati, Ohio, September 30, 1954.

To: College and university presidents and librarians.

From: Order Knights of Pythias.

Subject: Recommended reading list on communism and how to combat it.

Colleges and universities have been criticized often for failure to provide good background reading and reference materials explaining and exposing the conspiracy and tactics of communism. Occasionally they have been unjustly criticized for their selections of materials to perform this function. In both instances they have found their inability to lend more assistance in this exposure and understanding of communism based on a lack of a reliable reference list of such books and pamphlets.

The Order Knights of Pythias takes pride in its long record of positive contributions to the building of a strong, self-reliant and God-fearing America. Herewith it offers another contribution toward keeping America strong through a comprehensive recommended reading list of books and pamphlets designed to expose the nature and tactics of communism.

The accompanying list of available books and pamphlets has been compiled for the Pythians by a board of stable and competent advisors convened by the All-American Conference to Combat Communism. This conference is composed of representatives of more than 50 large national organizations representing fraternal, veterans, religious, professional and business groups. Its comprehensive recommendations and activities are without bias or slant.

It is the hope of the Order Knights of Pythias that this list may prove to be an effective aid to universities and colleges in their search for reliable reading materials and may promote a greater interest and activity in the understanding of our common peril.

SUGGESTED READING LIST ON COMMUNISM AND HOW TO COMBAT IT

(Prepared under the auspices of the Order Knights of Pythias, Cincinnati, Ohio, in cooperation with the All-American Conference, to Combat Communism, Washington, D. C.)

BASIC

The Accused—(Weissberg), Simon & Schuster.

Brain Washing in Red China—(Hunter), Vanguard.

Eleven Years in Soviet Prison Camps—(Lipper), Henry Regnery.

Religion Behind the Iron Curtain—(Shuster), Macmillan.

Seeds of Treason—(DeToledano & Lasky), Funk & Wagnalls.

The Web of Subversion—(Burnham), John Day.

Witness—(Chambers), Random House.

1984—(Orwell), New Am. Lib. of World Lit. Paper binding.

1984—(Orwell), Harcourt Brace.

THEORY

The Appeals of Communism—(Almond), Princeton University Press.

Communism and Christ—(Lowry), Morehouse-Gorham. Paper binding.

The God That Failed—(Editor Crossman), Harper. Paper binding, Bantam Books.

Handbook on Propaganda for the Alert Citizen, Carlson-Foundation for Social Research.

I Believed—(Hyde), Putnam.

Address by DeWitt Nelson, Director, California Department of Natural Resources, Before the National Conference on Water Resources Policy

---

EXTENSION OF REMARKS

OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1956

Mr. HOSMER. Mr. Speaker, DeWitt "Swede" Nelson is the director of the California Department of Natural Resources. He joined that department in 1944, after 20 years with the United States Forest Service in several national forests in California. He is a graduate forester and was named California State Forester in 1945. He has held his present position since September 1953. Mr. Nelson is president of the Society of American Foresters and a director of the American Forestry Association. At the

national conference on water resources policy in St. Louis, Mr. Nelson addressed several hundred of the Nation's water leaders on the subject of upstream water conservation. The following is the text of his address:

I live and work in a region of great extremes in topography, in soil, in temperature and in precipitation. As a result of these extremes we have areas of overabundance and areas of great deficiency in rainfall. These extremes range from the desert areas with as little as 2 inches of rain per year to the "rain forests" with more than 100 inches of annual precipitation. To make the problem still more complex most of our precipitation falls as rain or snow during the winter months followed by summers characterized by high temperatures and little or no precipitation.

To further emphasize these extremes, northern California and southern Oregon are only now digging out from under two floods, one of which was the worst on record, while southern California is still forced to irrigate its citrus groves, and the winter grain crops are being decimated by drought.

With three-fourths of our precipitation falling in the mountainous areas we are forced to impound and transport this seasonal runoff to areas of need for agricultural, industrial, and urban requirements. Even in those areas of high annual rainfall we experience months of local deficiency during the summer season.

Speaking for the Pacific Coastal States, our problem is not that of water shortage when the total available supply is considered; but rather the problem of retaining and distributing the surplus flow to meet the urgently needed requirements in all areas.

Accustomed as we are to the use of charts and graphs, I would like to sketch a brief mental picture of the feeder streams to a river system. I believe the feeder streams can be likened to the roots of a tree which furnish the food which builds the great trunk. As the roots of a tree spread out through the soil they create a feeder system comparable to the small tributary streams that reach out over the land, picking up the collection of raindrops where they first begin to accumulate. These accumulations are gathered together by the large roots and tributaries of the main channels, then to the trunk where great storage may be provided. The branches in turn may represent the canals distributing the water which causes the landscape to bloom and prosper. Seriously injure the roots of a tree and you endanger its very existence or reduce its productive capacity. Similarly, mistreatment of the headwaters and feeder tributaries of a river will be reflected in the nature and duration of water flow as well as the quality of water produced. Possibly the planners of this panel recognized that fact when they placed the upstream water conservation subject first on the list.

While I speak from the western point of view in dealing with upstream problems I believe the fundamental principles of upstream treatment and management are quite universally applicable, even though some of the techniques may be different. Every State has uplands that may be classified as wildlands on a relative basis. Most all States have some lands which are used for forest, forage, or woodland crops. A great number of the States are mountainous in varying degrees. Such areas perform valuable watershed functions and the resource management and land treatment problems are similar in many respects. Probably one of the major differences between the West and the rest of the country is our dependence on great water distribution systems for irrigation purposes. But here again I understand that other parts of the Nation are studying the application of irrigation to take the drought out of dry periods. With this new concept of water use in other areas it is possible that over the long pull we will all be following very similar practices.

As I visualize the problem of water conservation and use I view it as a total problem reaching from the headwaters to the points of use and consumption. The problem cannot be stratified between upstream and downstream; nor should it be considered by itself without regard to the proper conservation and use of the related resources of soil, forests, forage, and other watershed cover types.

There is an interdependence of all our resources and certainly there is a close relationship between the proper use and conservation of those resources and the stability of our total economy. Probably one of the most vulnerable links in this chain of interdependence is the relationship of the watershed to the production of this precious crop of water upon which we are so dependent.

The point I wish to emphasize is that no single resource can be properly treated and managed by itself, but that all of the related resources should be treated and managed as integral parts of the whole. In dealing with water problems this type of integrated resource management has not been given the level of consideration that it must ultimately receive. There are a few exceptions, of course, where given watersheds have been acquired and dedicated to the primary purpose of water production and yet one or more other resources have also been managed and used. An excellent example of this is that of the city of Seattle where timber cropping and water production are being successfully integrated on the city-owned watershed.

We speak of and are endeavoring to manage our wildland areas on a multiple-use basis. The intensity of this type of management varies greatly between the dominant uses to which the lands are put and the attitudes of the landowners. Since all lands receive their proportionate share of rainfall, I believe we can consider all lands as watershed lands. Therefore, the soil stability of all lands, together with their contribution to water conservation and water yield, is important to the whole. This is true of both the upstream and downstream areas and calls for the integrated management of all the resources and crops.

The problem of harmonizing all of these uses is no simple one because of the competition for the resources of timber, forage, wildlife, and recreation, and because of the complex land-ownership patterns. I believe that, if these resources are properly managed for their best yield and use, they will naturally contribute to the maximum production of high-quality water. In other words, if we manage all of the agricultural, range, and forest lands to the full capabilities of the soil, we will be meeting the responsibilities of watershed-resource management to a large degree.

Until recently our national and regional organized efforts have been directed primarily to the downstream water-development programs. These have been great and often spectacular projects of either single or multiple purpose nature. The need for these projects has been urgent and the ratios of benefit to cost have generally been large. Even in the face of such requirements and values there has been opposition to their development. It required courage and long-range vision to forge ahead on many of those projects which have since proven their worth. What would be the condition of southern California today were it not for the courage and vision of the men who, many years ago, made the Los Angeles metropolitan aqueduct a reality?

Today many of the upstream water-conservation programs and projects are going through that same process of evolution. Preceded by a few test cases in the form of "pilot projects," it was not until the 83d Congress, through Public Law 566, that the upstream watershed program received full recognition and statutory support with a modest appropriation for activation. Yet, in spite of the growing need for the conservation and development of all water on a nationwide basis there are those who do not support it. This is the first broad watershed program that integrates water conservation, flood prevention, and land treatment. It fills a broad gap between the major flood-control projects handled by the Corps of Army Engineers on the one hand and the small local projects which can be developed by individuals or small groups on the other hand.

The upstream program calls for coordinated and complete watershed planning, development, and conservation. It is the type of program that can be broken down to units of most any desirable size and as the individual units are finished they should ultimately encompass the upper watersheds of a complete river system. It is truly long range and it is doubtful if any of us here today will see the completion of any major river system's upstream program. But we can and will see a strong start on many river systems. Much of the water saved through this upstream program will be the cheapest available water for it will be local water for local use. The theory is that the water should be conserved and stored on the land on which it falls through small dams, channel improvement, land treatment, and local water controls.

However, in the West, this theory is far from being generally applicable because most of the precipitation falls in the headwaters which are not agricultural lands but which are forest, range, and recreational areas, often referred to as wild lands, and are in large part in public ownership. We must, therefore, look high into the hills, for it is here that the streams gather their volume and their velocity. Here is the place where we need proper resource management, small reservoirs, stream clearance, check dams, and the all-important forest-fire prevention and control. I call this last an all-important item and as an illustration I give the following example. In 1953 there was a 3,000-acre forest fire in the San Bernardino watershed mountains. The following winter we experienced only moderate rainfall. As a result, 750,000 cubic yards of silt had to be removed from the downstream water spreading grounds which are so vital to recharging the underground water supplies. This removal cost 15 cents per cubic yard. Another million cubic yards are hanging on the mountain slopes ready to be washed down with the next heavy rains. Protection from fire is a part of the land treatment program. In these watersheds above and beyond the local agricultural areas, financial help and leadership in resource management and land treatment will be required. In addition, there is need for more knowledge as to how our wild land watersheds should be managed. Therefore we have great need for research.

Here again we find the close relationship and interdependence between the lower and upper reaches of the watershed, whether we are dealing with a large or small watershed problem. There are a few outstanding examples where overall integration has proven successful. Such an example is to be found in the Muskingum Conservancy District of Ohio. In many areas the design, construction, and operation of the physical improvements will be much simpler than the design, application and operation of the resource management and land treatment methods to be applied to a complex landownership pattern in the rugged headwaters of our streams.

We talk about our basic resources of soil, water, forests, forage, and minerals. Of these, soil is the foundation from which all of our renewable natural resources are produced. Yet soil is one of our least stable resources because it can be depleted or lost so easily. Here again is an interdependence, for the crops produced from the soil depend upon the soil's productive capacity and at the same time the soil is held in place by the vegetative crops it produces.

The Small Watershed Act, Public Law 566, 83d Congress, is basically sound and provides a means by which the Federal Government may cooperate with local agencies in planning complete watershed treatment for flood prevention. As I previously stated, it bridges a gap betwen the small soil and water-conservation program for which assistance is provided by the Department of Agriculture and the large flood-control projects of the United States Corps of Engineers. It emphasizes land use and land treatment for water conservation to help take the peak off of large flood flows. In this respect it is companion with and supplemental to the major downstream projects. It is not anticipated that upstream watershed work will ever replace the major structures needed for downstream protection and multiple-purpose uses.

In speaking of the law I join with many who believe its provisions are too limited to properly meet the problems and to secure maximum values from investments that will be made within its authorization. In this regard I suggest (1) that the watershed limitation of 250 acres be liberalized and that the 5,000 acre-feet of water storage capacity behind a single structure be enlarged to possibly 10,000 acre-feet; (2) since water conservation implies water use and since conservation and use are both vital elements to a coordinated program, it is urged that Federal funds used for water storage in this flood prevention program be also applicable to water conservation and to water storage for irrigation. This would permit Federal cost sharing in water conservation, flood prevention and water use; and (3) the law requires that the benefits shall exceed the cost of the improvements. In evaluating projects it is required that current prices be used for construction costs but that long-range projected prices be used in evaluating all benefits in accordance with Bureau of the Budget Circular A–47. Long-range projected prices assume that average prices over the next 50 years will be about two-thirds of present prices. The result is that the present value of project benefits must be discounted about one-third and therefore many projects that appear highly desirable turn out to have unfavorable cost-benefit ratios. Certainly to be equitable and practicable both the cost and benefit figures should be based on the same evaluation standards.

Recently I talked with a man who has spent a lifetime in developing and distributing mountain water and managing a large water organization. I asked him what he considered important in the upstream water program. His reply was short but to the point. "(1) Build upstream reservoirs as rapidly as possible; (2) protect the watershed cover; and (3) maintain a balanced use of the resources in the headwaters so as to produce a full yield of high quality water." In those few words he summed up the interdependence between water, land and vegetative cover.

I believe it is also well to emphasize that no single type of program is sufficient unto itself. A completely integrated program will encompass both downstream and upstream projects. It is important that we proceed with both programs in an agressive manner, for each will complement the other and build for a stronger America.

The Canning Industry in California

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1956

Mr. JOHNSON of California. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to point out that California has the most diverse type of agriculture in the Nation. Under the permit to include extraneous matter, I include a list of the members of the Canners League of California.

Also some answers and questions about canned foods.

Finally I include certain interesting facts about the canning industry in California under the heading "Did You Know?":

MEMBERS OF THE CANNERS LEAGUE OF CALIFORNIA

Aron Canning Co., F. M. Ball & Co., Beech-Nut Packing Co., F. E. Booth Co., Inc., California Packing Corp., Escalon Packers, Inc., Filice & Perrelli Canning Co., Inc., Flotill Products, Inc., Gerber Products Co., Golden Gate Products Co., Harter Packing Co., Hawaiian Pineapple Co., Ltd., H. J. Heinz Co., Hershel California Fruit Products Co., Inc., Hickmott Canning Co., Hollister Canning Co., G. W. Hume Co., Hunt Foods, Inc., Lake County Cannery, Inc., Libby, McNeill & Libby, Manteca Canning Co., Mor-Pak Preserving Corp., George Noroian Co., Planada Packers, Pratt-Low Preserving Co., Puccinelli Packing Co., Richmond-Chase Co., S and W Fine Foods, Inc., Santa Clara Packing Co., Schuckl & Co., Inc., Stanislaus Food Products Co., Stokely-Van Camp, Inc., Sun Garden Packing Co., Thornton Canning Co., Tri-Valley Packing Association, Turlock Cooperative Growers, United States Products Corp., Ltd., Walnut Creek Canning Co., Western California Canners, Inc., Wood Canning Co., F. G. Wool Packing Co.

ANSWERS TO QUESTIONS ABOUT CANNED FOODS

1. What is canning?

Canning is a method of preserving food by heating; either just before or after it is sealed in air-tight containers.

2. Are foods grown especially for canning?

Yes. Canning crops that are especially adapted to canning are grown in the parts of the country best suited to their production.

3. Do canners use leftover marketing produce?

No. Produce for canning is especially grown for that purpose. Growing fruits and vegetables for the canning industry is a specialized branch of farming.

4. Why do canned foods keep?

Because sufficient heat is applied to sterilize the food, that is, to kill organisms, such as bacteria, yeasts, and molds, that would otherwise cause spoilage.

5. How do commercial canners know how long to heat the food?

Scientists have worked out the exact length of time that each food must be cooked to sterilize it.

6. Is anything added to make canned foods keep?

No. Heat is the only thing used to make canned foods keep.

7. Of what is a tin can made?

Tin cans are made of a sheet of steel completely covered with a thin layer of pure tin.

8. Why are gold-colored enamel-lined cans used for some foods?

Enamel-lined cans are highly desirable to retain an attractive appearance for some kinds of foods.

9. Is it safe to leave unused portions of canned foods in the can after it is opened?

It is perfectly safe to leave opened food in the can. The Bureau of Human Nutrition and Home Economics of the Department of Agriculture, in a news release entitled "Oh, Sure! You Can Keep It in a Can," said: "It is just as safe to keep canned food in the can it comes in—if the can is cool and covered—as it is to empty the food into another container."

The important thing to remember in storing any unused portion of canned food is to put it in the refrigerator, just as any other cooked food is kept.

10. Does rust on the outside of a can harm the contents?

Not unless the rust is severe enough to make the can leak. Never use food from any can that leaks.

11. Do dents harm the contents of the can?

Not unless the dent causes the can to leak.

12. What effect has freezing on canned foods?

Except for a slight breakdown of texture of a few products, a single thawing and freezing does not usually affect canned foods adversely.

13. Where should canned foods be stored?

In a cool, dry place. Avoid storing near steam pipes or on shelves near a stove.

14. Are canned foods as nutritious as other cooked foods?

Yes. Scientific experiments have proved this is true.

15. Are the vitamins retained in canned foods?

Yes, vitamins are retained very well in commercially canned foods.

16. Is water added to all canned vegetables?

No. Tomatoes are canned in their own juice.

17. What is the liquid in a can of vegetables?

It is plain water, or water to which either salt or sugar is added.

18. Should the liquid on canned vegetables be used?

Yes, because it contains some of the nutritive value, minerals, vitamins, and flavor of the vegetable.

19. What is the liquid on canned fruits?

Usually it is a syrup of sugar and water. Sometimes fruits are canned unsweetened and, if so, it is stated on the label.

20. What are dietetic canned foods?

A number of different canned foods are being canned without the addition of salt or sugar. This provides foods that are palatable, economical, and easily prepared for persons who are on low-sodium diets, or are restricted to a low sugar allowance by their physicians.

21. Are canned foods ready to eat when they come from the can?

Yes, they are cooked foods and ready to eat just as they come from the can. Canned vegetables are generally mildly seasoned so they may be seasoned to suit individual taste. In addition, canned foods may be used in many different ways to make interesting dishes.

22. Should foods be heated in the can?

It is better to remove the food from the can before heating it. An unopened, or unpunctured can should never be heated except under water. Dry heat, as in an oven, or in the pan in which a can is being heated boils dry, may produce such pressure in a can as to cause it to burst. Sometimes on a camping trip or picnic it may be most convenient to heat the food in the can. If so, always open the top of the can before heating.

23. What information is always on all food labels?

The net weight or the volume of the contents, the name of the canner or distributor, and the name of the product appear on all labels.

24. Is there any other information on the label?

Yes, many labels describe the contents of the can, giving definite, practical information to help in buying, such as the variety of the product, the amount in the can by cupfuls, servings, or number of pieces; seasonings and sweetness of sirups.

25. Does the law protect the buyers of canned foods?

Yes, there are State and Federal laws to safeguard the wholesomeness of canned products.

DID YOU KNOW?

That the California canning industry packs over 3 billion cans of fruits and vegetables each year.

That this California production is about one-third of all the canned fruits and vegetables packed in the United States.

That over 85,000 workers are employed by the California fruit and vegetable canning industry at the peak of the canning season.

That this California industry uses more than 200 million pounds of sugar each season.

That the annual production of the California fruit and vegetable canning industry has an estimated retail value of about $675 million.

New Jersey Fights Cancer—The George E. Stringfellow Awards Are Part of the Ammunition

---

EXTENSION OF REMARKS
OF
HON. ROBERT W. KEAN
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1956

Mr. KEAN. Mr. Speaker, 10 years have passed since a statewide organized effort to fight cancer in New Jersey was started. The crusade, begun when the New Jersey division of the American Cancer Society was chartered on December 26, 1945, has made great progress toward the day when cancer will be conquered.

One means of alerting New Jersey's more than 5 million residents to the dangers of cancer and educating them on steps they can take to lessen its threat in the future is the annual cancer editorial contest for the State's daily and weekly newspapers.

Winners of these contests are presented with the George E. Stringfellow Award. George E. Stringfellow, a longtime friend of mine, is senior vice president of Thomas A. Edison, Inc. A man who never hesitates to give his time to efforts that will help his community, his State, and his Nation, George E. Stringfellow was the first president and a founder of the New Jersey division of the American Cancer Society.

I think we Members of Congress will gain an impression of the effective work he is doing in the fight against cancer by taking time to read the George E. Stringfellow award-winning weekly and daily newspaper editorials for 1955.

The Blairstown Press won the 1955 award in the weekly competition. The editorial was written by Rita Fuller, wife of the paper's publisher, C. Raymond Fuller. Mrs. Fuller won the award for her husband's paper in 1954, too.

This is Mrs. Fuller's editorial:

ST. GEORGE AND YOU

Once upon a time, long, long ago and far, far away lived a monstrous dragon which terrified the countryside. Armies were sent forth to slay it, but still it menaced the city, belching fire and smoke. To save themselves, the townspeople daily tossed it a couple of sheep and, when the supply ran out, varied the beast's diet by sending one of their hapless fellows to keep him pacified. "Their lot spared no one," says the grim tale, "rich or poor, high or low, someone must each day be sacrificed."

Finally, the princess herself was drawn by lot and despite the king's offer of half his realm if she might be spared, the frightened people insisted that if they must die so must his daughter. As she stood weeping bitterly by the pond where the dragon lived, along came a Christian young man of noble bearing whose name was George and who had been told in a vision to go to the city to rescue the maiden in distress. Despite her pleading that he fly while still he could, George went boldly forward to meet the beast when it rose with a great bellowing from the waves. Raising his spear, he pierced its scaly neck and pinned it to the ground. Then, while the grateful people hailed him as their deliverer, he smote off the dragon's head with his sword.

Well, this is 1955 in America, the land not only of the free and the home of the brave, but also of the healthiest, wealthiest and happiest of people. Yet we, too, have our dragon. We, too, each day sacrifice to it some of our own whether they be rich or poor, child or oldster, high or low. No one is safe from this frightful beast who lives in our midst—his name is Cancer.

We suppose that every family calendar has its share of red letter days—birthdays, anniversaries, family reunions. Next Friday should be such a day for us, but it won't because the one whose birthday we would celebrate was senselessly, brutally murdered by the dragon, Cancer. She was a gentle person, this baker of cakes, drier of tears, grower of incredibly huge gladioli and sweetpeas—she was my mother. A great believer in birthdays, she would certainly have enjoyed her own, especially the grandchildren she never saw with their beribboned gifts and many candled birthday cake. It is a double tragedy, for those same grandchildren have been robbed of one of childhood's greatest blessings—a doting grandmother to love, spoil, and baby them.

Surely we do have a monster loose in our midst—but equally certain, we have a St. George in our scientists, day by day patiently trying, discarding, trying again the experiments that will some time lead to the total rout of the terrible disease that attacks impartially the mother or the child, the breadwinner or the town drunk.

But just as St. George needed his spear to capture the beast and his sword to slay it, so the scientist must have the tools to free us of our scourge. And that is where you come in, for the experiments cost money and even scientists must eat. Give as much as you possibly can during this month's cancer drive. And don't consider it charity. It may be your own life you are ransoming from the dragon.

ANOTHER WINNING EDITORIAL

The Paterson Evening News, published by Harry B. Haines and edited by Abe Green, won the 1955 George E. Stringfellow award for the best cancer editorial of the year in the New Jersey daily newspapers. The winning editorial, Cancer Workers Calling Tonight—Be Generous, was written by Editor Abe J. Green, who has been intensely interested and active in the fight against cancer for many years. He has won similar awards for the Paterson News in the past. Here is his editorial:

CANCER WORKERS CALLING TONIGHT—BE GENEROUS

Tonight is cancer night—in Paterson, Hawthorne, Little Falls, and West Paterson.

Between the hours of 7 and 9, workers will call at your home with proper credentials. They will be members of a vast army of volunteers, working in the cause of humanity.

Be good to these visitors, neighbors. Treat them as your very own. They are working for you, and you, and you.

This is one case where money may soon be buying your health, your very life. If not your own, at least of someone you love. The $24 million being raised in the country in 1955 to fight cancer is to provide for the vital research which soon may turn up the heaven-blessed cure to end this terrible scourge.

Do you realize that:

It is estimated 1 of 4 people in America will be visited by cancer in the future. That means 40 million people threatened by the shadow. Narrowed down to Paterson, it means 35,000 in a city of 140,000. Last year 20,000 men died of lung cancer in the Nation.

Polio has finally been cured, thanks to the valiant research of men like Dr. Jonas Salk. Thousands of equally dedicated and competent scientists are working around the clock to cure cancer.

This could be the year.

Your contributions helped to cure polio—your dollars can do the same for cancer.

It may be true, but it is true nonetheless—that the life you save may be your own.

Light up your porch tonight, between 7 and 9, and when the workers call at your home for contributions—be good to them in spirit and in generosity.

This could be the year.

It could also mean the life of someone you love.

Give generously to help attain the county goal of $70,000 and Paterson's goal of $30,000.

And if, perchance, the volunteers fail to call at your home, mail your contribution to Cancer, 625 Broadway, Paterson.

MOVED TO HELP

One can easily imagine how many New Jersey residents are moved to help in the fight againts cancer, by these editorials. It is not only the Paterson Evening News and the Blairstown Press that write these editorials; it is newspapers across the State. In other words, the award offered by George E. Stringfellow is acting like a catalyst and enlisting more and more people in our State in the fight against cancer. I am pleased with the opportunity to commend his effort here.

The New Jersey division of the American Cancer Society has a chapter in each of the State's 21 counties. Previous to its organization, the cancer crusade was carried on by a group of enthusiastic women known as the Field Army. From a membership of 4,000 volunteers, the volunteer service program of the division has grown until there are 19,075 volunteers in 1199 different units.

Keeping stride with the ever increasing number of cancer cases, the New Jersey division has set up a six-point medical program that has won a citation from the American Cancer Society. Ten years ago the medical committee of the divi-

sion approved 52 projects for the various county chapters. Last year 131 projects were approved. These projects include the purchase of deep X-ray therapy units and other equipment; the support of 46 clinics now being operated by hospitals with American Cancer Society help through grants-in-aid; medications, nursing service and home care for the State's cancer patients.

Assistance for the cancer patient has kept pace with the ever increasing number of cancer cases. Ten years ago, when the activities were started under State auspices, the establishment of clinics was a main object. Later many chapters organized motor corps and started loan closets. Nursing service was provided for patients on their return from hospitals, and about two years ago, home care was added. This has proven to be a boon especially in the cases of ill mothers and children.

An idea of the extent to which this program has grown is evidenced from the fact that during the last 12 month fiscal period, 3956 patients received dressings; 1819, articles from loan closets; 1383, home care, and 578 transportation. The approximate money spent in the service program during this time was $43,080.

In fund-raising the New Jersey division has been one of the top leaders in the country. In 1946 the residents of the State contributed $716,904. In 1955 they gave $1,050,202, the first time the State reached the million dollar mark.

Alerting the public to the dangers of cancer is carried on through the cooperation of newspapers, as was shown above, through radio, television and other like media. It is carried on by means of exhibits at conventions and county and State fairs, and through films, both for lay and professional groups. Chapters in 15 counties maintain information centers and a mobile cancer information unit is taken to communities throughout the State. Millions of pieces of literature are distributed and hundreds of meetings are held yearly for many industrial, civic and other groups. I feel that everyone in New Jersey can be thankful for the fine work its citizens are doing to help them in this crusade.

Social Security Amendments of 1955

EXTENSION OF REMARKS

OF

HON. EDITH GREEN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1956

Mrs. GREEN of Oregon. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of Representative JAMES ROOSEVELT before the Senate Finance Committee on January 26, 1956, in support of H. R. 7225:

STATEMENT OF REPRESENTATIVE JAMES ROOSEVELT BEFORE SENATE FINANCE COMMITTEE, JANUARY 26, 1956

Mr. Chairman and members of the committee, may I express my deep appreciation to you for the privilege of being here and the opportunity of joining my remarks with those other Members of Congress in support of H. R. 7225. It is my firm conviction that this bill contains most needed amendments to the Federal Social Security Act.

The strong public opinion behind H. R. 7225 was evident when on July 18, 1955, the House gave the bill its approval by 372 votes for and only 31 votes against it.

The proposed legislation corrects many inequities and brings many of the benefits to a more nearly up-to-date status. Amongst these are:

1. Disability insuranc benefits to be provided at age 50 and over for workers who can meet certain coverage requirements. It is estimated that this will affect about 250,000 persons in the first year.

2. The age of eligibility for all women beneficiaries—widows, wives, and women workers—will be lowered from 65 to 62. It is estimated that in the first year these benefits would be paid to almost 800,000 additional women. If I have any regret on this provision it is that the age could not be lowered to 60 and also be applied equally to men. Reluctantly, it is seemingly necessary to accept the fact that these additional and worthy changes are not financially feasible at this time.

3. Disabled children who are disabled before they are age 18 would continue to receive benefits after age 18. It is estimated that eventually 5,000 children and their mothers will receive benefits.

4. Coverage would be extended to lawyers, dentists, osteopaths, veterinarians, chiropractors, naturopaths, optometrists, Tennessee Valley Authority, Federal Home Loan Bank employees, and gun naval store employees. It also clarifies present law dealing with self-employed sharecroppers.

5. Provides that at least 2 years before social-security taxes are scheduled to increase, an Advisory Council would be appointed by the Secretary of the Health, Education, and Welfare Department to take a look at the system, the benefits and income, and make recommendations on these items.

6. These new benefits and coverage provisions are not made irresponsibly from a fiscal point of view, for the bill makes provision that they be paid for by a tax increase of one-half percent on both the employer and employee—a total of 1 percent, plus a three-fourths percent tax on self-employed persons.

Considering the times, the economy and the needs of the people of this country, the amendments as contained in H. R. 7225 are long overdue. I have read some criticism that these changes were rushed through without due consideration. You gentlemen know much better than I do that most of these amendments have been reviewed and deeply considered at least over the last 10 years.

As long ago as the Eightieth Congress the Advisory Council appointed by the Senate recommended disability insurance payments by a vote of 15 to 2 and unanimously recommended that the eligibility age for women be lowered not to 62 but to 60 years.

What right thinking person can argue against extending coverage to disabled children over 18 whose deceased parents helped to pay for such coverage or that benefits continue to be withheld from workers disabled at age 50?

Understanding the problem that women over 35 years of age have today, in seeking employment, how can anyone deny them old-age and survivors benefits at age 62?

H. R. 7225 seeks to embrace under social-security coverage certain professional people not now covered, thereby assuring them of a small measure of security in their old age. The vast majority of the professional people affected have indicated their earnest desire that they be included in this coverage.

But, gentlemen, much as I am in favor of the provisions of H. R. 7225, I earnestly and deeply hope that the Members of the Senate and that this committee will realize that it only does half the job, that it leaves undone much which not only needs to be done but should have been done many years ago. I have brought most of these features which pertain to title 1 of the Social Security Act, in contrast to the fact that H. R. 7225 is wholly devoted to title 2, into the bill which I introduced late in the last session. It is numbered H. R. 7848. I, therefore, respectfully urge that the members of this committee turn an eye toward amending the provisions contained in H. R. 7225 but add these suggested amendments to title 1 of the Social Security Act. In general, my suggestions would amend the public assistance provisions to provide increased income, eliminate certain inequities and restrictions, and permit a more effective distribution of Federal funds.

It would appear fair and just that the Congress establish a single standard of qualification for the applicants and recipients—thereby creating a more uniform administration of the Public Assistance Act throughout the Nation.

In the event that old-age and survivors insurance benefits are lowered to age 62 for women, it follows that the public assistance section of the act should likewise be lowered to age 62 for women applicants and recipients. My bill provides for that.

It is generally found that the survivors and old-age benefits payments are so low—especially among women—that to exist they must apply for public assistance to augment their income. Surveys made of those on public assistance in the various States all reveal a far greater percentage of women recipients than men.

While director of the Department of Social Welfare of the State of California, Charles D. Schottland, now Federal Social Security Administrator, made a study on the social and economic characteristics of old-age assistance recipients and issued a report in March 1954. His report showed that almost two-thirds of the case load consisted of women, and that the dependency rate for women is 1½ times greater than that of men.

It was found that three-fifths of the women on aid were widows, whereas one-fourth of the men were widowers.

The substantially higher dependency rates for women derive from many factors. Among the most important are the following: (1) Women have traditionally assumed a more dependent economic role in our society, concentrating on home management rather than outside employments. (2) Because of limited employability, they require public assistance at an earlier age. This is confirmed by the fact that there is a larger concentration of women at the younger age levels of 65 years.

We are all aware, I am sure, of the great increase in the cost of living and this applies not only to the well-to-do but perhaps in even greater degree to those who are forced to seek public assistance. I would, therefore, suggest that the ceiling on the matching of Federal funds to the States, which is now restricted to $55 a month, offering the States little incentive to provide properly for their needy, be raised. That Congress must encourage the States to grant the needy enough to meet the increased cost of living and to bring about a more realistic and uniform standard of payment is made obvious when we look at the December 1955 social security bulletin, issued by the United States Department of Health, Education, and Welfare, and study the amounts paid during the month of September to those on public assistance.

Two million five hundred fifty-two thousand five hundred ninety-six recipients of old-age assistance received a nationwide average of only $52.50. The average payments per month in the individual States

ranged from $86.57 a month paid by Connecticut down to $27.70 paid in West Virginia.

One hundred and four thousand two hundred and fifty-six recipients of aid to the blind received a nationwide average of only $57.03 per month. The average payments in the individual States ranged from $93.26 a month paid by Connecticut down to $31.94 paid in West Virginia.

Two hundred and forty thousand eight hundred and seventy-seven recipients of aid to the permanently and totally disabled received a nationwide average of only $55.23 per month. Connecticut paid $114.07, and the States ranged down to a payment of $24.59 in Mississippi.

Two million one hundred and ninety-one thousand three hundred recipients of aid to dependent childaren, including 1 adult relative, received a nationwide average of only $24.12 per month. The average payments in the individual States ranged from $43.13 a month paid by Connecticut to $7.44 paid in Mississippi.

Public demand has compelled many States to pay their aged, blind, and physically handicapped more than the $55 a month. The Federal Government will not pay more than a total of $35 toward a recipient to whom the State is paying $55 a month or more.

This same unrealistic approach is practiced in the aid to dependent children were the Federal Government will not pay more than a total of $19.50 to 1 needy child and adult where the State is paying the maximum monthly allowance.

In order that it may be clear what the formula which I have included in H. R. 7848 would mean to the Federal Government in its contribution to the individual States, I include the following examples of Federal contributions on the varying State payments to the aged, blind, physically handicapped, and in aid to dependent children:

State	Per capita income, 1954, percent of United States	Present law, October 1955		State's share under H. R. 7848 if benefit not changed	Average benefit under H. R. 7848 if State continues present benefit pay	State percent of contribution benefits above $25 but below $100 (H. R. 7848)
		Average aged aid	State's share			
Louisiana	74	$51.15	$18.07	$14.68	$60.32	37
Colorado	95	92.73	57.73	37.17	96.28	47.5
Delaware	134	42.88	13.94	13.94	42.88	50
Georgia	70	37.97	11.48	9.54	43.51	35
Oklahoma	83	61.87	26.87	20.30	69.41	41.5
Utah	84	59.83	24.83	19.63	66.45	42
Virginia	84	30.37	7.68	7.26	31.38	42
California	122	70.20	35.29	27.60	85.40	50

May I now point out a few of the greatest injustices that now exist in title 1 of the Social Security Act.

An aged or handicapped recipient, under present laws imposed by Congress, is sentenced to idleness and prohibited from earning even the smallest amount under the threat of having such earnings deducted from their aid payment.

Under H. R. 7848, the aged and handicapped would be allowed to earn up to $50 per month. This privilege already is granted by Congress to the blind.

Children, especially of school age, should be encouraged to better their lot, instead of being forced into idleness because of the Federal provision that all "outside income and earnings" be deducted from the amount of aid granted them.

My bill would permit needy children to earn up to $30 per month to supplement their assistance and encourage self-reliance.

A floor under the ownership of real and personal property would be established and a provision that there be no imposition of a lien on such a home as a condition to receiving aid.

Some years ago, the Federal Social Security Agency adopted the following policy: "Compulsory transfer of control of property in order to qualify for assistance violates cardinal principle on which the Social Security Act is based—that needy persons should not be differentiated by reason of their need and that recipients of assistance have the same right of self-determination by reason of their need in the use of their resources as others in the community."

H. R. 7848 eliminates practices whereby the public assistance laws of certain States are used to enforce collections from recipients' relatives.

Again, some years ago, the Social Security Agency recommended the elimination of these clauses from State welfare codes in a statement, which read in part as follows:

"We recommend that provisions conditioning eligibility for assistance on the ability of relatives to support the applicant be eliminated from public assistance laws.

"The assistance laws in many States provide not only that assistance received from relatives shall be taken into account in determining an applicant's need, but also that the existence of relatives considered able to support shall make an applicant ineligible for aid.

"In some instances it may be known that the relative is actually not contributing to the support of the applicant and yet, because of the State law, assistance must be denied. * * *

The income and resources of an applicant that are considered in determining need should be actual and not merely potential.

"The general support laws of the States provide the means of enforcing support from relatives if the individual or State wishes to take such action. The public assistance laws should not be used as a means of enforcing the support laws of the States."

Lastly, I would add a few features which may seem minor but which are of the greatest importance to those involved: That the needy need not be penalized because of marriage; persons receiving aid shall not be deemed paupers or their names published for the purpose of shaming them off the rolls; that the program be administered in each State to insure uniform treatment in all of its political subdivisions.

Now the inevitable question arises: "How do we pay for these improvements?"

It is, I hope, well known and recognized that payments under title 2 are secured by the levying of taxes paid directly into the Social Security fund. Benefits under title 1 have always been paid from general revenues and appropriations. I do not propose that further taxes be levied or that any different system be adopted. It would seem more equtiable to continue paying such additional costs as will be necessitated from general revenue. Concretely, it would seem to me that, if we are going to be successful in defeating communism and in making democracy an example of the best system of government to provide for the just and proper needs of people, we first need to pay attention to our problems here at home. I am a strong supporter of economic aid to our allies and potential friends but I also firmly believe that we can cut down in the waste of our military expenditures and that, if necessary, we should curtail the amount of our billions that we are planning to spend abroad to the extent that it is necessary to do so in order to pay for these improvements here at home. At worst, it will be a small percentage of the money we are willing to spend for economic aid abroad. Certainly, our own most needy citizens have a prior claim.

In my opinion and that of many others, improvements in the Public Assistance Section of the Federal Social Security Act have been shamefully neglected. The laws of no two States are alike. Congress has the responsibility to correct this and to make our public assistance laws uniform throughout the Nation.

I respectfully urge that the members of the committee not only adopt H. R. 7225, but also amend into it the features of H. R. 7848, and give our needy aged, blind, physically handicapped, and dependent children their right to human dignity.

Thank you.

The Altoona (Pa.) Tribune Reached the 100th Milestone in the Field of Journalism January 3, 1956

SPEECH

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1956

Mr. VAN ZANDT. Mr. Speaker, the centennial edition of the Altoona (Pa.) Tribune, issued January 12, 1956, presented a nostalgic review of world-shattering events that transpired during the past century.

Through a series of reprinted articles and photographs, the reader enjoyed not only a refresher course in American and world history but likewise a chronological review of the transformation of the Altoona area in 1849 from its pastoral setting into a thriving industrial section of Pennsylvania which takes pardonable pride in the fact that it is the site of the famous Horseshoe Curve on the Pennsylvania Railroad and the home of the largest railroad shops in the world.

The Pennsylvania Railroad was only 3 years old when in 1849 it purchased farmland in Blair County, Pa., and began the erection of the railroad shops and yards which were destined to transform Altoona into an important railroad center of the Pennsylvania Railroad system.

The Altoona Tribune over the span of a century has recorded the growth and development of the Pennsylvania Railroad and other industries in the Altoona area with the result that today in the American tradition of free enterprise Altoona is a bustling city of diversified industries.

Pictures of locomotives and the railroad yards before the turn of the century, as shown in the centennial edition of the Altoona Tribune, are graphic illustrations of America's marked progress in the field of science and invention.

For example, there are reproduced early pictures of the American "Iron Horse" while another page carries an advertisement by the Pioneer Fast Line

organized in 1837 to provide transportation facilities.

The advertisement promised fast service of 3½ days between Philadelphia and Pittsburgh, adding that the journey was made possible "by railroad cars, canal pockets, and steamboats carrying the United States mail."

Depicting the American scene at the national level, the Altoona Tribune reported the war clouds gathering over the Nation as the threat of a civil war became imminent.

When Fort Sumter was fired upon, war became a stark reality and there followed the sequence of events of that fratricidal blood-bath that divided a nation.

Among these events was the famous conference of the Civil War Governors held in the swanky Logan House, Altoona, Pa., which at that time was one of the Nation's finest hotels. This conference is regarded by many historians as the turning point in the Civil War.

The famous Gettysburg Address was printed in the Altoona Tribune in regular fashion and with no idea that it was destined to become an historic and immortal masterpiece of thought and diction.

In addition to the surrender of General Lee, there was recorded the horrifying account of the assassination of the beloved Abraham Lincoln.

The chronology of historic events at home and abroad proceed with the Altoona Tribune's reporting of President McKinley's proclamation and the entrance of the United States into the War With Spain.

The 20th century approached and brought with it the continued growth and expansion of the United States and also depressing events such as World War I and World War II, the Korean conflict, and the global struggle to control the minds of men made necessary by the ruthless tactics of Soviet Russia in seeking dominance over all mankind.

The panoramic view by picture and the printed word encompasses the horse and buggy area to the present atomic age, thus revealing the important role played by the Altoona Tribune, as a disseminator of news in the 100 years of its existence.

In addition, the nostalgic review in the centennial edition of events of the last 100 years is a lesson in capsule form of America's joys and tribulations experienced by the young republic on the road to maturity and to the exalted position of the greatest nation on the face of the earth.

Mr. Speaker, to trace the history of Altoona's popular morning newspaper, I should like, at this point, to include in my remarks the following article that appeared in the centennial edition of the Altoona Tribune on January 12, 1956, and an accompanying editorial entitled "The Tribune Looks Forward" from the pen of its erudite and versatile editor, Mr. Robert W. Boyer, whose timely editorials have won wide acclaim for clarity and cogency in appealing for a dynamic brand of Americanism:

FIRST TRIBUNE PUBLISHED ON JANUARY 3, 1856—ALTOONA HAS BEEN BIG NEWS TO THE TRIBUNE FOR 100 YEARS

The Altoona Tribune has been a familiar name in Altoona and Blair County for 100 years, this month.

Journalism still was in its infancy when the Tribune first began operations January 3, 1856. The date of formal incorporation is listed as January 1, 1856.

Thus, the Altoona Tribune has seen, and reported, some of the most eventful times of world history, and, certainly, it has reported all of the story of the growth of our own community.

But, in looking back through our files, only a few of which remain from this early period, we found that many of the great events of our Nation had not yet found a dramatic spot in history, and were treated as very prosaic news.

The report of President Lincoln's Emancipation Proclamation was published on an inside page, and for example, nowhere does that familiar title appear in the wording.

The meeting of the loyal war governors here at the Logan House is regarded as a turning point in the Civil War. Imagine how we should treat such an event in our news columns today.

But, this simple item appears in the columns of the Tribune, Thursday, September 25, 1862:

"Meeting of Governors."

"On Wednesday, last, the Governors of all the loyal States with the exception of the Governor of Minnesota, who was detained by Indian difficulties, and Governor Morgan, of New York, were present either in person or by proxy. Their sessions were secret and although a number of reporters have given sketches of their proceedings, we are inclined to the thought that there was considerable guesswork about the reports. The convention adjourned to meet again in Washington City, and the Governors have gone thither."

NO BIG HEADLINES

The day of headlines had not yet been ushered in by Willam Rendolph Hearst, and the story of the Civil War appears in The Tribune in a series of brief, sketchy dispatches, seldom with anything more than a small, one-line heading.

This, of course, was in the day of slow communications. The telegraph had come into general use only shortly before the Tribune saw the light of day, and its service was limited, and often interrupted by broken lines.

There were no telephones, and even the mails were slow and irregular.

Through all this, the Tribune carried on, endeavoring by such means as were available to keep the people of the community informed.

The development of the Pennsylvania Railroad Co. here was reported steadily through the years; the industrial expansion of the city, the annexations, the social and cultural growth, and, among the most vital news to our people, the reporting of their own doings, their meetings, their accidents and tragedies, their marriages, births and deaths.

The first newspaper in Blair County was The Altoona Register published for a short time by William H. and J. A. Snyder in the spring of 1855. After its suspension it was succeeded by The Tribune, Jan. 1, 1856, McCrum & Allison, proprietors.

On May 1, 1858, William M. Allison of the Altoona Tribune disposed of his interest to H. C. Dern. On July 19, 1875, the interest of Ephriam B. McCrum passed into the hands of Hugh Pitcairn who for many years conducted the paper with Mr. Dern.

An April 14, 1873, McCrum and Dern began the Daily Tribune. The firm of Dern-Pitcairn took over January 28, 1878, continuing until Mr. Dern's death in 1905. At that time the company was reorganized as the "Altoona Tribune" with Dr. Pitcairn as president, Henry C. Dern as treasurer, and Alonzo D. Houck as general manager.

Col. Henry Shoemaker purchased the Tribune and became president and publisher November 12, 1912. Hr. Houck retired as general manager and became first vice president upon the retirement of Enos M. Jones in 1916.

MERGER

In January of 1920 the Altoona Times merged with the Tribune. Colonel Shoemaker continued as president with Bert Leopold as vice president. A. D. Houck became vice president and general manager of the job printing plant with A. M. Whitaker general manager of the newspaper. Charles K. Kelley who had been editor of the Times retired. W. H. Schwartz, editor of the Tribune, continued in that post.

Colonel Shoemaker purchased the Times interest in January of 1921.

Adam J. Greer was editor of the Tribune for a number of years in the early days of publication. He was succeeded February 1, 1881, by Wesley H. Schwartz, native of Williamsburg, who resigned as editor in 1922 to be succeeded by A. O. Vorse, J. V. Taylor, J. Herbert Walker, Henry T. Baldwin, Thomas C. Langdon, Robert O. Price, and James F. Brantinger who preceded Robert W. Boyer, present managing editor.

OTHER OFFICIALS

Other Tribune officials since 1923 have included Parson H. Crawford, advertising manager; Herbert D. Brauff, business manager; B. I. Levine, advertising manager; and Robert Keys, advertising manager. First directors of the organization headed by Colonel Shoemaker were Enos H. Jones, John D. Meyer, J. C. Quiggle, J. H. Chatham, Joseph Arbuckle, and William F. Gable. Prior to the purchase of the Tribune by Shoemaker, E. Warren Everhart was city editor for many years and William W. Witherow was circulation manager a long time. John Kelly was city editor before being called into the service several years ago, and is now stationed in Germany. Joseph Berger served as city editor several years before accepting a position with the State Department at Washington, D. C.

Several years ago Colonel Shoemaker sold his interest in the Altoona Tribune. Col. Theodore Carter is now owner. A. B. Crane is now vice president and publisher; and Joseph A. Faul is general manager; John P. Nardella, business manager. Leo P. Carroll is advertising manager; Bernard Krauth, head of circulation; Robert W. Boyer, managing editor; and Donald N. D'Elia, city editor.

Close to the time of the Spanish-American War the Tribune proprietors erected a neat and substantial three-story brick building especially designed as a printing house between 11th and 12th Avenues, fronting 32 feet on 12th Street, with a depth of 60 feet. This edifice is still in use.

THE TRIBUNE LOOKS FORWARD

(By Robert W. Boyer)

As we look backward across the years during which the Altoona Tribune has served Altoona, and all of Blair County, we become conscious, humbly so, of a oneness, a perfect unity, which exists, and has existed for all the long years of its life, between the Tribune and the community of which it is so vital a daily part.

For a full century, this month, the Tribune has served as a voice of the city. Sometimes it has been raised in exhortation, sometimes in denunciation, but, by the records, always on behalf of the city, always defending, ad-

vising, suggesting, striving always for a better city, a more informed people.

A century is a long time to serve a community. The very thought of the past, dwindling faintly into the depths of the distant years, and of the men and women, the brilliant and the able, and the mediocre who have worked here, who have kept finger to pulse while the community lived its daily life, leaves us humbly casting about for a way to express our own feelings as we mark this 100th anniversary.

There is so much to say to sum up a hundred years. What can we say? Shall we become dull and dreary with figures? Shall we belabor the columns, and the reader, with pile upon pile of statistics?

No. A century of recording the life of a community is more than a stack of statistics, more than dusty columns recounting the chronological events, people and dates, in every local organization and group through the years.

We were astounded to read an editorial in a paper of 1866 advising the people of Altoona that someday they would need more different types of industries.

The Tribune urged diversification of industry at the very beginning of the industrial age.

And so, we are not looking forward with the vain regrets of old men who lament the passing years, and to whom only the old days were good.

We do not delve into the ancient records to bewail the past, nor to shed tears for a day that is no more. But, to pull aside the curtain of time and glance backward momentarily can serve to give us a deeper appreciation of today, and of the life's struggle of the many who have gone faithfully through their daily tasks, and, step by step and year by year, built a better world, a better Nation, and a better city.

There are many things to be learned in a hundred years, whether it is a man or a newspaper which has lived them.

And only a very amateur philosopher is required to see that the wisdom of the years point toward a better tomorrow.

That is the thought and the urge which drive men and communities forward.

It is the future that counts. For the future is the very stuff of life itself.

One can go adventuring through the files of the Tribune, and through its pages of history, and one can look with interest backward through the years, and see the tiny village of Altoona, and its mud streets, and hear the lonely wail of a locomotive's whistle coming up the valley, heading bravely toward the ramparts of the mountains, and the newly opened West beyond, but, at the threshold of another century of service, the Tribune and all who now comprise its personnel, look forward to the future with zest, proud of an ancient masthead, but interested only in tomorrow, for, our past is now history.

Mr. Speaker, the worth of any institution to the community, State, and Nation is measured by its record of service in the common good. In this respect the Altoona Tribune has earned its laurels in the field of journalism as evidenced by the warm messages of congratulations that flooded its editorial offices the week of January 3, 1956.

These expressions of widespread commendation came from President Dwight D. Eisenhower, United States Senator Edward Martin, United States Senator James H. Duff, Gov. George Leader, State Senator Charles R. Mallery, State Assemblymen Charles A. Auker, Daniel H. Erb, Harold G. Miller, and Mayor Robert W. Anthony, of Altoona, along with scores of congratulatory messages from other business, industrial, church, and civic leaders throughout Pennsylvania and the Nation.

It was highly pleasing to me to be able to join in extending centenary congratulations in my capacity as Representative in Congress of the 20th Congressional District of Pennsylvania, which is comprised of Blair, Centre, and Clearfield Counties, because I belong to the Tribune alumni, having been employed in the folding room and also as a newsboy delivering Altoona's popular morning newspaper while a grade student in the Altoona schools.

I have many pleasant memories of my boyhood employment with the Altoona Tribune and feel that the training I received there in my early youth proved helpful to me in developing into manhood.

It has been my good fortune to have known personally many of the officials and employees of the Altoona Tribune over the past 50 years.

On the occasion of this centennial observance of one of Pennsylvania's leading daily newspapers I extend best wishes to the present publishers and staff for continued success in their efforts to meet the challenging future as ably as their predecessors met the test since 1856.

Mr. Speaker, it has been said often that if you wish to probe the sincerity, honesty, and ability of a man, ask his neighbor.

This admonition of an age-old adage aptly applies to the newspaper field because in the not too distant past members of the fourth estate in their publishing activities were not reluctant to repeatedly attack policies and personalities of a rival newspaper. This practice of verbally lambasting another newspaper is happily on the wane but it has always proved foreign to the precepts of journalism as practiced in the Altoona area with the result that all newspaper editors respect each other and as a result dwell in amity and contentment as they cooperate in promoting the best interests of the community.

There is no stronger evidence of the cordial relations that prevail among the newspaper fraternity in Altoona than the glowing editorial of cordiality and goodwill that appeared in the Altoona (Pa.) Mirror on January 12, 1956, warmly congratulating the Altoona Tribune on its 100th birthday.

Mr. Speaker, as a fitting conclusion to this tribute to the publishers and the staff of the Altoona Tribune, I wish to include at this point in my remarks the Altoona Mirror editorial and to add the two fine articles by Mrs. Grace K. Ebright, staff writer of the Altoona Mirror, in saluting the Altoona Tribune for its contribution through able and learned journalists in promoting the best interest of the newspaper profession in my home city of Altoona:

[From the Altoona (Pa.) Mirror of January 12, 1956]

TRIBUNE ANNIVERSARY

For 100 years residents of Altoona have welcomed the daily arrival of one of the city's first newspapers, the Altoona Tribune, and this anniversary year of that newspaper finds the officers of the company, the newspaper staff and its readers all celebrating the birthday event.

Birth date of the Altoona Tribune is January 3, for the first issue appeared back in 1856, and the newspaper has continued as a morning paper ever since.

The Altoona Mirror heartily congratulates the Tribune and its newspaper family on its centenary year. An existence of 100 years is an achievement most outstanding in any business, and the Tribune, ancient in its years, but up-to-date in its operation, starts a second century with the finest of greetings and the heartiest of congratulations.

For 82 years of the 100 years of existence of the Altoona Tribune, this newspaper, the Altoona Mirror, has traveled side-by-side in the production of a newspaper and the promotion of a progressive Altoona, and the association has been most friendly.

The 100-year-old Altoona Tribune has had a most interesting history, dating as it does back to a period 10 years after the formation of Blair county. The Tribune was antedated only by the Altoona Register, which appeared in 1855 and this paper was purchased to launch the Altoona Tribune. For a brief span it was known as the Daily Tribune, the title Altoona Tribune being first applied in 1905.

In 1914 the Tribune acquired the Altoona Gazette, an afternoon paper, which early began as the Altoona Sun. In 1920 the Altoona Times, a morning paper, was procured and the paper was issued as the Times-Tribune, the present title continuing however since 1923.

The Altoona Tribune is rich in newspaper tradition and in personnel, newspapermen of outstanding ability being associated with the business. On this anniversary date are recalled the names of E. B. McCrum and William H. Allison, first owners; Henry C. Dern, Dr. Hugh Pitcairn, Alonzo D. Houck, Enos M. Jones, Col. Henry W. Shoemaker, as owners.

The dean of Altoona newspapermen, the late Wesley Howe Schwartz, served the paper from 1881 up until a few years prior to his death in 1937. Miss Lizzie Akers is remembered as the faithful editorial room employee. Long in the service were J. Virgil Taylor, Parse H. Crawford, Karl Isenberg, Matthew Smith (now the Monsignor Smith of Denver) and a host of others, all who achieved fine newspaper reputations. Many continued to other positions distinguishing themselves.

To the present officers and staff, President Theodore Arter, Jr., Publisher A. B. Crane, Editor Robert W. Boyer, General Manager Joseph A. Faul and Advertising Director Leo Carroll, the very best of anniversary wishes and hearty congratulations on the historic edition. May the future add to the bright pages of the Altoona Tribune.

[From the Altoona (Pa.) Mirror of January 16, 1956]

MEMORIES

(By Grace K. Ebright)

This is being written before seeing the 100th anniversary issue of the Altoona Tribune, but the very fact that the morning paper is celebrating its 100th anniversary brings a flood of memories that goes back to more than half that period of time, when I deliberately left high school to fill a vacancy in the editorial office of the city's morning paper, as assitsant to Wesley Howe Schwartz, a self-educated man of towering literary ability who was then the Tribune's editor.

Educators today would certainly frown on my temerity. I had little "book larnin" as such. My earlier school years were spent in a 1-room country school. Before I could enter high school I was obliged to take a year and a half in grade school—the Adams

School—where, under the most efficient training of Della K. Yingling, I had many of the rough edges polished off.

In high school my Latin teacher was John S. Fair—a most ambitious young man with a leaning toward Army life, but filling in the interim with a heavy double schedule of teaching Greek and Latin by day, working on the morning newspaper by night.

Colonel Fair—as he later became—took an interest in my longing to write, and it was he who first introduced me to the inside of a newspaper office when he took my sister and me on a tour of the Tribune office.

Later he encouraged my early attempts at column writing. Because I was shy and retiring, I did not sign my name. Instead, I used the Greek initials for my name—Gamma Kappa—I learned the Greek alphabet through listening in to class recitations during what was supposed to be study periods. I can still hear the clear, ringing voice of the teacher reading passages from the textbook in a way to make them sound like sublime music—even though I did not understand the words.

Sue Schwartz, a daughter of the Tribune's editor, was at that time editorial assistant, and when she began planning her marriage to Prof. Joseph Barker—everyone called him Professor Barker—I set my sights as next in line for the job.

I was a real greenhorn. Today I would not have the courage to ask for a job in a newspaper office, but I did make good. Like Barkis, I was "willin'" to learn, and under the kind and patient tutelage of Mr. Schwartz I soon became familiar with editorial duties, reading proof, writing heads for inside copy, editing the country correspondence and, a little later, being sent out to cover educational or religious meetings of importance in the city.

I never learned shorthand, I never learned typing. Like my teacher, Mr. Schwartz, I began with a hunt-and-peck system on an old typewriter at home, though in the office it was all pencil work.

Sometimes I held copy while the editor did the proofreading on the ads, or statistics of various sorts.

And every now and then Oliver Danley, foreman in the composing room, would shout down the little well for more copy to be put in the tiny box and pulled upstairs by a rope.

I have never regretted leaving high school, for the experience I had under the tutelage of Wesley Howe Schwartz was to me priceless. Like the noted Msgr. Matthew Smith, now dean of Catholic publications, and famous editor of the Catholic Register, in Denever, Colo., who also served as proofreader and reporter on the Altoona Tribune, I feel that my association with Mr. Schwartz was in itself a liberal education. Just as Monsignor Smith gives credit to the wise and capable teaching—more by example than precept—of Wesley H. Schwartz, so do I feel that those 4 years of working side by side with this great man was far, far more valuable to me than any college degree I might have won, had I been able to go to college.

[From the Altoona (Pa.) Mirror of January 18, 1956]

A GREAT MAN

(By Grace K. Ebright)

Addressing Williams College alumni almost a hundred years ago, President James A. Garfield made the immortal statement concerning Mark Hopkins, the president of the college, 1836 to 1872: "Give me a log hut with only a simple bench, Mark Hopkins on one end and I on the other, and you may have all the buildings, apparatus and libraries without him."

The famous quotation has been often used as "Mark Hopkins on one end of a log and I on the other," to express the powerful influence of a great man's mind.

And it is with a feeling of a reverence somewhat like that of Garfield when I pause to pay tribute to the helpful influence on my mind that was given in the few years I was privileged to be an assistant to Wesley Howe Schwartz, editor of the Altoona Tribune for 40 years where, through his scholarly editorials and wise presentation of facts, he became a great influence for good and was considered one of the brainiest men of his day and time.

He was self taught. All his life books wielded a powerful influence over him and he told me that the first dollar he ever made went for a book.

How his reading was guided and directed I do not know, unless by Providence, but he soon cultivated a taste for the best in books and periodicals and once a week he would go down to Joe Bridenstein's newsstand on 12th Street and come back with an armload of the best in magazines—Harper's Bazaar, Atlantic Monthly, Review of Reviews, to mention just a few.

His family had to live in a big house, in his later years, to make room for his big library—one of the finest in the city. As I visited often in the home, I remember how crowded bookcases were to be found in every room, the halls, all the bedrooms and even the kitchen.

In later years the family moved to a big brick house in Fairview and there was a spacious sunporch where Mr. Schwartz did his writing and most every time I visited there, 1 or 2 of the huge Maltese cats would be found fast asleep on the desk top, amid the pages he was writing, or on the books he kept ready to browse in.

Unobtrusively, Mr. Schwartz was a good influence on my reading habits, lending me good books to read. And a good book was always my pay for carrying on, as best I could, in the office in his absence.

He was frequently called on to speak before religious or educational groups and he was absent on lodge nights and if he went out of town he was sure to bring me back a good book on his return.

He gave me the golden key to the treasure house of the printed page and through him I learned that with a mind fortified with good reading, or with good books at hand, one need never be idle or lonely and never beset by the present-day plague, even in young children, that constantly demands entertainment.

For many years he wrote a popular column which he signed "The Saunterer" and which, though often of a personal nature, carried a fund of worthwhile information.

In his later years he wrote often and much of his experiences as a youth when he worked on the Juniata Canal, long since passed into oblivion; but hearing him tell of those long-ago days it seemed to me I could recapture the magic of the slow-moving barges on the still waters—barges drawn by mules on the well-worn towpath alongside the canal.

Passengers and freight were hauled and nobody then complained about lack of speed. Travelers or shippers were too glad of any means of transportation in the fairly new country.

The States and Watershed Development

EXTENSION OF REMARKS

OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1956

Mr. GATHINGS. Mr. Speaker, the January issue of State Government contains an article prepared by Dr. Robert J. Morgan, associate professor of political science at the University of Nebraska, relative to the development and operation of watershed projects under the act which was enacted some 2 years ago.

In view of the expanding nationwide interest in the watershed protection and flood prevention program, this article is most timely. Believing that it will be of interest to Members, under unanimous consent, I include this article in its entirety:

THE STATES AND WATERSHED DEVELOPMENT

(By Robert J. Morgan)

With the adoption of the Department of Agriculture's program of pilot watershed projects in 1953 and the Watershed Protection and Flood Prevention Act of 1954,[1] sufficient progress has been made in this significant addition to the Nation's water programs to note some related problems. In particular, these are problems that concern State and local governments.

The watershed management program of the Department is designed, in part, to develop works of flood prevention or control in the tributary watersheds upstream from the larger rivers. Two types of construction are embraced in a completed watershed. B measures consist of such soil conservation practices as terracing, revegetation, land use management, and other practices. A measures are small dams—not to exceed 5,000 acre-feet in capacity, stabilizing structures, diversion ditches and dikes, stream channel improvement and other structures designed to minimize flood damages on the uplands of watersheds and to benefit urban localities situated downstream.

Public Law 566 (the Hope-Aiken law) differs from the authorization for pilot projects only insofar as the latter permits the Department of Agriculture to assume nearly all costs, although it is limited to a period of 5 years. The Hope-Aiken Law permits the Secretary of Agriculture to assist local organizations which apply to him for aid in planning and executing works of improvement for flood prevention and for the agricultural phases of water utilization, conservation and disposal. Watersheds not to exceed 250,000 acres in area may be treated as a single project, but contiguous areas may be joined as parts of a larger watershed. Local organizations authorized to act may include agencies of a State or its political subdivisions which have power to carry out, maintain and operate works of improvement. Such agencies are responsible for developing work plans, entering into contracts for construction, acquiring easements and rights of way, assuming a share of costs, securing water rights and operating and maintaining completed structures. Irrigation features may be included, but they cannot be paid for out of Department of Agriculture funds under this program.[2]

Considerable experience has been gained so far in the four Nebraska pilot projects being developed concurrently with 61 other watersheds scattered through the Nation. Undoubtedly many of the issues pressing for solution in Nebraska will be paralleled in other States. Actually, however, every State must determine whether watershed development is to be administered as a Federal-State, Federal-local or mixed Federal-State-local program. Certainly, as it is visualized by its proponents, this addition to conservation policy will, if it is widely accepted, force a reevaluation of the role of State and local governments affecting structure, functions and finance in carrying it into execution.

Three important assumptions concerning the functions of Federal, State, and local governments underlie the Hope-Aiken Law. The first is that, theoretically, the initiative in developing a watershed will come from the

---

Footnotes at end of speech.

State or local interests involved and that the Department of Agriculture will not impose a project which does not have the approval of these interests through the action of the Governor or his delegated subordinate. The second is that the Secretary of Agriculture is merely assisting local interests with technical and limited financial aid. The third is that local beneficiaries will bear as much of the cost as they can. (The act does not clearly distinguish between local governments as that term is traditionally understood and State government proper.)

Public Law 566 provides that applications from "local organizations" shall be approved by a State agency or by the Governor, if no such agency exists. In Nebraska the Governor has created an advisory committee composed with an eye to giving representation to the soil conservation districts (the predominant interest), the watershed associations, the State soil conservation committee, and industry. This committee is charged with advising the Governor to approve or reject applications arising in the State for assistance under the law. So far the committee has worked without a planning staff (except for data supplied by the Soil Conservation Service) and has not announced publicly the standards on which it will recommend approval or rejection of projects. Thus at present the committee is not in a position to deal with the watershed program within the broad framework of an integrated resources program related to other Federal activities in the area or to the economic and physical needs of various areas of the State.[3] Once a project has been approved by the Governor it is sent to the Secretary of Agriculture for further screening at his discretion, after which it goes to the agriculture committees of Congress via the Bureau of the Budget and the President's Office.

The assumption of Public Law 566 that local governments will bear a reasonable share of the costs poses a problem for the States and their subdivisions. Nebraska has not appropriated funds, nor has it provided credit facilities for this program, nor is there any apparent likelihood of such action in the near future. Undoubtedly, however, this issue must be met unless the watershed program is to face difficult odds in competition with the Army Corps of Engineers, who are able to construct dams almost wholly at Federal expense.[4]

The principal problems which have emerged so far have been those occurring in the planning stage, since most of the structures completed to date have not yet presented operational difficulties, although several can be foreseen.

The most obvious deficiency, structurally speaking, on the local level is lack of a single agency responsible for initiating the planning and overseeing the execution of watershed projects, and capable of doing this. Although planning in many instances so far, as will be the case in the future, is in terms of small watersheds less than 250,000 acres in area, even such undertakings usually have involved several legal subdivisions of the State. It can be anticipated that future projects, such as Oak-Middle Creek in Nebraska, wil present even more formidable problems of coordination.

To date the only means of securing coordination has been the development of ad hoc coordinating committees, which apparently have relied very heavily on the Soil Conservation Service for central guidance. In fact, it is no exaggeration to say that the Conservation Service has exerted dominant influence and has been the centrifugal force in project development.

Although it is a "pilot" project, the upper Salt-Swedeburg Watershed in Nebraska illustrates the multiplicity of agencies participating and the dimensions of the task in securing cooperative action.

The initiative in securing assistance and promising local support was assumed by the Salt-Wahoo Watershed Association, a corporation formed in 1950 to stimulate flood control for its watershed by securing cooperation between the Department of Agriculture and the Corps of Engineers; by the board of supervisors of the Lancaster County Soil Conservation District; and by the Six County Soil Conservation Committee, consisting of members from the counties within the Salt-Wahoo watershed. A resolution of August 11, 1953, served as evidence to the Soil Conservation Service of local willingness to supoprt the project. An office memorandum from the chief of the Conservation Service to the regional director contained the authority to commence formulation of a work plan. After the work plan was completed in September 1954, the board of supervisors of the Saunders County Soil Conservation District joined in sponsoring it in that county.

The work plan itself represents at least a year of planning and negotiations, especially with landowners to be affected by accelerated land treatment measures and construction. Additional arrangements had to be made with other related agencies. The two county soil conservation districts, the watershed association, and the extension services of the two counties assumed responsibility for the educational and promotional phases. Actual negotiations with landowners to secure easements, rights-of-way, and acceleration of land treatment measures were the special task of the soil conservation districts. The boards of commissioners of the two counties entered into memoranda of understanding with their respective soil conservation districts to cooperate in incorporating floodwater retarding features in certain designated structures—culverts and bridges. The board of Stocking Township in Saunders County agreed to establish roadside erosion control within its boundaries, and to furnish dirt for grade control retarding structures.

Several State agencies are involved in the project. The Nebraska Department of Roads and Irrigation has agreed to cooperate in redesigning selected highway structures and in constructing special appurtenances to them. The bureau of irrigation, waterpower, and drainage within this department has consented (or rather has not imposed theoretical powers to intervene) to the design of dams retaining flood waters. This agency has been required by State law, however, to demand the payment of filing fees for submission of plans; to date the necessary funds have come from the watershed association, since the soil conservation district has virtually no means of raising funds. The game, forestation, and parks commission has cooperated in an extensive program of multiflora rose and shrub planting, and is assisting in development of recreational potentials in the numerous small ponds to be impounded behind dams. The State conservation and survey division, affiliated with the University of Nebraska, has made available its relatively extensive geological and hydrological data, especially regarding the ground water supply. The university's college of agriculture is participating to evaluate the effects of the project on runoff, erosion, sedimentation, and water evaporation.

This evaluation program is actually a cooperative project within itself, involving not only the college of agriculture but also the United States Weather Bureau and the United States Geological Survey. Sharing with the Soil Conservation Service the costs of this research, these agencies expect to obtain invaluable and hitherto unavailable data from instrumentation stations in the area. With such information it is anticipated that the effectiveness of watershed management techniques can be determined with scientific accuracy either to substantiate past claims of usefulness or to modify present construction practices.

Other Federal agencies have coordinated their efforts. The primary assistance is by the Soil Conservation Service which, of course, has the responsibility for giving technical aid to landowners and operators in applying soil and water conservation plans, layout and proper construction, and for assisting local agencies in planning, designing structures, securing easements, supervising construction, and preparing and letting contracts to advance flood-prevention measures. The Agricultural Stabilization and Conservation Service has made the maximum payments allowable to individual farmers under existing legislation, to the extent of approving 100 percent Federal payments for approved conservation practices. It has, in fact, diverted funds to those counties in which watershed projects are under construction, and it has encouraged farmers to pool resources for building structures common to two or more farms. The Forest Service has given technical assistance in planning tree plantings. The Federal Housing Administration has indicated its willingness to extend credit to individual farmers who need assistance in terracing lands before other flood-prevention structures can be started. The Agricultural Research Service supplies data in hydrology, sedimentation, and the economics of costs and benefits to the Soil Conservation Service.

Despite the glowing evidence of intergovernmental coordination in the execution of this project, it is apparent that many problems, involving a mixture of policy, administration, and law, must be solved.

On the Federal level it is not clear whether Congress, in enacting the Hope-Aiken law, anticipated genuine coordination among the Department of Agriculture, the Corps of Engineers and the Bureau of Reclamation in developing the many phases of water management. The act may merely mark a further division of labor in this already crowded field, in which it is prayerfully hoped that the agencies—like three young lions consuming their spoil—will come into as little contact as possible. Conservationists in many States find, however, that the irrigation, drainage and water-management features of the act are as important as its flood-control provisions. Any conflict of agency interest must be resolved on the Federal level if there is to be a reasonable prospect of cooperation on the local project level.

Moreover, there is need for the Secretary of Agriculture to inform the States of the standards he will use in evaluating projects to be assisted. States with limited resources cannot benefit fully from the program, for example, if the Soil Conservation Service prefers to emphasize the development of areas capable of sharing a large percentage of the costs at the expense of impoverished areas much in need of Federal financial assistance. The provision of Public Law 566 requiring State approval of projects will insure that no State must accept a project that it does not want, but it is scarcely calculated to insure that a State will get the ones it does want. Since the President is required to submit project plans to the agriculture committees of Congress, it appears that the final evaluation of project worthiness will be a legislative task. It is reasonable to expect, under such circumstances, that organized groups and the views of individual Congressmen will play an influential role in the matter.

It is also uncertain whether the watershed protection and flood-prevention program is to be administered on a Federal-State basis or a Federal-local one. There is considerable evidence that the Soil Conservation Service would prefer to continue to direct the pro-

---

Footnotes at end of speech.

gram through the soil-conservation districts, with whom relations are generally very congenial. In fact, in the view of the Conservation Service, a prime consideration in undertaking development of a watershed project is the degree of cooperation it can anticipate from a functioning district. Such a relationship, involving a minimum of contact between the Soil Conservation Service and State agencies would leave the latter a doubtful role in planning projects, even if the State were to assist local units with administrative guidance and financial means. But, despite its preference for planning and executing individual projects through the soil-conservation districts, the Conservation Service has found them lacking in financial powers to undertake many projects, so that some other agency must assume the burdens of construction and maintenance.

In such a situation what is the function of State government? Conceivably, the State could undertake an active administrative direction of planning, could supply localities with technical advice and supervision, and could render financial assistance either in the form of direct appropriations, grants-in-aid, or credit facilities for local governments. Or, apart from giving the governor an advisory committee, it could confine its administrative role to designating a single agency responsible for coordinating the contributions of existing agencies to individual watershed projects. On the other hand, it could assume its more traditional role in the field of resources development by enacting permissive legislation which would fix the powers of local subdivisions to enable them to undertake the development of projects. Other legislation could define water rights not now existent, such as the right of prior appropriation in most Eastern States, or determine such rights as the right to flood and the ownership of waters impounded behind dams.

If the first of these approaches is selected, cries will be raised that the initiative and vitality of local governments are being sapped. But if the States do not undertake some direction and assistance, it can be predicted that the Federal Government will step in, as it has done in the "pilot" projects, with direction and money.

The effect of the watershed program on the structure and functions of local government has only recently become a subject of careful discussion. Advocates of the program have devoted most of their efforts so far to securing public acceptance of it from a technical standpoint. One of the virtues claimed for watershed flood prevention is that it attacks the problem where it is found, irrespective of existing political boundaries. In the Salt-Wahoo area, for example, the final project will embrace all or parts of six counties. Should a new unit of local government, such as the watershed district (authorized by enabling legislation in Nebraska and Kansas in 1953 and in Minnesota, Tennesee and Nevada in 1955) be adopted?[5] The functional nature of such an agency, empowered to deal with the total problems of development and maintenance, has its advantages, but the creation of such a district adds further to the hotch-potch of local government. Nebraska has not yet formed such a district, partly because there is suspicion of any new agency with taxing powers, partly because the original law (amended in 1955) required a rather complex procedure for proposing and organizing a district, and partly because urban-rural conflicts over the allocation of benefits and costs are certain to arise. It also appears that most existing local units, such as municipalities, counties and soil conservation districts lack adequate powers to undertake the obligations required under the Hope-Aiken Act.

Footnotes at end of speech.

Specifically necessary are adequate powers of eminent domain and taxation, as well as power to enter into agreements with Federal agencies. Units also must be able to construct and maintain works of improvement, to assess costs and benefits resulting from construction, and to secure easements and rights-of-way—including flowage rights and the right to flood. It may also be necessary to empower local units to purchase equipment, hire technical and administrative personnel, enact flood zoning ordinances, and borrow money. Moreover, some coordinating devices, formal or informal, are necessary in watersheds covering any appreciable area. Not least in importance is the need for adequate economic resources from which to draw funds even in political subdivisions already possessing adequate legal powers in this regard.

Experience in Nebraska to date illustrates several specific problems involving the need for adequate structure and powers on the part of local units. The success of the program starts with the individual land owner and farmer. The Soil Conservation Service does not possess and does not wish to have the power of eminent domain. Farmers must be convinced by education that they need the program, as urban dwellers do in many instances. The Service has extensive contacts with the former group, but virtually none with the latter. Thus it is essential that some local agency, public or private, undertake the task of demonstrating the value of the program to the public. The watershed associations in Nebraska have been remarkably successful in this regard.

In addition, the Conservation Service will be hard pressed to supply sufficient technical personnel once the program is accelerated, and State and local units will be equally hard pressed to find adequately trained men of their own. It is difficult to say what assistance the Extension Service and land grant colleges might give. The Lincoln area office of the Conservation Service had added seven men in the past 18 months to cope with the projects being developed under its jurisdiction.

It has been found on the pilot projects that it is not easy to secure easements for the construction of the larger structures, and in fact it is doubtful whether areas of class I land larger than about 4 square miles have the resources to support the program. In many cases justice demands that payment be made for easements, but Federal funds are not available for this purpose. Moreover, it appears that funds must be available to reimburse farmers who grant flowage rights (right to flood temporarily) as well as to purchase land for areas to be flooded permanently. Experience in this State with drainage districts indicates that serious litigation can grow out of damages incurred as a result of flooding.

Furthermore, if the land is purchased for the permanent pools behind dams, who is to own the water and be responsible for its use and control? It has also been found that coordination with county boards in the reconstruction of bridges and culverts requires patience, skill and, sometimes, fortuitous contacts. It is equally apparent that satisfactory relations and coordinated effort must be worked out with the State highway department in planning construction touching upon watershed projects. In Nebraska, as in some other Western States, the Bureau of Irrigation has extensive powers to authorize and oversee the construction of dams and the beneficial uses of water. This power must be either subordinated to or coordinated with Federal and State agencies developing watershed structures.

Structures requiring extensive local financial participation are as yet only in the planning stage in this State. But there is some disposition to rely on the soil conservation districts and watershed associations to initiate the projects by arousing local enthusiasm and by giving assurances that means will be found to construct and maintain the completed structures. Various solutions have been proposed, but none has gained widespread acceptance.

In 1953 counties were authorized to enter into compacts with each other and to contract with Federal agencies to undertake flood prevention projects. In 1955 additional legislation reduced the number of signatures necessary to propose a watershed district and the percentage of affirmative votes necessary to approve the creation of a district. Each county also was authorized in 1955 to impose a one-fourth mill levy, and to enter into agreements with Federal agencies, cities, drainage districts, other counties, or any other body politic or persons, for the construction, maintenance, repair, or operation of flood-control works authorized by Congress to be undertaken by Federal agencies. It is this last approach, that of using the county as the primary agency to finance and operate structures, that has gained some favor in Nebraska.[6]

It is probably unnecessarily and hopelessly utopian to insist that governmental agencies frame a rational and integrated program of water and land resources, despite the pressing need for such action. Given the American preference for political improvisation that results in a pragmatic approximation of the ideal, we undoubtedly shall have to settle for partial, tentative, and ad hoc solutions. Logical arrangements will have to give way to negotiations of the possible, and institutional forms will have to reflect the compromise of conflicting interests. Whether standardization will prevail because of the influence of Federal legislation, or traditional diversity in local institutions will hold, is uncertain. Rational reflection ought to aid in fixing the proper functions to be performed by national, State, and local units of government in the administration of this program.

In any event, it might be well for us to ponder De Tocqueville's observation that "It is not the administrative, but the political effects of decentralization that I most admire in America."

Ten Factors in the Global Struggle

EXTENSION OF REMARKS
OF

HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1956

Mr. VAN ZANDT. Mr. Speaker, during the present world crisis when the complexity of issues give rise to various suggestions of procedure in solving them, it is helpful to have the careful analysis by competent authorities of the dominant factors in the struggle for control over the minds of men.

With that thought in mind, I wish to call attention to the address by Dr. Robert T. Oliver, head of the department of speech, the Pennsylvania State University, University Park, Pa., delivered to the convocation of Juniata College, Huntingdon, Pa., November 30, 1955.

Dr. Oliver, who is a constituent of mine, chose as his subject Ten Factors in the Global Struggle. In addition to his position at Pennsylvania State University, Dr. Oliver is Adviser to the Korean Delegation at the United Nations and is the author of Syngman Rhee, Verdict in Korea, Four Who Spoke Out, and so forth.

The address which appeared in the January 15, 1956, issue of the magazine Vital Speeches of the Day follows:

TEN FACTORS IN THE GLOBAL STRUGGLE—ANALYSIS OF OUR STRENGTH AND WEAKNESSES

(By Robert T. Oliver, professor and head, department of speech, the Pennsylvania State University)

The cold war presents our generation with problems in international relations that are not only more severe but that are also different in kind than any that had existed previously. At the so-called summit conference in Geneva last July, the four heads of state clarified this difference—though it has been in existence for some time. The essential consideration governing international affairs at present is the recognition that major war has finally been rendered suicidal by development of weapons so destructive that they simply cannot be used.

This fact—which was stated explicitly by President Eisenhower at Geneva, but which underlay the strange restraints of the Korean war and which has dominated diplomacy for the past decade—makes it necessary for our leadership to devise fundamental changes in our basic national approach to international issues. Such a change is impossible in a democracy unless the public is brought to understand far better than it now does the truly radical effects of the simple conclusion that neither side dares risk a conflict of hydrogen bombs, intercontinental guided missiles and bacteriological warfare.

The classic relationship between diplomacy and war was stated in the famous dictum of Clausewitz, that "war is the extension of diplomacy by other means." This dictum, which has been axiomatic through 6,000 years of recorded history, became outmoded at Eniwetok, if not, indeed, at Hiroshima. It must now be restated and reassessed as follows: "Diplomacy must develop pressures short of total war to enforce decisions across sovereign boundaries."

Someday, perhaps, the sovereign state may be dissolved into a global federation capable of enforcing one uniform set of laws upon all its members. Under present conditions, however, sovereignty remains unquestionable. As is evidenced by the divisions of Germany and Korea, the Russian-American armaments race, the Iron Curtain, and the impasse at the United Nations, there is no legal power in existence to force agreements upon nations that choose to disagree.

This has been true, of course, all through history, and diplomacy has developed upon the hypothesis that, finally, "God is on the side of the heaviest battalions." Diplomats have always been constrained to negotiate from strength. That is to say, one of their skills has been to make it clear to their opponents that in case agreements are not reached war will be unleashed.

Under present conditions diplomats must develop a new strategy based upon the cardinal fact that war no longer is the court of final appeal. They must negotiate from the strength of other sanctions than total war—sanctions which will be powerful enough to create an atmosphere of tension sufficiently threatening to make it impossible for the opposition to maintain stubbornly an attitude of cynical disagreement.

The events of the past decade, in which Russia has extended its effective control over 800 million people outside the Soviet Union, make it indisputably evident that thus far the Communist distatorship has been far more successful than has the democratic leadership in understanding the new problems and in developing a new strategy of diplomatic force.

The confidence of the Soviet rulers, which I believe is real and not a mere pretense, was expressed last month, on the anniversary of the Russian revolution, by Deputy Prime Minister Kaganovich, when he said: "The 20th century is the century of the triumph of socialism and communism." And the nature of this anticipated triumph was spelled out explicitly back in 1922 by Nikolai Lenin, when he said: "First we shall take eastern Europe, then the masses of Asia. After that we shall surround and undermine the United States, which will fall into our laps like overripe fruit, without a struggle."

"Without a struggle" meant, of course, without a major war. There has been, and there will be, an intensive struggle—but (as the Russians realize better than we have done as yet) it will be a struggle under the new conditions in which cold war is the only kind we dare to wage. Our problem, then, is to make an analysis of all the kinds of pressures short of total war which the diplomats can, and must, organize to enforce their negotiations.

The first such pressure is propaganda. It is a weapon made possible by the development of mass mediums of communication and by the tremendous worldwide increase in literacy. The primary importance of this weapon is indicated by the frequency with which we use the term "psychological warfare" as a rough synonym for the cold war. And propaganda is a skill in which, in the considered judgment of Edward L. Bernays, the great public relations counselor, the Soviet Union is a full generation ahead of the United States. We are all aware of how greviously our military leadership and our public opinion has been disturbed by hints that Russia may be 6 months or a year ahead of us in research to develop an intercontinental guided missile. Yet if the assumption stated by President Eisenhower at Geneva is correct, that total war has become a practical impossibility, then the tremendous superiority of the Communists in propaganda techniques will be of fundamental and perhaps of decisive influence.

One indication of the differing emphasis upon propaganda is the fact that the Soviet Union is currently spending about $3 billion a year upon its global propaganda efforts; whereas, the American budget for overseas information consists of only $75 million—about 3 percent of what Russia is spending.

And as for the results, we might mention the spread of neutralism among the nations of southeastern Asia, the Communist victory at the polls in Indonesia, the stimulated unrest in the Middle East, and the Russian success in selling the idea of relaxing tensions at the very time when we most need to increase (not decrease) our efforts. Or, for a very specific example, we might note that the United States has supplied India with some $450 million; whereas Russia has given India almost nothing except praise and promises—yet the Indian press and Government speak often and loudly of Russian generosity as contrasted with what they term American selfishness. If something similar happened as between an American business and one of its competitors, the board of directors would immediately undertake an intensive reconsideration of its sales and public relations programs. To improve our American propaganda must be an immediate goal.

A second form of pressure used in the cold war is subversion and infiltration. This is a method utilized extensively by the Communists, who have a Communist Party, directed from Moscow, in every nation of the world. Dramatic evidence of the way in which this cold war weapon is employed has been furnished in the revelations of the espionage successfully carried on within our own and allied governments by such men as Burgess, McLean, Hiss, Fuchs, the Greenbergs, and others. Everyone knows, of course, of this utilization of parasitic political parties, which eat away at our vitals while—under protection of our laws—paying abject homage to the dictates of Moscow. However, effective as it is for the Communists, it is not a method that we would choose to utilize or that we could, under our democratic ideals of government. Nevertheless, we must recognize its effectiveness as used by the Soviet Union and we have to find some instrument of our own that we can use in our own way to counterbalance it.

Perhaps the best counterbalancing form of pressure, and one that should be wholly open to us, is the prohibition of strategic trade with the Communist nations until they will consent to honest and honorable negotiation. Actually, this is a weapon ready to our hands and denied to the Communists by the simple fact that they need a great many products from the free world; whereas we do not need products from areas presently dominated by Moscow. Even so, this has proved to be a difficult instrument of pressure to utilize in the past. Even during the course of the war in Korea, some of our Allies very strongly resisted our insistence upon the denial of strategic imports to Red China. In view of the fact that a million Red Chinese soldiers were actively in the field fighting against the United Nations, we did manage to secure a fair degree of concurrence with the prohibition of items on an agreed list of strategic goods. But this list was never a very realistic one. Rubber, for example, was always sent by our Allies into Red Chinese ports, on the grounds that it was needed for shoes for the peasants, as well as for tires for military vehicles. Also sent into Red China, even during the actual course of the fighting, were vast quantities of food, textiles, machine tools, and raw materials which did a great deal to sustain the economy of our and the United Nations' enemy. We may conclude that the pressure of an economic blockade is one that should theoretically offer us considerable advantages, but that it is very difficult to enforce so long as the free nations are heavily dependent upon foreign exports to maintain their standards of living.

A fourth factor in the cold war is the very nature of the international alinement of the two sides in the global struggle. Russia has surrounded herself with a body of satellites who never dream of being allowed to pursue any independence in their foreign

policy. A striking example is the instance in which Czechoslovakia made the mistake in 1948 of indicating that it would accept the free economic assistance that the United States offered under the Marshall Aid plan—but instantly withdrew its acceptance upon instructions from Moscow. Another instance is the absolute solidity of the Communist voting bloc in the United Nations. On the other hand, the free world alliance is extremely loose and disjointed.

At this very moment in the United Nations the United States is widely split from its principal allies on the questions of the package deal for admitting 17 (or 18) new members and on the question of whether Yugoslavia or the Philippines should be elected to the Security Council. We are split on the issue of the recognition of Red China and the defense of Formosa. We are split on the vital issue of whether it is wise to make additional concessions to the Communist demands. And in many ways, on many other issues, there is widespread disagreement among the so-called democratic nations regarding the tactics to be pursued in stemming further Communist aggression.

This looseness of the democratic alliance has been exploited by the Communists to create another—and one of their most effective—instruments in waging the cold war: namely, neutralism.

We all recall the great joy that spread through the entire free world when Yugoslavia announced, back in 1948, that it was asserting independence of Moscow's domination of its foreign policy. We seized upon "Titoism" as the most hopeful development of the entire postwar era. Ever since then, our fondest hope has been that we might somehow be able to encourage the spread of "Titoism"—and most specifically that we might be able to persuade Mao Tze-tung to become a second Tito.

Well, as a matter of fact, Titoism is no longer unique; it has become almost endemic. But, unhappily, it is not in the form of a neutralist desertion from the Communist camp, but of a neutralist movement led by India of separation from the democratic alliance. This spirit of neutralism has spread rapidly in southeast Asia, throughout the Arab-Asian bloc, and into parts of Europe as well. Undoubtedly it is fanned by the thought that if war should break out, the safest course for many nations to pursue is to stand aside from it and to emerge after the holocaust still strong and undamaged after Russia and the United States shall have battered themselves into helplessness. Meanwhile, these neutralist nations have greatly weakened the propaganda effectiveness of the democratic idcal by their insistence that they see little to choose between us and Russia.

A sixth factor in the cold war, which also, unfortunately, is much to the advantage of the Soviet Union, is the nature of the population of wide areas of the world. It is a simple fact that three-fourths of the people of the earth live in poverty, with little immediate hope of bettering their condition. It is relatively easy for Russia to tell them that the United States and Western Europe are monopolizing the means of creating wealth, and that their best hope lies in joining with the Soviet Union in taking away from us that which we have. And allied to this characteristic of many peoples is the concurrent fact that they have existed for many generations under tyrannical governments and do not have very high ideals of personal freedom. Hence, the police terrorism of communism is not by far as shocking to them as it is to us. They will, in fact, accept the tyranny if it is accompanied by promises, however fanciful, of improvement in their economic circumstances.

A seventh factor, arising out of these conditions, is the development of future effective allies by granting economic assistance and technical guidance to underdeveloped peoples around the world. A striking example of what may be accomplished in this respect is the fact that the Republic of Korea, which we have helped since 1945, now has the fourth largest armed force in the world and is devotedly and dependably on our side in the effort to develop collective security among nations. However, we must soberly take note of the fact that at just this period in history the tendency in our country is to taper off our foreign-aid programs; whereas at this same time, the Soviet Union is for the first time beginning to offer assistance of this kind. This, most assuredly, is not an area of endeavor in which we should permit ourselves to relax our efforts.

The noted historian, Arnold Toynbee, has laid special stress upon another aspect of the global struggle which he considers of great importance—namely, the dissatisfaction of large areas of the world with the colonial relationship which they have had under the rule of western nations. In terms of his cyclical interpretation of history, Toynbee has pointed out that the Anglo-American and Western European nations have enjoyed vast advantages, especially in the 19th century, and must now pay the price of seeing these formerly subordinated peoples rise against them. Obviously, the chief need which we have in this situation—especially since the colonial rule of western nations is all but ended—is to make clear to the former colonials that Russian designs upon them are nothing but a neocolonialism in a far worse form. But this is a task for enlightened and skillful propaganda, and in this respect, as I have pointed out, Russia most unfortunately for us is far in the lead.

A ninth factor in any struggle is the question of the unifying ideals for which the struggle is waged. As has often been said to me by orientals I have met, in the Far East people are inclined to think of national strength in three categories: Military, economic, and ideological. In the first two forms of strength the United States has definite superiority and is capable of surpassing the Soviet Union to a marked degree. Moreover, historically, the strength of our democratic ideals has been the chief weapon in our national arsenal. It was so when our own Colonies were inspired by the love of independence to carry on for 8 years a seemingly hopeless war against Great Birtain. It has been so in more recent times, when Wilson's 14 points and Roosevelt's 4 freedoms proved to be rallying points for peoples around the world.

However, it is precisely in this realm of ideology where the Soviet Union appears, paradoxically, to have one of its greatest advantages. To state the matter bluntly, it is all too clear that Russia knows what she wants and is determined to try to get it at any cost. And, on the contrary, it is dismally evident that the free world, including our own country, seems often unclear as to our world aims and indecisive in pursuing them. To many peoples of the world it seems that the country which knows where she is going is most likely to get there—and thereby there is created a "bandwagon psychology" of the inevitability of eventual Soviet triumph. This is especially true in parts of Asia and that fact, more than anything else, accounts for the successes of communism in China, in Indonesia, and in other areas of Southeastern Asia and the Middle East.

Finally, the tenth of these factors of influence in shaping the world struggle is the basic difference in the moral system under which that struggle is waged. The free world believes that promises are made to be kept; whereas, the Communist nations believe that agreements are only stratagems to achieve an end and that there is no point whatsoever in abiding by them. An immediate case in point is the flagrant, violent, and continuing violation by the Communists of the truce in Korea.

The difference in morals may be illustrated by an analogy drawn from war. We would feel pretty smart if, under battle conditions, we were able to camouflage a tank as though it looked like a haystack, and by that stratagem were enabled to destroy an unsuspecting body of attacking troops. Far from being ashamed of such deceitfulness, we would be proud of it, and might well give a medal to the commanding officer capable of pulling it off. Now, to the Communists diplomacy is only a form of war which they are waging for the ultimate destruction of all capitalistic nations. Therefore, to them, a treaty, a promise, or a speech in the United Nations is nothing whatsoever except a stratagem in a continuing war. If by ambiguities, hypocrisy, or lies they are able to maneuver our side into any concessions or into a position of weakness, they do not feel at all ashamed of doing so but instead pride themselves upon their cleverness.

The great pity, of course, is that such a system of morals on their side makes normal diplomacy impossible and negotiation as we understand it nothing but a dangerous hoax. Yet, this is precisely the kind of psychology with which we must learn eventually to deal.

The foregoing analysis has not been intended to sound either optimistic or pessimistic, but merely a sober analysis of crucial elements in the world situation as it now confronts us.

At the Geneva Conference in July, the four heads of state agreed implicitly that any resort to all-out warfare has become an impossibility. Of course, we have no way of knowing that the time may not come when the Soviet Union may, nevertheless, undertake a surprise attack in great force upon us, hoping for a knockout total victory. In any event, we are required by sheer commonsense to try to maintain at least an equality of armaments so long as the hostile conditions persist.

But the Geneva spirit never did mean that agreements were going to be reached or that the world struggle would be halted. Lenin's stated goal of surrounding and undermining the United States, until we fall into the Russian lap like overripe fruit, remains unchanged. What the Geneva spirit does do is to emphasize for us that we must devise means of winning the global struggle by means short of and other than total war. My purpose has been to suggest some of the problems which must be identified and solved, in order that we may begin to wage cold war more effectively. Much remains to be done.

Aid to Israel Before It Is Too Late

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1956

Mr. ANFUSO. Mr. Speaker, today President Eisenhower and British Prime Minister Sir Anthony Eden are beginning a series of meetings to discuss various international problems, including the situation in the Middle East. For some time now it is known that Mr. Eden is proposing that Israel make territorial concessions to the Arab countries by giving up a fourth of its area, which would leave little Israel even smaller than

it is and rob it of any opportunity for economic self-sufficiency for its people.

This morning's Washington Post and Times Herald carries a short statement on the subject which is endorsed by many leading persons, Christians and Jews, in all walks of American life. I subscribe wholeheartedly to the views expressed in this statement. I want to add my voice to that of these distinguished Americans who urge our Government to support Israel before it is too late.

Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert this statement and commend it to the attention of all my colleagues. The statement is as follows:

BEFORE IT IS TOO LATE

We believe it to be our duty to call the attention of our Government and our fellow citizens to the continuing grave crisis in the Middle East, which threatens the existence of the State of Israel and the peace and security of the entire free world.

The State of Israel came into being on May 14, 1948. Its establishment by action of the United Nations General Assembly honored a historic right and redressed an ancient wrong. A tortuous history of agony for Jewish communities in lands of persecution ended in a monumental opportunity for self-determination and independence. Multitudes of people in all countries were deeply stirred by the revival of this nation, which in its earlier age of independence in its own land, had given priceless spiritual and ethical gifts to civilization. The world community considered that the Arab peoples, who in the past generation have secured a wide sphere of independence in eight sovereign states, would welcome a kindred people in their new-found freedom. Israel's area of 8,000 square miles and 1,800,000 population is not a threat to 8 Arab states which extend over 2 million square miles of territory and support over 40 million people.

With the moral and material aid of the people and Government of the United States and of friends of freedom everywhere, Israel in fewer than 8 years has built a free and democratic commonwealth in the Middle East. It has provided a haven for hundreds of thousands of hapless victims of persecution. It has constructed a humane society in a corner of the earth which has known for centuries past wasteful neglect and exploitation. Israel has fulfilled in substantial and earnest measure the trust and high hopes of its well-wishers throughout the world. Where it has failed, that failure has been due in large measure to inordinate provocation which, we feel, no nation in similar circumstances would have tolerated with so much patience.

Israel's widely acclaimed achievement is today in danger. Its enemies, encouraged by lavish supplies of weapons of destruction from the Communist world, are making rapid preparations to unleash a new round of war which their leaders assert will destroy Israel. A renewed war against Israel would set the whole Middle East aflame, endangering the peace of the world.

We cannot accept the view held by some of our British friends that war can be forestalled or prevented by applying pressures to Israel to yield territory to the Arab States. We recall the historic failure of the Munich Conference to avert World War II by forcing democratic Czechoslovakia to surrender its teritories to Nazi Germany. The appetite of aggressors feeds upon appeasement.

We ask our Government to stand firm and support with vigor our sister democracy of Israel.

As a first step in restoring equilibrium and creating a more favorable climate of stability and peace in the Middle East, which has been deeply disturbed by the supply of Communist arms to Egypt, we appeal to our Government to make available to Israel without delay the legitimate means for its self-defense. We also urge our Government to conclude as soon as possible security treaties with Israel, and those of her neighbors who desire peace, guaranteeing their present frontiers against alteration by force. Such measures would clear the way for the Arab States and Israel to negotiate a peace settlement fair to all. Such measures, further, can lead to that renascence of the spirit so vital to the development of the area's resources, both Israeli and Arab.

We believe that these positive actions by the United States Government will be welcomed by the overwhelming majority of the American people. In the name of justice, humanity, and America's good name among the nations, we urge our Government to act firmly and decisively before it is too late.

SIGNATORIES TO THE STATEMENT

Prof. James Luther Adams, federated theologic faculty, University of Chicago; Dr. Dewey Anderson, Public Affairs Institute, Washington, D. C.; Dana Andrews, Actor; Martin C. Ansorge, Attorney, New York City; Joseph Applebaum, Vice President, Oil, Chemical & Atomic Workers International Union; Prof. Kenneth J. Arrow, Stanford University; Dr. Henry A. Atkinson, church leader, New York City; Judge William Hawley Atwell, Dallas.

Texas Schoolmen Offer Plan for Aid to Education

EXTENSION OF REMARKS

OF

HON. WALTER ROGERS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1956

Mr. ROGERS of Texas. Mr. Speaker, the House this week will begin debate on the question of Federal aid to education. As a firm believer in the principle that there should be no Federal control over our public school system and that local people can best assume such responsibility, I am encouraged by a plan sent to

me by the board of education of Corpus Christi, Tex. It seems to me some such program, as outlined here, whereby the States could retain a portion of tax moneys within the State to be used for school construction, is worthy of serious consideration.

For that reason, under permission to extend my remarks, I include the following plan offered by the Corpus Christi Board of Education:

SUGGESTED WAYS AND MEANS OF FINANCING PUBLIC EDUCATION, GRADES 1–12

It is obvious that the increase in students will necessitate a corresponding increase in the cost of public education. Therefore, a substantial amount of new money will be necessary immediately to continue adequately the operations of our public schools. In view of the heavy over-all tax load with which America is burdened today we feel that new taxation is absolutely unnecessary.

I. We recommend that 10 percent of the Federal income tax be withheld at the State level for public school education (grades 1–12) and that—

(a) Distribution of this money be made to the respective school districts in accordance with the income tax derived from the district.

(b) A State board of equalization be established with authority to adjust assessed valuations and determine minimum tax rates for each school district in the State.

(c) Each school district, in order to be eligible for Federal income-tax money, comply with the requirements of the State Board of Equalization.

(d) The Texas Education Agency, when authorized by the State board of equalization, be empowered to certify payment of such funds to the respective school districts.

(e) These funds be used at the discretion of the local school board, in accordance with State laws, for school operations and building construction.

(f) All such funds be accounted for and be audited annually by a CPA for public and official information and the report published.

(g) Proposals submitted not be construed or designed for the purpose of reducing local district school taxes.

We feel the recommendation relative to Federal income-tax withholding would lead to the following results:

1. This would provide for the adequate operation of our public schools when the program is placed into operation.

2. This would avoid a State sales and income tax which, under present conditions, appears to be inevitable.

3. This would eliminate the necessity of voting any new taxes for public school purposes for many years.

4. This would approach the basic American philosophy of all the people paying for the education of all the children in grades 1–12.

5. This would attract and hold more and better qualified teachers (men and women) to the teaching profession.

6. This would further assure security to members of the teaching profession.

7. This would create a never-ending interest in public education since all people would now be paying school taxes.

8. This would enable us to increase salaries of members of the teaching profession.

We feel confident that this proposal would be generally accepted because—

1. There is nothing as close to the heart of American parents today as the education of their children.

2. Withholding the tax money at the State level to help finance public education would be more appreciated by American parents than just reducing the Federal income tax.

3. Reduction of the Federal income tax will not benefit the educational system at all.

4. Withholding the Federal income-tax money at the State level and distributing it in accordance with State and local regulations would eliminate the complexing problems which would be encountered if Federal aid to education, as now being considered, were distributed at the national level.

5. Ten percent of the Federal income tax withheld at the State level for public education would assist in giving the permanent shot in the arm to American economy which many of the experts state will be necessary.

6. Ten percent of the Federal income tax withheld at the State level would, with prevailing local and State taxes, solve permanently the tremendously increasing problem of financing public education.

II. We recommend that the Texas Education Agency establish procedures by which the objectives of public education in the State can be determined and that—

(a) State funds and Federal income tax money be used only to accomplish these objectives.

(b) Any program extra and beyond these objectives be financed by the local district after all other financial requirements have been met.

We feel that the interest on debt service in Texas, amounting to many millions of dollars, could be substantially reduced, thereby eventually releasing this money for the maintenance and operations of our schools. This is, of course, in addition to prevailing school funds, State and local. The tremendous amount of school buildings necessary will, under present provisions, cause this debt service to substantially increase.

III. We recommend that the Texas Legislature establish a public school building fund to lend money to school districts burdened with unusual buiding problems.

(a) School districts would qualify for loans according to their bonding capacity and ability to pay after having met all requirements of the State board of equalization. (We feel that this particular fund would not be needed more than 10 years if suggestions relative to Federal income tax withholding and State board of equalization were enacted.)

Shall the Jury System Be Sacrificed on the Altar of Economy?

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1956

Mr. ANFUSO. Mr. Speaker, it is a great honor and a privilege for me to insert into the CONGRESSIONAL RECORD a statement by Mr. Justice Walter R. Hart of the Supreme Court of the State of New York on the occasion of the approval of a certificate for the incorporation of the Committee for the Preservation of the Constitutional Rights to Trial by Jury, Inc.

This is a very timely article by an outstanding jurist, in view of the great debate now going on with respect to this subject in many parts of the country. Mr. Justice Hart was a distinguished lawyer and legislator before ascending the supreme court bench of New York. He is eminently qualified to speak on this subject. I am certain that his views will be greatly appreciated by my colleagues.

Justice Hart's statement is as follows:

SHALL THE JURY SYSTEM BE SACRIFICED ON THE ALTAR OF ECONOMY?

(Statement by Mr. Justice Walter R. Hart)

There has been submitted to me for approval a certificate for the incorporation of the Committee for the Preservation of the Constitutional Right to Trial by Jury, Inc.

In view of the historic background of the jury system and the fact that the right to a trial by jury in a civil case is guaranteed by the Constitution of the United States and the constitution of every State of the Union except Louisiana and Utah, the necessity for the organization of a committee such as this might be questioned.

CLOUDS ON THE HORIZON OF DEMOCRACY

During the past 5 years, however, proposals have been advanced that trial by jury be denied in actions brought to recover damages for personal injuries.

These proposals have received widespread publicity, probably due to the fact that they have been advanced by high-ranking members of the judicial system.

Numerous addresses have been made upon this subject by Presiding Justice David W. Peck of the appellate division, first department. A short time ago, while appearing on station WMCA, referring to the verdicts of juries, he said:

"I have no complaints about jury trials or the result of jury trials. The only thing about it is that the process of jury trial is so slow that you can't keep up with the rapidity of accidents in a congested community like New York City, and therefore you are presented with the problem of either changing the process of trial to get one which is more speedy or having a lot more court buildings, judges, and jurors around to try cases."

Supreme Court Justice Samuel H. Hofstadter (first department) in an article in the New York Times (February 21, 1954), is reported to have said:

"By a bare majority the trial justices of the first department last May (1953) registered their approval of a move to abolish jury trials in civil actions, with some exceptions, as under the English system."

United States Court of Appeals Judge Jerome N. Frank, in an article in Collier's magazine (December 9, 1950), said

"Since in none of the democracries other than ours today is the jury held in high esteem, it cannot be considered an essential part of democratic government."

One might be tempted to ask, where are the democracies "other than ours", and then cite the highly relevant comment made approximately 260 years ago by 1 of the justices of His Majesty's Courts of Common Pleas, Sir William Blackstone, Knt., viz:

"And, therefore, a celebrated French writer, (Mon. esq. Sp. L. xi, 6) who concludes, that because Rome, Sparta, and Carthage have lost their liberties, therefore those of England in time must perish, should have recollected that Rome, Sparta, and Carthage, at the time when their liberties were lost, were strangers to the trial by jury." [1]

ARE AWARDS OF JURIES AND JUDGES THE SAME?

In the New York State Bar Bulletin of April, 1953 (p. 117), Presiding Justice Peck states:

"Over all, there is no reason to think that results before judges would be any different from those before juries, although a more even and less spasmodic justice could be anticipated. In the one State where I know that comparisons can be made, the State of Massachusetts, where they have two courts of coordinate jurisdiction, one trying cases with juries and the other without, with no distinction in the class of cases or the monetary jurisdiction of the two courts, the fig-

Footnotes at end of speech.

ures show that the percentage of plaintiff's and defendant's verdicts is the same and the amounts of the awards are the same."

On the other hand, we find Chief Justice Arthur T. Vanderbilt, of the Supreme Court of the State of New Jersey, quoting Chief Justice Stern, of the Common Pleas Court of Pennsylvania, as having used the following language with respect to the disposition of actions without a jury: [2]

"The plaintiffs expressed satisfaction because they were getting a prompt hearing of their cases, with resulting prompt payments. * * * On the other hand, the defendants were equally pleased because they felt protected from the danger of reckless and extravagant verdicts, and were satisfied that the amounts found were fair and reasonable."

Associate Justice Botein, of the appellate division, in his admirable book "Trial Judge," states (at p. 142):

"A case was tried before me involving the death of a man in his thirties, who was survived by a widow and three small children. For some reason, the lawyer representing his estate did not demand a jury."

Mr. Justice Botein then goes on to discuss the facts, as found by him, as follows:

"The defendant was driving his car at an excessive rate of speed, that he had passed another car dangerously close to a curve, and that as he entered the curve his left wheels were on the wrong side of the white line bisecting the road. His car collided with that being driven by the decedent, in the opposite direction. The latter suffered internal injuries which resulted in his death in a hospital 2 days later. Unquestionably the defendant had operated his automobile negligently. * * *

"That the decedent had attended a bachelor party where he had a few drinks, and * * * that he, too, was straddling the white line. The conclusion was inescapable that the decedent had been as much to blame as the defendant."

Mr. Justice Botein then concludes:

"Under the circumstances, I had no alternative but to decide in favor of the defendant. Had I found in favor of the plaintiff, who was the widow acting as administratrix, I would have given her a verdict of sixty thousand to seventy thousand dollars. It was no comfort to me to feel that a jury might have found in her favor, or given her half that amount as a compromise verdict. Rendering a decision for the defendant was a distressing judicial duty."

The sole basis for the decision in the above case was the determination by Mr. Justice Botein that the witnesses who testified that the deceased "was straddling the white line" were telling the truth. While any other judge might have come to the same or a different conclusion from the same state of facts, the necessity for performing such "a distressing judicial duty" could have been obviated if it were not for the fact, as Mr. Justice Botein says, "For some reason, the lawyer representing his estate did not demand a jury." [3] At any rate, it is apparent from the language of this learned associate justice of the appellate division, that he is not in accord with the view expressed by the presiding justice, that "Overall there is no reason to think that results before judges would be any different from those before juries." [4]

THE FUNCTION OF A JURY

The principal function of a jury is to evaluate the credibility of the witnesses who testify before it, and attempt to come to a conclusion as to which witnesses are telling the truth, and render its verdict on that basis in accordance with the instructions from the court. Neither the jurors, in rendering their verdict, nor the judge in a case tried without a jury, in rendering his decision, pretends to know what actually happened at the time of the incident upon which the cause of action is predicated.

Presiding Justice Peck recently stated:

"On the civil side, where you are talking about whether the light was red or green, whether the car was on the wrong side of the road, how fast it was going, and those questions, I think that a judge without a jury can handle the situation as well as a jury." [5]

I repeat that no judge or jury knows whether a "light was red or green," or whether "a car was on the wrong side of the road, or how fast it was going." As hereinbefore stated, they can but listen to the testimony of the witnesses and decide the case on the basis of credibility, which I shall hereinafter demonstrate, by quotation from competent authority, can be more efficiently done by 12 citizens called from every walk of life than by the most competent and experienced judge.

REASONS ASSIGNED FOR DENIAL OF JURY TRIAL

It will be noted that no one has made an attack on the jury system upon the ground that it does not promote the interests of justice. The abolition of trial by jury is urged upon the ground that such a trial takes longer than one without a jury, and, therefore, causes congestion of the calendars in our courts. It has been said that in order to continue the jury system it will be necessary to increase the number of judges, and may even necessitate the erection of new courthouses, all of which will entail great expense.

It has been stated that jury trials belong to the horse-and-buggy age and that the advent of the motor vehicle and the resultant personal injury claims incidental to the operation of automobiles in our city streets have resulted in an increase in litigation to the extent that the calendars of our courts are congested.

The history of this State demonstrates the falsity of the contention that calendar congestion in the Supreme Court is due to the advent of the automobile. As far back as 1828 Gov. DeWitt Clinton, and in 1834 Gov. William L. Marcy, commenting on the judicial system, said it needed to be enlarged "to meet the demands of accumulated business and to prevent delays which amounted to a denial of justice." This message was repeated by Governor Marcy in 1835, 1836 and in 1837, at which time he "recommended an enlargement of the Supreme Court."

The legislature apparently found it inconvenient or impracticable to give the subject the attention it deserved but appointed a commission to investigate the circumstances. In 1839, Gov. William F. Sewart, in his annual message to the legislature, stated, "Every other vice of government is more endurable than delay in the administration of justice." Gov. William C. Bouck, in 1943, urged that the legislature make "adequate provision for the expansion of the judicial system with the increased population and business of the State."

The situation is ably summed up by Charles Z. Lincoln, who in his work entitled "Constitutional History of the State of New York" says:

"The bench and the bar and the people generally were studying the subject, and numerous plans of greater or less merit were brought to public attention. It was conceded that the situation demanded relief, but great diversity of opinion was manifest from the failure to repass many amendments, and from the failure to repass amendments which had been agreed upon by a previous legislature. The result was that no progress was made except in the presentation and comparison of plans and a general and continued discussion of the whole subject."

It is apparent from the foregoing that congestion has existed in our Supreme Court for upwards of 125 years, due solely to the fact that the legislature has failed to recognize that with the growth of population, industrial expansion and devices created by inventive genius, additional judicial manpower was not only necessary but, as heretofore pointed out, was recommended by practically every governor since DeWitt Clinton in 1828 and by almost a score of committees and commissions on the judiciary appointed during that period.

In 1894, after the consolidation of the various courts with the supreme court, there were 76 justices of the supreme court in this State which then had a population of less than 6 million people (1 judge for each 80,000 population). At that time there were no personal injury actions resulting from automobile accidents. In fact, there were no automobiles. In 1956 we have 132 justices in New York State with a population of approximately 17 million, or 1 for each 128,785 population and in the second judicial district we have approximately 1 justice of the supreme court for each 160,000 population.

I have studied the judicial history of the State and carefully examined the minutes of the various constitutional conventions, and although I found that on several occasions proposals were advanced in favor of changing the provision for a unanimous jury verdict, I could not find a single word spoken by any delegate or person in authority in support of a proposition that the right to a trial by jury be denied in any case where it had theretofore existed.

WITNESSES CALLED IN DEFENSE OF THE JURY SYSTEM

It might not be considered appropriate, and it might even be immodest, if I were to take issue with the illustrious jurists who have argued in favor of the abolition of trial by jury in personal injury cases. So I will call as witnesses historic and revered members of the bench and bar.

Sir William Blackstone: [6] "Upon these accounts the trial by jury ever has been, and I trust ever will be, looked upon as the glory of the English law. And, if it has so great an advantage over others in regulating civil property, how much must that advantage be heightened, when it is applied to criminal cases. * * * it is the most transcendent privilege which any subject can enjoy, or wish for, that he cannot be affected either in his property, his liberty, or his person, but by the unanimous consent of 12 of his neighbors and equals. A constitution, that I may venture to affirm has, under Providence, secured the just liberties of this Nation for a long succession of ages."

JURORS BETTER QUALIFIED TO FIND FACTS

As to the question as to whether a jury or a judge is better qualified to find facts, Blackstone stated:

"It is wisely therefore ordered, that the principles and axioms of law, which are general propositions, flowing from abstracted reason, and not accommodated to times or to men, should be deposited in the breasts of the judges, to be occasionally applied to such facts as come properly ascertained before them. For here partiality can have little scope: the law is well known, and is the same for all ranks and degrees; it follows as a regular conclusion from the premises of fact preestablished.

"But in settling and adjusting a question of fact, when intrusted to any single magistrate, partiality and injustice have an ample field to range in; * * *. Here therefore a competent number of sensible and upright jurymen, chosen by lot from among those of

Footnotes at end of speech.

Footnotes at end of speech.

Footnotes at end of speech.

the middle rank, will be found the best investigators of truth, and the surest guardians of public justice. For the most powerful individual in the State will be cautious of committing any flagrant invasion of another's right, when he knows that the fact of his oppression must be examined and decided by 12 indifferent men, not appointed till the hour of trial; and that, when once the fact is ascertained, the law must of course redress it."

As to the voice of the people in the judicial system, Blackstone observed:

"This therefore preserves in the hands of the people that share, which they ought to have in the administration of public justice, and prevents the encroachments of the more powerful and wealthy citizens."

With respect to the suggestion that the issues of fact in actions for personal injuries be disposed of by an administrative body or commissions, the remarks of Justice Blackstone, though uttered in the 18th century, are prophetic, and the warning given by him should be given heed at the present time. He stated:

"Every new tribunal, erected for the decision of facts, without the intervention of a jury (whether composed of justices of the peace, commissioners of the revenue, judges of a court of conscience, or any other standing magistrates) is a step towards establishing aristocracy, the most oppressive of absolute governments."

"It is therefore upon the whole, a duty which every man owes to his country, his friends, his posterity, and himself, to maintain to the utmost of his power this valuable constitution in all its rights; to restore it to its ancient dignity, if at all impaired by the different value of property, or otherwise deviated from its first institution; to amend it, wherever it is defective; and, above all, to guard with the most zealous circumspection against the introduction of new and arbitrary methods of trial, which, under a variety of plausible pretences, may in time imperceptibly undermine this best preservative of English liberty."

After noting the defects existing in the jury system even in those days, Blackstone continued:

"I have ventured to mark these defects, that the just panegyric, which I have given on the trial by jury, might appear to be the result of sober reflection, and not of enthusiasm or prejudice. But should they, after all, continue unremedied and unsupplied, still (with all its imperfections) I trust that this mode of decision will be found the best criterion, for investigating the truth of facts, that was ever established in any country."

FORMER JUDGE JOHN F. DILLON

My next witness is former judge John F. Dillon [7] of the Circuit Court of the United States for the 8th Judicial Circuit, and also chief justice of the Supreme Court of the State of Iowa, who was Storrs professor at Yale University (1891–1892), who emphatically stated: [8]

"Consonant with the popular character of our institutions are the grand and petit jury. They are expressions of the free and practical spirit of the common law. They have a value, a deep value, too often overlooked, beyond the specific functions they exercise. The jurors acquire and disseminate a knowledge of the laws among the local communities from which they come, and to which they return. * * * I will * * * reaffirm that in my judgment the jury is both a valuable and an essential part of our judicial and political system. It is not simply to be venerated as a reminiscence, but to be prized for its usefulness. Its roots strike deep into the soil, and cling to the very foundation stones of our jurisprudence. The system belongs to free institutions, and tends to fortify and perpetuate them. * * * I protest against the continentalization of our law. I invoke the conservative judgment of the profession against the iconoclast who in the same of reform comes to destroy the jury; against the rash surgery which holds not a cautery to cure, but a knife to amputate. Twelve good and lawful men are better judges of disputed facts than 12 learned judges."

FORMER ASSOCIATE JUSTICE SAMUEL F. MILLER, UNITED STATES SUPREME COURT

May I now call as a witness former Associate Justice Samuel F. Miller, of the United States Supreme Court: [9]

"And I must say that in my experience in the conference room of the Supreme Court of the United States, which consists of nine judges, I have been surprised to find how readily those judges come to an agreement upon questions of law, and how often they disagree in regard to questions of fact, which apparently are as clear as the law. I have noticed this so often and so much, that I am willing to give the benefit of my observation on this subject to the public, that judges are not preeminently fitted over other men of good judgment in business affairs to decide upon mere questions of disputed fact."

ASSOCIATE JUSTICE GEORGE SUTHERLAND

Associate Justice George Sutherland of the Supreme Court of the United States stated the position of that Court as follows: [10]

"Maintenance of the jury as a factfinding body is of such importance and occupies so firm a place in our history and jurisprudence that any seeming curtailment should be scrutinized with the utmost care." (This was a civil case.)

ASSOCIATE JUSTICE JOSEPH STORY

Justice Story of the United States Supreme Court, a most learned jurist, expressed himself as follows: [11]

"The Constitution would have been justly obnoxious if it had not confirmed it (right to trial by jury) in the most solemn terms."

PERSONAL VIEWS ON THE SUBJECT

If, after hearing what has been said or written by these illustrious jurists, anyone should happen to be even slightly interested in my views, I will take the liberty of stating them as follows:

Not a single logical reason has been advanced for the proposal to discontinue the right to a trial by jury in personal injury actions. I do not believe that the citizens of our great State will ever sanction such action solely upon the theory that to retain such right will involve the expenditure of money.

One of the grievances against King George the Third in the Declaration of Independence was that he had deprived us "in many cases of the benefits of trial by jury." This precious heritage, secured for us at the price of the blood of our ancestors, should not be sacrificed on the altar of economy.

To argue to the contrary would be as illogical as to contend that the right of the citizens to vote should be curtailed because the increased population required new polling places and additional election officials.

I cannot agree that a jury trial, while important in a criminal action, is unnecessary in a civil action. I have witnessed, during my years at the bench and bar, the horrible tragedies that have fallen upon plaintiffs in civil actions, and their families, where accidents have resulted in loss of life, limbs and eyesight. There have been carried into our court on stretchers, wheeled in on wheelchairs, walked in on crutches or artificial limbs, plaintiffs who claimed that their injuries were due to the negligence of a defendant. It certainly cannot be disputed that the impact of an unfavorable result would be far more drastic than a conviction would be to a defendant in the majority of cases where he stands accused of a crime.

No other example need be cited to emphasize the importance of a jury in a civil action than the one referred to by Mr. Justice Botein.[12]

I should like to see engraved over the portals of our new courthouse the immortal words: "The right to trial by jury as heretofore used shall forever remain inviolate."

But should we fail our ancestors who gave their lives to preserve for us this precious right, should we permit it to be abridged and in time wither and die, as it descends in silence to the grave let no man write upon its tomb a single word. When the years have passed and the impact upon our democracy shall have been fully realized, if I do not greatly deceive myself, impartial posterity will inscribe an epitaph on that tomb, expressive of profound veneration.

Gentlemen, it is with a feeling of satisfaction that I sign this certificate of the Committee for the Preservation of the Right to Trial by Jury, Inc.

Address by Boyd Campbell, United States Chamber of Commerce President, Before the National Conference on Water Resources Policy

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1956

Mr. HOSMER. Mr. Speaker, Mr. Boyd Campbell, president of the Chamber of Commerce of the United States, is a top business executive with considerable experience in the field of human relations. He is chairman of the Board of the Mississippi School Supply Co., of Jackson, Miss. He has been a director of the National Chamber since 1949, a vice president since April 1954. He is director of the First National Bank of Jackson, the Mississippi Power and Light Co. and the Gulf, Mobile and Ohio Railroad. He addressed the National Conference on Water Resources Policy at St. Louis on January 25, 1956, as follows:

There is an old Chinese proverb—so old that its origin is lost in the mists of an-

tiquity—that tells us that "Water is feared less than fire, yet fewer suffer by fire than by water."

But here we are—in the last half of the 20th century—and we are still confronted by the constantly recurring problem of too much water when we do not want it—and too little water when we do want it.

The lack of water stunts our crops or utterly destroys them. It hampers industrial operations in a thousand different ways. It affects the comfort of our homes. It limits recreation. The financial losses of too little water are incalculable.

Too much water washes out our crops, takes lives, kills livestock, devastates cities, and destroys property. Our flood losses in 1955 are estimated at $1 billion, and the average loss from floods for the past 10 years is more than $300 million per year.

And yet we are a people who pride ourselves on our mastery of physical forces.

We can split the atom, control epidemics, and fly in the stratosphere, but no man can predict with any great degree of certainty the onset of a searing drought or a devastating flood. The ancient Chinese proverb still holds true.

In light of our pretensions to scientific genius, this thought is rather humbling. The pushbutton world is a long way away, and nature's greatest secrets remain a mystery.

We cannot rule out floods or droughts by resolution or by legislation, but there is one think we can do: We can stop waste which results from too much water or too little water. Perhaps we cannot teach nature any new tricks, but we can control the rampage of floods, and we can alleviate the suffering of drought. Why haven't we done it?

Partly, I suppose, because our memories are short. When it rains, we forget about the dust bowl. When it is dry, we forget about floods. That is one reason why I am glad we are holding this National Conference on Water Resources Policy. We are focusing attention on the water problem and reminding our fellow citizens of the vast influence that water brings to bear on their affairs. An aroused public is an absolute must in this recurring struggle with nature's disastrous whims.

A few score thousand water-conscious men and women constitute only a hard core for action on the water problem. We need recruits by the millions. We need a water-conscious public, for in the end, the public will decide the ways and means of coping with our water problems—and—more importantly, perhaps—the time.

All thinking citizens could be enlisted for the active support of old but urgent water problems such as conservation, elimination of waste, pollution abatement, flood control, watershed protection and salt water conversion. Essentially, such problems—like national defense— are outside the realm of politics and noncontroversial.

Then why is this country dragging its feet? Certainly not because of the cost—when compared to the waste that results from flood or drought.

The reason seems to be that we are forced to spend so much time and energy debating the water power issue that the basic problem of water supply is obscured in a flux of words, and the public is confused.

We are forced to consume time and energy debating whether private enterprise or Government should develop our water resources—which is a question that could be solved in no time at all if the hopes of minor political advantage were subjugated to the greater good of all.

There is a place for Government in the development of our water resources. There is also a place for private enterprise. Government and private enterprise ought to work in partnership. It is almost as simple as that.

When the issue of waterpower is stripped of all the ideological doubletalk, the question of resource ownership, development, and use could be resolved by a program which would allow the most ready, willing, and able partner to do its share of the total undertaking.

Under these conditions our national policy would say that it is ridiculous to try to prevent a well-established, efficient power company from producing usable electricity from the falling waters of the Snake River.

It would say that New York State should put its $400 million proposed for power facilities at Niagara into public-works projects of benefit to all residents of the State, allowing private firms to go ahead with expansion of existing powerplants to use Niagara water.

It would proclaim that the plan for Federal Government and local interests to share in the cost of building the mighty John Day Dam, on the Columbia River, is the only wise plan to get the kilowatts so urgently needed by the people of the Pacific Northwest.

Under these conditions of getting on with the job—with each eligible member of the team undertaking the part he can best perform—our national policy would decree that anyone in need of additional water supply or electric energy should assume the responsibility for it without hindrance from others on the team.

In this way, the large industries of the Tennessee Valley would build their own generating plants; the larger cities would plan and construct municipal power stations; power-short communities and cooperatives would purchase energy from nearby utilities; and the Federal Government would have sufficient power capacity for all its legitimate defense needs in the Tennessee Valley area.

A balanced national policy on water resources would entail a four-way partnership of the Federal Government, the States, communities, and individuals. Such is the position of the Chamber of Commerce of the United States.

The Federal Government is responsible for adequate legislation and administration of resource matters in the national interest. It should adopt the Hoover Commission recommendations on water resources and power.

It should approve private development at Niagara, partnership development at John Day, local responsibility for power supply in the TVA area, and it should act in cooperation with State and local agencies.

The States should cooperate with the Federal agencies and with each other in pollution control and abatement, and they should upgrade their programs of research, investigation, construction, and operation regarding water use, control, and conservation.

We also know today that supplementary irrigation is a coming thing in our Eastern States. This is something rather new, and pressures are being generated for changes in State laws to insure the proper allocation of water supply as, for example, between agricultural needs and municipal needs. In revising existing law to meet new conditions, cautious study will be necessary. For instance, it is not at all clear that substitution of the western doctrine of prior appropriation for the historic eastern system of riparian rights would be the answer.

Local communities with water problems should organize for action as soon as possible. This includes action on the National and State levels, as well as locally. Local effort and attention to issues of national interest often are coordinated in a chamber of commerce. Here, or elsewhere, watershed associations or water conservation districts should be organized to undertake whatever local problem exists in the area of water resources. Assistance in this activity is available from a number of national organizations, and from Federal agencies.

Individuals have always been the key to progressive programs at local or higher levels. Businessmen get group action on all sorts of issues through their chambers of other organizations. Water problems need be no exception.

The waterpower issue can be translated in terms of self-help versus centralized authority—as free enterprise versus controllism—and as opportunity versus Government monopoly.

As more people recognize this truth, the closer we will come to solving our basic water problem of supply—whether insufficient or in surplus—drought or flood. Confusion will diminish and, in the words of Pindar, the ancient Greek poet of the fifth century before the birth of Christ, water will become "the best of all things."

A Significant Victory for Public Power

EXTENSION OF REMARKS
OF
HON. IRWIN D. DAVIDSON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1956

Mr. DAVIDSON. Mr. Speaker, I should like to report to the House what I consider a significant victory for public power. I wish to direct your attention specifically to the circumstances surrounding the sale to the Niagara Mohawk Power Co. of electricity generated by the atomic reactor located at West Milton, N. Y. My concern in this matter was aroused by information, which first came to my attention shortly before Congress adjourned last August, that the preference clause Congress had so carefully written into the Atomic Energy Act had not been complied with in any sense. As early as August 8, 1955, I called on the Atomic Energy Commission to "make a full public statement of the facts concerning the distribution of this—West Milton—power at once."

As more facts came to light, the state of affairs involving the disposition of the West Milton power grew progressively worse. On October 7, 1955, I made public the fact that a letter I had received from the Atomic Energy Commission on September 23, 1955, showed beyond peradventure of doubt that "construction of generating equipment and the disposal of the power to Niagara Mohawks was entirely arranged by General Electric in August and September of 1954 while availability of the power was effectively concealed from the public bodies entitled to a preference under the Atomic Energy Act until January 1955."

In an effort to give the facts in this situation the benefit of unmistakable clarity, Mr. Speaker, I should like to insert at this point in my remarks a chronological fact sheet on disposal of West Milton Atomic Electrical Power by the Atomic Energy Commission:

CHRONOLOGICAL FACT SHEET ON DISPOSAL OF WEST MILTON ATOMIC ELECTRIC POWER BY THE ATOMIC ENERGY COMMISSION

1. The West Milton facility: The West Milton facility is an experimental Submarine Intermediate Reactor (SIR) Mark A. It was initiated by the AEC in 1950 and is the proto-

type for the SIR Mark B to be used in the submarine *Seawolf*.

2. The preference clause: Atomic Energy Act of 1954, section 44 (42 U. S. C. 2064) provides that "if energy is produced * * * in experimental utilization facilities of the Commisson, such energy may be used by the Commssion or transferred to other Government agencies, or sold to publicly, cooperatively, or privately owned utilities or users at reasonable and nondiscriminatory prices. If the energy produced is electric energy, the price shall be subject to regulation by the appropriate agency having jurisdiction. In contracting for the disposal of such energy, the Commission shall give preference and priority to public bodies and cooperatives or to privately owned utilites providing electrc utility services to high-cost areas not being served by public bodies or cooperatives."

3. Negotiations with private corporations:

A. On August 18, 1954, General Electric Co. proposed to the AEC that excess steam being generated at West Milton could be utilized to generate electricity and made a specific propostiion to the AEC that included the following (1) Title to the facilities would remain in GE; (2) facilities would be available for 3 years and would cost GE a million dollars and the Government nothing; (3) about 10,000 kilowatts of electric power would be available by the summer of 1955; (4) Niagara Mohawk Power Corp. would take the power on an "if, as, and when" basis at a price of 8 mills per kilowatt-hour. (This is the same price as that to be paid by Duquesne Light Co. for power from the civilian nuclear plant at Shippingport, Pa.)

B. On September 3, 1954, representatives of GE and the AEC met in Washington to discuss GE's proposal. The preference clause in section 44 of the Atomic Energy Act was discussed.

C. On September 24, 1954, Niagara Mohawk Power Corp. proposed to AEC that it would purchase the power generated by GE on an "if, as, and when" basis for 8 mills per kilowatt-hour.

D. On October 7, 1954, GE sent a report to AEC concerning the possible sale of West Milton power to preference utilities. In this report GE indicated its opinion that it was completely impractical for even the nearest public power body to use the West Milton power.

E. On October 18, 1954, General Electric again wrote to the AEC declaring that it was impracticable for anyone other. than GE to operate the generating facilities at West Milton. (The Westinghouse Electric Corp. operated and constructed the experimental submarine thermal reactor (STR) Mark I at the National Reactor Testing Station in Idaho previously.)

F. Finally, on November 3, 1945, the Commission approved the GE proposal to generate power from the excess steam at West Milton.

G. On January 4, 1955, the AEC discussed with General Electric the sale of the West Milton power.

4. Negotiations with public utilities:

A. As the initial step prior to contacting the preference utilities the General Electric Co. wrote to the AEC and provided the Commission with a list suggested by Niagara Mohawk as contacts in the 26 public and cooperative power organizations located within 100 miles of West Milton.

B. Following receipt of this information the Commission on January 13 and 14 communicated by telephone with only these 26 utilities and also contacted 3 other private utilities.

C. The following obstacles to use of the power by the public bodies were set up by the Commission: (1) All power available would have to be taken by the prospective purchaser; (2) no amount of power, however, could be guaranteed; (3) what power would be produced would first be available by July 30, 1955, and all transmission arrangements would have to be made by the purchaser; (4) an initial 2-week time limit was set by the Commission.

D. Of the notified utilities three, Holyoke, Mass., Gas and Electric Department, Ilion, N. Y., Board of Light Commissioners, and the New York State Rural Electric Cooperatives Association, were interested in obtaining the power from the outset. All three remain interested in obtaining the power being produced at West Milton (February, March, and April).

E. For the next 3 months, the Atomic Energy Commission consistently refused to put a price on the power to be available at West Milton and persisted in trying to obtain an offer from the preference customers.

1. On March 9, 1955, the Acting Chairman of AEC wrote to the general manager of the National Rural Electric Cooperative Association refusing to set a price and soliciting an offer.

2. On March 24, 1955, the manager of the AEC Schenectady office wrote to the Delaware County Electric Cooperative (a member of the New York State Rural Electric Cooperative Association), reasserting the obstacles in the path of the public utilities.

F. Extensions of time were granted to the public utilities in making their proposals and on April 13, 1955 the AEC contacted the General Electric Co. to ascertain whether such extensions were all right with GE. On April 19, 1955 representatives of the AEC restated the unfirm nature of the prospective power and its indefinite timing and quality.

G. On May 11, 1955, the public utilities were for the first time informed that Niagara Mohawk had offered 8 mills for the West Milton power.

H. On May 17, June 4, June 6, June 8, June 21 and June 22, 1955, General Electric Co. contacted the AEC informing it of the imminent completion and then of the completion of the installation of the generating facilities and GE's desire to expedite the sale of the power.

I. On June 8, 1955, the Commission set a deadline of 2 weeks for the submission of proposals by the preference utilities.

J. On June 15 and June 17, 1955, the Municipal Electric Association of Massachusetts and New York State Rural Electric Association and the Ilion Board of Light Commissioners proposed purchasing of the power at a price of 3 mills per kilowatt hour. The Ilion Board proposed that the power be delivered to Niagara Mohawk and in exchange for Niagara Mohawk transmitting it, Ilion would take 1 kilowatt hour for every 2 Niagara Mohawk received at West Milton. Ilion would pay for all the power received by Niagara Mohawk.

K. On June 22, 1955, General Electric, AEC and Niagara Mohawk reportedly discussed contract terms.

L. On June 29, 1955, the Commission established a price of 3 mills per kilowatt hour for the West Milton power. It also approved sale of the power to Niagara Mohawk since it knew that the preference utilities had been unable to make transmission arrangements.

M. On July 13, 1955, a 3-month contract with Niagara Mohawk was signed by the AEC.

N. On July 18, 1955, in well-publicized public ceremonies General Electric produced electricity from atomic energy which was delivered to Niagara Mohawk at West Milton.

O. On July 19, 1955, the President of Niagara Mohawk formally rejected the preference utilities 2 for 1 offer.

P. On October 11, 1955, the contract between AEC and Niagara Mohawk expired.

Mr. Speaker, this chronology indicates clearly, as you will note—point 3, section G—that Niagara Mohawk offered the AEC a price of 8 mills per kilowatt-hour on September 24, 1954 and that the preference groups were not notified of the Niagara bid until May 11, 1955, 9 months later—point 4, section G.

Furthermore, the chronology shows—point 3, section G—that on September 24, 1954, Niagara Mohawk proposed to the Atomic Energy Commission that it would purchase the power generated by the reactor on an if, as, and when basis and that it was not until January of 1955, 4 months later, that the Commission for the first time notified the preference groups of the fact that there would be an available source of electricity at West Milton—point 4, section B.

In point 4, section C of the chronology, the various obstacles to utilization of the electrical power by the public bodies which were thrown up by the Atomic Energy Commission are set forth. It seems to me that they indicate the somewhat less than subtle technique employed by the Commission to debar the preference groups from any opportunity to contract successfully for this power.

As these facts and the others in the chronology were brought to light, Mr. Speaker, I felt they clearly showed an attempt by the AEC to prevent and subvert the congressional intent in enacting the preference clause. The conduct of the AEC I consider to be a scandalous example of the giveaway philosophy of the present Republican-led administration. As a result, a considerable amount of correspondence ensued between my office and the Atomic Energy Commission. I should like to report on the most recent of these letters, because they most clearly reflect the victory that is here claimed.

On October 6, 1955, in a letter to Chairman Strauss, I indicated among other things that since the agreement entered into with Niagara Mohawk would expire on October 11, the Commission was presented with "an ideal opportunity to review this situation and enter into an agreement with the interested preference utilities under section 44 of the Atomic Energy Act of 1954." Receipt of my letter was acknowledged on October 11 and on November 4, 1955, I was advised in the reply from the Commission that the preference groups had been granted an extension of time for the submission of bids, in order to give them additional time to arrange for transmission of the power to their systems and that in an effort to afford every opportunity to municipal and cooperative bodies to obtain the advantage of the preference provision of section 44 of the Atomic Energy Act of 1954, the Commission is giving such groups a further extension of time to January 1, 1956, within which to submit firm proposals for the purchase of West Milton power at the bus bar at the established price of 3 mills per kilowatt-hour.

Then, Mr. Speaker, on December 29, 1955, the Atomic Energy Commission sent me the latest letter in our exchange of correspondence. In that letter, Mr. K. E. Fields, General Manager of the Commission, informed me that the Commission had been told "by one of the

preference groups that negotiations are underway with Niagara Mohawk Power Corp. on arrangements for transmitting the power, but that additional time beyond the January 1, 1956, deadline for the submission of firm proposals to purchase the power would be required. In response to this request, the time is being extended to February 1, 1956. All interested preference groups are being notified of this extension."

In view of the fact that the deadline for these negotiations is but a few days away, I believe it appropriate at this time to place this matter in its entirety before the House. I am sure that each of my colleagues will watch, with an interest equal to my own, for developments leading to a successful conclusion of these negotiations between one of the preference groups an Niagara Mohawk. There can be no doubt that the public interest will be best served by the consummation of such an agreement.

I hope that you, Mr. Speaker, and that my colleagues in the House will forgive my feelings of hopefulness. The consideration that preference utilities are now being afforded is heartening indeed, for it was the intention of Congress in enacting the preference clause that they should be given the first opportunity to purchase this atomic electric power if they desired it. That the congressional intent is now, finally, being complied with and followed is a significant victory for small rural communities, the farmer and modest municipal utilities who for so long have been deprived of cheap, firm electric power by the utility monopoly.

Another Study of the Farmers' Ills

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1956

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Another Study of the Farmers' Ills," which appeared in the January 23, 1956, issue of the Madisonville Messenger, of Madisonville, Ky.:

ANOTHER STUDY OF THE FARMERS' ILLS

Measures designed to help farmers attain a high and rising standard of living in the present good times without continuous Government accumulation of surpluses, and without production controls, are proposed by the Research and Policy Committee of the Committee for Economic Development, Washington.

In a detailed study of the farm problem, the committee recommends, the Messenger notes, that the costs of necessary economic readjustments for agriculture be shared by the country as a whole, rather than being borne entirely by farmers. Says the study:

"The Nation faces an accumulation of problems that have become urgent and that, because of their size and character, agriculture cannot handle by itself. There is no quick and easy way out of our present farm difficulties."

The committee identifies three fundamental problems which in its opinion require public action:

1. Too much production of some farm products.

2. Too much instability of farmers' incomes.

3. Too many full-time farm families with very low incomes.

To deal with the problem of surplus crops, the committee recommends a combination of continued price supports at gradually reduced levels, coupled with a program to pay farmers to take some land out of production. Governmental rental of this land should be geared to bringing production and consumption into balance over a period of perhaps 5 years, it suggested.

To deal with the problem of unstable incomes, the committee recommends "moderating extreme price fluctuations through a system of flexible price supports or income payments and a storage program. These devices would not be used to affect the long-run movement of prices, but would protect farmers against sharp and temporary swings of prices and income."

To alleviate the problems of 1 million farmers in areas of persistently low incomes, the committee would encourage movement of people out of the areas, stimulating such movement by increasing the amount of information available about jobs in urban areas. To this rather doubtful expedient the committee adds, the Messenger notes:

"The possibilities of offering financial aid to families who want to move, and of encouraging industrialization in rural areas, should also be explored. Farmers who remain in the low-income areas should be assisted in obtaining larger farms. For this, special credit arrangements and training in new methods will be required in many cases."

The committee opposes continuation of high, rigid price supports as wasteful and self-defeating. It also opposes using a two-price system to dispose of surpluses abroad at prices lower than prevail in our own country.

The committee, it seems to the Messenger, has tackled the vast and complex problems of agriculture in rather pat and learned fashion, in a report which makes good reading but which is easy to compile, compared to the superman job of putting it into practical operation. Like other typewriter and paper solutions of the sort, the farmer must now wait and see what comes of this one.

Nixon Defends Policy That Maintains Peace

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1956

Mr. ARENDS. Mr. Speaker, under leave to revise and extend my remarks, I am calling attention to the following editorial which appeared in the Illinois State Journal, a newspaper I consider to be one of the very best in the country:

NIXON DEFENDS POLICY THAT MAINTAINS PEACE

Apparently the hierarchy of the Democratic Party couldn't think up a sound answer to Vice President RICHARD NIXON's hard-hitting salute to Eisenhower speech in which he declared that "indecision, weakness, retreat, and surrender do not bring peace in dealing with dictatorial, aggressive communism."

The statement was a rebuttal against Adlai Stevenson's sarcastic "Russian roulette" statement. Stevenson had said that Secretary of State Dulles was playing Russian roulette with the fate of the Nation by using threats of military force to stop Communist aggressors.

NIXON posed a question that the American voter ought to think seriously about before ever casting a ballot for Adlai Stevenson, if Stevenson becomes a candidate: It was this: "What does he (Stevenson) offer?"

"Nothing except a return to the Acheson foreign policy," NIXON said.

He answered: "Whether it brings war or peace."

NIXON's reference to Stevenson's quavering attitude on the Formosa and Quemoy issue hardly needs elaboration. This newspaper pointed out Stevenson's attitude on Quemoy and Matsu last spring when the issue was hot. Stevenson implied that it was far better to give the Reds the islands than to face them with military force.

If the United States had done that, the Chinese Reds would have gained tremendous face in Asia and the United States would have been made out a coward.

But Stevenson wasn't President, thank God.

1956 National Champion Flying Wheels

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1956

Mr. HOSMER. Mr. Speaker, the Flying Wheels of the Long Beach Veterans Hospital are in Washington today on their 10th coast-to-coast nonprofit, noncommercial trip to play the Nation's top-ranking wheelchair basketball teams and provide inspiration and free entertainment for hospitalized veterans and to call America's attention to the National Paraplegia Research Foundation.

Each member of the team is a veteran, paralyzed from the waist down. Yet the vigorous game of basketball on wheelchairs has given him the opportunity to become a national champion in athletics. The example of the Flying Wheels is an example and inspiration to all who are handicapped.

Those who saw the Flying Wheels defeat the Bulova Watch Co. squad at Bethesda Naval Hospital last night will testify that wheelchair basketball is fully as exciting as the regular game. They saw the team play that won the 1955 national championships held at Chanute Air Force Base.

Funds on their annual trips throughout the Nation were first raised by Mr. John B. Old through personal solicitation of his friends in the sports, theatrical, and business worlds. For the fifth year, their trip has been sponsored by the Los Angeles Herald-Express through Mr. David Hearst, publisher, and Mr. Vic Dunsmore, business manager.

The following information furnished by the Flying Wheels should be of interest to all:

MEDICALLY SPEAKING

An excerpt from Veterans' Administration Technical Bulletin TB 10-503, page 36, paragraph 5, reveals:

"The importance of competitive games for physical and psychological rehabilitation of paraplegics must not be forgotten. These games maintain the musculature in good condition, improve coordination and put to severe test the paraplegic's ability to balance as in a fast basketball game conducted from wheelchairs.

"The mental goal achieved by such competition is a loss of self-consciousness and a gain of self-reliance.

"It is medically desirable that tournaments be regularly arranged between the several paraplegic centers in the Veterans' Administration."

Dr. Ernest Bors, medical chief, paraplegic section, Long Beach Veterans' Hospital, observes:

"Having witnessed the very beginning of the athletic rehabilitation of paraplegic patients, I am impressed with the beneficial effect wheelchair basketball has on the morale and on the physical well-being of the paralyzed veterans.

"Successful rehabilitation of the severely disabled person is contingent upon the mental approach. It is evident that the self-consciousness of patients, who are bound to use a wheelchair, has been greatly relieved by competitive performances before spectators. Good muscle function, so vital to the patient with a spinal cord injury, is obtained through participation in wheelchair basketball.

"The patient's desire to play wheelchair basketball makes his mental and physical rehabilitation a voluntary pleasure."

BEST YEARS OF THEIR LIVES

Paralyzed veterans are fine young Americans. Many will never walk again. They're paralyzed from the waist down. Most of 'em are victims of an enemy bullet in the spine. Others are victims of polio or tragic accidents. All served their country gallantly.

Many are continuously bedridden. Others find themselves chained to wheelchairs for the rest of their life, compelled to return periodically to VA hospitals for check-ups and medical attention.

Their incentive to live isn't the same as most people—or so you might reasonably assume. Not so with the courageous members of the Flying Wheels, all-star wheelchair basketball squad of the Long Beach, Calif., Paralyzed Veterans' Association.

They're out to prove to themselves, to their less fortunate bedridden PVA brethren, polio victims everywhere and the world at large that the years to come should not be wasted in self-pity or vain regrets sitting on the sidelines of life. They're participants.

The agonies of the soul which all hopelessly crippled young veterans must have suffered can only be imagined. What gutty guys like the Flying Wheels are doing today takes more courage, in a way, than they were called on to display against the enemy.

Although their mode of living is limited, they have but one code: "Ability, not disability, counts." Wheelchair basketball is doing much to keep that spirit alive and contagious.

It all started early in World War II at the now discarded Birmingham VA hospital, Van Nuys, Calif. Hunting a way to inspire bedridden patients, Bob Rynearson, of the Recreation Department, hit upon the idea of wheelchair basketball—played just like able-bodied teams do with only slight variations—such as two pushes on the wheels, while the ball rests on a player's lap, is the equivalent of a dribble.

Occasionally a veteran would wheel down to the gym. On the court self confidence was bolstered. Returning to his ward, he'd brag of his shooting—a direct challenge to wardmates to get out of bed. As the competitive spirit lurks in the heart of every American youth, many accepted. Later more and more. For most of the paraplegics it was their first real inspiration "to get out of bed—back into the American competitive way of life" if only to beat a bunkmate.

Once on the court they gained physical benefits far and beyond the reach of calisthenics. A new and hopeful mental outlook was born. They bit heavily into the challenge to excel, found they were no longer cognizant of their handicap. Now all wheelchair basketball players love crowds—especially when backward fellows with similar handicaps are watching. Their brilliant court play is inspiring proof positive that "ability, not disability, counts."

Because of its proven value, wheelchair basketball is now played wherever PVA groups assemble. Unfortunately for the southern California group, there is no other VA paraplegic center west of Kansas City. Hence these annual coast-to-coast, nonprofit, noncommercial tours. The Flying Wheels want to meet and beat the best wheelchair teams in the country.

Hail to the gallant crusading Flying Wheels, national wheelchair basketball champions.

FLYING WHEELS' RECORD

In nine coast-to-coast wheelchair basketball tours, the famed Flying Wheels have amassed the sensational record of 62 games won, 22 lost, in 84 intersectional engagements.

To date the Californians, 1955 national champions (they captured the title last year at Chanute Air Force Base, Rantoul, Ill.), have averaged 35 points per game—a remarkable percentage for the unique sport.

Prior to starting their current junket, the Flying Wheels boasted a record of 13 straight triumphs—9 last year, a final game victory in 1954, and 3 in the 1955 titular tourney.

Here's the record achieved by the Wheels since their inception in 1948:

	Won	Lost
1948	12	1
1949	7	4
1950	10	1
1951	3	6
1952	3	3
1953	9	1
1953 [1]	1	2
1954	5	4
1955	9	0
1955 [2]	3	0
Total	62	22

[1] National Tourney, New York City, N. Y.
[2] National Tourney, Chanute Air Force Base, Rantoul, Ill.

FLYING WHEELS SCHEDULE, 1956

January 27: Play St. Louis Rolling Rams at Concordia Seminary.

January 29: Play New York Bulova Watchmakers at Bethesda Naval Medical Center, Bethesda, Md.

January 30: Play Charioteers at McGuire Hospital, Richmond, Va.

February 1: Play Jersey Wheelers at 62d Columbus Armory, New York City.

February 2: Play Pan-Am Jets at Forest Hills High, Long Island.

February 4: Play New York Spokesmen at Yonkers.

February 6: Play Whirlaways at St. Albans, Brooklyn.

February 8: Play Illinois "Gizz Kids" at Navy Pier, Chicago, Ill.

February 9: Play Rolling Pioneers, Kansas City, Mo.

THE FLYING WHEELS SQUAD ROSTER FOR 1956

(California Paralyzed Veterans Association, Long Beach VA Hospital Chapter)

John McGinley (3), center, Army.
Dick Thomas (4), forward, Seabees.
Bill Johnson (5), center, Air Force.
Morris Moorhead (6), guard, Marine Corps.
Bill Fairbanks (10), guard, equipment manager.
Dick Kaiser (11), center, Navy.
Gus Morrill (15), forward, Marine Corps.
Al Halverson (16), forward, Army.
Gene Haley (20), forward, Navy.

1956 FLYING WHEELS ABLE-BODIED PERSONNEL

Coach: Bill Patterson, Long Beach, Calif., Miliken High School.

Physician: Dr. John F. Fahey, Los Angeles, Calif.

Trainer: Dave Flores, Los Angeles Baseball Club.

Publicity director: Sam Schnitzer (Los Angeles Examiner).

Tour director: John B. Old (Los Angeles Herald-Express).

Air service: Trans-World Airlines.

FLYING WHEELS EXPENSE

All traveling expenses for this tour—and last four years—paid by the Los Angeles Herald-Express through the courtesy of Mr. David Hearst, publisher; and Mr. Vic Dunsmore, business manager.

Expenses for the other five coast-to-coast tours were raised by Mr. John B. Old through personal solicitation of his friends in the sports, theatrical, and business worlds.

Lee and Jackson

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1956

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Lee and Jackson," which appeared in the January 24, 1956, issue of the Irvington Herald, of Irvington, Ky.:

LEE AND JACKSON

Gen. Robert E. Lee and Thomas J. (Stonewall) Jackson, Confederate heroes, were born on January 19 and 21, respectively, although not in the same year. Their birthday anniversaries especially Lee's, are observed in a number of States.

The hero of a lost cause generally misses his chance of immortality because the old adage that "might makes right" relegates his cause to a losing effort, a repressed one. Occasionally an individual, or more than one individual, stands out above the ordinary stress and strain of his times, and his reputation survives almost untarnished.

In the case of both Lee and Jackson, there are few people today who doubt that they possessed a strength of convictions, not surpassed by their fellow men. In addition, they had an almost impossible task to perform, and they attempted to perform it courageously, to the end.

In the case of Lee, he hoped to the last that the Union would not divide. He had freed his own slaves and had turned down an offer to command the Union armies prior to the beginning of the war. He believed sincerely that his first duty lay with his State, Virginia, and that he could not draw his sword against his native State.

In those days, there were about as many Americans who believed that States could secede as there were those who held convictions to the contrary. Certainly, there were honorable and intelligent men who differed on this great question, and who were bound to act on faith in their convictions.

As a military leader, Lee had no peer in American history nor has he any today.

Nor has Stonewall Jackson, who was killed by his own troops, through error, in 1863. One reason why the United States has not produced military leaders who have outshone these two Confederate generals is the fact that the United States has never since been outnumbered in a war or faced the odds that the Confederate armies faced in 1861–65.

Be that as it may, the military achievements of both Lee and Jackson are admired, and studied, the world over today. But, more than that, their personal lives are examples of devotion to duty, honor, and courage, and the last measure of sacrifice. The fact that they fought for a lost cause does not deny them a place in history, or the admiration of Americans in all parts of our great country.

Address by Gen. Nathan F. Twining, Chief of Staff, United States Air Force, at The Citadel, Charleston, S. C., January 28, 1956

EXTENSION OF REMARKS
OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1956

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Gen. Nathan F. Twining:

I am certainly glad to be here with you today, and I want to thank you for inviting me down. I am sorry that I have been unable to accept previous invitations. Now that I am at The Citadel I realize the experience was worth waiting for.

Needless to say, I have been impressed by the military snap and precision of your cadet organization. I must admit that I was prepared for this and was not surprised by your military proficiency. When General White, Vice Chief of the Air Force, returned from his visit to The Citadel last March, he told me of the fine review you put on for him. Now I have seen the reason for his glowing remarks.

You might be interested to know that General White gave me another piece of timely intelligence. He warned me that on any Saturday morning I would be up against fierce competition for your attention. He said that shortly after his Saturday morning talk last year, the campus was invaded by dozens of the prettiest young girls in South Carolina.

Your tradition is one of gallant resistance to aggression. Nevertheless, I understand that on Saturday afternoons you lose your taste for combat and that you even encourage these weekend invasions of your historic grounds.

I cannot say that I blame you if your attention this morning wandered to thoughts of a pleasant interlude this afternoon. Therefore, I will take General White's advice to me, and make what I have to say to you rather brief.

There are two points I would like to discuss this morning. First, what air power and atomic weapons mean to our Nation. Second, a few probable effects that air power and atomic weapons will have on any future war.

A war winning potential is not the greatest value of air power and atomic weapons to the United States. Their great value lies in their potential for preventing war. Specifically, the capability of our nuclear armed Air Forces allow leaders of the United States to think, plan, speak, and act from a position of paramount strength. Only with great strength to back it up, can this Nation be free to do what we think is morally right.

Without this power to back us, in times of crisis, we would either have to back down or expose ourselves to great danger.

We did not always have the strength to back our moral stands. You here at the Citadel undoubtedly recall the historic XYZ drama in which Charleston's Charles Cotesworth Pinckney played a prominent part.

You will remember that in 1797, the United States was in an uncomfortable position between two hostile nations—France and England.

When President Adams took charge, American relations with France were especially difficult. Our foreign minister had been recalled from Paris the year before, and President Adams felt it necessary that we again be represented in the French capital. He therefore sent a misson of 3 men to see what could be gained by diplomacy.

The three envoys included Charles Cotesworth Pinckney. When they arrived in Paris, they were rebuffed and could make no headway at all. While waiting to be received by the French leaders, the three envoys were approached by blackmailers who purported to represent the French leaders. They proposed that the United States lend France $10 million and in addition, present a gift of $250,000 to Talleyrand as a price to reopen diplomatic negotiations.

The alternative was, of course, continued diplomatic stalemate plus threats of force against the United States.

Charles Pinckney answered this proposal, and his answer is immortalized on a monument in St. Michael's Church here in Charleston.

You all know this phrase which became a rallying cry throughout America. It was, "Millions for defense, but not one cent for tribute."

This has gone down in history as a magnificent gesture. Indeed it was—but it was also the loud assertion of a newborn nation struggling for a place in the world. The United States Government was less than 10 years old. Our Nation's muscles were only beginning to develop, and its land did not extend beyond the Mississippi. Our Army was insignificant and our Navy had its hands full with the British on the Great Lakes.

Nevertheless, we shouted our youthful defiance and prepared for war with France.

Clearly we did not have the strength to back up our valiant words. Nevertheless in 1797, we survived that crisis.

Today a weak United States could not survive a similar crisis. We are dealing with a potential enemy who has demonstrated his lack of respect for anything but power.

The strength of our nuclear air power has been the insurmountable obstacle in the path of Communist aggression. As President Eisenhower mentioned in his state of the Union message, the Comunists have been forced from other aggression to other means of achieving their goals.

Our position of power has enabled us to rally our free world allies into an effective force to resist the spread of communism. It has enabled us to help our allies, and it has lent strength to the entire free world.

Our ability to deliver as many high-powered, nuclear weapons as necessary, anywhere in the world, has been the principal deterrent to war. It may be the prime reason we are not now at war. As such, we must continue to improve our air strength because, for the time being, it offers our best hope for peace.

The hopes for peace, however, are not necessarily any more than just hopes. As long as the Communists covet the world, and as long as the Soviet war machine continues to rumble, we face the possibility of war. This is why we must maintain an Army, a Navy, and our Air Force. This is also one of the many important reasons for military colleges like this one.

We must study war and actually plan the strategy of hypothetical wars at the same time we try to avoid one. We have talked of the value of nuclear weapons and air power to our Nation during peace. To complete the picture, we must also examine the impact of atomic weapons on war.

Here at The Citadel, you have studied history's great battles. I need not elaborate on the way that we have defeated the enemy in past conflicts. Our armies and navies resisted attacks and then counterattacked. Our land, sea, and air forces have had to seek out the enemy, and then fight either to destroy him or to force him to surreunder.

In World War II we defeated Hitler by overwhelming him. It was true then as it had been in all wars—decisions have always gone to the side that applied the most power at the right place.

From man's first conflict, fighting power has been roughly proportional to manpower and supplies. Whether using stones, clubs, rifles, cannon, or TNT the victorious side was the side with the most armed forces in position to fight. Of course, there have been historic battles in which superior forces were defeated by superior tactics, but the great wars and campaigns have been won always by volume of effective pressure.

To exert the necessary pressure in both World Wars, we had to arm and send forth millions of men. Following the principles of mass and concentration of force, we used huge numbers of men, rifles, tanks, ships, and airplanes. Keeping these tremendous forces going required mountains of supplies—millions of tons of ammunition, gasoline, oil, food, and clothing. Mobilizing this force and placing it into position to fight took months—even years.

We won the war because we put more men in position to fight. They fought with rifles, tanks, ships, and airplanes—but always they were massed at decisive points.

Now how would that work today?

The atomic bomb has not magically cancelled the principle of mass, but it has altered the way mass is used. When one considers that a single aircraft can unleash more explosive force than all the bombs dropped in World War II, it becomes obvious that mass is no longer measured in manpower but in megatons.

This is a military advantage to the United States. If we are ever forced to fight the Communists man for man, we are indeed in trouble. Communist China is the world's most populous nation. Soviet Russia is the third most populous nation. Furthermore, the Communist armies are equipped with modern weapons that compare favorably with those in the hands of our troops.

In America, manpower is our most precious asset. Not only that, but man-hours are our most expensive resource. In every product that we buy, from refrigerators to jet bombers, labor costs—man-hours—are the biggest part of the price.

Obviously, if we must meet a challenge, we should fight on our terms and with our own strengths, not the enemy's. We must use the products of our technology so that we can be most effective at the least cost of men.

It seems to me that we cannot but incline toward a nuclear strategy in reaction to aggression by a major enemy.

Let me add that it will not be very long until every potential enemy will have a nuclear capability. We are approaching, if not already in, an era of nuclear plenty.

Although the Communist satellites may have no atomic bombs of their own yet, how long will this situation last? We must as-

sume that many, if not all, of the satellites will be provided with or will develop some degree of nuclear capability just as they are now being provided with modern jet planes.

For a few years, the possibility of a nonnuclear peripheral action may be with us. However, we are rapidly approaching the day when any conflict would be waged with nuclear weapons.

Although we recognize that we are committed to a nuclear strategy in a major war, we intend to retain within our force structure the capability for limited conventional actions. The Air Force can now provide all the airlift for the Army that is now required by joint agreement. We are continuing to expand and improve this capability. Within the next few years, new turboprop transports will multiply our airlift capacity.

Furthermore, all our combat aircraft can put nonnuclear weapons on any target.

But you must remember that our capability to fight conventional action is limited. Our Armed Forces could not be successful against a major aggressor unless we do exploit our nuclear capability.

Maintaining a dual capability to fight a major enemy might be desirable, but doing this would double or triple our defense budget—an unlikely event. Can you imagine how many divisions, guns, airplanes, and bombs, it would require to be successful in a conventional campaign against the well-equipped Communist armies and air forces of Asia and Europe?

This is the reason that all three services are making great efforts to enlarge and improve their atomic capability.

Faced with the prospect of atomic war, what form could we expect to take?

Let us look at the most significant aspect of a nuclear conflict. That is time. The trade of nuclear blows would be necessarily swift. Unlike past wars, the peak of destruction would come at the very beginning instead of near the end of the war, after years of intensifying effort.

The largest stockpile of atomic weapons could be delivered in a few days. Since this time is so short, people have difficulty in assessing the probable effects of the atomic duel. Some visualize that airmen will complete this exchange of bombs quickly and that the real war will then go on in the traditional manner.

Yet, even a limited trade of atomic weapons would mean an exchange of more firepower than the total of all wars of history. Could anyone really believe that war in the traditional form could follow this opening phase? Even in the unlikely event that our land, sea, and air forces were to emerge unscathed, the devastation of communications, supplies, ports and bases would prohibit the use of these forces as they were used in past wars.

In all likelihood this initial exchange of atomic blows could be the dicisive phase.

I am not describing a short war. I want to emphasize that no Air Force spokesman has ever said that a future war would be short. We do say that the first phase, lasting only a few weeks may well be the decisive phase, but the war could and probably would last much longer.

There is another point I would emphasize here. Although we believe the first furious phase will be characterized by intense air action, no responsible Air Force spokesman has ever implied that foot soldiers have become obsolete.

Under our system of collective security each member contributes the strength it is best suited to furnish.

Ground troops are the type of force that many of our allies are best able to contribute, but they do not now have an equal ability to build and maintain the air power needed in a major war.

When the peak of the atomic exchange has been passed, then the ability to go on and show the enemy that he is defeated would depend on how well the foot soldiers of the United States and our allies have weathered the early days. This is when the forces that can exercise and exploit control of land and sea will begin to play an important part.

But while the atomic exchange is going on, the land and sea arms of both sides will be primarily occupied by attempts to survive.

Real effort to improve and enlarge the flying arms of the other services demonstrates their realization of the importance of air operations.

Airmen welcome this belated acceptance of the importance of air operations. But of course there is always concern that this trend could result in duplication and waste of our air effort and our national resources.

Looking at the overall prospects of future war, if forced into one, we are faced, then, with the probability that we would have to follow a nuclear strategy. In this case, the air battle is likely to be not only the first but also the short and decisive phase.

What is the effect of these concepts on all our planning? On our military organizations? On our preparations, our mobilization, and our stockpiling?

These questions and others like them are ones which military planners and military students like yourselves should be giving serious study. I hope you are.

There is one thought I would like to reemphasize and leave with you.

The better our atomic weapons and the more skillfully we can employ them, the less become the chances of war. If we have at last reached the time when the function of military forces is to prevent war rather than to fight them, we and the world have come a long way.

The ability of the United States of America to speak and to act with respected authority has been fostered by the atomic-air power. This air power has also presented us with the prospect of modern war with its quick, terrible destruction and early decision.

It is up to us to make sure that war becomes a diminishing prospect and that peace becomes an increasing reality.

I promised to be brief so I will omit any further summary.

Let me thank you again for this opportunity to speak. It has been a real pleasure to visit with you.

Water for Growth

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1956

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Water for Growth," which appeared in the January 23, 1956, issue of the Messenger and Inquirer of Owensboro, Ky.:

WATER FOR GROWTH

The national water need, now at 200 billion gallons a day, will rise to an estimated 350 billion gallons within the next 2 decades, a presidential advisory committee of 3 cabinet secretaries foresees. To meet this need, it made a 2-year study of the water resources of the country, with recommendations which have been passed on to Congress with the President's recommendation for legislation.

"Lack of adequate planning threatens to impose a water scarcity, which can become a limiting factor on the growth of some of our cities while at the same time flood damage in many areas continues to be great," the committee declares. It emphasized the fact that shortages of water both for industrial and agricultural need was already frequent.

However, the remedies the committee suggests do not seem to be far-reaching or clear-cut. Citing the fact that some 25 Federal agencies are involved in some phase of water resources development—the most important being the Soil Conservation Service in the Department of Agriculture, the Bureau of Reclamation in Interior, and the Army Corps of Engineers in Defense—the committee suggests that a coordinator of water resources be authorized in the White House. A new independent board of review would also be established to analyze the engineering and economic feasibility of water resources projects.

But, unfortunately, no dynamic policy as such is outlined to satisfy the water needs foreseen or to reduce floods and channel their waters to domestic uses.

Polish Seamen

EXTENSION OF REMARKS
OF
HON. ALFRED D. SIEMINSKI
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1956

Mr. SIEMINSKI. Mr. Speaker, today I introduced a bill at the request of the Polish Immigration Committee at 25 St. Marks Place, New York, N. Y. The Right Rev. Msgr. Felix F. Burant is president and director of this organization for relief of Polish immigrants.

Last year, at Monsignor Burant's request, I introduced private legislation for the relief of certain Polish sailors who refused to return to Poland and stayed in Formosa.

Just recently, it was disclosed in the newspapers that three of these boys returned to Poland. They were the victims, the report states, of pressures—moral, physical, and psychological. The remaining members of this crew are greatly concerned about their status.

Enclosed is a letter regarding these men which was received from Monsignor Burant asking me again to reintroduce legislation that would assist them in acquiring American citizenship.

Inserted also in the RECORD for the benefit of Members of the House are the views of a person intimately concerned with the problems of such people as these Polish seamen. This person prepared a special report based on 2 or 3 of his interviews with each and every Polish sailor who remained in Formosa. An extract of his report follows:

"The boys complained distinctly about the fact that their immigration status in this country has not been settled. They said that they were informed on their departure from Formosa that they would be given the right of permanent residence and that, following this right, they would be able to continue to serve as seamen. Many of them would like to continue in their profession. And yet, after their arrival in the United States, they were surprised by new hearings and screening. As they see it, the sense of

insecurity in this country could have contributed to a certain extent to the decision of the trio."

Incidentally, the minds of the remaining boys cannot conceive the idea that American authorities tolerate this kind of invavasion of private residences by the regime officials, the harassing of people in their homes and blackmailing them by delivering private mail from their families. They are also at a loss to understand how the trio could so easily leave the United States.

To them this is a symptom of the West's helplessness in its fight against the Communist agents hiding behind the mask of diplomatic representatives. I am leaving to the proper factors the evaluation of this opinion.

As far as the matter of stabilization of the residence of the group of the seamen from Formosa is concerned, I wish to point out that the private bill filed in their behalf by Congressman SIEMINSKI, from New Jersey, at our request grants them only the right to request later the legalization of their stay here within the framework of section 6 of the Refugee Relief Act. In other words, after the bill will have been passed, they will have to start anew through another phase, to file again the requested applications, to once more go through all the hearings and wait another year for the final settlement of their case. I am afraid that this is absolutely too much for their nerves and imaginations. We must not forget that most of these men spent almost a year and a half in Formosa before they reached the United States. That is why it seems to me that, after termination of the investigation of each of them, now being minutely carried out by the immigration authorities, the United States Congress should pass an ultimate decision on their remaining in this country.

POLISH IMMIGRATION COMMITTEE,
New York, N. Y., December 16, 1955.

Re Polish seamen from Formosa.

Hon. ALFRED D. SIEMINSKI,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN SIEMINSKI: We are taking the liberty of writing to you in reference to the 22 Polish sailors from Formosa for whose relief you were good enough to introduce on February 10, 1955, a private bill H. R. 3981.

As you have probably heard by now three of this group to it: Kedzierski, Tauzowski, and Wegrzynowski under the pressure brought on them by their families in Poland and due to persuasive talks by agents of the Communist Warsaw Embassy at Washington, left for Poland. Since the vigorous campaign launched by the regime of Poland to induce refugees to return home, that group of sailors from Formosa was receiving special attention of the Warsaw Embassy agents, who are trying to get them by coaxing or scaring.

We have not written to you on the subject before, however, in view of the approaching session of the Congress we think it will be imperative to take this matter up in order to obtain for them the right of permanent residency in the United States. The bill introduced by you tends to grant them the right to apply for adjustment of their immigration status under section 6 of the Refugee Relief Act of 1953. If the bill will have been passed it would take another year or so to have the case settled. Taking into consideration that they have been promised permanent residency in the United States when in Formosa, their disappointment is considerable and their anxiety great; added to this were faked letters sent to them from their families which sapped their energy not to a small degree. We have proven that the letters in question are written under duress, clearly evident from their styling when compared with other letters previously written to them, or even recent letters, but on subjects not related to their suggested repatriation. On the other hand, it is known that these families are persecuted by the Warsaw regime.

It would be of great importance and we shall be extremely grateful if adjustment of their immigration status might be definitely settled in the nearest future and we appeal to you for assistance.

We are taking this opportunity to enclose herewith a copy of a report on those seamen throwing some new light on the situation. The material enclosed has been sent by us to the immigration authorities and other government agencies interested in the matter.

With best wishes and all kind regards, I am,

Sincerely yours,
REV. FELIX F. BURANT,
Polish Immigration Committee.

Price Supports on Hogs and Cattle

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1956

Mr. VURSELL. Mr. Speaker, with leave to extend my remarks, I am including for the RECORD a copy of a telegram sent to President Eisenhower and Secretary of Agriculture Benson by the presidents and boards of directors of farm bureaus in the Midwestern States, signed by Mr. Roger Fleming, secretary-treasurer of the American Farm Bureau Federation, which discusses the matter of price supports on hogs and cattle. The telegram is as follows:

Farm bureau leaders from 12 Midwestern States, in Madison, Wis., for a regional farm bureau program meeting, are gravely concerned over proposals for price supports on hogs and cattle.

These leaders, officers, and board members of 12 important corn-hog State farm bureaus, are elected by and represent approximately 800,000 farm families who produce the bulk of the hogs grown in the United States, and feed large numbers of cattle.

Price supports on hogs, in our opinion would immediately encourage further overproduction of hog numbers; would encourage large numbers of new producers, principally outside the Corn Belt, to get into the hog business in view of available feed supplies produced on diverted acres; would, within a short time, force the Government to limit the number of hogs each farmer could produce for market.

The real answer to the problem lies in the control and reduction of surplus feed produced on acres diverted from price-supported crops.

The most direct approach to the situation is in quick congressional action on the farm bureau's soil-bank program.

The soil bank is designed to reduce total production with special emphasis on the diverted acres which are now largely being used to increase feed production.

We have seriously considered the problems of livestock producers. We are rededicating our efforts to improving the real income of livestock producers, so essential to our area. At the same time we firmly believe that politically inspired price supports would wreck—not save—the livestock industry.

Address by W. W. Horner Before the National Conference on Water Resources Policy

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1956

Mr. HOSMER. Mr. Speaker, Wesley W. Horner, consulting engineer of St. Louis, Mo., has had a distinguished career as a civil engineer beginning in 1905 with the city of St. Louis. He has served on several national boards as a specialist on flood reduction and water damage abatement. Professional honors have come to him in the form of elections to director, American Society of Municipal Improvements, president of American Public Works Association and president of American Society of Civil Engineers. Mr. Horner served as chairman of the National Water Policy Panel of Engineers' Joint Council. He was chairman of the task group on flood control of the Hoover Commission Task Force on Water Resources and Power. The National Conference on Water Resources Policy in St. Louis on January 24, heard him speak on flood control. The following is the text of Mr. Horner's address:

In 1950, the Engineers' Joint Council's Panel on National Water Policy organized a task force of about 80 engineers and associated specialists; through their efforts there was prepared and presented to the President's Water Resource Policy Commission, an extensive brochure outlining desirable policy in the water resource field.

In 1951, after reviewing the report of the President's Commisison, the panel prepared its document entitled "Principles of a Sound National Water Policy." EJC transmitted this document to all Members of Congress and urged that the Congress itself create a commission to make an exhaustive study and recommendation.

The second Hoover Commission, set up in 1953, was, along with other matters, given this assignment. It may, therefore, be considered in part as the response by Congress to EJC's request. The Hoover Commission in this phase operated through its Task Force on Water Resources and Power, which in turn worked, in part, through four subgroups. Flood control was the assignment of one group.

We now have the Commission's report on water resources and power, which is quite brief, and deals primarily with broad principles; the report of the task force, which is extensive—1,763 pages; the report of the flood-control group, much more detailed in its field—125 pages; and the reports of special consultants on specific matters. These documents, as I read them with respect to the flood-control phase, are in full agreement as to basic principles. They differ somewhat in detail as to implementation and organization. Mr. Hoover states that the task force's report, with its related documents, represent "the most exhaustive study of our water problems that has yet been undertaken."

Since I cannot attempt to review the reports here, I will recommend them to your reading. I offer briefly my personal reaction to the material presented; to the findings and the recommendation I add my idea of where

we stand in our effort to abate flood damages and a suggestion as to how we might proceed from here.

1. Flood control is a misnomer; our interest is in abatement of flood damages by whatever means are applicable, and to the extent that the investment can be economically justified.

2. The program carrying the designation flood control is related to flood damages to the extent of about 50 or 60 percent. The remainder of the program covers other classes of water development, such as hydropower, reclamation, drainage, and navigation.

3. There appears to have been no orderly and consistent approach in the making of the program; the Congress has asked for surveys and reports, later it authorized projects or in some cases it approved an overall plan, as in the Missouri Basin. When such approval is given there has been a strong tendency for the Federal construction agencies to construe it as an authorization of all parts of the plan while the plan itself is open to modification and extension; despite the fact that the House Appropriations Committee has said that it does not consider the Missouri plan an authorized project.

4. The program is a matter of the last 20 years. Up to 1917, Congress had appropriated less than $100 million for flood control, from 1917 to 1936, not a great deal more. In contrast, under the 1936 Flood Control Act:

(a) Congress has authorized 1,033 projects presently estimated to cost $11.1 billion.

(b) Of these, 433 are completed or under construction, at the cost estimate of $5.7 billion.

(c) Of the remainder, 290 are classified as ready for construction, with the cost estimate of $3.3 billion.

(d) As of now, 310 projects have been deferred for restudy or classified as inactive, with a cost estimate of $2.1 billion.

(e) Congress has been appropriating about $300 million a year for flood control on the average. At this rate, about 18 years would be required to complete appropriations for the current "active" program of the Corps of Engineers.

5. The Task Force has estimated that the ultimate capital cost of the flood control program visualized by the Chief of Engineers in 1948 would be about $25 billion.

6. The programs of the Department of Agriculture related to soil conservation and improved land management, may appreciably reduce floods along upland streams, but can be effective to a minor degree only with respect to the larger river systems. The Department of Agriculture, under the 1936 act, received authorization to carry out some flood control programs; these did not depart greatly from the character of the Department's regular programs; the Jones Subcommittee has stated "The welfare of the Nation requires that sound practices for the conservation of the fertility of the soil be undertaken. The need is sufficiently important that it does not need to be disguised as flood control."

The Department of Agriculture has also undertaken flood control demonstration projects of the "upstream engineering" type and has spent some millions of dollars for demonstration work, primarily small flood control dams.

The Watershed Protection and Flood Prevention Act of 1954 authorized the Secretary of Agriculture "to assist local organizations in preparing and carrying out plans for works of improvement." These works will be primarily headwater dams to reduce flooding of lands below them. The act was presented and publicized as a conservation measure, which it is not. It is aimed strictly at flood control on small streams and it may involve dams of considerable size. The task force has estimated that such a program could ultimately involve a cost of $17 billion. How much of this would be paid by the Federal taxpayers remains to be determined; if it develops that a large part must be contributed locally, I believe that the program would shrink to a small part of this figure.

7. Neither the $25 billion main stream program nor the possible $17 billion upstream program represents the whole cost to the taxpayers. If interest, which the taxpayers would have to pay over a 50-year amortization period is added, the total might be on the order of $65 billion or about one-fourth of the present national debt.

8. The program is a Federal program, not only in terms of planning and administration, but also in payment of the cost; the Federal Government pays the entire cost of reservoirs, including land; for "local protection projects, local interests provide lands, and assume responsibility for damages." Study of a representative sample of local protection projects indicates that on the average non-Federal interests pay about 6 percent of the capital cost and the Federal Treasury about 94 percent.

9. The program to a very considerable extent is one of land reclamation. The Chief of Engineers has stated in 1951 that "The improvement of agriculture production made possible or to be made possible by the Federal flood-control program is equivalent to the reclamation of 8 million acres of land." When this fact is coupled with the negligible cost sharing mentioned above, it would appear that the program must be providing very extensive windfall profits to owners of agricultural lands; the same finding would apply to urban areas where both industry and housing have been located in flood plains and are now bailed out at the Federal taxpayer's expense.

10. In the earlier years of the program, pressure by groups in individual congressional districts resulted in the production of disconnected local projects, some of which were mutually self-defeating.

Some progress has been made in coordinating projects through overall basin plans. But it must be said that in general, there still exists a disturbing lack of coordination between projects in the same basin. Moreover, in the planning of systems of projects, a great deal of waste has been occasioned by arbitrarily fixing a uniform degree of protection without regard to the economics of the individual problems. To make matters worse the degree of protection selected is often fixed by engineering judgment at a much higher value than economically justified. To insure that public funds are wisely invested there must be careful studies of combinations of measures, and selection of the most economic combination. Failure to achieve this goal may result in the wasting of the taxpayers' money. An outstanding illustration of this is in the Kansas River Valley, where the official plan provides primarily for flood reduction by reservoirs, with additional local protection of urban areas. Engineering consultants to a State agency developed an alternate plan involving channel improvements and zoning of agricultural lands, which was thought to provide abatement of about 75 percent of the damages at only about one-fourth of the cost.

11. The task force could find practically no examples of projects or plans in which it was clearly demonstrated that all methods of damage abatement had been fully considered. To some extent this is due to the engineering approach; the natural tendency of the engineering profession in general, and the Federal engineers in particular is to structural measures with respect to which they are adept, and to avoid such things as floodway and flood-plain clearance, and flood-plain zoning which would involve difficult human relation problems. This tendency, of course, is aggravated by the pressure groups who prefer those projects for which local contributions are a minimum. The importance of such overall plans is strikingly apparent in the case of the recent New England floods, where the narrow valley had become choked and the floodways greatly restricted by the development which had grown up in the flood plains. After these floods, EJC issued a press release strongly pointing out the need for replanning of the valley lands and the return of the floodways to the rivers.

There is a growing interest in this type of solution, as evidenced by the symposium on the American Society of Civil Engineers' program in October of 1955. I was particularly impressed by the paper by Joseph I. Perrey, Chief Engineer of the Indiana Flood Control and Water Resources Commission. His thesis throughout was that flood damage abatement should be first approached by insuring the "protection of the water carrying capacity of floodways."

12. The current program has been defective in the field of economic analysis. The task force found that the methods of appraising benefits quite often resulted in values which were unrealistic, and that the original estimates of cost did not fully reflect revision and expansion of projects which came about during design. As a result, there was more than a suspicion that many projects reported as economically justified, and later authorized, would be at least marginal, if properly reappraised today.

13. Present procedures by the Congress provide for not analysis of desirable priorities within the program. As a result, those projects go into construction which have the strongest pressure groups behind them.

In summary, the current program under the 1936 and subsequent Flood Control Act involves an estimated cost of $11 billion. A long-range program under this act involves a capital cost of at least $25 billion. If the Department of Agriculture's upstream program under the 1954 act, is carried out largely at Federal expense, the total visualized cost to the taxpayers for flood control might be as much as $65 billion, a figure equal to one-fourth of the present national debt. The downstream program development is in the hands of Federal agencies, and the cost to the extent of over 95 percent comes from the Federal Treasury. It does not constitute an orderly and consistent whole, and does not satisfactorily reflect alternate measures of damage abatement. It includes a strong element of land reclamation and of windfall profits to the owners of marginal lands. New projects which may be authorized could not be undertaken in the near future, unless the sponsors can constitute a strong enough pressure group to push other projects farther back on the schedule.

Some of the disadvantages (to use a mild word) of the present program and procedures could be removed by Executive order, or even by changes in attitude in the approach to project planning, but the more serious features are imbedded in the act of Congress, among these, the assumption of full responsibility by the Federal Government, and the failure to require direct beneficiaries to pay a fair part of the cost.

In view of this, it may be well to review the circumstances under which the 1936 Flood Control Act was devised.

The 1936 act stated for the first time that the Federal Government assumed the responsibility for the abatement of flood damages, anywhere in the United States; that the Federal taxpayers would pay the cost, except for a nominal percentage covering rights-of-way, easements, and in some cases, operation; and that projects would be undertaken whenever the benefits to whomever they accrued, exceeded the cost.

The record shows that the act was passed under what appears to be almost hysterical conditions, related to devastating damages in certain major cities out of the floods of the middle thirties, to the recognition of the depression situation, when most of the

cities were on the verge of insolvency, and the need for a work relief program. None of these factors are operative today. Yet the policies which they brought into being are still in effect. This is a striking illustration of the fact—often stated by students of bureaucracy—that Government programs and policies, once initiated, rarely recede from their high-water mark; even when the causes which gave rise to them have disappeared.

The act was strongly opposed by some of the more conservative Members of Congress, and the then Chief of Engineers, General Markham, insisted that the Federal Government should not pay the entire cost. The late Senator Vandenburg stated in the course of the debate:

"Let it not be overlooked that this is the first time in 150 years of American history when it has been proposed to assert that floods upon practically all the rivers of the United States constitute a menace to national welfare and are a Federal responsibility * * *.

"The human imagination can hardly encompass the total extent of the burden and responsibility which is thus laid at the door of the Treasury of the United States, by the adoption of this policy."

To summarize again at this point, it would seem that after 20 years of experience with the 1936 act and its amendments, the time has come when the Congress, with reasonable consideration of the Federal taxpayers, should take a new and objective look at the whole question of Federal flood control responsibility.

The situation today represents a nearly complete reversal from that of 1936. The cities and States instead of being on the verge of insolvency, are in a good position to use their credit. On the other hand, the rate of Federal appropriation appears to have about reached its maximum limit. Public attention is focused in the direction of a balanced budget and a decrease in taxes, and in the face of this, Congress is not likely to greatly extend the rate or appropriation for civil works. Yet, the very great Federal expenditures for Federal flood control appear to be completely inadequate in the light of the apparent needs of today. The New England floods of last summer and fall, and now, those in California, indicate the necessity for a flood control program, with broader coverage and an accelerated pace. I cannot imagine that this year's flood sufferers would care to wait for a Federal program which might not be initiated until the present backlog is cleaned up 12 or 15 years hence. In New England, there is good evidence of orientation in the direction of local and regional responsibility. California has been moving in that direction for some years.

The Hoover Commission, in its Nine Point Program (recommendation No. 1), stated that "water resources development should be generally undertaken by drainage areas—locally and regionaly, and that the Federal Government should assume responsibility when participation or initiative is necessary, to further or safeguard the national interest, or to accomplish broad national objectives, where projects, because of size or complexity or potential multiple purposes or benefits, are beyond the means or the needs of local or private enterprise.

"Under other circumstances, the responsibility for development should be discharged by State or local Governments, or by local organizations, or by private enterprise."

Elsewhere, the Commission states "non-Federal agencies, communities, and private business interests that benefit directly from water resource development, also have a basic obligation to share in financial responsibility in proportion to the benefits they receive."

The task force and the flood-control group spelled this matter out in more detail, but possibly as an expedient, compromised somewhat by recommending that direct tangible beneficiaries should pay in proportion to one-half of the benefits accredited to them.

I would have little hope that the Congress could be persuaded to revise the flood-control legislation in the direction of these recommendations, if the approach to it was solely that of improved procedure, or a consideration of the equities as between the unvocal Federal taxpayer and the active lobby groups representing the desire of direct beneficiaries to get something for next to nothing; but we might hope with the Federal appropriations reaching a static limit, and an urgent need which cannot be deferred for another generation, that the flood sufferers will begin to press Congress for a revised act under which they can get action wtihin reasonable time, even though they themselves pay a considerable part of the bill.

I have frequently been asked that disingenuous and silly question: "Would the adoption of the Hoover Commission recommendations have prevented floods like those in New England?" The only possible answer would be "No." If, however, the question were more honestly, realistically stated, such as, "Would the adoption of the Hoover recommendations make it feasible within a reasonable time to prevent and avoid the terrific and disastrous condition which occurred in New England?" I think the answer would clearly be "Yes," and this might be backed up by the following suggestions:

Drainage basin plans, in which local and regional agencies have a leading part, would involve a careful appraisal of means of damage abatement other than expensive structures. In my opinion, the projects which could be economically justified should be materially less expensive. It would seem to follow that the dollar cost of adequate programs would be reduced; then of this smaller capital program, local and regional agencies would provide a considerable portion of the funds, again reducing the call on the Federal Treasury. I have no doubt that the Federal taxpayers would still be called upon to maintain something like the current rate of appropriation, but the program as a whole might well be accelerated 100 percent or more.

America's Educational Needs Today and in the Foreseeable Future

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 25, 1956

Mr. BYRD. Mr. Speaker, America is becoming aware of the startling shortcomings of its rather gangling public-school system. In this—the Nation of multicolored, chrome-plated, zippy automobiles, super duper, bigger-than-before movies and spectacular color television we are faced with these not-so-super facts:

The current accumulated deficit of public-school classrooms is 250,000 and it is estimated that this figure will increase to 470,000 by 1959.

Fires damaged 4,000 school buildings during one recent year.

Seven hundred thousand public school children were attending school on part-time sessions.

More than 83,000 teachers left the profession during the last year.

Of the 86,696 persons who were graduated last year with standard preparation for teaching, only 56,800 actually entered teaching.

This year our public schools lack 141,300 qualified teachers.

In this—which we like to believe is the most modern Nation in the world—we have 140,000 classrooms that are makeshift or badly outmoded. Included in this category are buildings without plumbing, those without heating, others that are worn out, structurally weakened or potential "tinderboxes."

Last year for each dollar spent for schools in the United States $2.96 was spent for defense, $1.60 for new automobiles, and 45 cents for roads. Look at it this way—the United States is spending about 2½ percent of its national income on education. In contrast to this, it spends 4 percent on recreation. In one recent year—1951—the amount spend for advertising for every family in this Nation was $1.99 per family, while the amount spent for primary and secondary education was $1.52 per household. As one person pointed out: "The national outlay for educating citizens is substantially less than the outlay for educating customers." It has also been estimated that in order to maintain the present pupil-teacher ratio in the face of our heavy population growth, the teaching staffs of our schools will have to be enlarged by 500,000 in the next 10 years. To meet this, "more than half the college graduates during the next 10 years will have to enter the teaching profession."

Is this too plain a fact for us to comprehend—the future of this Nation is in its educational system. At present this all-important system is understaffed and inadequately housed. It should be clear that we must increase both our interest in our schools and the money made available for their support.

Perhaps this information might help you to see the urgency of my plea. On good authority, we know that the Soviet Union's scientific and technical education system presents a formidable challenge to the free world. The Soviets are currently graduating more university students in the sciences than we are—about 120,000 to 70,000 in 1955. They "will graduate about 1,200,000 in the sciences in the 10 years from 1950 to 1960, while the comparable United States figure will be about 900,000."

We are training less than half of the scientists and engineers we need today. The head of the United States Atomic Energy Commission, Lewis L. Strauss, warns:

> This situation is going to get worse for us before it can possibly become better; it is going to get better for the Soviets before it can possibly get worse.

He stressed this alarming situation further when he said:

> Already dangerous, within less than a decade [it] could become disastrous.

This lag cannot be solved without concerted effort from many forces in the United States. Currently, few college students are being prepared to teach mathematics and the sciences at the high school level. High school enrollments are mounting steadily, the need

for scientists is skyrocketing, while the proportion of college graduates who qualify to teach high school mathematics and science continues to decrease.

Perhaps all of this sounds like we have opened "Pandora's box," because the obstacles we have looked at seem insurmountable. It should be remembered, however, that along with all of the unpleasant things in Pandora's box there was a quality—hope. With hope and hard work we will be able to meet the challenges I have outlined. I am sure, however, it will take 90 percent hard work and 10 percent hope.

The Tinkling Cymbal

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1956

Mr. OSTERTAG. Mr. Speaker, the city of Rochester has recently been the target of a concerted effort, emanating from behind the Iron Curtain, to lure refugees back to the Soviet orbit. In the past weeks, more than 500 letters have been received by Rochesterians of Lithuanian descent, urging them to return to the "workingman's paradise." Someone ought to tell the Kremlin masterminds that they are wasting their time and money. Anyone who has had an opportunity to live in the stimulating atmosphere of freedom could hardly be lured back behind the Iron Curtain by anything short of blackmail. Rochester is happy with its new residents and there is every evidence that they are happy in their new home. They have no intention of returning to the tyranny of the Reds. The enticements are no more than a tinkling cymbal.

Under leave to extend my remarks, Mr. Speaker, I include in the RECORD an editorial from the Democrat and Chronicle of Rochester for January 23, 1956, commenting on this rather flattering but futile effort:

"COME HOME TO SLAVERY"

In their crude appeal for Lithuanian-Americans to return to their native land, the Soviet propagandists pay our country the highest kind of tribute. It is betrayal, nicely documented, that they are deeply, perhaps desperately, worried about the attractions of the West.

Rochester was one of the focal points of a mail barrage straight from East Berlin. More than 500 letters extolling the wonders of the land where "the workingman rules" were received here. Because Rochester through the years opened its arms to displaced persons, subsequent appeals to our residents of other extractions would surprise no one. As expected, the "come home, all its forgiven" letters did not get the kind of response desired in Moscow.

Of all the developments in the East-West cleavage, none has counted more heavily against the Communist high command than the amazing exodus of refugees from the Red satellites. It has been a simple matter of overwhelming choice that can't be talked away or ignored.

If the full account of the thousands who have fled the Iron Curtain countries, many of them landing in our own neighborhood, ever gets into print, the high adventure story of all time will be with us. They are the men and women who defied danger to seek a new life. They are our new citizens, integrating themselves with astonishing speed into western life.

Why should they, reveling in the excitement of a new life, filling positions of high responsibility, raising families in an atmosphere of freedom, go back to the chains of Soviet rule? As well ask the moon to quake when the hound bays.

Department of Agriculture Should Act Now

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including an editorial from the Monroe (Wis.) Evening Times on the position of the swiss cheese industry and its effort to prod the Department of Agriculture into doing something about the distressed swiss cheese situation. There are section 32 funds available to help this industry out and there would seem to be no good reason for procrastination at this time.

The editorial follows:

USDA'S OPPORTUNITY TO ACT IS NOW

Last November, we accompanied the local swiss cheese industry representatives to Washington to plead the case of the swiss cheese price squeeze before United States Department of Agriculture officials.

At that time, we reported the reception given us by the USDA group and the apparent sympathetic understanding of the plight of farmers supplying milk to the swiss cheese industry were encouraging.

We described it thus because we came away from the conference with a feeling that Government purchases of grinder swiss for school lunch and other needs, at a price insuring proper return to farmers, were a distinct possibility.

Now we're not so sure we were right. Nor, are we sure the USDA people we saw understood that the future of an entire industry was at stake because of hardships resulting from the Government's decision to put artificial props under only one type of cheese, American.

Our feeling of disillusionment wasn't alleviated to any degree this week by remarks of USDA spokesmen at the regional meeting in Stevens Point for the National Milk Producers Association.

That meeting was told it will be March, at the soonest, before the USDA can reach a decision on dairy price supports, or even on a dairy program—unless Congress changes the laws immediately.

In the meantime, the spokesmen said, the dairy industry, and especially the hard hit cheese industry may have to sweat it out.

One of these spokesmen said: "We must face the fact that the cheese (surplus) inventory is staring the whole dairy industry in the face and is certain to be noted by the Secretary in arriving at a decision."

We understand that surplus problem, and we have commented on it from time to time. That is why we joined in the appeal for swiss cheese assistance through buying for actual use instead of by mere price suppport purchases.

It is our belief—and it was expressed at Washington—that price support buying was a mistake in the first place, a legislative mistake. But, we feel, just because such a mistake was made, there is no reason why the handicaps that mistake puts on swiss cheese should be allowed to continue without exercise of the relief method open to the USDA through section 32 of the agricultural act. That section permits the purchases of distressed dairy products for Government programs, military service, school lunch and other needs.

We understand those USDA officials, who promised to consider the grinder purchase plan when the distress situation again became apparent, are being notified directly by the local industry that the "time now is at hand for action."

The grinder market is drying up once more, and the factory price on November grinders is down 2 cents.

The response by the USDA to that appeal will be of great interest to milk producers in this area, as well as to the rest of the industry. It should be prompt and clearcut.

We believe Congressman LAWRENCE H. SMITH of our district, Congressman MELVIN R. LAIRD, of Marshfield, Congressman GLENN DAVIS, of Waukesha and Senator ALEXANDER WILEY have given the USDA full evidence of the cheese industry's distress. They have done all they can to impress the Government with the problems, especially for swiss cheese.

Their comments certainly have been sufficient confirmation of the local delegation's testimony at Washington.

Now let's see what happens to the grinder purchase appeal. A friend, wise in the ways of Government agencies in his role as a leading industrialist, had an interesting comment when we told him last November of our encouragement following the meeting with the USDA:

"I'm happy to hear you feel that way, but my experience in Washington has been that you never know how long those fellows will stay put."

He was not speaking of the USDA, of course, and we were confident at the time he was being unduly pessimistic.

The Department now has the chance to prove our friend was wrong, either by expedient action on the grinder-purchase appeal or through a frank and unmistakable statement as to our prospects for early help.

Gas Tax on Gasoline Used in Farming Activities

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1956

Mr. VURSELL. Mr. Speaker, with leave to extend my remarks in the RECORD, may I say that I regret, exceedingly, that I will have to be absent on Monday, January 30, when the bill comes up to exempt farmers from Federal taxation on gasoline and fuels used in farming activities.

I have favored such legislation for quite some time, and if it were possible for me to be here when it comes to the floor of the House, I would vote for it.

I make this explanation because I must be absent Monday, Tuesday, and possibly longer, due to being called to my home in Salem, Ill., on Sunday just passed, because of serious illness in my family.

I have asked my colleague, the Honorable SID SIMPSON, to insert in the RECORD the reason for my absence today.

America Will Not Forget Gen. Douglas MacArthur

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, at a time when our country needs help and direction in the Far East, our greatest authority, Gen. Douglas MacArthur, is not consulted.

Mr. Speaker, General MacArthur is the victim of petty politicians and while they may not want to use his services, the American people are disappointed that our greatest military leader is not called upon to render a final service to his country.

Under leave to extend my remarks, I am including two articles, one by Bob Considine, and the other by George E. Sokolsky, both articles having appeared in the Milwaukee (Wis.) Sentinel on January 25, 1956:

MACARTHUR: SECLUDED BUT NOT FORGOTTEN

(By Bob Considine)

Douglas MacArthur, the Nation's most famous but least consulted authority on Far Eastern matters, will be 76 years old Thursday. In quiet but determined opposition to the policies of the last two administrations, the former supreme commander has not yet found that peace of mind he sought upon announcing that he planned to fade away.

MacArthur, one of the most remarkable figures in modern world history, has become virtually a recluse. But it is a splendid isolation he has imposed upon himself. He lives with his vivacious wife and their studious 17 year old son, Arthur (who would like to make music his profession), in a magnificent apartment high in the Waldorf towers in New York City. He is seen less and less outside its memento-filled and Orientally-decorated confines.

Contact with MacArthur is not readily made. The bulk of his still heavy mail, which features stacks or requests for autographer pictures, is forwarded to the office which the Army maintains for him at 90 Church Street in deference to his permanent on duty status as a five-star general. Other mail is sent to the occasionally visited office which is set aside for him in the executives' mansion of the Sperry Remington Rand Corp., headquarters near Norwalk, Conn. MacArthur serves as the corporation's board chairman at $60,000 a year.

Phone calls to MacArthur seldom penetrate the Waldorf switchboard and ascend to apartment 37–A. Most calls are referred to 90 Church. The calls that do get through are from visiting dignitaries (MacArthur recently received the President-Elect of Brazil) and from old colleagues in arms, trusted friends, and an occasional Member of Congress.

But the calls seldom, if ever, are answered by MacArthur. Conrad Hilton, MacArthur's landlord, complained to a friend not long ago that he had been trying to get his famed tenant on the phone for weeks. The caller whose call gets closest to MacArthur personally finds himself talking to Maj. Gen. Courtney Whitney, MacArthur's close aide, friend, and business associate, whose new book, MacArthur: His Rendezvous With History, probably is the ultimately intimate assessment of the hero. It is not believed that MacArthur will write his autobiography. General Whitney mainly decides who will see MacArthur and who will not.

Though he is impeccable in his respect for the office of the Presidency, and has in the past spoken highly of Harry S. Truman and Dwight D. Eisenhower, MacArthur is still gripped with a cold indignation over the manner in which he was relieved of his command by Truman and is hurt by the indifference of the administration headed by his one-time aide Eisenhower.

He has never forgotten, of course, the galling final military campaigns of a fabled military life when restrictions the old soldier will never be able to comprehend were imposed upon him by the Truman administration and the United Nations. He was not permitted to attack the area in which the enemy was supporting its entire campaign.

To close friends, including General Whitney, who outlined it in his book, MacArthur has since revealed what he would have done in Korea if given his head. He would have augmented his American and U. N. forces with 30,000 troops from Chiang Kai-shek's army and made big amphibious landings, simultaneously, at the northeast and northwest tips of Korea. Each would have been assigned to drive inland along the southern side of the Yalu and join in north central Korea, closing off the supply lines from across the river.

When these were disposed of, MacArthur would have proposed that a belt of radioactive material be spread across the waistline of Korea over which no future invader could move his men and supplies.

The creator of this mighty dream and the major architect of victory in the great world wars hears the din of battle only in thoughtful retrospect today. He frets over "the way things are being run down there," meaning Washington, and recently told a friend he wouldn't be surprised if Adlai Stevenson and a depression arrive at the White House simultaneously, after which the people will install a conservative Republican administration.

MACARTHUR: A REFRESHING FIGURE IN ERA OF YES-MEN

(By George Sokolsky)

As one lies here in the hospital and thinks of men and events and the courses and tides of history, it comes to me that tomorrow, Gen. Douglas MacArthur will celebrate his 76th birthday.

His birthday ought to be marked in some manner for this is an extraordinarily truthful man in an era of mediocre timeservers. His is a philosophic outlook on the history and future of his country rather than an overspecialized emphasis on personal self-preservation. He is acknowledged in his own occupation to be our greatest general, perhaps the most competent military mind we have produced since Robert E. Lee; so he was kicked out by military lackies, most of whose names we have already forgotten. They may have gotten rid of MacArthur from the Army but not from his place in history.

And as he remains alive, we must ask him about Gen. Matthew Ridgway's disclosure that a report to the Nation was faked and who was responsible for faking it. For MacArthur suffered much from the moral irresponsibility of the Penatgon where men become so engrossed in detail that they never think of the consequences of what they do.

I met General Ridgway at a dinner shortly after he returned from Korea, and his conversation was all in one direction, that MacArthur had been right and the politicians in Washington all wrong and he spoke privately of how the lives of our sons were endangered because of arms shortages. Many crimes have been committed in the name of politics, or loyalty to the "commander-in-chief," whatever that may be in American life. But now the honest men are talking up and it is not going to be easy to answer. Nobody can answer Ridgway's charge of lying to the American people.

Gen. Douglas MacArthur, as a military man, could not understand why he was instructed to go into a war to achieve a defeat. There was never a question of insubordination because he led his Army to defeat as he had been instructed to do. But how to understand these orders? How to interpret them? How to make them fit a philosophy of war? That he could not do. And so he spoke out and got fired after serving his country from West Point to a commander of a theater.

When men speak of morale in the Army or clergy, in schools or anywhere, they really speak of that quality of pride that men have in their work and their associations. The "old tie" may be a phrase for amusement but it represented just this high quality of loyalty to a service that held better than all the rules books ever devised. When Gen. Douglas MacArthur was dismissed summarily, without even a face-saving device, a blow was struck not at him but at the morale of our armed services. A noble overtone of service disappeared. It all became nothing but a job for those who learn how to stand in right, who know just what to say at the right moment, the apple-polishers.

Efficient and competent as they may be, and nobody doubts that, they lack a moral elan and their lack is conveyed down the line to the men. A hero's breed must be heroic and these men who knifed MacArthur to please politicians were not heroes. And where are they today?

And so there he stands, as noble as ever, Douglas MacArthur, from whom has even been withheld a nominal honor, the title, "general of the armies." On his birthday, I congratulate him that time has proved him a noble figure in a confused era.

New York Is Alarmed

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, during the first session of the 84th Congress a considerable portion of the debate on the floor one afternoon was devoted to a discussion of the merits of deepening of the channel of the Delaware River from Philadelphia to Trenton, N. J. In addition to the time spent on that debate considerable time was also spent during the course of the year to hearings on the merits of the proposed deepening, which incidentally had already been approved by a previous session of the Congress. On that afternoon last year a sufficient number of my colleagues remained unconvinced of the merits of the proposal to defeat the bill

temporarily. However, those of us who feel that the bill was not only worthwhile, but urgently necessary for the continued economic health of the entire Delaware Valley region have by no means given up hope that Congress this year will see fit to change its collective mind.

In the interest of helping to convince my colleagues I should like to include, at this point in the RECORD, an editorial which appeared recently in the Philadelphia Inquirer. Economic growth must be continuous if any area is to avoid stagnation, and I think it is clear that the deeper channel is urgently necessary if the Delaware Valley is to continue to grow.

The editorial follows:

NEW YORK IS ALARMED

On the same day that the Delaware River Port Authority issued a report showing that the port of Philadelphia had its busiest year in history in 1955, the New York Herald-Tribune was lamenting editorially the continued sag in New York's port business and warning of Philadelphia's challenge to it.

The newspaper's fears have statistical justification. Philadelphia has become the Nation's No. 1 import port. Total waterborne commerce for 1955 was more than 85 million tons, a gain since 1948 of about 50 percent.

In foreign commerce, the authority report shows, the tonnage increase here was even more impressive. The 1955 figure was more than double that of 1948.

While it is pleasing to know that the port of Philadelphia is thus raising alarm in New York, it is obivous that it cannot rest on its laurels. New York is discovering tardily that it must maintain up-to-date facilities to keep and increase shipping business. Philadelphia has recently spent more than $6 million to improve pier and loading facilities, and these services have already demonstrated their worth.

But additional improvements are needed, in the shape of modern piers and in adequate approaches to them. Efforts should be made also to attract more passenger shipping here. A basic need is that for a deeper channel in the upper Delaware to give access to ocean-traveling ore ships. We have one of the world's finest ports; to maintain and to better its position, there can be no letdown in port development programs.

Opposition to Federal School Aid

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including a timely editorial from the Janesville (Wis.) Gazette which sets forth clearly its position opposing Federal school aid and the bill which is now pending.

The editorial follows:

OPPOSING FEDERAL SCHOOL AID

Education has never before faced such pressures for expanding schools, classrooms and for teachers, due to the influx of "war babies" now in the lower grades. Almost every community foresees the growing demand. Some do something about it, some procrastinate, waiting for possible Government help.

Now President Eisenhower, apparently under constant pressure to lend Federal aid, especially to the poorer States, has proposed a program totaling about 2 billions in Federal help. But his program favors poorer States at the expense of the richer States, of which Wisconsin is one.

This newspaper has always opposed Federal aid to education for, as the President recognizes, "responsibility for public education rests with States and local communities." He also recognizes that "Federal action which infringes upon this is alien to our system."

Then he said that States and localties cannot meet the demand for classrooms by themselves and early enough. So it is proposed that the American taxpayer pay 2 billions in taxes to Washington where it would be redistributed, the northern States getting less aid, the Southern States getting more.

Public education is a local issue and a State issue. Tax dollars sent to Washington never reach their destination as 100 cent dollars. The further Government is removed from the people, the less control they have over it and the more it costs them. Also the more waste and loss there is. To get the most from our tax dollars we must keep control close to home.

How far would 2 billions go in building new school rooms? It would be only a starter.

Remember when we started big billion foreign aid? It was supposed to be a stopgap, a temporary aid to recovery of the war-ravaged nations. That was 10 years ago and for 1956 the proposal is for 4.9 billions in foreign aid, with commitments over a period of years, even though billions already committed are as yet unspent.

So it would be with Federal aid to education. School buildings and classrooms are terribly costly, as every taxpayer in this area knows. Tens of millions are being spent right here, within a radius of 50 miles of Janesville. But not one cent of these already planned or constructed projects comes from Washington handouts. The citizens here want to be independent. They are shouldering the burdens without going to Washington with their hands out. They are doing something about education here and now.

Meanwhile, Southern States priding themselves upon their ability to attract new industries, have to admit that many of these industries have moved south from Wisconsin. Why? Because the Southern States offered all kinds of inducements, including no taxes or low taxes. Now they would have Wisconsin taxpayers pay for schools they could build if they taxed industry as Wisconsin does.

One sidelight on this issue is that some politicians find it good politics—giving something to everyone.

There is no hocus-pocus about getting money to build schools. It calls for some sacrifice and hardheaded financing. The easy way out is to run to Washington politicians for the biggest handout—at the expense of northern taxpayers.

Farm Legislation

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1956

Mr. VURSELL. Mr. Speaker, with leave to extend my remarks in the RECORD, may I say that I received the following telegram from the board of directors, Illinois Agricultural Association, urging the necessity of early action upon the part of this Congress to pass farm legislation. I am including this telegram for the benefit of the Members, and sincerely hope, and urge, the earliest possible action on the part of both bodies of Congress, to pass constructive farm legislation at the earliest possible date:

Early enactment of soil bank and related legislation is necessary, to be effective and helpful in 1956. Farmers are now making plans and ordering seed and supplies. Seeding small grain will start in March. We urge that the basic program upon which there is substantial agreement be enacted immediately leaving details and controversial matters for later consideration.

ROGER FLEMING,
Secretary-Treasurer,
American Farm Bureau Federation.

Plant Trees To Solve Newsprint Shortage

EXTENSION OF REMARKS
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1956

Mr. QUIGLEY. Mr. Speaker, on Thursday last, I discussed the farm crisis, the current acute shortage of newsprint, and suggested that one means of making the soil-bank proposal, particularly the acreage reserve aspect, economically justifiable was to encourage the planting of softwoods so as to provide the raw materials for an expanded domestic newsprint industry.

When I reached my home that evening and settled down with the evening newspaper, I noticed three articles, all from the Associated Press, which coincidentally pointed up the shortage, and suggested the desirability of expanding the domestic industry beyond present plans.

I think the three articles speak for themselves. Certainly the item describing the offer of Russia to supply to Mexican newspapers all the newsprint they require has serious and alarming overtones.

I wish to assure our good friend, the Delegate from Alaska, that in inviting the attention of the House to the suggestion for an Alaskan TVA, I am not taking a position against the development of this great area. But I should like also to suggest that the recommendation from the American Newspaper Publishers' Association that an Alaskan TVA-type project be undertaken is headed for a dubious reception from an administration which looks upon TVA as creeping socialism.

Under leave to revise and extend my remarks, I include the three news items, all of which are from the Washington Star for Thursday, January 26:

NEWSPRINT CURB WINS QUEBEC VOTE

QUEBEC, January 26.—A bill to freeze newsprint prices for Quebec consumers has been approved, 51–21, by the Quebec Provincial Assembly on its decisive second reading.

Date of the third and final reading has not been announced.

Conservative (Union Nationale) Premier Maurice Duplessis urged unanimous support for the measure on the second ballot last night, but met the solid opposition of the Liberal Party.

Mr. Duplessis earlier this month said the newsprint industry would be put under controls because the industry rejected his request that Quebec newspapers be exempted from a recent $4 price increase. The Premier said the controls would not affect newsprint exports.

The bill would set up a four-man board with vast powers over the production, distribution, and sale of newsprint. Prices to Quebec newspapers would be frozen at the September 1, 1955, level until March 1, 1957. Newsprint quotas to publishers would be based on the peak month of November 1955.

Liberal Leader Georges Lapalme, in opposing the bill, said the question of press freedom in Quebec "is still at stake." He said the measure would save newspapers a few dollars, but at a cost of placing themselves under the protection of the Newsprint Board.

SOVIET NEWSPRINT OFFERED TO MEXICO

MEXACO CITY, January 26.—Russia has offered newsprint to Mexican newspapers. It was the Soviet's first gesture to Mexico since Moscow's recent announcement that it wanted to help Latin American nations.

Although Mexican newspapers badly need newsprint, the offer met little response. The newspaper Excelsoir this morning devoted one paragraph to the offer.

The embassy issued the announcement yesterday that Russia "would attend to all requests for newsprint from Mexican newspapers" in serious need of paper.

There were no further details of the offer.

PUBLISHERS' AIDE URGES TVA FOR ALASKAN PAPER

A spokesman for newspaper publishers suggests the Government could help relieve the newsprint shortage by developing power in Alaska to operate paper mills.

All the forests there mean nothing in providing newsprint unless there is power, Cranston Williams, general manager of the American Newspaper Publishers' Association told a House Commerce Subcommittee yesterday.

Mr. Williams suggested the Government could build a kind of TVA in Alaska.

Other than the Alaskan power suggestion, Mr. Williams said, "I don't know of a specific thing Congress can do today" that private investment couldn't do to help relieve the scarcity of newsprint—the paper on which newspapers are printed. The subcommittee is studying the problem.

North American mills have announced plans for expansion to add 1,709,572 tons to their capacity by 1958, Mr. Williams, said. But, he added, the ANPA anticipates a need from half a million to a million more tons than that by 1960.

A Rallying Heart Prayer for President Eisenhower

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1956

Mr. McDONOUGH. Mr. Speaker, the prayers of hundreds of thousands of devout Americans in every corner of our land speeded the splendid recovery of President Eisenhower. The affection of a nation for one of its greatest leaders in history was manifest by the immediate and wholehearted response of all our people in sincere prayer and supplication for the President's full recovery.

Prayers of thanksgiving and for the continued improvement of the President's health are now being given since President Eisenhower is back on the job at the White House.

One of these, a tribute to our great President and a moving prayer for his continued improvement, is the following by Rabbi Max John Merritt, of Los Angeles, Calif. Rabbi Merritt's prayer was included in a broadcast from Los Angeles radio station KMPC during the program, The Free World Faces the New Year, on December 26, 1955. It is a prayer in which we may all sincerely join.

The prayer follows:

A RALLYING HEART—A PRAYER FOR PRESIDENT EISENHOWER

(By Rabbi Max John Merritt, broadcast in station KMPC program, The Free World Faces the New Year, December 26, 1955)

You knew how awful was war's fiery breath,
You surveyed the fields whose harvest was death.
You drew the plans only youth could apply,
Though by the thousands you knew youth must die.
Yet the soldier spoke not for war but for peace,
Your heartfelt plea was that mass murder cease.
Millions hailed your call as to a fresh start,
Now the free world prays for your rallying heart.

Doubt and suspicion clouded men's reason,
The fog of mistrust ruled from season to season,
All channels of meeting were silted with fear,
Curtains, iron and bamboo, divided our sphere,
Then through the fog that misted men's eyes,
As a bright beam of light strikes from the skies,
Your voice blasted the evils that hold men apart,
Now the free world prays for your rallying heart.

Through all the ages the clear truth has stood,
That men of all races form one brotherhood.
Across bloody ages tragic dramas unroll
As the race presses on to a far distant goal.
Then the dark of our night was lit by a beam
That renewed waning faith in a great prophet's dream.
You tore the web of the warmongers apart,
Now the free world prays for your rallying heart.

Never Was Nor Can Be

EXTENSION OF REMARKS

OF

HON. BYRON G. ROGERS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1956

Mr. ROGERS of Colorado. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD an excellent editorial that appeared in the Denver Post, Denver, Colo., on Wednesday, January 25, 1956.

The editorial is as follows:

NEVER WAS NOR EVER CAN BE

There is something terribly wrong in the communication of policies, decisions and actions by the Government to the people. This is becoming more and more apparent—and annoying. Somebody has no faith in the public's ability to digest unpleasant facts, to make calm judgments in the midst of controversy. They just do not believe the public's business is public—if it is touchy or complex and emphatically if it is dangerous.

Reporters cannot get straight answers to straight and valid questions. Why? Is there a conspiracy of silence or calculated delusion to cloak dishonorable acts or to cover up mistakes? We believe not. Why, then, cannot the press of this country help blow away the fog of doubletalk (some call it "rewritten history") which is so obscuring great issues? Well, because candor in the discussion of official business is at a low ebb. Again, why? Perhaps the examples that illustrate our dissent suggest the answers within themselves:

Four of the most sensitive areas of Government today are foreign affairs, defense, atomic energy, and internal security.

Secretary of State Dulles has said that President Eisenhower decided to use atomic arms against Manchurian bases in the event that hostilities were renewed in Korea. Mr. Dulles also said that the President concurred in the destruction of Communist Chinese staging bases in South China if the Red Chinese intervened during the Indochina crisis. Both statements were in a Life magazine article which has since been confirmed, in substance, by the Secretary himself.

Did the President so decide and concur? Is it important that we know? Perhaps the American people, directly and through their Representatives in Congress, would have agreed to such a course of action. Then again, perhaps they would not have. As the record stands, Mr. Eisenhower is committed to one position by his Secretary of State, and to another by his own statements to the people. Which are we supposed to believe? Or are we to know, along with our allies, only when such policies are to be implemented with action?

Directly related to foregoing contradiction is the issue raised by General Ridgway's angry complaint against misrepresentation of his views while on the Joint Chiefs of Staff. Ridgway objected to what he believed to be overemphasis on nuclear weapons in United States military planning. His objection was a professional one. It bore upon budgetary considerations, but more importantly upon our capacity to support such decisions as those revealed by Mr. Dulles—without embarking upon world war III.

But General Ridgway's minority dissent, delivered as an unclassified document to Secretary of Defense Wilson, was classified as unprivileged for public consumption and filed away. Then, either through honest error of interpretation or by design, the President was led to believe that the joint chiefs were unanimous in their views on the balance of forces recommended by Mr. Eisenhower, and the President so informed Congress and the country.

Here again, as in the case of Mr. Dulles' personalized history of recent diplomatic maneuvering, there was a serious breakdown in the communication between the Government and the people. And the general has turned to a popular magazine to tell his side of the story.

Almost a full year passed before the Atomic Energy Commission revealed the character and extent of radioactive fallout from the super bomb that was set off in the Pacific, March 1, 1954. There are many scientists today who feel that the Government is failing to inform the American people fully about the nature of the threat which is posed to civil defense in this country.

Finally, almost 2 years passed before patient congressional digging was able to separate and distinguish between cases of proven or implied disloyalty, and cases involving personal aberrations in the Government's security-risk firings. The press was completely frustrated in its efforts to obtain clear explanations of the actions. The figures were thrown around in the 1954 congressional campaigns to prove that the present Government had achieved an astonishing housecleaning job on Reds in Government.

Now, why are we having such exhausting experiences with men in high office? We think there are several reasons:

First, many of the men running our present Government are accustomed to dealing with the press only on their own terms. They make public only what, in their opinion and in the view of public relations counsel, is helpful to them and their objectives. This may not reflect adversely on their abilities. But it does not commend their concepts of public responsibility.

Second, tailored information—given appropriate color, timing, and emphasis—can enhance a program, even though illuminating it imperfectly. Achievement of objectives is more important than understanding them in the view of some. The comprehension and, of course, approval will follow. Meanwhile, why slow things up with endless and fruitless debate that would follow full disclosure?

Third, some confusion over purpose and performance in the conduct of the public's business is politically expedient. It disarms one's enemies while permitting one's friends to concentrate on generalities with indisputable appeal, i. e., peace and prosperity.

We believe the people have the same right to demand the facts on great questions of national policy as they have to the records of their courts, their school boards, and their city councils. But many of those facts, the answers to questions that bear upon justice and oppression, war and peace, life and death, are being withheld.

The people are being told, by strong inference, that their helmsmen are guiding the ship of state through dangerous waters with exceeding devotion and skill—that what they are doing is more important than why or how they are doing it. But that is a fatal course in a free nation. For as Thomas Jefferson said: "A nation which expects to be both ignorant and free, expects something that never was nor ever can be."

Boys' Clubs of America

EXTENSION OF REMARKS
OF
HON. THOMAS L. ASHLEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1956

Mr. ASHLEY. Mr. Speaker, the year 1956 marks the golden anniversary of Boys' Clubs of America and it is my wish, today, to pay tribute to that organization.

Even if juvenile delinquency were not one of our foremost problems, the contribution of Boys' Clubs of America would be of incalculable value. But the problem is undeniably there, and we must all be deeply grateful for the firm line of defense against youthful frustration, disillusionment, dispair, and crime which the boys' clubs across the country have erected.

In my district, the city of Toledo has a thriving boys' club of which we are all proud. The boys tell me that they plan their program under the slogan, "Building Boys Is Better Than Mending Men." Here, I think, we have the essence of the Boys' Clubs program.

Anyone of us can harken back to his own boyhood and remember the driving energy, the spirit of competition and combat, the yearning for adventure, the urge to explore and the need to be a member of the gang, which motivated many youthful ventures, many boyhood escapades.

These are important drives in youth, drives we do not want to destroy, but guide, instead, into constructive channels. This is the job Boys' Clubs of America has tackled, and the record of that organization over the past 50 years has been most heartening.

Since 1906 more than 400 boys' clubs have been established throughout the country, with a membership of some 400,000 boys—boys who are finding outlets for their energies and interests in sports, arts, crafts, and wholesome social activities. The boys' clubs have made available to them facilities valued at some $120 million and ranging from clubhouses to sports equipment, games and books.

The boys' clubs answer the basic need of boys to belong—to a club, a group, a team. Their programs place special emphasis on the needs of underprivileged boys. In congested cities the membership is drawn from the crowded areas, and in towns where other similar opportunities are not available, club members represent all economic levels. The clubs are nonsectarian. Membership fees are low enough to permit the poorest boy in the community to belong, and programs are varied enough to appeal to boys of every interest and capability.

The contribution of Boys' Clubs of America in building for good citizenship, preventing delinquency and developing latent talents in our boys cannot be overrated. The place which this organization has earned in our society is unique; its work is vital.

It is my purpose, today, Mr. Speaker, to call attention to the great work being done by Boys' Club of America and to urge that, in this anniversary year, Americans everywhere commend and support this program which must, of necessity, be close to the hearts of all who wish for American youth a bright and happy future.

The Great State of Michigan

EXTENSION OF REMARKS
OF
HON. THADDEUS M. MACHROWICZ
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1956

Mr. MACHROWICZ. Mr. Speaker, under leave to extend my remarks, I wish to include in the RECORD the remarks of Gov. C. Mennen Williams, of Michigan, which he made at the Michigan State Society dinner on Friday, January 27, 1956, held at the Raleigh Hotel here in Washington.

The Governor's remarks follow:

It is a great pleasure to dine with and visit with a group of friends who share my own devotion to our beautiful State of Michigan.

Your pride in our great State of Mitchaw Sagiegan, a pride which is suitably evidenced by your activities in this nearly century old State soceity, is no more surprising to me than mine can be to you.

We have much to be proud of in Michigan, including—yes, most of all—our energetic and imaginative people, who have done so much to make the most of the great resources and other blessings which have been showered in our State from the beginning.

It is not only from the days of 1787, when we were incorporated into the Northwest Territory, but even from our earliest beginning, when Etienne Brulé and his companion, Grenoble, first explored our beautiful land of the Great Lakes in 1618 that the products of Michigan have been enriching the lives of people, products which include both the first furs and pelts from our vast wilderness of the early 17th century and the automobiles, airplanes, electronic machines, and wonder drugs of the twenties.

Four flags have flown over Michigan in those years: French, British, Spanish, and our own American flag. (The inclusion of the Spanish flag may possibly be a surprise to some. The fact is that Spanish troops captured Fort St. Joseph, where the city of Niles now stands, and held it for several days in 1781). But no matter what flag flew over it, Michigan, a French terirtory, a Spanish territory in part, a British territory, and finally the 26th State of our own Union (in 1837), has made its unforgettable contribution to the civilization of the times.

Nature richly endowed Michigan with natural resources. In their prime, our great forests were one of the Nation's main sources of lumber.

More than 100 years ago, in 1844, our great Superior iron ranges began pouring their ore into the Nation's industries. Even today, there is only one State, Minnesota, which mines more iron ore than we do.

Our fabulous copper mines were opened at about the same time, and at the turn of the century the deposits in Michigan mines were the most important single product in the world market.

Our rich earth enjoys top rank in the production of calcium, magnesium, chlorides, gypsum and salt. We are second in the commercial production of bromine, sand and gravel. We are third in natural magnesium compounds. We are fourth in stone and peat.

We have the largest underground iron mine in the world, the largest commercial limestone quarries, and we supply almost all of the graphite used in lead pencils.

What the world thinks of when it thinks of Michigan, is automobiles, and for good enough reason. But our 10,000 factories rank first, not only in automobiles, but also in boat building, gray iron making, cutting tools, woodworking machinery, baby foods, magicians' equipment, breakfast food, and in the repair of calliopes. More than 80 percent of all the different kinds of manufacturing is done in Michigan.

In Kalamazoo, Michigan boasts the world's largest drug products plant under one roof.

In Dearborn, of course, we have the world's largest automobile plant; in Alpena, the world's largest cement plant; and, again in Kalamazoo, the world's largest guitar factory.

And that isn't all.

Detroit is the Nation's first city in pharmaceutical products, adding machines, machine tool accessories, foundry products, heating devices, paint and heavy chemicals.

Detroit, although there may be some who will not believe it, is the healthiest big city in the world and also the wealthiest.

It has the lowest death rate of any large city, and its per capita income averages out at more than $4,000 per year, which is the highest in the world.

It also has the largest proportion of homeowners of any large city in the Nation.

The Detroit River is the world's busiest waterway, carrying more tonnage than the Rhine, Thames, Seine, and Volga combined.

But Michigan also is a mighty agricultural State. In the production of the Nation's 20 most important crops, Michigan ranks tenth or better in each.

It leads the Nation in the production of tart cherries, navy beans, cantaloupe, celery, cucumber pickles, strawberries, gladioli bulbs, and chicory.

It is second in the production of plums, carrots, field beans, cauliflower, red clover seed, onions, and blueberries.

It is fourth in sugar beets, and it produces 21 percent of the Nation's peppermint and wintergreen.

Michigan farmers have won national awards for potatoes and butterfat, and world championships in milk production and wheat growing.

Michigan is the fourth largest tourist State. The beauty of the State itself, in addition to its industries, is the attraction. A few hours' drive from the Nation's biggest factories, we have some of the Nation's biggest forests. Six million acres of our State are covered by State and National forests. In and near these forests, we have a deer herd of more than 700,000, the largest east of the Rockies; the only elk herd east of the Mississippi; and one of the few moose herds in the United States, not to mention bear, bobcat and other game.

Michigan—or Mitchaw Sagiegan, to revert again to its old Chippewa name—has 11,000 lakes and 36,000 miles of streams.

To open up this great water wonderland to our fellow Americans, not to say to our Canadian friends and others, Michigan built the first cement highway in 1899, and the world's longest international bridge at Detroit.

The longest suspension bridge in the world, the Mackinac Bridge, is now being built to link the two peninsulas of the State. Including anchorages, but excluding approaches, it will extend 8,614 feet across the Straits of Mackinac. If we include approaches, the total length will be 26,195 feet, which is just less than five miles.

Engineers have said it would be impossible to build this bridge. They drew blueprints and submitted innumerable data to prove that it could not be done.

Michigan is doing it!

So far, we have discussed what Michigan is, what it has done. Our lumber helped build the cities, towns and farms when the Nation was young. As time passed, we put not only the Nation but the whole world on wheels. More recently, we helped save democracy by becoming its arsenal. But I can say to you that our best years, our most prideful years, are just now upon us.

The whole Nation, right now, is entering a brand new era. It is an era in which automation, the science in which miracle machines powered by miracle energy sources, including the power of the sun itself, will free men, at last, from the backbreaking tasks to which they have been chained for so long.

And Michigan is taking its place, and will continue to hold its place, in the very van of this great new forward surge into a new kind of civilization in which all Americans, continuing to look to Michigan's genius in the future as they have in the past, should be enabled to enjoy an abundance of everything—including, for the first time since Adam and Eve were driven out of Paradise, an abundance of leisure to devote to the development of their whole persons—physical, mental, spiritual.

The products which have poured out of Michigan's 10,000 factories up to now are as nothing compared to the products which will flow out of them from now on, with one machine doing the work now done by 4 or 5 men. We are headed into an era such as the world has never known, or even imagined, up to now, and Michigan is leading the way.

As man begins to fill his hunger for goods he will seek more and more leisure. Then, truly, the wonderful peninsulas of Michigan, with their great natural resources and rich historical inheritance, will become a mecca of happy vacation-bound people not only from our own farms and factories but from many States of the Union.

It is part of our inheritance to lead. Ours is an illustrious tradition, and we are proving ourselves worthy inheritors. Our future is circumscribed only by the limits of our courage and our initiative, and I myself have seen that the limits are boundless.

Our history is a great one. Our future will be even greater.

Ladies and gentlemen, with you, I salute our great State, Mitchaw Sagiegan, the beautiful land of the Great Lakes.

Air Pollution

EXTENSION OF REMARKS
OF
HON. JOHN H. RAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1956

Mr. RAY. Mr. Speaker, the problems of air pollution are countrywide and are increasing in severity and frequency of occurrence at an alarming rate. Some of these developments and the measures being taken to combat them are summarized in the following excerpts from a recent address by Dr. Lauren B. Hitchcock, president of the Air Pollution Foundation in Los Angeles. They are a timely reminder to this Congress that, while we have made a start toward research in this field, much more must be done, and soon.

The address follows:

AIR POLLUTION AFFECTS NEARLY HALF OF UNITED STATES POPULATION

Seventy-six million residents of the United States, approximately 46 percent of the entire population, are living in areas which have atmospheric pollution, Dr. Lauren B. Hitchcock, president of the Air Pollution Foundation, said.

And solutions for the Nation's steadily growing air pollution problem can be produced only as fast as the public acknowledges its seriousness and supplies the money needed to bring the menace of smog under control.

Dr. Hitchcock traced the spread of air pollution in urban centers across the continent at a Pacific southwest regional meeting of the American Geophysical Union at Kerckhoff Hall on the UCLA campus.

Far from being an isolated problem characteristic of Los Angeles or such cities as Chicago and New Orleans, he said, air pollution is causing concern in the East as well.

"Of the 76 million residents of United States areas which are experiencing air pollution, 40 percent live in the six Eastern States of Massachusetts, Rhode Island, Connecticut, New York, New Jersey, and Pennsylvania," he reported.

Speaking on "Smog—Its Causes and Probable Cures," Dr. Hitchcock asserted that unless air pollution is combated successfully on a nationwide scale, the cost of smog during the next 25 years "may exceed the total cost of all our wars of the last 50 years."

Cost factors include $1 billion worth of unburned gasoline emitted from auto exhausts and adding to smog each year, unreckoned losses of other partially burned fuels, at least $1 billion a year in smog-caused laundry bills and cleaning of buildings, furnishings, and automobiles, and untallied millions of dollars in crop damage, plus corrosion and deterioration of metals and other materials.

"And who would attempt to put a price tag on the health and welfare of our citizens?" Dr. Hitchcock asked. "Who will advocate that we experiment with this generation or the next to determine how much insult man can endure?"

But this is one gamble man does not have to take, he said.

"At the cost of a few millions now, we can effect savings to the country of billions in the years to come, plus far-reaching health benefits."

He pointed out that statistics of higher incidence of lung cancer in cities, though not yet proven to be a cause-and-effect relationship, are being taken very seriously by our highest medical authorities.

The foundation president emphasized that air pollution "parallels the increasing metropolitan concentrations of man and his machines."

He pointed out that "over one-third of the air-polluted population in the United States live in the three metropolitan areas of New York-northeastern New Jersey, Chicago, and Los Angeles," and added that "metropolitan areas along the eastern coast from Boston to Washington, D. C., are fast coalescing into one continuous metropolis."

Air pollution is now being noted in varying degrees in 30 metropolitan areas of the Nation having populations of more than 500,000, and in 71 other centers of lesser populations, Dr. Hitchcock said.

In addition, reports of atmospheric pollution in Mexico City, Bogota, Sao Paulo, London, Liverpool, Manchester, Paris, Cologne, Copenhagen, Sydney, Melbourne, and Tokyo, indicate that at least 33 million persons in other parts of the world live in heavily-populater, air-polluted centers.

Dr. Hitchcock warned that "the air supply of any community is fixed by nature, by winds and weather, beyond the control of man," and explained that "a large part of air pollution is the result of our growing requirements for energy in an age of mechanization."

A problem not under control of scientists and engineers, Dr. Hitchcock reminded, is "the willingness of the community—which includes business, industry, the public, and Government—to spend the necessary money and to accept the necessary controls."

Concession on Echo Park

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1956

Mr. SCHERER. Mr. Speaker, an editorial in the December 27 issue of the Cincinnati Times-Star on the upper Colorado River project is timely and exceptionally well written. I am, therefore, inserting it in the RECORD so that

my colleagues may have the benefit of the arguments it makes in opposition to the project:

CONCESSION ON ECHO PARK

One of the questions which Congress will face when it reconvenes in January is the controversial upper Colorado River project. And this time it may stand a better chance of passage because the dam at Echo Park, in Dinosaur National Monument, has been eliminated.

The Echo Park Dam brought forth the opposition of conservationists and lovers of the national parks all over the Nation. The dam would have inundated a beautiful canyon in one of the West's most scenic spots. And there was always the question of whether it was really vital to the upper Colorado project.

Members of the House Rules Committee eliminated the Echo Park Dam from the House bill last spring. The proponents have now conceded defeat and are willing to leave Echo Park alone. But they are still beating the drums for the rest of the project.

Congress may buy their altered goods. If it does, however, it will not be getting an unmixed blessing. Several other features of the upper Colorado project are also of dubious value. Engineers are not certain some of the dams are practical. No one seems to agree on the cost, which may run into hundreds of millions, and there is disagreement over whether the benefits from it, such as irrigation, recreation, and electric power, will make it self-supporting.

Above all is the questionable policy of spending huge sums to create new agricultural lans at a time when the Government is so plagued with surplus crops that it is proposing to take millions of acres out of cultivation and put them in a soil bank. Echo Park or no Echo Park, Congress had better take another long look at this proposal.

Address of Hon. George M. Leader, Governor of Pennsylvania, Before the Nationalities Division of the Democratic National Committee, January 28, 1956, Mayflower Hotel, Washington, D. C.

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address:

When I was a boy we used to sing a piece of jargon that went like this:

"Run, get the ax; there's a flea on Willie's head."

Even as children we thought it ridiculous. Even as children we realized it was a foolish way to kill a flea—unless you didn't mind killing Willie in the process.

I don't know why I say "even" as children we thought it ridiculous, for it seems to me that a good many grown-ups, living in today's United States, find it completely reasonable.

These are the people who are so anxious to kill the fleas of communism that they swing their axes at our Constitution, our Bill of Rights, and our tradition of fair play.

In the very act of combating communism, they swing the ax of communism.

The swing the ax of terror.

And while the brave among us shudder, the frightened cringe.

All of us know that we are living in an atmosphere of hysteria: Most of us are familiar with the kangaroo courts and the star-chambers of our present-day America.

This is the age of insecurity—for security reasons.

It has come about because we have allowed some of our Government administrative agencies to bypass the courts and even to bypass our lawmaking bodies.

By administrative decree—which can be changed by one stroke of a bureaucratic pen—men are being labeled as disloyal and, by implication, potentially treasonous.

Take the Ladejinsky case, for example. Secretary Benson was finally forced to admit that it was unjust to call Mr. Ladejinsky a security risk. Secretary Benson now says that the loyalty-security tag pinned upon him was simply a pretext.

For Secretary Benson's real reason for dismissing Ladejinsky was his belief that everybody in the Department of Agriculture should be a native-born American.

Those of us meeting here tonight are particularly concerned with the problems of foreign-born or first-generation Americans. This is the reason why I have touched upon the dangers of the present security program.

For, if native Americans are themselves facing the menace of trial-by-bureaucrat, what is ahead for the nationalities groups? What of the foreign-born American, or the American whose parents came from another country, or the American who still has relatives in another land?

I must admit that the question is rhetorical. All of you know the answer as well as I.

All of you know that their problem is infinitely more critical than it is for the native American.

As Governor of the Commonwealth of Pennsylvania, I know a good deal about nationality groups. Within our State we have more than three-quarters of a million foreign-born citizens, and another two million who are either of foreign or mixed parentage. This is a high proportion, even in a Nation which numbers nearly 34 million of its citizens among the foreign-born or first generation.

For my part—I am a Pennsylvania Dutchman.

It is true that my ancestors came to America nine generations ago, but I am still a Pennsylvania Dutchman and I pride myself upon it.

My identity as such is only a part of my complete identity as an American, of course. But this is equally true of the newly naturalized citizen. He may speak accented English; he may read a newspaper printed in his native language; he may affiliate himself with a group made up of other Americans sprung from the same stock; he may preserve his language, his customs, and his inheritance of national culture and folk wisdom. But he is still as much an American as I am, or anybody else is.

This is as it should be. After all, our pride in our origin does not disqualify us as Americans.

All of us, whether naturalized or native-born, are Americans and citizens, and even those of us whose families came here hundreds of years ago spring from immigrant stock.

The thing that counts is the actuality of citizenship.

Now traditionally, American citizenship is given without reservation and without disclaimer. There are no strings attached. No trick clauses are hidden among the fine print. And no one is expected to start out with a fractional degree of citizenship and build it up to the complete whole over a period of years by seniority or bureaucratic endorsement.

We have always believed in this country that the newly made citizen of half an hour ago was as much an American as the descendant of John Smith, or Priscilla Alden, or Peter Stuyvesant.

Why then should a new American, or an American with relatives abroad, or an American who has fled the Iron Curtain, face discrimination?

He shouldn't. But all too often he does.

For there is little doubt that in our present hysterical era he suffers more from the erosion of American civil rights than his native-born fellow citizen.

Yet we are the people who for so long have prided ourselves on our nerve, our balance, and our acceptance of every man at face value.

We are the people who have prided ourselves upon our design for freedom and our zealous defense of liberty.

But we, those same people, see hardly a week go by without another affront to the freedoms we treasure.

Undoubtedly, there are a few disloyal Americans and certainly we should like them to be removed from sensitive areas. But in the process we must not cast aside our heritage and our law.

This is too high a price.

You know, speaking as a layman, it has always seemed to me that civil rights are too often construed in the negative sense. Too often we think of them as protective devices. Too often we consider them to be simply defenses against the invasion of our individual freedoms. Too often we relegate them to the courts, to the lawyers, and to the due process of the law itself.

Judge Learned Hand, one of our Nation's great jurists and great men, has said something very pertinent about this:

"What do we mean," Judge Hand asked, "when we say that first of all we seek liberty? I often wonder whether we do not rest our hopes too much upon constitutions, upon laws, and upon courts. These are false hopes; believe me, these are false hopes.

"Liberty lies in the hearts of men and women; when it dies there, no constitution, no law, no court can save it; no constitution, no law, no court can even do much to help it. While it lies there, it needs no constitution, no law, no court to save it."

Let us, therefore, stand up and be counted. Let us endorse sanity and abjure fear. Let us proclaim our faith in one another as Americans, and let us do it loudly enough to make our voices heard.

For we are all of us immigrants, or the descendants of immigrants; and we have in common not only our search for liberty but our conviction that we can best find it here.

And we are all of us members, in one way or another, of minority groups. At least, we are mavericks enough to think so. We are, in fact, individuals who find kinship in our independence, in our varied approaches to government, but also in our basic similarity of purpose. We have found that all our minorities have, together, become the majority we call the Democratic Party. We have found that our party is the sum total of our viewpoints, of our tolerance for one another, of our conviction that democracy is best achieved and best preserved in the United States by the Democratic Party.

Before I leave this meeting here tonight, I should like to quote a few more words from the thoughtful pen of Judge Learned Hand.

"What, then, is the spirit of liberty?" he asked. "I cannot define it; I can only tell you my own faith. The spirit of liberty is the spirit which is not too sure that it is right; the spirit of liberty is the spirit which seeks to understand the minds of other men and women; the spirit of liberty is the spirit which weighs their interests alongside its own without bias; the spirit of liberty remembers that not even a sparrow falls to earth unheeded; the spirit of liberty is the spirit of Him who, near 2,000 years ago, taught mankind that lesson it has never

learned, but has never quite forgotten; that there may be a kingdom where the least shall be heard and considered side by side with the greatest * * *."

And so tonight, within the four walls of this room, we are gathered together as Americans whose national origins cover the world—as men and women who believe that all of us are children of one Father and brothers in the same land.

For myself, there is no greater cause in life than our common cause of brotherhood; for it is, after all, the cause of liberty. And I wish for liberty not only in America but throughout all the world.

Let us pray, therefore, that the conscience and courage of Americans can create that spirit of liberty of which Judge Hand spoke so well; and that they will safeguard the very liberty they have created.

Only then will our Nation be secure in the armor of its freedom.

Worries of the President

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1956

Mr. BURDICK. Mr. Speaker, through sickness and otherwise—mostly otherwise—the President has had a hard time of it for the past few months. He will completely recover from his sickness, but I doubt that his worries will end.

Many members of his Cabinet seem to be suffering from the hoof-and-mouth disease, and it is apparently spreading. Defense Secretary Wilson led off in his speech in Chicago—spoke entirely out of turn and expressed his own views and not those of the President. That simmered down, but not until the damage removed some Republican Members of Congress.

Along comes Dulles and authors an article he never saw or read which appeared in Life magazine, telling how we had been on the brink of war many times, but that through dextrous handling and political jujitsu he had avoided war as often as it was threatened, and a general "hoo rah" for Dulles. Another storm broke, and through the heroism of the editor of Life, Mr. Luce, who assumed all the blame, the administration ship righted itself and started to sail again. This course was short lived, however, because another administration officer who had neither written nor read an article appearing in Harper's, stating that support prices were the bunk, sent in a letter stating that the article was excellent.

Benson had trouble before sporting around with sliding scales and Senator AIKEN, but this last blast shook the Federal buildings in Washington. The President, speaking in the last campaign, said that the farmers were entitled to 90 percent of parity, and that they could count on him to maintain support prices, and now his Secretary of Agriculture settles the whole farm question in a hurry, and the article says the support program is out.

There is one redeeming feature about Benson's blunder. He admitted it and took full responsibility. That only confirms what I think of him. He is a very nice, honest man, much better than the usual run of Secretaries, but his knowledge of what to do to straighten out agriculture is on a par with what I know about the hereafter.

These Secretaries seem to have contracted the dread foot-and-mouth disease, because every time the yopen their mouth they get their foot in it. In this political fly time the President should insist that the Secretaries wear muzzles, and I doubt that muzzles would stop the appearance of letters in the magazines under the name of a Secretary who never saw or read or signed the publication. That presents a mysterious situation. In my small way I have been correctly quoted, misquoted, and had my statements rewritten until I could not recognize them, but I never have yet seen an article in any magazine attribtued to me which I did not write, did not read, and did not sign. Gosh. This Secretary business is dangerous, when a Secretary cannot tell from 1 minute to the next what he will say when he has not said anything. The magazines should be fair enough to permit any Secretary to read what he is about to say. I just would not have anything to do with a magazine which would not let me see what it had concocted. If he cannot read, let someone read it to him. This promiscuous appearance of articles and letters emanating from the administration headquarters ought to be approved by somebody before the publication comes out.

I think the President will survive his heart trouble if the situation is not aggravated, but the action of these promiscuous statements appearing in magazines, which the President knows nothing about, will give a well man thrombosis of the heart, liver, or any other vital organ.

Somewhat, Yes Very, Confusing

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1956

Mr. McDONOUGH. Mr. Speaker, I hope every Member of the House will take 2 minutes to read the following editorials from the Rockaway (N. J.) Record, and the Los Angeles Herald Express.

They say in a few words, what I am sure a great many Congressmen are asking themselves. That is: "How can we approve the upper Colorado River project, which would bring into production more than half a million acres of new agricultural land, and at the same time propose that 40 million other acres be taken out of production?"

Here we have the situation of our left hand not paying any attention to what our right hand is doing.

I am sure that all Members are sincerely struggling to devise ways and means for solving the great problem of our surplus foods. With inconsistencies such as this, however, we cannot arrive at an equitable solution.

Such projects as the upper Colorado should not be approved to increase the headache of our farm problem. Such projects are unjustified and foolhardy in the face of the present situation.

I strongly commend the following analysis:

[From the Rockaway (N. J.) Record of January 12, 1956]

MEMO FOR A POSTAL

It's impossible to read all the material sent to us from Washington, but one piece this week commanded our enthusiastic attention.

For the past couple of years we've been hearing about a multi-billion-dollar scheme of the Federal Bureau of Reclamation, called the upper Colorado River project, to irrigate land in high, barren, remote areas of Wyoming, Colorado, Utah, and New Mexico.

Representative CRAIG HOSMER, of California (he must be a Republican; Senators HARRY BYRD, WALTER GEORGE, and RICHARD RUSSELL are the only Democrats we know of in Congress who aren't hell bent on squandering the taxpayers' money) has come up with a report that ought to blast the project for good. He has found there are nearly 21 million acres of fair to excellent farm land lying idle in the East, Midwest, and South, where there is ample rainfall and a long growing season. This total does not include woodlands, pastures, or Government lands. The figures were supplied by the United States Soil Conservation Service.

Against this he contrasts the upper Colorado project, that would irrigate about half a million acres at a cost of at least $5,000 per acre, in an area where there is little population, few roads, no metropolitan markets, few towns. The cost of establishing local governments, police forces, schools, and building highways and new towns would have to be added to the irrigation costs, whereas the good land now lying idle is close to markets and population centers, with roads and transportation running through them, and with schools and municipal governments already established.

"It is an unbelievable proposal for the purpose of growing more farm products of the kind already in great surplus while there are these millions of acres of good idle land," he says.

Well, that's bureaucracy for you. How could the parasites in the Reclamation Bureau justify their salaries if they didn't try to reclaim something—anywhere, just so it keeps them busy?

How about dropping a postcard to PETE FRELINGHUYSEN in the House Office Building? Or would you prefer to pay your share of that $5,000 per acre to grow more surplus to be bought with more of your money?

Here is another editorial from the Los Angeles Herald-Express which reviews the same problem:

SOMEWHAT CONFUSING

The President has called for farm legislation the core of which is the soil bank and other methods of inducing farmers to cut back on their production.

But the President also recommended that Congress act to authorize construction of the upper Colorado River Basin water storage dams to throw open half a million new farm acres to agriculture.

We are told that our Government storage bins are filled to overflowing with surplus farm products which must be sold here or abroad, even in Iron Curtain countries, and that is why we must pay farmers to stop production on a good part of their acreage.

If the upper Colorado project is built at a cost of billions of dollars, it will take away water that should come to southern California from the lower Colorado and that is a major concern of everyone in this section of the country.

California's Republican Congressman CRAIG HOSMER, of Long Beach, has thrown another monkey wrench into the confusion machinery by announcing that he will present to the House evidence that nearly 21 million acres of the best American croplands are lying idle and unused for any purpose.

"With millions of acres of the best farmland awaiting the plow in areas where the rainfall is heavy and the growing season long, the Federal Bureau of Reclamation would force this great new burden of the upper Colorado River project on the American taxpayers," HOSMER stated.

HOSMER said that the cost of bringing millions of idle farm acres into full production would run only from $15 to $150 an acre.

"Compare that with the $5,000 an acre cost of building the upper Colorado project," he added, "and you see how inconceivable the Reclamation Bureau's scheme is."

It would seem that while we are talking about a soil bank for the farmers already having their land in full production, we should think a little about keeping these virgin lands around the upper Colorado project locked in their present soil bank until we have use for them.

Politics and the Generals

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston Post of Thursday, January 26, 1956:

POLITICS AND THE GENERALS

Gen. Matthew Ridgway has now joined a lengthening list of general officers of the Army whose dissenting views of the defense policies stemming directly from the Commander in Chief are a symptom of some deep-seated defect of our Nation's high command.

General Ridgway has been supreme commander in the Far East for U. N. forces, supreme commander of NATO, and Chief of Staff of the Army. These are posts which gave him some competence in commands which General MacArthur and President Eisenhower have held, a wider experience, in fact, than either MacArthur or Eisenhower. Eisenhower never commanded directly in the Far East for U. N. forces, and MacArthur never commanded NATO.

It cannot be charged then, that General Ridgway's criticism of the political decisions which he says have marred the military preparedness of this country, stems from frustrated ambition. Other general officers have had similar experiences with the pressure of politics. Generals Clark, Wedemeyer, Collins, Bradley—even General Marshall—and others of recent memory have experienced overt political pressure. General Ridgway has taken his case to the people, while the others, from one consideration or another, never succeeded in registering an effective protest.

No efforts will be spared by the coterie of incompetents surrounding Secretary of Defense Wilson to smear General Ridgway. But he has said something which needed to be said, and uncovered a story which was hinted at for so long that it needed documentation.

An Expression of Public Opinion on Foreign Policy

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1956

Mr. SCUDDER. Mr. Speaker, the January 23, 1956, issue of the Santa Rosa (Calif.) Press-Democrat carried an editorial entitled "What Foreign Policy Would Adlai Suggest?" which is a timely expression of public opinion on the current foreign-policy controversy.

I believe the opposition is going overboard in their many times silly criticism of the Eisenhower administration. Never in the history of our country have we had more capable and honest men of reputation leading our important and sensitive departments of Government. I would warn those who criticize not to go too far, it may be a long way back.

The editorial follows:

WHAT FOREIGN POLICY WOULD ADLAI SUGGEST?

When Adlai Stevenson officially became a candidate for President, a lot of people wondered whether he was making a mistake by announcing too early.

His pronouncements recently on a magazine article quoting Secretary of State Dulles that the United States has been on the brink of war 3 times in 3 years will make even more people wonder whether Mr. Stevenson would have increased his chances of nomination and election by remaining in the background a little longer.

Mr. Stevenson is one of the most polished phraseturners of our times. When the magazine quoted Mr. Dulles, Candidate Stevenson promptly got into print by accusing the Secretary of playing Russian roulette with our entire Nation at a time when our military might was being reduced for political purposes.

It sounds good. The only trouble is that it isn't accurate. And a lot of people may be better informed than Mr. Stevenson thinks.

There is no mystery about the foreign policy of the United States.

In both Europe and Asia, we have drawn lines. Communist Russia and Communist China both understand clearly that if those lines are crossed, we will fight.

Few people in the United States do not realize that the Communists would start a war at any time they are convinced they could defeat us. In essence, our foreign policy is that we do not propose to let our enemy nibble away at our defense perimeters, communizing other nations, until they have reached the point where the United States is isolated and ripe for attack.

This foreign policy is in sharp contrast to that of Mr. Truman.

Far from a clear-cut thus far and no farther policy, Mr. Truman's administration let it be known that we did not consider Korea within our defense perimeter. The Communists promptly invaded South Korea—and we blundered into a shooting war in defending it.

There have been no similar misadventures under the Eisenhower administration. If the Communists invade, we will fight. They know it, and the American public knows it. So does Mr. Stevenson.

If we have been on the brink of war during crises over the Korean armistice, in Indochina and Formosa, and Mr. Dulles says we have, it is because our enemy has been tempted to gamble on whether we mean what we say. If there has been no war, and there has not, it is because our enemy has decided it's not safe to take the gamble.

What would Mr. Stevenson substitute for this policy of strong defense and clear understanding? Would be return to the policy of weak defense and uncertainty that plunged us into the Korean mess?

He doesn't say. He doesn't even criticize our present foreign policy in a clear-cut and understandable manner.

All he does is coin a smooth phrase about "Russian roulette."

Whether he's running for President too soon remains to be seen.

But since he's running, he should let the people know in what direction he proposes to take the United States if nominated and elected.

The People Trust President Eisenhower

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1956

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks, I am enclosing an editorial appearing in one of the outstanding newspapers of my district, the Mount Vernon (Ohio) News. In well-chosen words, it clearly defines the position of our President and recognizes that his performance in office confirms the feeling of trust and confidence that the people of our Nation have for him. The records will show, Mr. Speaker, that President Eisenhower has dedicated himself to the preservation of peace. The people trust him, Mr. Speaker, regardless of politics. He has given us full employment without war. He has balanced the budget without jeopardizing defense or any other segment of our economy. He has cut waste and unnecessary expenditures and has given dignity to his office.

MORE POPULAR THAN EVER

President Eisenhower has now completed three-fourths of the term to which he was elected in November 1952. That is a sufficient span to allow the American people to judge him as Chief Executive.

The celebrations honoring him at this milestone bear a largely partisan Republican stamp. But the evidences suggest that many millions of Americans would happily associate themselves with such homage.

For Mr. Eisenhower is an extremely popular man, as much or more so than the day he was elected with an all-time record of nearly 34 million votes. Judged in these terms, his tenure of office thus far has been a smashing success.

The verdict of the historians may or may not coincide with the popular judgment, but it is bound to be affected by it.

There is not really a great deal new that can be said in explanation of this popularity that was not uttered at the time of the President's fateful heart attack last September. At that time he learned, as few living men do, in what esteem his countrymen held him.

In the beginning it seemed to be chiefly a matter of trust. Mr. Eisenhower was a man who had taken a big role in bringing the American people safely through a great war and preparing the defenses against the prospect of another.

His performance in office tended to confirm that feeling of trust. The President revealed himself as a man intensely dedicated to the preservation of peace, the cause most Ameri-

cans wanted to see served with full devotion.

In the domestic realm his tenure was linked first with a moderate economic decline and then with a resurgence that carried the Nation to new peaks of prosperity. Here again the great majority of Americans appeared inclined to credit him with striving earnestly to better their lot in life.

Almost beyond these things, Americans came to view Mr. Eisenhower as a man of such innate sincerity and decency that he has stamped the fresh imprint of these qualities on the country's public life. He has quieted, if he has not stilled, the angry currents being stirred by the extremists when he assumed the Presidency. The tenor of public discussion is calmer, and there is more unity in the United States than in many a day.

His critics in his own party think he has been too much a Democrat. His Democratic adversaries think—or say—he has benefited form the illusion rather than fact of peace and prosperity.

If President Eisenhower should decide to run for a second term, those who would prove these circumstances illusionary have their work cut out for them. For most people show no signs today of doubting the substance of these favorable conditions.

They have watched the President for 3 years. And they like what they have seen.

Flynt Speaks for the South

EXTENSION OF REMARKS
OF
HON. E. L. FORRESTER
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1956

Mr. FORRESTER. Mr. Speaker, a few days ago the gentleman from Georgia, Mr. J. J. FLYNT, JR., made an address to a joint session of the General Assembly of Georgia, wherein he opposed the Federal aid-to-education bill.

That speech met with approval in the general assembly, and the Griffin Daily News wrote the following editorial which should be of interest to this body, to wit:

FLYNT SPEAKS FOR THE SOUTH

(By Quimby Melton, Jr.)

Congressman JACK FLYNT, of Griffin, made a fighting address to a joint session of the General Assembly of Georgia yesterday. In it he said clearly that he opposes the Federal aid-to-education bill in Congress because it would remove local control of schools and transfer it to Washington.

Discussing the issue of segregation, he had some reasonable arguments to offer. As one of the leaders in Congress for continued segregation of the races, he made a statement which should be published through the Nation. It is:

"I want to state without any reservation or evasion that I am here and now willing to take a solemn oath that I hold no malice, hatred, or prejudice whatsoever in my heart or mind or soul against any man or group of men, living or dead, because of his race or the color of his skin. * * * I have sought to give every man and woman every dignity to which he is entitled as a human being and every right to which he is entitled as an American citizen.

"And, yet, I just as firmly and sincerely believe that to completely integrate in communities and States where each race constitutes a large proportion of the population would unquestionably weaken both races and even destroy one or both."

That statement, in a nutshell, explains the South's opposition to segregation. It tells the Nation clearly that the white southerner does not hate Negroes as so many people out of our section believe we do. It explains that the fight for segregation is not a fight for bigotry or prejudice.

To the contrary, the white southerner is the best friend the Negro race ever had.

And like Congressman FLYNT, we have neither malice nor hatred toward the Negro race. We admire and respect the race's achievements and accomplishments in a relatively few number of years. We believe that Negroes are entitled to fair treatment, a proper standard of living, good education, and the right to the pursuit of happiness.

But, again, like Congressman FLYNT, we believe that integrating the races in the South might well lead to the destruction of either or both races.

And though we bear no ill will whatever toward Negroes, we do loathe, abhor, and despise the political and sociological meddlings of troublemakers from outside our State who seek to overthrow the Constitution, wreck the good will between the races, and cram an illegal and unconstitutional decision down our throats.

Congressman FLYNT has spoken out in terms even the Supreme Court and even the rabble rousers of the leftwing elements can understand. Let his words be heard throughout the Nation.

Retiring Admiral Shepheard Honored

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1956

Mr. CANFIELD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article from the New York Times of January 26, 1956:

RETIRING ADMIRAL SHEPHEARD HONORED

A Who's Who list of leaders in the maritime industry paid tribute last night to a man often called the best friend of the American merchant marine.

He is Rear Adm. Halert Clifford Shepheard, Chief of the Coast Guard Office of Merchant Marine Safety. After almost 40 years as naval rating and officer, civilian shipping industry employee and Coast Guard officer, he will retire on Tuesday.

Admiral Shepheard entered the Naval Reserve Force in March 1917 and won a provisional lieutenant's stripes before he was separated in March 1928. For the next 5 years he was associated with private steamship lines but then joined the old Steamboat Inspection Service of the Department of Commerce.

When the inspection service was transferred to the Coast Guard in 1942, Admiral Shepheard was commissioned a Reserve captain and named Chief of the Merchant Marine Inspection. He saw service with the Navy in World War II and won the Legion of Merit. He was promoted to rear admiral in 1948.

In his long career, the admiral won the respect of many shipping-industry executives who honored him last night at the Commodore Hotel. To "Shep," as he is affectionately known, they could look for sympathetic and fair handling of their maritime safety and inspection problems.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1956

Mr. PELLY. Mr. Speaker, knowing that in the State of Washington we have been short some 2,725 school classrooms, I followed the White House Conference on Education with great interest. It was obvious the problem of the shortage of education facilities was nationwide—due to a lag of construction during World War II, plus a soaring birth rate. Like others who feared Federal dictation in the field of education, I had to admit that although I felt the providing of proper schooling for our children is not a Federal responsibility; nevertheless, many localities presently are either unable or unwilling to meet this responsibility. It has become a Federal problem.

Under the State of Washington constitution, every child is assured an education by the State—so if the local community falls short, the State, as I see it, must fill the need. The frills of education—and I do not use this term in a derogatory sense—can be voted up or down on a grassroots basis, but in my State a child's basic education is a State responsibility. By and large, I gather the same is true in most other States.

The difference between States seems to be that some States have made more effort than others to fill their responsibilities. Comparisons are not fair, but I have heard that California under the impact of population growth, due to the trend of westward migration, has issued $300 million of bonds to meet their needs. In our State of Washington, we have gone in debt to try and meet the shortage—unsuccessfully. It appears that certain other States have not needed to go into debt or are not of a mind to do as much.

The Eisenhower program to alleviate the shortage of public-school classrooms was unprecedented. Critics say it was too little and too late, but a Democratic-controlled Congress which failed a year earlier to act would have to share any such criticism with a Republican administration.

However, Mr. Speaker, sound programs require study and I, myself, question if anyone has the right answer yet. Certainly I am disillusioned by H. R. 7535.

Need, under the Eisenhower recommendation, was to be the basis for grants to States. This penalizes those communities which have acted on their own to build the needed schools. But this much should be said for the administration plan: it would cut off States and communities from getting aid if they had their own resources to build schools, yet failed to use them.

If the Federal Government gets into the solution of school maintenance problems—costs of and raising the standard of salary levels—I see a danger of Federal dictation but, in aiding a program

to meet the classroom backlog, we assume the Government in time will step out of the picture. The requirement for matching contributions by the States is one provision to insure local payments, and local participation means local control under the Hospital Construction Act so it can be retained under a Federal grant program.

Anyway, I am favorable to giving apathetic or hard-pressed communities a Federal lift in catching up. I hope it will have the effect of encouraging local efforts to raise the standards of teachers pay. If the States have reason to feel the Federal Government is going to enter the teacher-salary field, I fear for the effort. It will be a case of let Uncle Sam do it.

Now I want to say I am very unhappy about the proposed formulas for allotments to the States. I have looked over the tables issued by the Department of Health, Education, and Welfare in connection with S. 2905 which, as I understand it, is the administration's recommendation. Then I have before me figures developed by the Tax Foundation of New York City showing how the various States would fare under H. R. 7539, the so-called Kelley bill. Both formulas leave me very cold. It is not necessarily that my State of Washington will pay more into the Federal Government in taxes for the program than it gets back. I am used to that. The sore point with me is that the tables show that we States, who in relation to our total State-tax revenue have bonded ourselves highly or gone into debt, fare worse than many States who have not incurred debts. Mind you, I am not criticizing those States who do not have big bonded indebtedness. I envy them.

Another point I raise is that the State of Washington is exceeded by only one State, New York, in expenditures for school purposes from State and local sources from current revenue receipts on a basis of per pupil in daily average attendance. It appears to me under H. R. 7535 our State does not get enough credit for what we are doing, and I come from a heavily taxed industrial area, Seattle and Kitsap County, that has been trying to meet its school needs in a local way as well as through the State level. Meanwhile, certain rural areas of our State who will not raise their assessed valuations for tax purposes to a fair figure are not paying a proportionate and fair amount of the effort the State is making.

However, that is a local problem. What I wish to emphasize as far as the Federal school construction program is concerned is that States like mine should be studying the basis of State allotments.

Frankly, our State Educational Association has wired me it favors H. R. 7535, the Kelley bill. But later when I have to explain to the taxpayers of my district my support of a bill which is not equitable, that wire from the Washington Education Association will not help much.

For example, Arizona's tax collections in 1954 were 26 times her outstanding debt. Yet Arizona under H. R. 7535 will get more aid than the cost of the Federal school construction program to her based on her share of Federal tax payments. She gets back more than her cost.

Wisconsin's taxes collected in 1954 were 52 times the outstanding State debt, yet she benefits in a greater degree than she would pay. In other words, the formula is wrong. A great many States benefit unduly in the same way. Notwithstanding, I am committed in my conscience to support a Federal education-aid measure which I hope will encourage people in every State as well as my own to meet the emergency. To vote down this bill, bad as it is, means no legislation this year.

There are only two provisions I insist on. I will compromise on the basis of allocating the funds to States. I am willing to see my constituents pay more than their just share provided, first, that the fair labor standard of the Davis-Bacon type is included, and second, that assurance is given one way or another that no funds under this program go to any school district in defiance of the United States Supreme Court as to segregation of races. If assurance is given that legally funds can be withheld by administrative action of the Department of Health, Education, and Welfare, I will waive the requirement of an amendment as to this latter point. But otherwise I personally will stand firm on both points.

Meanwhile, I urge a corrected formula for State distribution. A State with a heavy debt like my State of Washington is entitled to get back at least as much as the program costs her taxpayers.

A Humane Society Proposal

OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1956

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial:

A HUMANE SOCIETY PROPOSAL

There are times when the objectives of the well-meaning humane societies are worthy of public support.

Such an instance is the proposed legislation before the Congress to require that meat animals be slaughtered "by humane, rapid, and efficient means." The legislation would not impose anything brand new and untried on the packing industry. Already 15 American packing companies are said to use approved methods of slaughtering and laws like the bills before the Congress have been in effect for years in Great Britain, the Netherlands, Germany, Sweden, Denmark, and Switzerland.

Any one of three bills, whose authors are Senator HUMPHREY and Representatives HIESTAND and GRIFFITHS, would be satisfactory to the humane groups. It should be possible for the Congress, whose Members surely are in sympathy with the objective, to reach agreement on legislation to accomplish it.

The Vice President

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1956

Mr. HILLINGS. Mr. Speaker, on January 26, 1956, the distinguished columnist, Mr. Bill Henry, wrote an excellent column which appeared in the Los Angeles Times. Bill Henry has analyzed some of the reasons for the outstanding service performed by Vice President NIXON.

The article follows:

BY THE WAY

(By Bill Henry)

WASHINGTON.—No matter whether Dwight D. Eisenhower runs or doesn't run for the Presidency it is quite clear that much of the Republican Party's campaigning is going to be done by RICHARD MILHAUS NIXON. His are capable hands.

DICK NIXON

It is unfortunate that most people have never heard the Vice President in normal oratorical effort, for, thanks to his amazing skill as a political campaigner, he has had to spend most of his time carrying the ball for his party. The fact is, though, that NIXON is a past master at other facets in the field of talk. He is extremely good at the small, cozy address to groups of limited size on subjects which are only incidentally political. And in addition he is amazingly skillful at the banquet type of oratory. Truth is that in just about every way of meeting people he is extremely successful, as his handshaking tours of the world and the Latin American countries will testify. As is the case with Gen. Douglas MacArthur, most of the enmity which exists against NIXON comes from people who have had little direct contact with him.

DIRECT

Part of NIXON's skill lies in the simplicity of his approach to subjects. When, for instance, at the Chicago salute-to-Eisenhower dinner he reduced Adlai Stevenson into what one Republican described as a quivering, spineless heap of quips and wisecracks, NIXON did it in the simplest possible way and in the shortest space of time. He opened by skeletonizing his speech which, he said, would deal with four topics: (1) The conditions the Eisenhower administration inherited; (2) the condition now after 3 years of Eisenhower leadership; (3) some of the major complaints of the critics of the administration; and (4) the great vista for the future if the Republicans remain in office. The third point dealt with, and pretty well disposed of, Adlai by noting that Stevenson offered only criticism, no remedy except a return to the policies which got us into much of our international trouble.

SIMPLICITY

Here in Government circles they're forever talking about the way in which Nixon addresses groups of, say, district attorneys or attorneys general. He has a tremendous ability to "bone up" on any topic and when he addresses them he quickly displays an amazing understanding of their problems, their possible remedies, and of the law with which they are most intimately concerned. He usually knows a large number of them personally, knows the peculiar problems of their individual areas and displays an astounding comprehension of their jobs. This is no accident. He takes his job seriously and he takes every speech seriously, making

sure that he provides them with something more than a collection of canned platitudes or even of political argument. He saves his political barbs for such special occasions as seem appropriate.

EPIGRAMS

For instance, the other night when he was presented with the gold medal of Philadelphia's Poor Richard Club on the occasion of the 250th anniversary of the birth of Benjamin Franklin, Nixon's speech showed the same painstaking preparation which always characterizes his public efforts. He carefully outlined and narrowed down his discussion of Franklin before this group of Franklin experts, limiting his remarks to Franklin in his role as a public man and a public servant. Then having carefully chosen his Frankliniana, he applied a couple of dozen aphorisms of the great man to present-day problems and cited Franklin's remarks in such a manner as to show how the thinking of the man in Revolutionary times could be used in meeting today's seemingly new and more complex situations. It was quite a masterpiece of making use of pioneer American thinking in the light of today's, and tomorrow's developments. It is Nixon's ability to speak simply, clearly, and convincingly that gives him such stature as we plunge into the haggling of this political year.

Arms for Israel

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1956

Mr. MULTER. Mr. Speaker, the following is the text of a statement issued by Mrs. Franklin D. Roosevelt on her own behalf, and on behalf of former President Harry S. Truman, and on behalf of Walter P. Reuther, vice president of the American Federation of Labor and Congress of Industrial Organizations. This is the same item I referred to during my remarks on the floor earlier today:

ARMS FOR ISRAEL

The future of Israel and the Arab lands of the Near East is inextricably intertwined. Present antagonisms and fears have forced both Israel and the Arab lands to channel human and material resources into arms when they are desperately needed for the peaceful development of the Middle East. The threat to peace in the Middle East is a threat to world peace. Border clashes with increasing frequency may at any time erupt into war which may spread far beyond the Middle East. The problems which have arisen between the Arab States and Israel, difficult though they are, can be solved, given goodwill and the sincere desire for peace.

It is essential that America should do all that lies within its power to prevent war and lay the foundation for permanent peace in the Middle East.

The State of Israel is a great and irrevocable historic fact. It represents the rebirth of a nation that has given to the world one of its greatest traditions. When it proclaimed its independence in 1948, the United States was the first government to give Israel recognition. In doing so, our Government gave practical expression to an ideal and policy supported by every administration since World War I, and repeatedly endorsed by bipartisan resolutions in Congress and the platforms of both major parties.

ACHIEVEMENTS ARE NOTED

This country has extended the hand of friendship and given assistance to the Arab States, through its support of the cultural interest of the Arab world and its participation with the Arabs in the exploitation of the region's rich natural resources. Through the United Nations and through our own assistance programs, we have aided the Arab governments to meet their economic and social problems. Our technicians and diplomats are laboring to bring into being vast projects in the Jordan and Sinai which promise great benefits to the Arab world. We have been prepared to enter into mutual security agreements with the Arabs for the defense of their frontiers and those of the free world. Secretary Dulles has made clear the willingness of the United States to extend financial and economic assistance and to help settle the refugee problem.

Israel, with the help of scientists, technicians, and administrators drawn from every land, has shown how the desert can be transformed by human skill and perseverance. Israel has demonstrated the tremendous possibilities for economic and social development in this area, where there is both belief in and the practice of democracy. Peace would make these skills and achievements available to the whole Near East and help the region to achieve a new flowering, unparalleled since Biblical days.

In facing the real problems of the Arab refugees, it must be recognized that Israel cannot economically or politically afford to admit more than a small number. Though a significant part. Israel is only a small part, and is by no means the most richly endowed part of the Middle East. The opportunity for the settlement of nearly a million Arab refugees is far more promising in the vast Arab lands tht surround Israel than in the small State of Israel under any conditions that could possibly be created there. America, together with other countries ready to give financial and technical assistance for the resettlement of Arab refugees, has the right to expect the goodwill and full cooperation of the Arab lands and of Israel to the extent of its ability to provide financial compensation.

The United States must pursue an unequivocal policy in regard to the Middle East. It must make clear that any change in the status quo by force will not be recognized or tolerated. No constructive purpose could be served by gnawing at or seeking to roll back the boundaries of Israel. No part of Israel has ever been part of Egypt or Jordan. The Arab States and Israel are bound by the United Nations Charter not to use threats of force or force as an instrument of national policy. They are bound by armistice agreements that forbid alteration of boundaries by the use of force. Changes of boundaries can, therefore, be brought about only by mutual agreement.

ARMS RACES DEPLORED

It is for the United States to restate and implement its basic principles in such a way that there can be no uncertainty as to where it stands. The cynical invitation to an arms race, the spreading of confusion, and the exciting of mutual fear and hostility by the shipment of Communist arms to Egypt can be offset only by the clarification of our position, persistent efforts toward mutual confidence, and our active efforts toward achieving peace. We must counteract every attempt by the Soviet Union to upset the present precarious balance of power in this area. This requires that the United States should now provide the defensive arms needed by Israel to protect itself against any aggression made possible or incited by the introduction of Communist arms.

The tripartite declaration of 1950, under which the United States, the United Kingdom, and France committed themselves that "should they find that any of these states were preparing to violate frontier or armistice lines" they would "immediately take action within and outside the United Nations to prevent such violation" must now be strengthened by incorporation into treaties offered on equal terms to Israel and the Arab lands. Because of Soviet intervention, such treaties can no longer be conditioned on either acceptance by both sides or by mutual agreement in regard to border changes, since such conditions would, if imposed, only delay the enactment of treaties that are essential to maintaining peace in this area.

Peace is the highest American interest in the Near East. What is at stake is not only the survival of the small State of Israel, for which we have long avowed, our firm friendship, but, as the President has reminded us, the peace of the world.

United Nations Vote on New Members Called a Blow to Morality

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mr. JOHNSON of California. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an article from the New York Herald Tribune by David Lawrence which shows that the Court of International Justice rendered an advisory opinion sought by the United Nations itself in which the Court declared that package deals are illegal. Despite this, package deals persisted.

The article follows:

U. N. VOTE ON NEW MEMBERS CALLED A BLOW TO MORALITY

(By David Lawrence)

WASHINGTON, December 15.—The United Nations has revealed itself as just another logrolling organization, with less regard for principle and morality than for political expediency. It's a blow from which the organization may never recover. For, once respect is lost, it is rarely regained.

The controversy over admitting new members was on the same low plane that one would find in Tammany Hall in New York City or in the smoke-filled rooms of political conventions where deals and packages are manipulated with all the artful barter and selfishness of the market place.

Nationalist China, alone, by her veto of Outer Mongolia, stood out as the courageous champion of morality. Yet it is a sign of the decadence of the times that newspaper dispatches are telling already of the intention of some governments to punish the Nationalist government next year and give her seat in the United Nations to unmoral Red China just because the Nationalist delegate didn't bow to expediency.

RECALLS KOREA TOLL

The day that Red China goes in the U. N., the demand for America to step out will be resumed. For it was Red China's murderous commanders who in Korea helped to bring about the death of 33,000 American boys and the wounding of 110,000 others. The same

U. N., which declared Red China an aggressor now is reported to be ready to take that regime unto its bosom.

But the amazing thing is the way that supposed champions of virtue—those who extol the U. N. as the last word in international morality—are themselves surrendering principle and rejoicing that Soviet Russia did finally condescend to let sixteen members come into the organization. The cry is for "universality" at any cost, as if numbers rather than the qualifications of the members to carry out the obligations of the U. N. charter were the real criterion of effectiveness.

EXPEDIENCY, SPENDER SAYS

It was Sir Percy Spender, of Australia, president of the Security Council, who, with startling frankness, said the other day: "It is not principle with which we are concerned here but expediency—the expediency of inexorable political circumstances."

This then is the new doctrine of the U. N. which in all the schools and colleges of America has heretofore been praised as the paragon of international virtue and as the last great hope of civilization to settle its disputes.

Having failed to command universal support for armed intervention to repel the aggressor in Korea, the United Nations has since been compelled to rely primarily on moral force. But even this moral force now has deteriorated. For there can be no respect throughout the world for an organization that violates its own principles of law and order. The Court of International Justice, for example, in an advisory opinion sought by the U. N. itself, ruled in 1943 that package deals are illegal and that admission must be on individual merits of the member rather than dependent or conditioned on the acceptance of other members.

All this now has been brushed aside and the new slogan seems to be "numbers for numbers' sake."

Under such circumstances, it is logical for the United States now to ask that all its 48 States be admitted to the U. N. It would augment the number of members considerably. After all, each of the 48 States is sovereign and, while the charter uses the term sovereign equality, there is no inclination today in the U. N. to examine the qualifications of members too carefully. Also it would solve the controversy here over the Bricker amendment, for if the various subsidiary bodies of the U. N. are to make treaties or agreements binding this country on certain domestic affairs, at least each of the 48 States would have some sort of opportunity to veto such legislation.

If Outer Mongolia, which was a part of Red China, is to be a member—and Russia now insists that Outer Mongolia must be admitted or else Japan can't be admitted—then it does seem that a case can be made also for British Columbia or Quebec or Ontario, though the British Government seems to have fared pretty well in voting strength with such sympathetic partners as Australia, New Zealand, Canada and the Union of South Africa already members of the U. N.

Only the United States among the major powers has been left with a single vote. For in due time Soviet Russia will want more of her provinces admitted, just as were the Ukraine and Byelorussia. Some day, if Red China does come into the U. N., she will demand that Inner Mongolia be accepted to balance Outer Mongolia, and so the game goes—the great hope of mankind for a union of peace-loving organizations with a devotion to idealism, instead of to materialism, has been crushed under an avalanche of brazen deals and packages set loose by unmoral politicians.

Liquor Advertising

EXTENSION OF REMARKS
OF

HON. HORACE SEELY-BROWN, JR.

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1956

Mr. SEELY-BROWN. Mr. Speaker, I ask unanimous consent to extend my own remarks in the Appendix of the RECORD to include a letter which I have received from Mrs. Norma Burgess Moore, president, the Woman's Christian Temperance Union of Connecticut, Inc., with an enclosed petition. I ask unanimous consent that the petition with the names of those signing it be also made a part of the RECORD.

The letter and petition follow:

THE WOMAN'S CHRISTIAN
TEMPERANCE UNION OF
CONNECTICUT, INC.,
Hartford, January 20, 1956.

Hon. HORACE SEELY-BROWN, Jr.,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN: Again we are reminding you of the wave of public sentiment against the liquor advertising over the air and in publications. Even people who are not with us in wanting total abstinence deplore the ads, which get bolder and bolder in their glamour to get more people to drink.

After all, how ridiculous it is to allow the glamorous advertising of a product that is the cause of so much misery and crime in the world. How the liquor traffic must gloat over the ignorance and indifference of good people.

To actually allow a group of money-seekers to ruin our civilization with their poisonous product isn't very bright. Alocholic beverages contain a very powerful narcotic and are habit forming. The few clinics we have could never begin to care for the alcoholics, which increase all the time.

Over 20,000 alcoholics in Connecticut who are a burden on society, dependent financially, and a hazard to have loose.

Please take this seriously and study the problem, so as to take a definite stand on it and do what is best for all concerned. Civilization is at a pretty low ebb in many ways.

Many thanks for your cooperation.

Sincerely yours,

NORMA B. MOORE.

P. S.—Enclosed petitions with 240 names. Please record in the CONGRESSIONAL RECORD.

PETITION

To our Senators and Representatives in Congress:

We, the undersigned, respectfully petition you to protect us in our rights as parents and as purchasers, by passing legislation to prohibit alcoholic beverage advertising over the radio and television and in our magazines and newspapers. Our television sets are being rendered worse than useless to us by alcoholic beverage advertising, and our children are being led to believe that alcohol is harmless and to glorify crime by means of such advertising.

"Everybody, Grown a Little Taller"

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1956

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert the following speech by Dr. Robert L. Johnson, president of Temple University, as printed in the December 17, 1955, issue of the Christian Science Monitor:

"EVERYBODY, GROWN A LITTLE TALLER"

(Speech delivered by Dr. Robert L. Johnson, president of Temple University, on the occasion of the dedication and unveiling service of the historical marker at the Eisenhower ancestral home, Elizabethville, Pa.)

We are met on a site that marks an important stage in the development of an American heritage. It is a heritage not of accumulated wealth, nor social position, nor intellectual genius. What was planted in this beautiful valley of the Susquehanna long ago was the seed of a family line which in its flowering perpetuated a name to represent to the world in troubled times the best hopes of mankind. * * *

The first of the family line, Nicholas Eisenhower, stepped from a sailing vessel in the port of Philadelphia one day in 1741. He had a son Peter, who in turn had a son Frederick. Frederick was the father of Jacob F. Eisenhower who, with his wife, Rebecca Mather, was to establish the family in this pleasant valley, build the ancestral home where we are gathered, and become the grandfather of the 34th President of the United States. * * *

As I said in the beginning, the Eisenhower heritage * * * is not unique. It is as typically American as anything I know. The only thing unusual about it is that it has been used so well by so many for the benefit of so many others. Yet that heritage by itself does not explain all that we know about these brothers.

What, for instance, is the ingredient, and where did it come from that produced a leader so beloved at home and abroad as Dwight D. Eisenhower? * * * What is the magical element in a man that can draw trustingly to him other men of many minds, contrary interests, varied fortunes, diverse backgrounds, and contrasting temperaments? I asked myself that question just a month ago on that cheerless Saturday that gave to the country the news that the President was seriously ill.

Never have I seen such genuine outpouring of concern and good will for any public figure. It came from all levels of society—big people and little people, Democrats and Republicans, the poor and the prosperous, the cynical and the sentimental, the godless and the devout. * * *

What is it that can do this to people? I asked. Is it the profundity of a man's knowledge? the sureness of his judgment? his organizational ability? the eloquence of his utterances? I have known men having all these qualities in varying combinations and degrees but without the slightest ability to command the respect and affection of people in the mass.

I have been thinking it over for a long time. I think I have the answer.

What is it that everybody wants more than anything else? Is it money? Health? Security? No, he only thinks he does. These are conventional, surface desires. Satisfy them all and the universal yearning, the deeper dissatisfactions still exist. What everybody wants fundamentally is to establish identity with what I may call, for lack of a better term, the spirit of man.

What I mean is this. We can be surrounded by family, friends, and neighbors and be as lonely as a hermit * * * A man may be known to hundreds, yet be known by none. The ego, the psyche, whatever it is that is the real person is held apart from that element in everybody else. It is encased by walls of selfishness, layers of lethargy, barriers of timidity and reserve, barricades of inhibition, introversion, and all kinds of mental and spiritual blocks. More than anything else, we want to break from these shackles in an effort to find understanding and true communion with other human beings.

If we could do it, that would be, of course, the ideal state. We may never find this condition outside utopia. But once in a while, once in a long while, a man comes along with those rare personal gifts that enable him to penetrate the barricades. His presence melts the walls. He has an uncommon power of understanding and of making others feel they are understood. Such a man is Dwight D. Eisenhower.

Like every man who has ever had personal contact with the President, I have felt that power and seen it in action. The instances I am thinking of are little, unimportant, everyday episodes, but they are examples of the power that Khrushchev felt at Geneva, the power that prompted Bulganin to say: "Your President we can talk to. We trust him." That's one proposition, anyway, on which the Russians can get a majority vote from the American people anytime.

A man who is a world figure and another who is not known beyond the street where he lives have a common quality for Mr. Eisenhower. They are both people. To him, everybody is important.

That quality was apparent so many times 2 years later in Chicago where he was nominated for the Presidency. Early one morning he was walking briskly through the lobby of the Conrad Hilton Hotel with 2 or 3 aids. Not many people were about yet, but a young GI with a camera spotted him and tried to get a picture. Because the General was walking fast, the youth could not quite get the focus. As Mr. Eisenhower was about to pass, the boy reached out impulsively and touched his sleeve. "Please, Sir," he said, "could you wait just a second?"

One man in the party tried to brush off the young soldier.

"You have only 10 minutes to make your appointment," he said to Mr. Eisenhower as the General paused. "That's all right," the boss said. "This won't take long." He reached for the GI's camera and looked at it. Passing it to another of his attendants, he said, "Do you know how to work this thing? Get over there and take a picture of both of us, this soldier and me together." The picture taken, he said to the boy, "Thanks, son, and good luck," and went his busy way.

Somewhere in America there is a young man who will never forget that act of kindness, and the picture of himself standing alongside the General of the Army will always be his most prized possession.

Some of Mr. Eisenhower's political foes have spoken of such incidents as play-acting. Well, the oldtimers in Abilene will tell you that whatever it is, it isn't play-acting. They say that Ike was never worth shucks at acting. When he was in high school he could do everything else, he could ride and box and play ball, but in dramatics, the only role he could play was that of Ike Eisenhower. That's the way it's always been.

Thinking of it that way, I guess that's why we love him. He's always just himself. He never shuts us out with barriers of pretense, and so, when we look at him, we find just the plain man, a man who resembles the kind of person that each of us feels himself to be. Trusting him, then, is just like trusting our own best selves. As someone once said of Abraham Lincoln, he's everybody, grown a little taller.

James Reston, now the chief of the New York Times Washington Bureau, summarized it well one day in Chicago during the 1952 convention: "What impressed me is that Mr. Eisenhower—you may smile at the old-fashioned word, but I can't describe him any other way—Mr. Eisenhower is a 'good' man. You can't be around him long without feeling that goodness. It is a positive power, instilling confidence. Frankly, I have reached a conviction in these weeks that this goodness is something that America needs right now more than anything else."

Dilemmas of a Congressman

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1956

Mr. CELLER. Mr. Speaker, under leave to extend my remarks, I insert herewith a speech I made before the Command Management School, at Fort Belvoir, on January 19, 1956:

DILEMMAS OF THE CONGRESSMAN

No one group of people has been on the receiving end of jokes than have the Members

of Congress—or, for that matter, the members of any legislative body, either in these times or in history, ancient and modern. I know a hundred such cracks, some of the most caustic of which were made by Mark Twain:

"Reader, suppose you were an idiot. And suppose you were a Member of Congress. But I repeat myself."

And:

"Fleas can be taught nearly anything that a Congressman can."

The British Parliament took its share of ribbing at the hands of such critics as Walter Bagehot, who defined Parliament as nothing less than a big meeting of more or less idle people," and Gilbert and Sullivan, who recorded thus the success story of a Member of Parliament:

"I always voted at my party's call
And I never thought of thinking for myself at all.
I thought so little, they rewarded me
By making me the ruler of the Queen's Navee."

—*H. M. S. Pinafore.*

Will Rogers had his fun at the expense of Congress, but innocently denied it: "I don't make jokes," he said, "I just watch the Government and report the facts." And Eugene Field remarked:

"Some statesmen go to Congress and some go to jail. It is the same thing, after all."

But, as the comedians say, don't get me wrong. I love it. And so say we, all of us. And to prove it, I have run for, and won, this office 16 times, and I am looking forward with the keenest of pleasure to running again. I have 33 years of battle and retreat, of small triumphs and bigger defeats.

I have chosen for my topic today Dilemmas of the Congressman, not because, believe me, the sensitive soul is hurt by the judgment of our humorists, but to get down to the serious business of the day, I am convinced that the structure of the democratic process cannot be wholly understood unless the people who live under a representative government know the dilemmas that are faced time and time again by the men and women they have selected to represent them.

I want to discuss first the apparent dilemma faced by every Congressman, and I think it can best be billed as "National Interest versus Regional Sentiment."

We see this at play in practically every major bit of legislation before us. A member of Congress, for example, is convinced that the national interest demands a low tariff. He recognizes that trade is a two-way street; that if we wish to export, we must also import; that if others are to buy our products, they can only earn the dollars with which to buy these very products by selling to us.

But let us suppose you represented a district whose present economic strength lies largely in, shall we say, the manufacture of blouses, which is meeting heavy competition from Japan. It is most difficult for people who must eat here and now to be persuaded that in the long run they and the country will fare better if the tariff on Japanese imports is reduced.

It has been proposed in many quarters that this conflict be resolved by re-training of workers for other industries and payments sustaining the workers during such period of re-training. The adoption of such a concept, however, is a long way off. Ways of compensation should be found for those who have invested in business and have been forced out by foreign competition. How does the Congressman vote—in what he believes to be the national interest, or in view of his district's present needs?

If he votes for the national interest as he sees it, does he face defeat?

Perhaps he can persuade the major part of his constituency of the soundness of his views, but I doubt if he can do so with those of his constituents who work in and with the manufacture of blouses.

Another such example is in the area of immigration legislation. Let us assume that the Congressman is convinced that a liberal immigration policy serves the best interests of his country; that such liberal policy will play an important part in cementing foreign friendships; that a liberal immigration policy means the bringing of new skills into the country, leading to new industries, greater purchasing power, and the enrichment of our culture.

But suppose his district, fearful of the foreigner, rejects this ideology. In what direction does he, representing his district, move: toward the national interest or toward the appeasement of regional sentiment?

We have seen this dilemma again in the matter of compulsory military training. A Member of Congress is convinced that the national interest demands the institution of a system of compulsory military training in these hazardous times. The constituents in his district who think—and must necessarily do so—in terms of the future of their children, their husbands, their fiances—are thinking in terms of single family units and hence urge against compulsory military training.

Shall the Member risk defeat and vote in the national interest, or does he, knowing the hearts of mothers and wives, take it upon himself to express the sentiment of the people who sent him to Congress? Which shall prevail, according to the Congressman's convictions—the national interest or the regional sentiment?

We see this dilemma at work among certain Congressmen who are face to face with the desegregation decision of the Supreme Court. Here emotion has risen high. Let us assume that the Congressman is elected by a district where the prevailing feeling against desegregation is intense. He personally believes in the principle of the equality of opportunity for all peoples. He feels that segregation is a mockery of democratic principle, that the color of skin has nothing to do with merit or potential, that it is wrong to put a fence around a people because of color, or to keep them on the lowest economic footing and to deny them entry into schools supported by public funds. And he believes that all children are God's children.

But his constituents will not have it so. They feel the lowering of educational and physical standards in the schools. They believe that this break with tradition is too painful for their children to face.

In which direction does the Congressman face? Does he represent the national interest or the regional sentiment?

For those who have been in Congress for many years and whose constituents are thoroughly familiar with the quality of their work, it is easier to say that the national interest shall prevail. But for those who are serving only their first, second, or third terms, it is a dilemma of large proportions.

There is another dilemma which rears its Janus heads in instances too numerous to be comfortable. This I have called the all or nothing or little bit of something dilemma. As a Congressman seeking election, you have stumped through the district and taken your firmest stand on the question of public housing, the urgent need for increased numbers, etc.

On the floor of the House you are confronted with a measure which cuts public housing to a minimum and ties it to a slum-clearance project. You have, then, the choice of voting your protest against the minimum program, thus helping to defeat the bill, with the end result of no public housing at all. Or you can vote for the bill and face accusation throughout your district that you have sold out to special interests.

There are times when you are accused of the kind of flexibility that ends up with your having no backbone at all, and there are other times when you are accused of being so rigid that you could not bend without cracking.

Does a Congressman trade? Does a Congressman compromise? If so, how much? Does he vote with the public-opinion polls? Or does he endeavor to persuade his constituents to join with him in his viewpoint?

It is safe to say that majority wins. But is it always the truth to say that the majority is always right?

I have found myself in the position of being the only Member on the floor to cast a dissenting vote. It is a lonely position, carrying with it the penalty of being conspicuous and inviting abusive letters from people all over the country. I knew when I voted that, at best, I could expect two people to vote with me. This was a dilemma which had to be resolved in the fraction of a minute.

I have to point again to a curious position in which a Congressman finds himself when, upon examination of the facts, he changes his point of view. I recall at the time of the vote on the aid to Greece and Turkey bill—which, as you know, was a forerunner to the Marshall plan—I had conducted my own poll in the district and the replies from my constituents numbered 2 to 1 against such aid. I followed the mandate of my constituents.

Following the vote, I probed more deeply into the subject and I became firmly convinced that I had been wrong. I have been a supporter of foreign aid programs since that time, and I have had to face the charges of inconsistency in each election campaign. I can only answer the charge when it is placed before me. But the process of growth and maturing leads to fuller understanding and different insights which require the freedom of mind to change your position if you so wish.

No one can solve these dilemmas for the individual, nor can there be any single solution to fit all cases. Each dilemma carries with it factors which are peculiar to the situation and a conclusion to one is not necessarily transferred to a conclusion to another. It is a part of the trust of government, and it is well for you that you understand it, for it is all part of living, and, I suppose, fundamentally no different from the experiences of all men and women in the paths they have chosen to travel.

Red Publicity Stunt

EXTENSION OF REMARKS
OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1956

Mr. RODINO. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial which appeared in the Newark Star Ledger, January 28, 1956, entitled "Red Publicity Stunt":

RED PUBLICITY STUNT

The comedy team of Khrushchev and Bulganin, traveling political acrobats, have come up with their latest international publicity stunt—a friendly letter to President Eisenhower to promote world peace.

In it, according to authoritative reports, they have proposed a treaty of friendship, a

sort of a nonaggression pact pledging both the United States and the Soviet Union to settle all differences within the framework of the United Nations Charter and to avoid interference in each other's internal affairs.

This, we submit, is nothing less than another propaganda move by the masters of the Kremlin in their continuing campaign to bamboozle the world into thinking that Russia is the only nation that sincerely desires peace.

For any nonaggression pact with Russia would only be binding on Russia itself, not on its satellites, other nations under Communist control such as Red China, or the world Communist movement, including the fifth column in this and other countries.

On the other hand, the United States, which has no satellites, would be legally and morally committed not to attack Russia, which, after all, is the seat of world communism. Therefore, the United States would have to insist on such a pact including the entire Communist world, a proposal which would be certain to be met by the Red-created myth that Russia has no control over communism outside its own borders.

United States policy on this newest Soviet propaganda move should be clear.

President Eisenhower has repeatedly told Bulganin and company that the only way the Soviet Union can prove to the United States and the world that it seeks peace is through deeds, not words.

If Bulganin wants to truly demonstrate to the world that Russia wants peace, let him:

1. Disperse the huge Chinese Communist arms buildup opposite Formosa—a buildup that proceeded unchecked even as Bulganin's friendly letter was delivered to Ike.

2. Still the rumbling of Communist artillery over the tortured island of Matsu—a continuing barrage that reached its highest intensity the day after Bulganin's letter reached the President.

3. Halt the rattling of Communist arms now rolling through Communist Yugoslavia from Communist Czechoslovakia toward the tense and troubled Middle East.

These are deeds that Russia can do now to prove she is genuinely interested in world peace. To accomplish them, no treaties, nonaggression pacts or friendly letters are necessary.

We do not believe the United States should let this latest publicity stunt go unchallenged. We think it should be turned to our advantage, countered and shown up for the quackery it is. Russia should not be allowed to make diplomatic capital out of it.

But basically, we believe President Eisenhower's policy of "deeds, not words," should prevail.

GOP Favored for Prosperity, According to Gallup Poll

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1956

Mr. HILLINGS. Mr. Speaker, I wish to place in the RECORD, the Gallup poll of January 27, 1956, which indicates that the people of America recognize that the Republican Party is the party of prosperity.

The article follows:

GOP FAVORED FOR PROSPERITY

(By George Gallup)

PRINCETON, N. J., January 26.—Important indications that America's voters are beginning to link the symbol of prosperity more with the Republican Party than with the Democratic Party are revealed in a survey of national sentiment just completed by the American Institute of Public Opinion.

For the first time in a decade, more people say good times in the immediate years ahead are more likely under the Republicans than under the Democrats.

The institution put the following question to a cross-section of voters throughout the country:

"Looking ahead for the next few years, which political party—the Republican or Democratic—do you think will do the best job of keeping the country prosperous?"

The vote:

Which party can best keep America prosperous?

	Percent
Republican	38
Democratic	34
No difference	10
No opinion	18

Although the GOP advantage is a small one, the fact remains that in breaking through the "prosperity barrier," the Republican Party has gained a foothold in an area that has been the almost exclusive claim of the Democrats.

It is interesting to compare today's survey figures with identical studies conducted by the institute last November and also in November 1951.

November 1955

	Percent
Republican	37
Democratic	39
No difference	15
No opinion	9

November 1951

	Percent
Republican	29
Democratic	37
No difference	19
No opinion	15

Replies to the question, of course, vary sharply according to the political party preference of the individual.

The important political fact, however, is that more independent voters—the "in-betweeners" in United States politics—have come to believe that the Republican Party can best keep the country prosperous than think the Democrats can, as follows:

Independent voters

	Percent
Republican	35
Democratic	22
No difference	13
No opinion	30

Rank-and-file GOP voters are somewhat more confident that their party can do a better job than are Democrats, as the following tables show:

Republican voters

	Percent
Republican	75
Democratic	4
No difference	9
No opinion	12

Democratic voters

	Percent
Democratic	65
Republican	9
No difference	10
No opinion	15

Two other interesting patterns emerge from an analysis of the survey figures:

1. So far as occupational groups are concerned there is considerable disagreement over which party can do the best job of keeping the country prosperous.

On the one hand, professional and business people and white-collar workers lean substantially toward the Republican Party.

Skilled workers are about evenly divided, while unskilled manual workers and farmers, on the other hand, lean toward the Democratic Party. Union members by a vote of 4 to 3, have more faith in the Democrats.

2. By sections of the country, the industrial East is considerably more inclined to believe that the Republicans can do a better job than the Democrats of keeping the country prosperous, while the South is most convinced that the Democrats can.

Sentiment in the Midwest and Far West is about evenly divided.

Assistant Secretary of Interior Appointees

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1956

Mr. JOHNSON of Wisconsin. Mr. Speaker, under leave to extend my remarks, I wish to call the attention of my colleagues to an article by Harold Titus, conservation editor of Field and Stream, published in the February issue of that magazine.

As a firm believer in sound conservation policies, I am deeply concerned in seeing that the post of Assistant Secretary of the Interior in charge of public land management be held by a man who has the true interests of conservationists as his primary concern. Mr. Titus' article follows:

Secretary of the Interior Douglas McKay seems to be having an unenviable time getting an Assistant Secretary for Public Land Management who will be regarded as something better than a calamity by most of the country's conservationists. The latest appointee—ex-Representative Wesley A. D'Ewart—will be up for Senate confirmation about the time these words reach print. If senatorial declarations made at the time of his nomination in October hold good, there will be lively goings-on in the upper Chamber of the Capitol.

The individual holding this post is charged with final responsibility for the administration of the 180 million acres of public grazing lands, of national parks, refuges, and Indian lands. The first to hold it under the McKay regime was Ralph A. Tudor of California. This man distinguished himself by departing from long-established precedent and demoting a career man as Director of the Fish and Wildlife Service, replacing him with the favorite son of a west coast pressure group. He then identified himself to millions by announcing this under his own byline in a periodical of vast circulation. And without a trace of shame or regret.

The next occupant of this office was Mr. Orme Lewis, of Arizona. He immortalized himself in the minds of the continent's wildlife administrators at their annual meeting in Seattle in September 1954. His mission there was to sell Mr. McKay's brand of Fish and Wildlife Service to the State officials, and in the course of his prepared speech he said, "One of our major objectives * * * is to restore the crusading spirit and the evangelism which once characterized the conservation movement, but which, in recent years, has tended to become lost in bureaucratic practices." He actually said this to an assemblage that for months had watched with alarm as the fire and dash which had once characterized the Service staff drained away because of lack of inspiring leadership. The Commissioners were flabbergasted and thereafter awaited impatiently Mr. Lewis' retirement, which came in October.

And now Mr. D'Ewart, a man with a strangely mixed record as far as his attitude toward resources is concerned. As a Congressman he occasionally rendered excellent service to national parks. After his retirement he gave support to a measure that finally cleared up the mess resulting from filing unwarranted mining claims on national forests. But while still in office he introduced a bill that would have been no improvement whatever over the old statute which authorized those fraudulent practices. He was floor manager for the noisome Ellsworth timberland exchange bill in the 83d Congress. The bill was designed to give some large timber-interests title to choice parcels of our national forests, but citizens like you Field & Stream readers helped beat it. But Mr. D'Ewart is most widely known for his introduction of the stockman's land-grab measure in 1953 which would have given a minority of cattle and sheep men special privileges on national forests. That bill went down to stunning defeat because civic leaders in every State in the Union declared their opposition.

The reaction to his recent appointment was significant. Newspapers from coast to coast, regardless of party preferences, stormed at and ridiculed the choice and scored Secretary McKay for it. Among other things, this reaffirmed the growing realization that resource management is not a partisan issue. The country wants a good job done, and party affiliations are no guaranty of immunity from castigation when a responsible individual fails to measure up to his responsibilities.

Who's Fooling Whom?

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1956

Mr. MULTER. Mr. Speaker, who among us cannot recall an incident of our boyhood involving if not ourselves, a playmate, coming home from a brawl and getting a thrashing—no, not one, but two whippings. The first one because the other fellow gave us the black eye and the second because we followed the parental advice of standing up and fighting back.

It is even so with nations.

We lose respect for the little country that does not fight back, and we condemn it when it does.

The real big brother steps in and stops the fighting.

I commend the following article, which appeared in the January 1956 issue of the American Zionist, to the attention of our colleagues:

WHO'S FOOLING WHOM?—HISTORY OF RETALIATION BY BIG POWERS

(By Eliezer Whartman)

One of the most amazing spectacles this country has ever witnessed took place a few weeks ago when the American Ambassador to the U. N. arose before that august body to declare that the United States was shocked by Israel's retaliatory raid against Syria on December 11. Students of American history can only assume that Ambassador Lodge either ignored what has been American policy when her borders have been infringed upon, or that he was engaging in double talk.

Less surprising was the fact that he was joined in this denunciation by Britain, France, and Russia. An observer could draw cold comfort from the fact that here at least was one issue they could all agree upon: U. N. censure of Israel.

Almost at the very moment Britain was delivering herself of a diatribe against "Jewish aggression," one of her expeditionary forces was busy liberating the Bureimi Oasis along the far-off Persian Gulf. The fact that just a few weeks before British airplanes had strafed a number of Aden villages as retaliation for the sniping at British convoys apparently didn't deter her U. N. representative from taking a grave view of the Israel raid.

France, of course, at the same time was killing off literally thousands of Berber tribesmen in the Atlas Mountains as a retaliatory measure for the shooting of French citizens in Morocco.

Russia, which pressed the condemnation resolution most strongly, was busy showering Egypt wtih millions of dollars worth of tanks, guns, planes, and submarines while writing in Pravda that Nasser's government was a peace-loving nation.

Of course we could hardly have expected anything from Russia, but we could have expected a more understanding attitude on the part of the United States. A glance at our own history provides the answer to the question: what would we have done under similar circumstances?

Our relations with out southern neighbors is a case in point.

UNITED STATES GOOD NEIGHBOR POLICY

In 1845 President James Polk, desirous of expanding the country's frontiers southward and westward, demanded that Mexico sell the United States the territories of New Mexico and California. When Mexico refused Polk dispatched General Zachary Taylor with an expeditionary force into Mexico to take possession of an area up to the Rio Grande River. This Polk did, and built a fort on the northern bank. The following year a Mexican patrol on the north side of the Rio Grande killed a few American soldiers, whereupon Polk announced to Congress that "after reiterated menaces Mexico had passed the boundary of the United States, invaded our territory and shed American blood on American soil." Congress replied by appropriating $10 million and authorized the raising of an army of 50,000 men for the prosecution of a war with Mexico.

Thereafter the expression became well known: "The Constitution follows the flag." During the next 70 years American expeditionary forces were busy protecting American lives and interests in Hawaii, Samoa, Nicaragua, Chile, Santo Domingo, the Dominican Republic, Venezuela, the Philippines and even far-away China. The loss of life caused to these countries was considerable.

It is significant—in view of the circumstances surrounding the Israeli retaliation for Syrian attacks on Jewish vessels—that the Spanish-American war started as a direct result of the sinking of the battleship *Maine*, a mystery which even to this day remains unsolved.

America's attitude to what she considered an assault on her rights was succinctly stated by President Theodore (Talk-Softly-But-Carry-a-Big-Stick) Roosevelt, who replied thus to criticism of his seizing the Panama Canal Zone from Colombia:

"I am interested in the Panama Canal because I started it. If I had followed traditional, conservative methods, I should have submitted a dignified state paper of probably at least 10 hundred pages to the Congress and the debate would have been going on yet. But I took the Canal Zone and let Congress debate, and while the debate goes on, the Canal does also."

When Colombia continued to protest, Roosevelt wrote to Mark Hanna: "It might be well to warn those jack-rabbits that great though our patience has been, it can be exhausted. The Colombians are entitled to precisely the amount of sympathy we extend to other inefficient bandits."

A few years later Gen. Victoriano Huerta seized power in Mexico. Fearing that he might do violence to Americans living near the border, President Wilson instructed the United States Navy to stop shipments of arms coming into Mexico and to seize the port of Vera Cruz. On April 22, 1914, Admiral Frank Fletcher seized the port in fighting which cost 200 Mexican and 19 American dead. The United States held the port for six months before returning it to a regime which it approved.

Again in 1916 American forces crossed into Mexico to safeguard American border settlers. A band of brigands under Gen. Francisco Pancho Villa that year entered American territory and without provocation killed 17 American citizens in the town of Columbus, N. Mex. Wilson, with the enthusiastic support of Congress, at once dispatched a force under Gen. John J. Pershing to seize Villa. Pershing marched into Mexico and scoured the country from Merch 1916 to February 1917, catching up with and killing off the infiltrators.

The above are simply a few instances which indicate how America has acted to safeguard her interests and her borders. In every case American retaliation was immediate and sharp and had the desired effect. If we want to be completely candid we must admit that in many instances the threat to our security was slight and the United States casualties which precipitated the retaliation were few.

PATIENCE UNREWARDED

Compare this with the carnage that has been taking place along Israel's borders. From the signing of the armistice agreements in the spring of 1949 until October 1955 Israel suffered the following at the hands of her neighbors:

Killed and wounded	1,139
Armed clashes	2,231
Cases of sabotage	272
Cases of armed robbery	237
Cases of theft	5,467

She has registered over 400 complaints with the U. N. Mixed Armistice Commission about violations of her borders by the Syrians. The surprising thing is not that she retaliated, but that she took so long in doing so.

That Britain and Russia are prepared to sacrifice Israel to secure a foothold in the Middle East is apparent to even the most naive. What hurts is when our own country becomes a party to the crime. The next time our Ambassador excoriates Israel for doing something America has done over and over, someone should ask him whether he is prepared to denounce America's actions. In short, who's fooling whom?

Red Sun Shines Again

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. RODINO. Mr. Speaker, under leave to extend my remarks, I wish to include an editorial which appeared in the January 27, 1956, issue of the Newark Evening News entitled "Red Sun Shines Again":

RED SUN SHINES AGAIN

The Kremlin, which suits its moods to its purposes, is turning its friendly face to the United States again. The warmth of

its smile is reminiscent of the "spirit of Geneva."

Mr. Bulganin sends a friendly note to President Eisenhower. Coincidentally, Mr. Khrushchev confides to his old crony, Marshal McDuffie how highly he regards the American executive—a man of peace if there ever was one.

It was only a few weeks ago that the two Russian leaders were publishing throughout southeast Asia their suspicions of American imperialism. It was only a few days ago that Mr. Khrushchev was saying harsh things about Mr. Eisenhower because he sent a message of hope to Moscow's European satellites. Suddenly things have changed. Why?

Washington takes a cautious attitude. The White House withholds the Bulganin note from publication until it can study the possible motives. It conveys some ideas of Mr. Bulganin on peace. Moscow's ideas on peace often carry strange undertones.

Prime Minister Eden, of Britain, on his way to Washington to confer, suspects the timing of the note has some bearing on these talks. To Mr. McDuffie, Mr. Khrushchev avows that he has no thought of trying to split the Anglo-American alliance. He has a pat for Mr. Eden as a man of peace, also.

The sunshine has been turned on, Soviet style. How long will it last? What clouds are lurking just over the horizon? For that is Soviet style, too.

Resolution of West End Post, No. 147, Atlanta, Ga.

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
January 5, 1956

Mr. DAVIS of Georgia. Mr. Speaker, the Veterans' Administration Hospital in Atlanta, Ga., is only a 300-bed capacity. When Lawson General Hospital in Atlanta was abandoned, we were promised that in lieu of Lawson General Hospital with its 524-bed capacity, the Veterans' Administration hospital—Peachtree Veterans' Administration Hospital—would be enlarged to a capacity of 500 beds. This promise has not been kept. The 300-bed capacity is woefully inadequate to fill the needs for hospitalization of our veterans in the Atlanta area.

It is shameful that in this populous area, one of the fastest growing sections of the United States, no provision has been made within the last 15 years to take care of the ever increasing needs of our veterans in this area. Instead of increasing the facilities, they have been decreased by the closing of Lawson General Hospital. The situation is so deplorable now at Peachtree Veterans' Administration Hospital that there is not an adequate waiting room for applicants for admission, or for relatives of patients who come to visit them at the hospital; there is no space for a consultation room for physicians, and only makeshift quarters for religious services and chaplain's use.

The inadequacy of the facilities at Peachtree Veterans' Administration Hospital is well known to veterans and nonveterans alike, and all recognize the great and pressing need for improvement of the situation.

I attach hereto a resolution adopted by the West End Post, No. 147, of the American Legion, in Atlanta, on October 6, 1955, and approved and endorsed by the fifth district executive committee of the American Legion, on December 18, 1955, which resolution was forwarded to me on January 24, 1956. I commend this resolution to the earnest and sincere consideration of the Veterans' Affairs Committee and the membership of this body:

"RESOLUTION BY WEST END POST, NO. 147, ATLANTA, GA., AND FIFTH DISTRICT, DEPARTMENT OF GEORGIA, THE AMERICAN LEGION

"Whereas it has come to the attention of this post and other posts in this district, that the facilities provided veterans at the veteran's hospital, 5998 Peachtree Road NE, Atlanta, Ga., is grossly inadequate to serve the designated area covered by this hospital. That it is next to impossible to obtain a bed in said hospital for veterans, who, in most cases are, and should be classed as emergency cases; and

"Whereas when a veteran makes application for admittance it is necessary that said application be made months in advance or the veteran must be put on a waiting list which means that he may get a bed, if he is lucky, in 6 month's time: Therefore be it

"*Resolved*, That sufficient appropriation be made to add more beds to the number now in said hospiptal; and be it further

"*Resolved*, That West End Post, No. 147, at its regular meeting held October 6, 1955, does hereby go on record as recommending the foregoing action and it is hereby ordered, that this resolution be submitted to the fifth district executive committee, Department of Georgia, for its approval and forwarding to Hon. JAMES C. DAVIS, Fifth District Congressman, of Georgia.

"This 6th day of October, 1955.

"WEST END POST, NO. 147,
"JAMES HOGAN, *Commander*.
"HENRY D. HANCOCK, Sr.,
"Adjutant."

The above and foregoing resolution read at the district executive committee meeting in regular session at East Point, Ga., December 19, 1955, and the same is hereby approved and endorsed.

Let the same be certified by the district adjutant and forwarded direct to Hon. JAMES C. DAVIS, Member of Congress.

By order of the district commander.

This the 19th day of December, 1955.

LEWIS J. SAUNDERS,
Adjutant.

Good News About TVA

EXTENSION OF REMARKS
OF
HON. HOWARD H. BAKER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1956

Mr. BAKER. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial entitled "Good News About TVA," from the Knoxville News-Sentinel, Knoxville, Tenn., on the subject of TVA:

GOOD NEWS ABOUT TVA

The story of the progress thus far made on the TVA self-financing bill by the Senate Public Works Committee in Washington is good news for our valley and for TVA. (See the article from our Washington bureau on page 1).

It appears that the basis is being laid for bipartisan support for the self-financing proposal. This is greatly to be desired.

The news from Washington about the developments thus far seem important to us because of two aspects:

1. The Senate committee apparently is going to impose reasonable controls, by responsible and conventional officers of the Government, both executive and legislative, on TVA's issuance of bonds. This makes sense. After all, it's all one Federal Government. No agency, no matter how good or vital to our valley, should be wholy autonomous.

2. The Senate committee is giving serious attention to putting a fence around TVA—limiting the territory of its operations. We advocated just this when self-financing was first proposed. We do not fear that TVA will make any vast increases in the scope of its operations—we know it will not try to go, say, into Birmingham, or Atlanta, or Chicago. But there is some fear that TVA, using its own money derived from its own bonds, would expand excessively. We favor restricting the TVA operations to their present boundaries, with some provision for minor extensions, where absolutely necessary. Frankly, we want to see TVA power kept here for our own use and our own growth.

The problem of TVA's repayments to the Government of money already invested in its power system by appropriations from the Treasury remains to be settled. We hope the committee, in reaching its conclusions, will not saddle TVA with unnecessary and unworkable controls. TVA has proved that it is ready, willing, and able to amortize the appropriations spent on its power system. It should retain control over its depreciation reserve.

It should, in short, be permitted to set up its finances so that its bonds will be one of the most attractive investments in the country.

We know they will be sound because they will be investments in our growing, thriving, prosperous Tennessee Valley.

To the President

EXTENSION OF REMARKS
OF
HON. FREDERIC R. COUDERT, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1956

Mr. COUDERT. Mr. Speaker, under leave to extend my remarks, I insert an editorial by one of the Nation's great newspapers calling upon the President to continue his service to the people of the United States. This admirable editorial in the New York Herald Tribune of January 30, 1956, speaks for itself:

TO THE PRESIDENT

President Eisenhower has announced that he is marshaling all the factors which bear upon the imminent and fatefully historic decision he must soon make.

We know it will be a decision free from personal ambition. We know it will be a decision free from personal reluctance to continue the burdens of the Presidency if he feels he can discharge the responsibilities of the Presidency. We know his continued leadership during another 4 years can well make a decisive contribution to the unity, strength and peace of America and the free world.

No one should presume to substitute his judgment for Mr. Eisenhower's as to whether he can run for a second term.

We believe, however, that it will be helpful to the President and welcome to the President for him to measure how others marshal the factors which are pertinent to his decision.

ON THE PRESIDENT'S HEALTH

We are glad that Mr. Eisenhower is not allowing any of his more political-minded associates to persuade him to dismiss lightly the factor of his health, his physical ability to do justice to his awesome job if he is elected again. We are glad that he is weighing this factor frankly, realistically, and openly.

We would not want the President to run, we would candidly counsel against his running if he felt he could not discharge the indispensable and pressing functions of the office. We know that the Presidency cannot be cut down to half-size to fit half a man, and we know that Mr. Eisenhower would never be party to such a delusion. The President knows that however much may be done to conserve the energies of the President by reducing the lesser administrative duties of the Presidency, you only free the President to devote more of his time to the largest responsibilities of his office.

No President, no private individual, can know for a certainty that he will survive the rigors of his labors for any given period. We are convinced that Mr. Eisenhower will and should accept renomination only if he is satisfied within his own good conscience, that he is equal to the task after measuring his recovery at full pace.

ON THE "INDISPENSABLE MAN"

Mr. Eisenhower has frequently remarked that he does not look upon himself as an indispensable man—or an indispensable President. He is right. He isn't. We wish that others in the past had been as clear and as humble. But we hope that Mr. Eisenhower will not become entangled by a false concept of the dispensable man. The traditions of our democratic system have not developed out of dogma and theory. They have developed out of the tests of experience and practice and wisdom. It is one of the best of our traditions that the two parties want their elected President to give the Nation the continuity of 8 consecutive years of service if he can possibly do so. To give the American people the opportunity to have a two-term Chief Executive is normal and desirable and constitutional. It is no expression of the indispensable-man theory to make it possible.

ON THE ISSUE OF PEACE OR WAR

Every loyal American wants to do his part to serve the cause of peace without appeasement. Today no one is doing so much to serve the cause of peace without appeasement as President Eisenhower. By his transcendent good faith and integrity he has become the embodiment for the whole free world of America's peaceful, world-minded leadership. There is no position anywhere from which so much can be done for peace as the Presidency of the United States. Mr. Eisenhower's voice is raised tenfold when it speaks from under the Presidential seal of the White House. It would inevitably be muted should he step from the White House and close the door.

Mr. Eisenhower has the capacity and the talent and the trust to make a unique contribution to the cause of peace which America needs and which the world needs at this crisis period of the hydrogen age. He is the right man in the right place at the right time to deal with the one issue which towers above all others—the cause of peace or war.

ON THE ISSUE OF NATIONAL UNITY

By his moderate, forward, unpartisan leadership, President Eisenhower has done much to dissolve the bitterness, erase the harsh, divisive controversies which tended to stalemate Government for so long. He is the symbol and chosen instrument of national unity. His election, we believe, sprang from the determination of the American people to break through the divisions of the past and rally the good will and energies of the whole Nation behind whatever needs to be done to meet the present.

Moderateness is the mood and necessity of these times. It is a constructive, accomplishing mood. We believe that the need to implement this mood has not changed and we believe that it can best be implemented by the man who proved he could best evoke it and bring it to fruition.

ON THE EISENHOWER PROGRAM

It is our conviction that President Eisenhower has enunciated a philosophy and a program of action designed to buttress the best of a free society, to maintain fiscal integrity and to preserve an economic strength essential to safeguard the free world. It creates the climate and the conditions which permit our private-enterprise economy to produce the most for labor and ownership and it fortifies this society with humanitarian measures to help meet the human needs of the people. It puts a floor under security and lifts the ceiling on initiative.

It is a philosophy of the middle road wherein the Government can effectively act. It seeks to strengthen the Federal system where local and State action is insufficient and to return to local and State government functions which they can better perform. It does not seek power for the sake of power, nor to maintain Big Government when it is not necessary.

We believe that in 1952 this was the fundamental change in government for which the American people voted after 20 years of one-party rule and of war and regulation. Another 4 years of President Eisenhower's leadership is essential to deepen, widen and secure the great liberal measures on which he is working.

The President's task is well begun but it is far from completed, far from securely moored.

The President's galvanizing, unifying leadership is needed to carry it forward, for if it is not decisively carried forward in the next 4 years, there is the gravest risk that it will be decisively carried backward.

ON THE TWO-PARTY SYSTEM

Dwight D. Eisenhower has no overriding obligation to the Republican Party but the Republican Party has a great obligation to Mr. Eisenhower. It would be a derogation of his sense of duty to suggest that he run primarily to save the Republican Party. It would not, we believe, be a derogation of his sense of duty to suggest that one of the compelling reasons why he should accept renomination is to secure the two-party system—by making sure that the Nation has a party which is liberal and effective because it is freed from the extremes of either the right or the left.

In a remark free of any comforting vagueness Vice President Nixon has stated the Republican problem in these words: "The Republican Party is not strong enough to elect a President. We have to have a presidential candidate strong enough to get the Republican Party elected."

The blunt and objective truth is that the Republican Party faces the very real danger of defeat this fall unless President Eisenhower remains at its head, its prestige-laden leader, its two-term presidential nominee.

IN CONCLUSION

Mr. Eisenhower has said that he wished the American people who voted so decisively to make him President, could decide for him whether he should offer himself as President for another 4 years.

That decision, Mr. President, is already in. If it is the wish of the President to be guided where the American people as a whole hope his course lies, then Mr. Eisenhower's decision is marked out. Every test of public opinion shows that the Nation, with both eyes open to the problem of his health, wants Mr. Eisenhower to continue in the White House.

The Gallup poll of December 18, before the President was as well as he is today, showed the country voting 3 to 2, higher than in 1952, in favor of the President. The Gallup poll of December 25, found 3 out of 4 Americans giving Mr. Eisenhower a decisive vote of confidence, 75 percent approving his handling of the Presidency, a higher percentage than before his illness.

The United States and the free world today stand poised between an era of unprecedented freedom and the dark portent of an age of slavery.

Because the hour is grave and the promise of a peaceful atomic era is so nearly within our grasp, we, Mr. President, feel it our solemn responsibility to avow our hope and prayer that nothing short of the most commanding reasons will keep you from accepting the call of this Nation and freemen everywhere.

The Vatican and Moscow

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1956

Mr. RODINO. Mr. Speaker, under leave to extend my remarks, I wish to include an editorial which appeared in the January 29, 1956, issue of the Il Progresso Italo-Americano which points up another phase of communistic propaganda:

THE VATICAN AND MOSCOW

We recently had the occasion to discuss the categoric instructions issued by Palmiro Togliatti to entice into the coexistence movement the greatest possible number of the fair sex, using his "dialogue with Catholic women" as bait. Evidently, the head of the Italian communism does not only set his sights on gaining a greater number of female votes in the next administrative elections, but they are aimed at facilitating and hastening a conciliation between the church and communism.

We must not forget, in this connection, that the campaign of the outstretched hand between the Vatican and Moscow has found authoritative followers in Italy and France; followers who are animated by the burning desire of preventing the interruption, for no one knows how long, of missionary activities in the East, and they are disposed to experiment with the attempt to "christianize communism."

Such agitation could not escape the directors of Soviet propaganda who have begun to encourage the slight differences in the Catholic world with clever maneuvers like inviting the Jesuit astronomers of the Castel Gandolfo observatory to visit Moscow on the occasion of the congress which will be held there in 1958.

THE POPE'S WARNING

There was a moment in which the Communist propaganda maneuver was about to succeed but for the immediate intervention of the Vatican organ, Osservatore Romano, which warned the Catholics that the good nature of the new Moscow leaders was only simulated.

The credit for giving impetus to the actual offensive against the attempt to "baptize communism" goes directly to the holy father who, in his Christmas radio message, specifically declared:

"We reject communism as a social system by virtue of the Christian doctrine and, for the same reason, we also reject the opinion that Christians today must view communism as a phenomenon or a milestone in the course of history, almost a necessary evolutionary part of it and, therefore, accept it as decreed by divine providence."

The mistaken belief that places the salvation of the world in the ever-increasing process of social production, is a superstition of our rationalistic industrial era, which is so much more dangerous, because it causes us to consider economic crises impossible; crises which are always accompanied by the risk of a return of dictatorship.

After all this superstition is not even apt to erect a solid bulwark against communism because, since it is shared by Communists and non-Communists, a tacit understanding develops between them which causes the deceived ones of the West to dream of a possible true coexistence.

Naturally, the Christians must not be content with anticommunism based on the defense of a liberty without substance. They must try to found a society in which the security of man must rest on the moral order which reflects true human nature.

The Christians know better than others that the Son of God, incarnate, is the only sound support of humanity even in historic and social life and He, assuming human form, has confirmed its dignity as the foundation and rule of the moral order.

THE CHURCH WELCOMES ALL

Communism has deprived the peoples it dominates of their freedom. It has degraded human dignity and has perpetrated the most abominable persecutions against ministers of worship to extirpate the seed of faith from the hearts of the believers.

The church is the mother of all and is ready to welcome, in its maternal arms, all the members of the great human family who turn to her, enlightened by the light of repentance. It cannot, however, subordinate or submit its high spiritual power to temporal autocracies. Christians must unite among themselves to conduct those activities willed by God for the benefit of the great human family. They must always remain open to every sound enterprise and to every genuine progress toward moral and material elevation. They must not isolate themselves as though separated from the rest of the world. Inspired by a desire to promote the common welfare, they must not disdain the others, because, if those who have gone astray are amenable to the force of reason they must, sooner or later, accept the doctrine of Christianity or at least that part which is founded on the inviolability of natural rights which are the very foundation of the inalienability of human rights.

Partnership or Giveaway?

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1956

Mr. HIESTAND. Mr. Speaker, under leave to extend my regarks in the RECORD, I am inserting the following article, by the Honorable SAM COON, of Oregon, entitled "Partnership or Giveaway?" which appeared in the Washington Post and Times-Herald on January 28, 1956:

PARTNERSHIP OR GIVEAWAY?

I feel compelled to make some comments regarding a section of an article which appeared in your issue of January 15, under the heading, "A Partnership or a Giveaway."

The section to which I refer concerns legislation which would permit non-Federal financing of a major portion of the John Day Dam on the Columbia River.

I am the author of that legislation. The person who is credited with writing the article did not call on me nor did he call on any member of my staff. The reference to the John Day legislation is so grossly inaccurate and misleading, it would appear that your reporter concerned himself only with the viewpoint of Senator MORSE and others in the Pacific Northwest who for selfish political reasons are attempting to choke off the development of that region.

The John Day bill, H. R. 5789, authorizes Federal development of the John Day project on the Columbia River with participation in financing by non-Federal public and private electric utilities.

The single purpose of the John Day bill is to expedite construction of this critically needed navigation, flood control and power project. It was authorized by Congress in 1950. To this date, not 1 cent has been appropriated for its construction.

In order to get the money required to build this project, my bill provides that the power from John Day can be sold in advance to any qualified utility.

Your story says that participation in this project is limited to three private utilities in the Pacific Northwest. This is a completely false statement. The bill very clearly states that participation is open to any organization, public or private, engaged in or authorized to engage in the production, transmission, or distribution of electric power. To this date, the city of Seattle, the power commission of the State of Washington, several Oregon municipal utilities, and three private companies have indicated an interest or a desire to participate in the project.

Your allegation that the participants will receive tax free revenue and low cost Government loans is ridiculous.

Equally incorrect is your statement that the participants will be under no obligation to advance any funds. The advancement of funds is the entire purpose of the bill.

Briefly, the bill provides that the local participants will pay to the Government, in advance, the entire cost of the project allocated to power. Further, the local agencies will pay all maintenance and operation costs allocated to power, transmission costs, replacement costs, and any charges for upstream or downstream benefits. In return for these payments, the participants will receive 50-year contracts for power in proportion to the amount of money advanced. The project is at all times owned and operated by the United States.

In other Federal projects, the United States Treasury advances the funds needed to build and operate the dam. The portion of this amount allocated to power is returned to the Treasury over a 50-year period—through sales of power to utilities and industries in the region.

My bill simply provides that these sales be made in advance. Thus the Federal appropriation required to construct this project is reduced from $310 million to less than $40 million.

The basic purpose of the John Day bill is to implement the program of hydroelectric development in the Pacific Northwest. All responsible power agencies in the region, including the Federal agencies, agree that 600,000 kilowatts of new capacity must be built each year for the next 10 years if the area is to avert a crippling power shortage. This will require $3 billion.

Congress has appropriated less than half that amount for Pacific Northwest power projects during the past 10 years. It is apparent to all who give our problems honest consideration that additional sources of funds must be used if the power program is to proceed. The people of the region are anxious to do their share.

SAM COON,
Member of Congress From Oregon.

The Arizonian, Modern Successor to the Weekly Arizonian, the Territory's First Newspaper, Established in 1859

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted, I would like to include in the RECORD an editorial that appeared in the Arizonian, which is the modern successor to the Weekly Arizonian, the Territory's first newspaper, established 1859. This editorial was written on the occasion of the world symposium on applied solar energy which was held in Phoenix, Ariz., on the first days of November 1955. I respectfully recommended this article to all who are interested in the future of solar energy:

A LOOK BACK IN THE YEAR 2000

Now in those days (little more than four decades ago, but they might have been centuries) man, a fumbling and contradictory being, had discovered coal and oil in the bowels of the earth, the invisible force of electricity, and even gold in the barren wastes where a more logical creature would never have looked for anything. But man had not discovered the sun, which from the beginning of time had hung high in the heavens for all to see.

In that primitive era, men depended upon a smelly, inflammable liquid called gasoline to power their cars, their homes and, ergo, their lives were entangled in a snarl of wires conducting electrical current to their lights, their wireless radio sets, their thousand and one devices to serve the home.

A fuel mined in underground gloom and danger in one State would be shipped thousands of miles to heat homes and besmirch cities in a far-off State. Waterpower to generate electricity was a complicated industry in itself, keeping hundreds of thousands too busy to look at the sun, much less enjoy its ready benefits—except on vacation, when they frantically offered their bodies to its rays to be transformed into a burnt sacrifice to their pitiful ignorance of solor potentials. There it was, God's sun, intended for man's great benefit, shining alike on the factories of New England, the farms and forests of the South, Kansas wheat and Iowa corn, and Colorado rangelands, and California forests and cities, and Pacific-washed beaches—and all of the rest of man's world, too—and no man knew it for what it was.

A few scientists, to be sure, ventured singly to probe the mysteries of solar significance. While other men fooled childishly with pitiful man-contrived sources of power, these visionaries sought the revelation of solar power.

Obviously, the breathtaking import of what it could do for mankind was too fantastic for the normally conditioned human brain

to contemplate, but maybe, possibly, just suppose.

In this present year of our Lord 2000, the manner of life of less than 50 years ago seems quite unbelievable. The sun's servitude to all mankind has enabled man to take more tremendous strides ahead than in all the earlier years since the birth of Christ.

Today every schoolboy knows that the era of solar employment came into being on a date more significant for mankind than 1066 or 1776—the first days of November 1955, when the world's greatest scientists met for the first world symposium on applied solar energy in Phoenix, Ariz.

There and then began the world we know today.

Restrictions Against Pan American Airways

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1956

Mr. SCHERER. Mr. Speaker, several months ago I brought to the attention of this body the inequities of a situation wherein Pan American Airways was denied access to the Orient via the great circle route while its strongest Pacific competitor enjoyed exclusive privileges over a route 1,200 miles shorter than that flown by Pan American.

At that time, I quoted from, and had inserted in the RECORD, a graphic illustration of this situation written by William H. Hessler in the Cincinnati Enquirer.

Apparently that effort, and others by several of my colleagues, has borne fruit. Recently the President directed the Civil Aeronautics Board to reexamine its decision denying Pan American the right to fly to the Orient over the same route as that flown by Northwest Airlines.

And Mr. Hessler is still as graphic as ever on the subject. In this column in the Enquirer on January 22 he has again made such a convincing argument in favor of reconsidering the restrictions against Pan American that I invite its reading by all my colleagues.

The article follows:

AIRCRAFT DESIGN OUTRUNS REGULATORY CONCEPTS

(By William H. Hessler)

In Arabia, a camel still has the right-of-way as against a railway train. And when they collide, as occasionally happens, it is the railroad, not the camel's owner, who pays any damages. Furthermore, every camel killed in these regrettable encounters on the king's iron road has turned out invariably to be the finest pack camel to be found between Mecca and the Persian Gulf.

All this is easy to understand. The camels were theire first. And the khadis, the judges who enforce the Moslem law, find nothing in their basic lawbook, the Koran, giving railway trains any standing whatever before the immutable laws of Islam.

This is not a very serious matter for the Saudi Arabian Government railroad, because camels usually get out of the way, from a deep instinct of self-preservation. Besides, the common camel has never read the Koran and does not know his rights. In addition, the king owns the railroad and doesn't care whether it makes money or not.

The underlying principle, however, is important. This is an example of how technology tends to outrun the development of law. We have the problem in many of our cities. To insure safe structures, we write into the building code many detailed requirements—as to electric insulation, thickness of walls, types of materials allowable, and so on. Then scientists and engineers go ahead and develop new, safer, stronger materials, permitting more economical construction. But it may be forbidden by building codes written a decade or two earlier.

Fortunately, our law changes more readily than that of Saudi Arabia.

Just now, there is one interesting case involving overseas air transport. Four flights across the Pacific and 12 across the Atlantic do not make me an expert in air transportation. But they have created an interest in its problems.

Years ago the American Government decided against handling all overseas routes to any "chosen instrument," any single airline, as many foreign governments have done. The principle adopted here is to foster competition on those routes—not unbridled competition, but enough to provide the incentive to give good service economically.

Ccross the Atlantic, there is plenty of competition, both between two major American flag lines and among many foreign flag lines—and from steamship service as well. But in the Pacific, a tougher problem, the competition is not realistic or effective.

Under existing Civil Aeronautics Board regulations, Northwest Airlines flies the Great Circle route—the shortest possible—between Seattle and Tokyo, and other such points. But Pan American Airways remains bound by much earlier reguations to stop at Honolulu or Wake Island. The Great Circle route is 4,770 miles. Via Honolulu is is 6,970 miles. That is a 2,200-mile handicap, plus the loss of time entailed in a stop. Even between San Francisco and Japanese cities, the Honolulu route is 1,000 miles longer.

That requirement of a midocean stop made sense some years ago, when aircraft did not have the range to cross the Pacific without several stops. But as we have noticed above, the engineers do not stop work. Technological advance countries. The DC7C, now coming into service with many improvements, has the range to make the Seattle-Tokyo run nonstop, with safety.

There is another side to it, of direct interest to the taxpayer. Over the years, we have been reducing the subsidies paid to our overseas airlines, as well as most domestic airlines. All major airlines within the United States are now off subsidy, pay taxes, and stand on their own feet. Last year Trans-World Airlines, with many profitable routes in the United States and some advantageous Atlantic routes, went entirely off subsidy.

Pan American has had a tougher problem, having no domestic routes at all. And for years it was subsidized in a substantial way, because it was considered in the interest of the United States to have many long overseas routes flown by at least one American-flag airline. Despite this handicap, however, Pan American has been able to operate with smaller and smaller subsidies. Last year it dropped from a subsidy of more than $20 million annually to something like $2 million.

If Pan Am were relieved of the burden of the long route across the Pacific, it could go entirely off subsidy and save the taxpayers that much more. For as things stand now, these weekly round trips by the circuitous route (not the great circle route) cost the Government $220,000 a year.

All this has to do with a problem that has emerged in advance of the long-range jet passenger plane. With the DC7C, it has become uneconomic to require an arbitrary midocean stop, even on flights over the broadest of the oceans. And when the jet plane comes into its own, flying at even greater altitudes and speeds, nonessential stops imposed by antiquated regulation will be even more uneconomic and an even greater brake on progress in transportation.

The Saudi Arabs, as I found for myself last month, are beginning to reexamine the whole business of the camel and the king's iron road. As the enormous advantages of rail transport over the camel caravan become better understood, the khadis are thumbing the Koran a little more earnestly. Eventually, they will find something in the law of the prophet to justify a better break for the railway against the camel.

Our problem is the same, in different degree. We don't happen to use the Koran, but we have learned to stretch the Constitution to meet the realities of a changing technogoly. Now we must make sure we do not let the accumulated red tape of past administrative regulations, those of the CAB, for instance, stand in the way of the progress made possible by technological change.

Annual Observance of the Birth of President William McKinley Sponsored by the Mahoning Valley McKinley Club, Niles, Ohio, January 23, 1956

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1956

Mr. VAN ZANDT. Mr. Speaker, it was my privilege to deliver the principal address on the occasion of the annual observance of the birth of President William McKinley sponsored by the Mahoning Valley McKinley Club at Niles, Ohio, January 28, 1956.

The address follows :

ADDRESS BY REPRESENTATIVE JAMES E. VAN ZANDT, MEMBER OF CONGRESS, 20TH DISTRICT OF PENNSYLVANIA, ON THE OCCASION OF THE ANNUAL OBSERVANCE OF THE BIRTH OF PRESIDENT WILLIAM MCKINLEY, SPONSORED BY THE MAHONING VALLEY MCKINLEY CLUB, NILES, OHIO, JANUARY 28, 1956

It is an honor to have been selected to participate in this annual program sponsored by the Mahoning Valley McKinley Club in observance of the birth of the 25th President of the United States—William McKinley.

As a student in the public schools of Altoona, Pa., I recall with much pleasure our observance of McKinley Day and more recently as a Member of Congress of the recognition given to this great American by the annual custom of wearing a red carnation in honor of his memory.

Then, too, I am reminded that annually on the birthday of William McKinley, Congress pauses in its deliberations to permit Members of the Ohio delegation to honor a man who by his service to his community, State, and Nation won the love, admiration, and respect of all Americans.

William McKinley brought honor to his home State of Ohio by his outstanding public career.

For seven terms he ably represented the 16th District of Ohio in the Congress of the United States.

The affection and esteem in which he was held by the people of Ohio is evident by the fact that he was elected twice as Governor of the great Buckeye State.

William McKinley by devotion to duty and an outstanding record of service to the people of Ohio found a wider sphere of activity

and a fitting climax to his public career when he was elected as the 25th President of the United States.

He was a great President because he had executive ability and administrative experience coupled with a thorough understanding of domestic affairs and international problems.

His successful handling of the war with Spain endeared him to the people of the Nation.

President McKinley was a man of unusual talents.

He was kindly yet firm in his insistence on justice and fair play, which with his honesty and sincerity of purpose, earned him nationwide affection and acclaim.

Furthermore, he had a fine military record, having served his country with honor and distinction in the Civil War.

His participation in the Battle of Antietam revealed his courage to such a degree that it is recorded as one of the heroic instances of the Civil War.

When death by assassination in 1901 summoned William McKinley to join Abraham Lincoln and James A. Garfield in the role of a martyred President, Americans became fully conscious of the loss of an able leader and a great President.

Since his assassination, volumes have been written in praise of this great American, who as an outstanding soldier and able statesman, revealed such a depth of love of country that his memory is forever enshrined in the hearts of the American people.

Ladies and gentlemen, it is a coincidence that at this hour we have as President of the United States, Dwight D. Eisenhower, a great American general with a brilliant military record, and who, like William McKinley, finds himself at the helm of Government during a great crisis with the monumental task of leading the free nations of the world in achieving a just and lasting peace.

It is reassuring to realize that unlike William McKinley, our present Commander in Chief has at his command a fully modernized and highly developed Military Establishment.

When President McKinley issued the call for volunteers for the Spanish-American War, the United States had an Army and Navy of 2,143 officers and 26,040 enlisted men; while Spain had one of the largest navies in the world, and an army of 500,000 with over 192,000 in Cuba alone.

In addition, with the exception of Great Britain, all of Europe was solidly behind Spain which enjoyed the prestige of being regarded as one of the world powers.

When the Spanish crisis developed, as a Nation we were recovering from a civil war that sought to divide us and destroy our unity.

The challenge hurled by Spain, however, found us a united Nation as some 483,000 American youths served in the Spanish-American War, 20,000 of them losing their lives in battle or as victims of yellow fever contracted in the disease-infested jungles.

Under William McKinley as President of the United States, victory over Spain was achieved.

That victory resulting from the courageous decision of the United States to face the issue, made certain that Cuba, Puerto Rico, and other islands of the West Indies were not conquered by hostile European nations.

What is more important is the likelihood that our defeat in the war with Spain would have placed Haiti, Guam, and the Philippines under Russian rule.

The result of our victory against Spain made possible the security and solidarity in the Western Hemisphere that we prize today as we watch with eternal vigilance Russia's avowed determination for world domination.

It is significant that a soldier President was Commander in Chief of our Armed Forces in the war with Spain for it was this Nation's initial battle on foreign soil in defense of liberty and freedom.

Since the days of William McKinley, the United States has fought two World Wars on far-flung battlefronts and in addition, the so-called police action in Korea with its heavy toll of death and injuries to American youths.

All of these global conflicts were costly in the loss of human life; in providing proper medical and hospital care for the maimed and wounded, and in the heavy drain on our natural resources in maintaining and supporting the war effort.

The prosecution of these world conflicts has had a devastating effect on our national economy forcing us to realize that the cost of modern warfare can bankrupt even the most powerful nation in the world.

This fact should prove a sobering influence to all Americans because it is commonly known that the prime objective of the Soviet Union according to the Russian timetable is to bleed America white by a series of so-called police actions and phony crusades for peace and then when our economy collapses to move in for the kill and take over this great Republic without firing a shot.

This formula for conquering the United States was first proclaimed by Marx and Lenin and subscribed to by Stalin and his successors.

For example, Dimitry Z. Manuilsky, of Russia, Presiding Officer of the U. N. Security Council in 1949 in defining Russia's policy of crushing capitalism summed it up several years ago as follows:

"War to the hilt between communism and capitalism is inevitable.

"Today, of course, we are not strong enough to attack.

"Our time will come in 20 or 30 years.

"To win we shall need the element of surprise.

"The bourgeoisie will have to be put to sleep.

"So we shall begin by launching the most spectacular peace movement on record.

"There will be electrifying overtures and unheard-of concessions.

"The capitalist countries, stupid and decadent, will rejoice to cooperate in their own destruction.

"They will leap at another chance to be friends.

"As soon as their guard is down, we shall smash them with our clenched fist."

However, this lone approach in conquering the United States is threatened by present-day developments in modern warfare.

The march of progress in the field of science has revealed the possibility of eventual war between the United States and Russia because of the development by both nations of modern weapons so death-dealing in their effectiveness that they stagger the imagination.

For example, after witnessing the destructive effects of the A-bomb we were further amazed to learn of the H-bomb and of its potential use in exterminating the human race.

Along with the development of these weapons of massive destruction has been the announcement that guided missiles have advanced to the stage of where it will be possible within a year or so to test a long-range missile able to carry the H-bomb to a target 5,000 miles distant.

It is no secret that tests will be made soon of a missile carrying an H-bomb with a 1,500-mile range while the immediate objective is to extend mileage to 5,000 miles at a speed 3 times that of a rifle bullet.

Thus we have on one hand the continuing threat of the cold war with Russia and her hope that we can be drawn into fringe warfare all over the globe while she sits on the sidelines.

The only other alternative since Russia is not interested in a just and lasting peace is the threat of direct war when she feels able and has had time to perfect an intercontinental missile and to build up a sufficient stock of A-bombs and H-bombs to warrant an all-out atomic attack.

In view of these breath-taking developments in the field of modern warfare, it is well for us on the anniversary of the birth of President McKinley to review the history of the United States since 1901 when he met death from an assassin's bullet.

William McKinley, as President, rallied this Nation in time of peril—and America responded—by meeting successfully the challenge to our liberty and freedom.

Since his time and after three successive world conflicts, we find that world peace is not within the grasp of the family of nations as long as the scourge of communism holds sway.

Ladies and gentlemen, the average American citizen has a fairly well defined knowledge of the evils of communism, but unfortunately, even with the utmost vigilance, Moscow dupes by escaping detection have infiltrated many segments of American life.

It has been proved possible that once the Communists-inspired individual is discovered he can be shadowed and finally exposed.

However, to our sorrow we know that these cunning stooges of Moscow operating in groups or alone have invaded our Government and succeeded in obtaining highly classified documents for Soviet Russia that revealed secrets concerning the development of the atomic bomb.

There is no doubt in anyone's mind that these traitors have made it possible for the Russians to make marked progress in developing the A- and the H-bomb.

In addition, they stole secret papers from the Department of State and the Department of Defense concerning our defense plans and sold them to Soviet agents thus becoming traitors to the flag they lived under while masquerading as loyal American citizens.

The irony of the situation is that these Moscow-puppets when apprehended and questioned about their Communist affiliations in a defiant manner invoke the fifth amendment to the Constitution of the United States—the very same Constitution they have sworn in Moscow fashion to nullify and destroy.

Unfortunately we have among us groups of American citizens who knowingly or unknowingly protect and aid these traitors by demanding in petitions or by newspaper advertisements that their civil rights be respected.

These so-called "liberals" have been found among newspapermen, radio commentators, educators, college professors, school teachers and lawyers, with a sprinkling in many other walks of life.

When taken to task for their interest in the pinkster element they cry that like the Commies their profession is being persecuted and their livelihood threatened, yet they have no apology for aiding those who would overthrow our form of government and with it destroy our cherished American principles of liberty and freedom.

It is revolting to realize that many so-called Americans are willing tools of Moscow and that despite their academic degrees and other claims of knowledge and intelligence, they refuse by their sinister actions to voice appreciation for the priceless heritage that they enjoy as citizens of this great Republic.

These self-styled Americans know in their hearts that a citizen of Russia is regarded as having no human dignity and that he is regarded as merely a creature of the state.

They know that under the Russian emblem—the hammer and the sickle—a Russian cannot own a foot of land, a shoeshine stand, a grocery store, or employ anyone.

There is but one employer—the state.

You work or you starve in Russia.

There is one political party, one ticket, one choice.

You hear, see, and read what the state permits—and no more.

You cannot remain away from work; labor cannot strike; nor can one travel without a permit or be friendly with a foreigner.

There is no freedom of assembly; no freedom of speech; or religion; or of the press.

In short, there is no freedom behind the Iron Curtain.

There is no such thing in Russia as a trial of justice and equity as we know it in America.

There is no jury trial.

You may not be charged with a serious crime if you steal something in Russia—but let you utter one word against the government and before sunset you are on your way to a slave labor camp.

It is reported that about 1 Russian in every 13 is in a slave labor camp.

The total population of these camps is over 15 million.

No one seized by the secret police. whether innocent or guilty, has any right to protest; and only 5 percent are ever released.

The rest die a slow death.

By contrast here in America, we enjoy the blessing of living in the greatest country on the face of the earth.

We inherit at birth the God-given heritage of liberty and freedom.

Since the birth of this Nation, American youth have fought to preserve these cherished principles.

Therefore, it is an insult to those who fought our Nation's battles, many of whom died, to tolerate in our midst any individual who directly or indirectly engages in or aids subversive activities.

Despite three world conflicts since 1917, the American people spent billions of dollars in trying to aid foreign nations to recover from the effects of war.

We have extended a helping hand to all nations, even to those hostile to our concept of government.

In return, we have received an empty hand and an almost threatening demand to continue the role of Santa Claus or the begging nation will embrace communism.

How long can the United States continue to carry the world on its shoulders and at the same time support a national defense policy at home that requires 65 cents out of every tax dollar, and which for the next fiscal year will cost American taxpayers over $35 billion.

In this connection, our guided missile research-demelopment program alone is costing us at the present time over $1 billion a year.

Meanwhile, it is reliabily reported that Russia has secretly overhauled the Red war machine, almost completely modernizing its Army of 2½ million men with emphasis on mobility and armor for the quick grouping and scattering required in atomic warfare.

Informants disclose that the Kremlin has put emphasis on bombers, jet fighters, and atomic weapons, but, in addition, has spent billions of dollars in remodeling the Russian Army into a first-rate ground-fighting force.

The modernization discloses that since Russia has mostly dirt roads, the remodeling plans contemplate atomic-type warfare in areas with hard-surfaced highways.

Comparison with the horse-drawn Red army of World War II discloses the tremendous gain that is being made in mobility through the reported acquisition by Russia of advanced types of trucks and helicopters.

The battle order of the Red army is said to continue to provide a total of 175 divisions, 30 of them assigned to East Germany and satellite countries in Western Europe, with 60 more divisions available on short notice to move in and support those on the Western front.

Special emphasis is also being placed by Moscow on radar-controlled aiming devices for accuracy to replace Russia's former dependence on massed artillery fire.

While the Soviet Union continues its huge military-modernization program, it has announced a 5-year plan for bolstering its economy.

Thus, the mad race for superiority in armaments proceeds as the United States and the free world struggle for peace among all nations.

To meet the cost of an adequate national defense, it is fortunate for us that, due to the American principle of free enterprise, we experienced a prosperous year during 1955, with more people employed than ever before in the peacetime history of this country.

Unemployment is low, although in some areas there is suffering because of a labor surplus.

The plight of these areas has been mentioned by President Eisenhower in his state of the Union message, and undoubtedly his program for relief will be sanctioned by Congress.

Prosperity is reflected in the average weekly pay envelope which shows an increase in wages while at the same time the cost of living has not been permitted to skyrocket, but in fact has been stabilized the past 3 years.

The net result is that the value of the dollar shows improvement the past 3 years—but what is more important—we are at peace and the Nation as a whole is in a prosperous condition.

It is gratifying to realize that we are enjoying this prosperity despite the fact that 3 years ago the prophets of gloom and doom were predicting a terrible depression if the Korean war ever ended.

Thanks to the ability, sincerity, honesty, and wisdom of President Eisenhower, hostilities have been ended in Korea and the ghastly casualty lists are no longer occupying their grim position on the front pages of our daily newspapers.

Ladies and gentlemen, with another McKinley-type President in the White House, we have made the transition from a wartime economy, based on the blood and sufferings of American youth, to a peacetime economy with over 64 million Americans gainfully employed and unemployment reduced to an all-time low in peacetime.

Tonight, through the grace of God and the wisdom and courage He has given our beloved President, everything is booming but the guns.

We Americans who pride ourselves on being citizens of this great Republic, founded under God, recognize the frenzied desire of the heartless and atheistic Russian leaders to banish all belief in a supreme being.

The godless Russian regime has virtually exterminated religion not only in the Soviet Union but has cruelly persecuted every form of Christian worship in the hapless countries that now find themselves behind the Iron Curtain.

We cannot review the life of the martyred McKinley without being reminded of his religious fervor and his complete dependence upon the love and mercy of Almight God.

It is recorded that one of his favorite hymns was the beautiful and inspiring "Nearer My God to Thee."

In this supersonic and ultrasonic age when death-dealing weapons of war are hurled through space at a speed greater than sound, we should be grateful that God in times of crises has given us such Presidents as William McKinley and Dwight D. Eisenhower, both of them unashamed like the martyred Lincoln to publicly admit their complete dependence on divine providence.

President Eisenhower in his inaugural speech confounded the Communists by his sincere, yet simple, appeal for God's continued blessings on this Nation.

At the same time he rekindled America's faith in the eternal truth that God is the fountain from whom all blessings flow.

The President's emphasis of the need for a deep spirituality in our daily lives has been acclaimed by persons of all religious faiths who realize that without recourse to prayer and worship of our Creator, we do not deserve to be protected from the atheistic horde of Communists who are plotting the destruction of this Nation.

It is by dedication to lofty moral principles that we as a nation can hope to wage a successful battle against the godless philosophy of the Communists who have characterized religion as the "opiate of the people."

Ladies and gentlemen, in these perilous days, we need a revival of the Spirit of 1776 that inspired the spirit of 1898 and which under President McKinley's guidance brought us victory.

Later that same spirit was reflected in the indomitable courage displayed by American youth in three successive world wars.

God grant that we may avoid atomic warfare and that Russia may someday soon depart from its evil program of worldwide domination and ruthless persecutions, and instead, make an honest effort to dwell in peace with all nations.

But until that happy day is realized, as a nation of free people respecting the human dignity of mankind, we have no choice but to guard and protect this country against the wiles of the cunning and crafty Communists.

We owe it to generations yet unborn, to make certain they will find that we have preserved for them the precious legacy of liberty and freedom which we inherited when we were born as citizens of the greatest Republic on the face of the earth.

With God's help and a sincere desire to protect and defend America, we cannot fail in this important mission, because America, "the land of the free and the home of the brave," is the free world's last best hope for survival.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shall be paid into the Treasury and accounted for in his annual report to Congress, and no sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Anderson, Eastland, Clements, Humphrey, Scott, Aiken, Young, Thye, Hickenlooper, Mundt, Williams, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, Kilgore, McClellan, Robertson, Magnuson, Holland, Stennis, Clements, Bridges, Saltonstall, Young, Knowland, Thye, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Dworshak, Dirksen, and Potter.

Committee on Armed Services

Messrs. Russell (chairman), Byrd, Johnson of Texas, Kefauver, Stennis, Symington, Jackson, Ervin, Saltonstall, Bridges, Flanders, Mrs. Smith of Maine, Messrs. Case of South Dakota, Duff, and Welker.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Lehman, Monroney, Morse, Capehart, Bricker, Ives, Bennett, Bush, Beall, and Payne.

Committee on the District of Columbia

Messrs. Neely (chairman), Bible, McNamara, Morse, Frear, Beall, Hruska, Case of New Jersey, and Allott.

Committee on Finance

Messrs. Byrd (chairman), George, Kerr, Frear, Long, Smathers, Johnson of Texas, Barkley, Millikin, Martin of Pennsylvania, Williams, Flanders, Malone, Carlson, and Bennett.

Committee on Foreign Relations

Messrs. George (chairman), Green, Fulbright, Sparkman, Humphrey, Mansfield, Barkley, Morse, Wiley, Smith of New Jersey, Hickenlooper, Langer, Knowland, Aiken, and Capehart.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Kennedy, Symington, Ervin, Humphrey, Thurmond, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Cotton, Bender, and Martin of Iowa.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Long, Jackson, O'Mahoney, Scott, Bible, Neuberger, Millikin, Malone, Watkins, Dworshak, Kuchel, Barrett, and Goldwater.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Daniel, Ervin, Bible, Thurmond, Bricker, Schoeppel, Butler, Potter, Duff, Purtell, and Payne.

Committee on the Judiciary

Messrs. Kilgore (chairman), Eastland, Kefauver, Johnston of South Carolina, Hennings, McClellan, Daniel, O'Mahoney, Wiley, Langer, Jenner, Watkins, Dirksen, Welker, and Butler.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Neely, Douglas, Lehman, Kennedy, McNamara, Smith of New Jersey, Ives, Purtell, Goldwater, Bender, and Allott.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Neely, Pastore, Monroney, Hennings, Scott, Neuberger, Carlson, Jenner, Langer, Curtis, Martin of Iowa, and Case of New Jersey.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, Gore, Symington, Thurmond, McNamara, Neuberger, Martin of Pennsylvania, Case of South Dakota, Bush, Kuchel, Cotton, and Hruska.

Committee on Rules and Administration

Messrs. Green (chairman), Hayden, Hennings, Gore, Mansfield, Jenner, Barrett, McCarthy, and Curtis.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Reed, of Kentucky, the Mayflower.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 3701 Connecticut Ave.
Mr. Justice Burton, of Ohio, the Dodge.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.
Mr. Justice Minton, of Indiana, the Methodist Building.
Mr. Justice Harlan, of New York, 1677 31st St.

OFFICERS OF THE SUPREME COURT

Clerk—Harold B. Willey, 3214 N. Wakefield St., Arlington, Va.
Deputy Clerk—Reginald C. Dilli, 1329 Hemlock St.
Deputy Clerk—Hugh W. Barr, 4701 Connecticut Ave.
Marshal—T. Perry Lippitt, 6004 Corbin Road.
Reporter—Walter Wyatt, 1702 Kalmia Rd.
Librarian—Helen Newman, 126 3d St. SE.

UNITED STATES JUDICIAL CIRCUITS

JUSTICES ASSIGNED
TERRITORY EMBRACED

District of Columbia: Mr. Chief Justice Warren. District of Columbia.

First judicial circuit: Mr. Justice Frankfurter. Maine, New Hampshire, Massachusetts, Rhode Island, Puerto Rico.

Second judicial circuit: Mr. Justice Harlan. Vermont, Connecticut, New York.

Third judicial circuit: Mr. Justice Burton, Pennsylvania, New Jersey, Delaware, Virgin Islands.

Fourth judicial circuit: Mr. Chief Justice Warren. Maryland, Virginia, West Virginia, North Carolina, South Carolina.

Fifth judicial circuit: Mr. Justice Black. Georgia, Florida, Alabama, Mississippi, Louisiana, Texas, Canal Zone.

Sixth judicial circuit: Mr. Justice Reed. Ohio, Michigan, Kentucky, Tennessee.

Seventh judicial circuit: Mr. Justice Minton. Indiana, Illinois, Wisconsin.

Eighth judicial circuit: Mr. Justice Clark. Minnesota, North Dakota, South Dakota, Iowa, Nebraska, Missouri, Arkansas.

Ninth judicial circuit: Mr. Justice Douglas. Washington, Oregon, Montana, Idaho, California, Nevada, Arizona, Alaska, Hawaii.

Tenth judicial circuit: Mr. Justice Clark. Colorado, Wyoming, Utah, Kansas, Oklahoma, New Mexico.

Appendix

Speech by Hon. Alexander Wiley, of Wisconsin, Before Neenah (Wis.) Junior Chamber of Commerce

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, January 31, 1956

Mr. WILEY. Mr. President, it was my privilege last night to speak before the junior chamber of commerce at Neenah, Wis. I ask unanimous consent that the address which I made be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SENATOR WILEY SAYS RESPONSIBLE CITIZENS SHOULD URGE INTENSIFIED UNITED STATES EFFORT IN COMPETITIVE COEXISTENCE RACE—ANNOUNCES COSPONSORSHIP OF BILL TO MAKE PERMANENT PRESIDENT'S TRADE FAIR PROGRAM ABROAD, PLUS CULTURAL, ATHLETIC EXCHANGES

I am happy to attend your distinguished service award banquet, to pay tribute to your Jaycee program, and to this outstanding young man of your community.

If I may, I'd like to use your criteria for your distinguished award selection—achievement, leadership, service to the community, and personal ability and character—as a foundation upon which to build my talk with you tonight.

EVERY CITIZEN PLAYS A DUAL ROLE

In our great country, each citizen plays a dual role.

First, each of us leads a private, personal life. We work at our vocations; we build our homes and care for our families; we pursue our personal careers and goals in life.

Second, each of us is a member of a community, with a civic responsibility. Our country is not kept free and dynamic by a "Let George do it" attitude on the part of our people. The successful working of a representative democracy requires selfless service and dedication by all of us—at the local, State, and National, and now, international level.

Tonight, we are honoring a young man for achievement both in his personal life and in service to the community—a fine example of the dual role we all must assume.

ROLE OF ALL JAYCEES

As members of a great nationwide organization of 160,000 Jaycees, you are all projected into the forefront of activity and progress on the American scene.

You have put yourselves in the category of people who are big enough to live beyond themselves, to become responsible members of community life.

You have concerned yourselves with the problem of education, finance, taxes, sanitation, and general progress of your community.

As dual role citizens, you have concerned yourselves with the problems at the State and National level. You are attempting likewise to achieve a constructive knowledge of international problems, and of how these reflect upon yourselves and our country.

As members of the Jaycees you are molding, not only the future of Neenah, Menasha, and Winnebago County, but of the State and Nation, and yes, the world, as well. Of this, I shall have more to say a bit later on.

AMERICA'S BEST FRUITS ARE ITS PEOPLE

There are different ways by which to measure our progress and success.

For myself, I believe that the most important achievement of our great country of 165 million people is not necessarily a political system, although ours is the best in the world; not our economic progress, although we have attained the highest standards of living in the history of mankind; and not our scientific and technological developments, although these are unsurpassed.

Instead, I hold the firm, unshakable belief that the best fruits of our years of work and progress are our people—free, humble, creative, independent people, dedicated, under God, to the preservation of human dignity; devoted to high ideals and progress; believing strongly in the principles of representative democracy, aware of the opportunities and responsibilities in our atomic-nuclear age; and, all of us, strong in our conviction that freedom is a must for all peoples, yes, including the enslaved peoples behind the Iron Curtain.

ERA OF PERIL; ERA OF PROMISE

The cycle of history has indicated two kinds of future prospects: an era of peril, and an era of promise.

ERA OF NUCLEAR PERIL

The era of peril, of course, has been created for us by the existence of a fanatic political and economic theory—communism—whose ultimate goal is still the conquering of the world.

In recent times, the dictators of the Kremlin have been traveling about the world under the disguise of "social reformists," attempting to deceive new peoples and nations on the real nature of totalitarian rule.

Meanwhile, the long tentacles of communism, above ground and underground, reach into all countries on earth.

COMPETITIVE COEXISTENCE

As you well know, the relatively new Communist line of "competitive coexistence" is being intensified.

The "line" definitely does not rule out the possibility of war.

It does, however, indicate that the Communists have entered a new phase of operation—trying by so-called soft means to alienate our friends, undermine our prestige, and subvert new peoples to communism.

Basically, the aimof the Kremlin is to discredit, weaken, and ultimately destroy our own political system, our Republic, our way of life.

ACCEPT "COMPETITIVE COEXISTENCE" OPTIMISTICALLY

I think, however, that we ought to accept the challenge of "competitive coexistence" optimistically. For this is the thing we are best at—providing good things for a better life.

We have achieved the best kind of life for our people at home.

And we have helped its progress in many countries around the world by sound economic aid and technical assistance.

IMPROVE SALESMANSHIP OF UNITED STATES ABROAD

However, we must improve our salesmanship of the United States abroad.

The United States Information Agency has been doing, generally speaking, a great job abroad. However, because of many obstacles it faces and because of the massive Soviet propaganda effort (which expends many times what we do), this fact emerges:

The true story of the free way of life unfortunately, isn't getting to the people of the world, as well or as fully as it should be.

Particularly in the so-called neutralist countries our capitalist system is frequently misrepresented. Our national character is often smeared. We are called "imperialist" and "colonialists" even though:

(a) Our entire history, from the days of our Thirteen Colonies' revolution, onward, refutes that charge:

(b) Not in man's history has there been a more savage, heartless, or widespread imperialism and colonialism than that of the Soviet Union (and it, of course, is the source responsible for most of the false charges against us).

And, so we must strengthen our salesmanship. We have the best product in the world to sell—freedom. And we must back up our salesmen—our United States Foreign Service, our United States Information officers, and others abroad, who are ably displaying our products.

COSPONSORSHIP OF BILL TO MAKE TRADE AND CULTURAL PROGRAMS PERMANENT

One of the ways by which we can do so is by making permanent what has thus far been merely temporary and on an emergency basis the authorization for the United States to participate in international trade fairs and to help defray expenses in sending our artistic troupes throughout the world.

Our participation in trade fairs and particularly, our sending of dance, theater, orchestral, athletic and other groups and individuals abroad—have met with spectacular success.

On this cultural point, I emphasize that man lives "by more than bread alone." He lives for and reveres the things of beauty in this world: great music, great art, great poetry, great drama, great literature, great ballet.

We want to share the fruits of American culture with other peoples, and I say, incidentally, we are willing and eager to enjoy more of the fruits of their cultures as well.

We Americans, we Wisconsinites are not "crass materialists" as the Reds like to picture us. We are vitally interested in the things of the spirit.

TRIBUTE TO AMERICAN NATIONAL THEATER AND ACADEMY

Fortunately, we have a grand instrumentality which has been helping to perform our overseas cultural presentation for us. It is the splendid American National Theater and Academy, chartered by the Congress, functioning through its International Exchange Program. This is a program in which Wisconsin performers, among others, I am glad to say, have contributed in full measure, and in which all the other rich artistic resources of America are fully represented.

United States ambassador after ambassador, now representing our country abroad, has written to me, praising our theater and other groups overseas. They have told me

that the visit of a single artistic group, like the famed "Symphony of the Air" in music-minded Japan, has done more to get across the truth regarding America's cultural interests, its devotion to the good life, to the ways of peace, than would mountains of speeches or press release "handouts."

I shall, therefore, in the next few days be cosponsoring legislation to make authorization for this type of activity permanent, precisely as President Eisenhower has wisely recommended. I point out to you that up until recent times the Soviet Union and its satellites had tended to be ahead of us in the trade fair and cultural troupe program. The Reds, with vast expense budgets committed to the task, had already achieved considerable success.

Fortunately, we are now catching up. Fortunately, too, the business world of America and the artistic world have so fine a product, so to speak, to display before the world, that we know we can surpass the Soviets in any fair competition.

But we must not allow this program to lag.

I want all the world to see what the free American enterprise system has produced. Let trade fairs in Indonesia or India or Pakistan display the skills of Green Bay industry, for example. And let audiences, especially, in the neutralist world, see what the great artistic talent of America has achieved.

WHY EACH ADDITIONAL COUNTRY IS SIGNIFICANT

We want no free nation—large or small—to drift into the Communist orbit, or to be softened up by the Reds for new aggression or internal revolution.

Each country that is kidnaped from the free world behind the bamboo or Iron Curtain is a potential military base for further subversion and aggression elsewhere.

Each country that falls or is pushed behind these curtains provides a reserve of natural and economic resources that will be raped and pillaged to support the Communist war machines.

Each captured country provides a reservoir of manpower that the Communists will not hesitate to use as cannon fodder in acts of aggression, now or in the future.

We must face these facts realistically, and strengthen our program to deter communism at every possible point.

Aggressive communism is a universal menace, even across the once wide Atlantic and Pacific Oceans. There are no longer any real natural barriers. There are no shelters anymore. All places are vulnerable. On the military front, a Communist-launched guided missile could hit Neenah and Menasha in less than 30 minutes from takeoff from a Soviet base. We are no more than 6 hours away from jet-bomber bases in Siberia.

INTERNATIONAL SCENE

As you know, on the international diplomatic scene, we are faced with a multitude of new and old problems. Most of these are serious, for a spark anywhere might emblazon the whole world in atomic fire. We must, therefore, keep constantly informed of the actions and events around the globe that may determine our own future. For example:

1. The recent announcement of a new 5-year plan by Russia warrants that we review our own programs and progress as regards strategic economic goods.

2. In Asia the stepped-up air and artillery action around Quemoy and Matsu Islands—off Formosa—requires us to take a new look at that hot spot.

3. In Latin America the bait that is being dangled to the 20 Republics merits our and our friends' careful scrutiny, for we Americans must above all safeguard our Western Hemisphere.

4. The fighting in and around the Holy Land and unrest throughout the Middle East and Africa require our alert and skilled efforts to avoid more explosions.

5. We must strengthen our allies in NATO, SEATO, the Middle East pacts and other agreements and mutual-support treaties.

There is no area in the world in which we can relax and say "this is safe." For the Communists are working, propagandizing, and subverting on a succession of insidious 5-year plans.

ERA OF PROMISE

We must, however, remember also that we live in an era of promise.

We have attained great and unprecedented heights of prosperity and standards of living.

We have more jobs, automobiles, TV sets, and stations, radios, and household appliances than ever before. We have better homes and more comforts of living than anywhere else in the world.

We live in an air-jet age and travel at supersonic speed.

We produce goods in automatic factories.

Our scientists have equipped us with electronic eyes and ears.

Yes; as we approach November 1956 we can even hazard election predictions with such complicated devices as Univacs.

ST. LAWRENCE SEAWAY

Domestically, one of the great landmarks of our times of course, is the St. Lawrence seaway. At completion, this great seaway will mean to the trade of Wisconsin and the United States what the Panama and Suez Canals have meant to the trade of the world.

It will open new markets, both foreign and domestic, for the products of our farms, dairy plants, paper mills, machine shops, and other industries. It will transform many of our Wisconsin cities into true, deep-water world ports.

Every one of you can help create the most effective seaway by giving your personal and organizational support to legislation now before the Senate Public Works Committee. This legislation, for which I testified only last Thursday, would authorize the deepening of the connecting channels, west of Lake Erie to 27 feet.

ECONOMIC OUTLOOK BRIGHT

Economically, if we are alert and act on opportunities, the outlook for Wisconsin and the country is of course excellent.

That fact is confirmed by the President's latest economic report. We are at the highest level of prosperity in our history. Our national income is at the $327-billion level. The total national product is almost to the $400-billion mark. Over 65 million people are employed—the most in our history. And the best is still to come.

FARMERS NOT SHARING IN NATIONAL PROSPERITY

Yet, as we review our problems, there is one segment of our economy that is not sharing proportionately in our national prosperity: farming.

A price "squeeze" has caught the farmer between rising costs of production and falling prices for his milk, pork, beef, and other products.

As you know, the Senate concluded hearings on farm parity proposals last week. The drafting of the final bill is expected to take about a week.

We must come up with some good, nonpartisan constructive legislation to relieve the distress in price-depressed farm areas—and we must do so now.

For myself, I believe that the price-support program needs a real overhauling. As for example, milk—which we produce, in amounts of 16½ billion pounds a year in Wisconsin—certainly should receive equal treatment under the law with the so-called 6 basic commodities.

OTHER LEGISLATION

To cope with other problems—foreign and domestic—which we face today, there is additional legislation pending before the Congress.

These concern such important matters as defense, tax reforms, social-security liberalization, aid to education, modern road construction, mutual security, yes, too, the dangerous natural-gas bill, and many others. They are of vital interest to all of us.

The best judgment of Congress and the Nation must be applied to these issues so as to result in a sound, comprehensive program.

MINIMIZE PARTISAN POLITICS

This is an election year, and, of course, it will be difficult to keep politics out of the legislative work.

But I, for one, have made this fact very plain: I consider the times too critical, and the consequences of failure, or even delay, on top international issues too great to allow ourselves to become overly involved in petty partisan politics.

NEW FRONTIERS

In our complicated, complex world, we face new frontiers of outer space with a so-called space satellite, new frontiers of atomic-nuclear development, and of improved human relations.

We need dedicated people—willing to work, study, think, and act—to resolve those many problems.

WE NEED YOU

We need you—every last one of you—to assume the dual role of citizenship, to take up the challenge of our times, to guide our Nation through the uncharted future, at home and abroad.

Man does not live by bread alone.

Man does not live for himself alone. So let us rally to our Republic, beacon of the world.

Albert Gallatin and Our Trade Policy

EXTENSION OF REMARKS

OF

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1956

Mr. RHODES of Pennsylvania. Mr. Speaker, January 29 marked the 195th anniversary of the birth of a distinguished Pennsylvanian who rendered noble service to his State and to his beloved America. Albert Gallatin was born in Geneva, Switzerland, and came to this country at the age of 19. He fought in the Revolutionary War, later taught at Harvard, and settled in the farmlands of western Pennsylvania. He was later elected to the House of Representatives, served as Secretary of the Treasury, and as an American minister in Europe.

As a public official, Gallatin translated his economic theories into the practical reality that characterized the era of Thomas Jefferson, and so reduced the national debt. As an American diplomat, still many years ahead of his time, he strived hard to end the destruction caused by warfare through the conclusion of trade conventions with foreign nations.

Typifying the good trade relations between our two countries is the recent revelation that my own State of Pennsylvania profits to the extent of about $10 million annually in Swiss trade.

This information was carried in the Latrobe (Pa.) Bulletin on December 8, 1955, and I insert the article in the RECORD under permission granted by the House:

STATE SENDS MANY PRODUCTS TO SWISS

The State of Pennsylvania sold $9.4 million in goods to Switzerland in 1954 to rank among the top 10 of the 48 American States exporting a grand total of $150.4 million to the small Alpine democracy, best cash customer for United States products in Europe.

This is revealed in an eight-page study published by the Society for Friendship with Switzerland to commemorate the 105th anniversary of the Treaty of Friendship and Commerce signed by the two nations November 25, 1850.

Coal, wool products, metals, machinery and chemicals were Pennsylvania's chief exports. Twenty-eight States annually have been selling from $1 million to $16 million in goods and services to Switzerland as their share in a postwar yearly total average of more than $150 million.

The society study was done to show how trade activity between the two countries has accelerated since the signing of the 1936 American-Swiss reciprocal trade agreement and has benefited producers in all areas of the United States.

The annual United States exports to the Swiss just prior to the signing of this pact averaged about $7 million. In the past decade, the yearly average has been over $150 millon, compared with annual Swiss exports to the United States averaging just over $100 million. This makes for a total postwar favorable trade balance to the United States of about $500 million.

Swiss watch exports represent 50 percent of the dollar value of products Switzerland sells to the United States. Within the past month, American political and business leaders have been voicing increasing concern over present and projected United States tariff curbs on watch imports.

The Privilege of Voting

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1956

Mr. BARTLETT. Mr. Speaker, under leave to extend my remarks, I should like to insert in the RECORD the following editorial from the Fairbanks (Alaska) Daily News-Miner of January 4, 1956:

WHEN THE NEXT CONGRESS MEETS?

The opening of the 2d session of the 84th Congress is highly significant, since it comes in a presidential election year. The main issues of the presidential race this year will be fought out in the Halls of Congress from now until adjournment, which will probably come in July or August.

Perhaps the one dominating issue, and one which will have a great effect on the political campaign this fall, is the farm problem. Conditions for the farmer, particularly the small farmer, have become almost critical and there is sentiment to do something about it in both parties.

The question is whether the Democratic solution or a Republican solution will be tried in 1956, or if both these attempted solutions will be checkmated for political reasons.

The Democratic proposal to restore 90 percent parity price supports has already been passed by the House. If it is passed by the Senate, and this seems likely, then the Democratic program to alleviate suffering among farmers will go to the White House. The decision by Mr. Eisenhower, whether to sign or veto this bill, will be a highly significant and perhaps dramatic one.

The Republicans are proposing other avenues of correction. The soil bank is one of them. The President traditionally outlines the general approach to such problems in his speeches to Congress.

It is probably not an exaggeration to say that the party which gets the credit for alleviating current farm distress, or the party which gets blamed for its continuance—if it is continued—will feel the results in the November election. We believe the results might even be decisive in this year's presidential race.

We can't help but feel, too, that the stand (if any) either party takes during early 1956 regarding statehood for Alaska and Hawaii will have some bearing on the presidential race.

We are well aware that Mr. Average Citizen in the States who has the privilege of casting a vote (quite a privilege that is to us "second class" United States citizens residing in Alaska) is primarily concerned with seeing Congress act on matters which affect his pocketbook and matters of particular interest to himself. * * * But he is also interested in seeing Alaskans and Hawaiians treated as fellow citizens of the United States. The political party which gives citizenship rights (other than the privilege of paying the highest taxes in the land) to the people of America's two great Territories will gain the respect—and in many cases the vote—of Mr. Average Citizen.

We have a feeling of envy as we watch the elected Representatives of our fellow citizens from the 48 States reconvene the 84th Congress. * * * We too, would like a voice in how the taxes we contribute to the greatest country in the world will be spent.

We will continue to pray, and to hope, and to work (and to pay our taxes) perhaps—

When the 85th Congress convenes.

The Charm of the U. S. A.

EXTENSION OF REMARKS
OF
HON. SAMUEL N. FRIEDEL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1956

Mr. FRIEDEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a song poem written by one of my constituents, Mr. Ernest J. Pegelow, of Baltimore:

THE CHARM OF THE U. S. A.

Out where the sky meets the ocean,
The sentry on New York Bay,
Holds forth the great lamp of freedom
The charm of the U. S. A.
Greeting the weary traveler,
A welcome to those who despair,
Liberty offers a haven,
To those so oppres'ed "over there."
Miss Liberty; My Country 'Tis of Thee,
Millions of hearts proclaim.
Miss Liberty: Forever you shall be,
The symbol of Old Glory's fame.
For Columbia the Gem of the Ocean,
A vigil you keep night and day.
God Bless the Statue of Liberty,
The charm of the U. S. A.

—*Ernest J. Pegelow, Author.*

The Natural Gas Debate

EXTENSION OF REMARKS
OF
HON. HENDERSON L. LANHAM
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1956

Mr. LANHAM. Mr. Speaker, again my hat is off to the Wall Street Journal for plain speaking and straight thinking. With leave of the Speaker, I am including an editorial which appeared in the Wall Street Journal for Monday, January 30, 1956, relative to the natural gas debate.

It is certainly encouraging to see that writers of the ability and intelligence such as displayed by the writer of this editorial are coming to see what so many of us in the South have been saying recently about the assumption on the part of the Supreme Court of the power to legislate invested by the Constitution in the Congress of the United States. Frankly, this tendency on the part of the Supreme Court to decide cases not upon the law as it is but as they believe it ought to be, is one of the most dangerous trends of our times. Unless it is reversed and unless the Congress asserts its right to legislate and fights vigorously against the assumption of its power and duty to legislate from encroachment by, not only the Supreme Court but the executive department, the Congress will soon be only a rubber stamp.

The editorial follows:

THE NATURAL GAS DEBATE

There is a great deal of heat surrounding the debate in the Senate on whether the Federal Government ought to control the price of natural gas at the well. Unfortunately, some of the arguments have obscured two important points.

One is whether the Supreme Court ought to legislate Federal controls through interpretation, as the Court did in 1954. Not only did the Supreme Court do by decree what the Congress refused to do, the Court actually overrode an exemption written into the 1938 Natural Gas Act which left producers of natural gas free of the controls the act placed on pipelines. The dissenting justices pointed out that the majority opinion transgressed this specific exemption and they said that "good faith" required the Court to interpret the act as "its terms read, and as we have, until today, declared it."

But talk of "windfalls," "giveaways" and somber predictions that the national householders' gas bill will go up $800 million if the price of natural gas is not controlled at the wellhead—all this is what the Senate is hearing instead of a debate on a constitutional issue.

Another point that ought to be discussed is the fairness in asking for Federal controls over natural gas when there are no similar proposals for coal and oil, which also are used for generating power and heating homes. Nobody tells the coal and oil companies they can charge this much and no more for their product at the mine and the well. Why single out natural gas?

One reason the controllers give is that the price the producer gets affects the price the consumer pays. Of course it does, to some extent. But the price of gas, like the prices of electricity, are set by public service commissions in the different States. The power to say what utilities can get for their gas is a powerful deterrent to any producer who

might like to "gouge" the utilities, and thus the consumer.

Further, Federal power to control the price the producers can get doesn't mean lower bills for the consumer. As Senator FULBRIGHT explained in a recent speech, even if the producers were made by Federal law to give their gas away, there is no Federal law which can pass on the savings to the consumer. So that argument for Federal regulation is fallacious.

But it is easy to understand why the argument is being made. There are about 4,000 producers and about 25 million consumers of natural gas and those who want Federal controls would like to see the issue decided on the basis of choosing between the interests of the two. The basis admittedly has political appeal, but it is not a good basis for the writing of fair law.

Our comments here are not meant to be an argument for the particular measure the Senate is now debating. Our argument is for debating the question on the main points.

The main points are two. One is whether a Federal bureau ought to dictate the price a man can get for natural gas while possessing no such controls over other fuels. The other is whether the Congress ought to surrender to the Supreme Court its responsibilities for writing the Nation's laws.

Officers of the Future for Ships of the Future

EXTENSION OF REMARKS
OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1956

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Rear Adm. Gordon McLintock, USMS, Superintendent, United States Merchant Marine Academy, at joint meeting of the Propeller Club, Port of New Orleans and the National Defense Transportation Association, at New Orleans, La., January 10, 1956:

OFFICERS OF THE FUTURE FOR SHIPS OF THE FUTURE

May I express to you my thanks and appreciation for the opportunity to address you at this luncheon jointly sponsored by the Propeller Club of the United States, Port of New Orleans, and the National Defense Transportation Association, both of which organizations render such great service to American shipping and the allied industries.

I am glad to say I am far from being a stranger to New Orleans. For some years I ran between New Orleans and Los Angeles, Mexico, Montevideo, and Buenos Aires, in the Pan American Petroleum & Transport Co. I passed for second mate in New Orleans. In addition I have the Mississippi River pilot's license from South Pass to Destrehan, some 30 miles above New Orleans, which I have kept current, although I should hate to have to use it again without some preliminary breaking in. I certainly hope you have straightened out the South Pass Bar so that ships no longer have to make that oblique approach with a hard right rudder at the crucial moment. Among my friends of those days were Mr. P. J. Dromgool, our marine superintendent; Mr. Cecil N. Bean, supervising inspector of the Steamship Inspection Service, who was one of the signers of my application when I took the examination for that service; Capt. Harry Koch who for some years has been vice president of the Avondale Marine Ways Inc., and is now also president of Koch-Ellis, Inc. In recent years I have made more friends and in addition have had the pleasure of meeting many of your shipping and transportation executives in the course of their visits to New York.

I am very grateful for the opportunity to meet with you here in New Orleans to discuss one of shipping's valuable assets—the United States Merchant Marine Academy. There has always existed a strong link between the shipping and transportation interests of the Gulf region and Kings Point, extending back to the time our basic school was established at Pass Christian in 1943 to cope with the increased demand for both merchant and naval reserve officers during World War II. This bond has become strengthened as more and more of our graduates have entered your employ as officers aboard your ships, and as a number of them, having become chief engineers and masters have been promoted into your shore employ. As an example I need only to invite attention to your Propeller Club of New Orleans vice president, Capt. J. V. Clark, and vice president of the Delta Line, a graduate of the Merchant Marine Cadet Corps, Class of 1940; Mr. Bartley W. Farrell, vice president, Standard Stevedoring Co., class of 1945; Capt. Richard E. McNeely, river pilot and secretary, Crescent River Port Pilots, class of 1943; Mr. Erik F. Johnsen, operations manager, States Marine Line, class of 1945; Mr. Lawrence J. Hill, average adjuster, C. A. Sporl & Co., class of 1943; Mr. David M., Brown, Jr., southern representative, the American Waterways Operators, Inc., and president of the Kings Point alumni chapter here, class of 1944; and other distinguished graduates too numerous to mention at this time.

The merchant fleet is one of our country's greatest assets. We prepare our cadets to be the servants of the merchant fleet in peacetime and in time of war.

I do not intend to go into what I am sure would be repetitious details of when the Academy was established, why it was established, the construction of its buildings, or the record of its accomplishments during World War II, or the details of its wartime courses. I do believe, however, that you will be interested in knowing a little more about what we are doing now in the way of training officers for a career at sea in the merchant marine, with a collateral status as Naval Reserve officers. Also you will be interested in knowing what our courses of the future will embrace insofar as we can see the picture at this time.

During World War II the courageous and heroic actions of Kings Pointers serving aboard merchant ships in war zones throughout the world won well deserved credit for themselves and the Corps from distinguished military leaders—Fleet Adm. Chester W. Nimitz paid us a handsome tribute when he visited Kings Point and afterward sent me a photograph of the signing of the Japanese surrender on board the U. S. S. *Missouri*. He had written underneath: "In recognition of the part the Cadet-Midshipmen of Kings Point played in making the above scene possible." From Gen. Douglas MacArthur, the following telegram:

HONSHU, HOKKAIDO, JAPAN,
October 16, 1945.

SUPERINTENDENT, UNITED STATES MERCHANT MARINE ACADEMY,
Kings Point, N. Y.:

I have directed that the surrender sword of Vice Admiral Ugaki, who commanded the Japanese naval forces of northern Honshu and Hokkaido be forwarded to the United States Merchant Marine Academy at Kings Point, N. Y., as a memento of the valiant service rendered by the sons of the Academy in our struggle in the Pacific.

MACARTHUR,
Commander in Chief,
American Forces, Pacific.

Many a Kings Pointer spent long days and nights in a lifeboat after being forced to abandon ship after torpedoing. Many of them were lost with their ships right off the mouth of the Mississippi during the early days of the war. The percentage of casualties sustained by the merchant marine during the war was nearly as large as the 4 percent experienced by the Army and Navy. Kings Pointers numbered only 3.6 percent of the entire complement of the merchant marine but the Academy is proud of the fact that her sons won 6 percent of the distinguished service medals for outstanding acts of heroism. Two hundred and twelve Kings Pointers paid the supreme sacrifice in combat action during the war.

The Academy was formally accredited by the Middle States Association and has since then awarded the bachelor of science degree. We did not seek accreditation per se, we sought to graduate a highly professionally trained and well rounded officer, and we were awarded the accolade of accreditation because of the successful manner in which we were accomplishing our mission. We believe that today's merchant marine officer must be judged in terms of his general education, his physical superiority, and good practical ability, his belief in democracy, his attitude toward America's leadership in world affairs, his readiness to serve his country as well as his developed professional abilities to perform new and complex shipboard duties as he enters upon his sea career. We endeavor to inculate in him and to foster and mold the qualities of courage, loyalty, and integrity. In the confused and critical years which lie ahead he will be called upon to use more than a little of each. Education is essential. At the same time, without character and leadership, nothing is of any avail.

The young man who is admitted to the Merchant Marine Academy prepares for a definite goal: If he is to become a deck officer he takes one specified curriculum; if he aspires to be an engineering officer he takes another. In order to assist in promoting a proper working relationship between the deck and engine departments and to increase the efficiency of the ship as a whole, our deck cadets are given the rudiments of what we call engineering knowledge for deck officers, and, similarly, our engine cadets are given elementary instruction in the rudiments of navigation, etc.

To enter the Academy, he must take a competitive scholastic examination. To be eligible for consideration for appointment he must stand well up among those taking the examination. Then he is accepted for appointment within the population-determined State quotas and on the basis of demonstrated ability and promise. It is not believed the new permanency bill for the Academy will fundamentally change this procedure.

All of our cadet-midshipmen, so-called, must become accepted in the Reserve component of the Navy as a condition of their appointment to the Academy, and upon graduation they receive commissions as ensigns in the Naval Reserve.

I believe it is typical of a Kings Pointer that he is forehanded and efficient and knows how to obey and to command. It is necessary that our cadets learn to discipline themselves in order that they can discipline others. It is essential for a merchant officer just as it is for a naval officer. We have been complimented on the appearance of the Kings Point cadets. I want to tell you that except for our regular Saturday morning inspections we have no drill periods in our cur-

riculum, and the high standard which observers have been good enough to attribute to us comes, I believe, from that esprit de corps which is an integral part of every Kings Pointer.

You will note that in much the same way that the United States Military Academy is referred to as West Point, the United States Merchant Marine Academy is, because of its location in the village of Kings Point, known as Kings Point, and the cadets as Kings Pointers. Less than a mile away is the much larger village of Great Neck, and but for this accident of geography we might easily have been known as Great Neckers.

The Academy has enjoyed, indeed has been inspired, by the encouragement and cooperation it has received from the shipping industry.

The individual steamship companies and the organizations in which they are grouped demonstrate an active interest in the Academy and are most cooperative. I would like to take this opportunity to thank you gentlemen here, representing the steamship companies of the gulf area, for your demonstrated interest in our cadets during their course of training and for the employment opportunities you have offered them and continue to offer them upon their graduation. Knowing that most of you are active in the Propeller Club I should also tell you how much we appreciate the fine resolution with respect to Kings Point, and merchant marine officer training, sponsored by your group at the American Merchant Marine Conference in October last year.

For the betterment of Academy courses and the development of new ideas for the program, the advice and recommendations of the industry are sought. This applies not only to steamship operators but to companies related to maritime activities or serving the industry with machinery, boilers, and a variety of other equipment. A great many of these companies have responded most generously by giving us equipment and a number have stimulated interest on the part of cadet-midshipmen through the establishment of prizes for award at graduation.

I must also mention the assistance and encouragement we have always received from the armed services—the United States Merchant Marine Academy has always enjoyed a close liaison and the full cooperative support of the Navy, the Army, the Air Force and the Coast Guard, and the citizenry. When President Eisenhower was inaugurated the Navy very kindly transported our entire student body by ship to Washington, D. C., in order that it might participate in the inaugural parade. In addition, the Navy offers our first classmen the opportunity of making training cruises in naval vessels from time to time.

The Army has given Kings Point, as a Federal Academy, pride of place in the Armed Forces Day parade line of march in New York City immediately behind West Point.

These are, of course, highlights, but there is a constant interchange of helpful information and a continuing readiness on the part of the armed services—the Army, Navy, Air Force, and Coast Guard to help Kings Point achieve its mission in every possible way.

On the 10th anniversary of the dedication of the Academy, President Eisenhower sent a congratulatory telegram which expressed the hope that "the United States Merchant Marine Academy continue in the years ahead to prepare young Americans for leadership in our modern merchant marine."

Senator Lachèvre, head of the French Senate Committee for Merchant Marine Affairs, visited the Academy last year in connection with a French program to coordinate all of their scattered training schools in one federal institution. He appeared to be very favorably impressed with Kings Point, and in fact this concluding comment was: "C'est magnifique." We were constrained not to disagree with him. Subsequently we received a very nice letter from the French Ambassador to the United States, His Excellency Maurice Couve de Murville.

The enrollment at Kings Point is approximately 750 in residence, with a class, the third class, of about 220 at sea. We take in something over 300 cadets each year and each year graduate in the neighborhood of 200—that is to say, 100 deck officers and 100 engineer officers. While no one knows better than you, gentlemen, the fluctuations of the maritime industry and the varying periods of overemployment and underemployment, it is generally agreed that on a long-range basis a minimum of 1,200 replacement officers are required annually. Of this number, the Federal academy and the State maritime academies are now providing nearly 500. It will be seen, therefore, that opportunity for advancement from the ranks remains open for outstanding, unlicensed personnel. At present, the balance of the annual required replacement is furnished from the unlicensed categories—some 700.

I should like, here, to pay a tribute to those officers of the merchant marine who have come up "through the hawse pipe." This includes some of our outstanding merchant marine officers. There are always a goodly number of cadet-midshipmen at Kings Point who have come from before the mast, and naturally they are among our best, having chosen the sea as their profession and then having done something about bettering themselves.

In our studies of the background, educational and employment experiences, of the young men who come to Kings Point, we have noted with satisfaction that the number of candidates who have had previous service aboard a ship is increasing from year to year. In our present plebe class, which entered the Academy last August, 41 of the three-hundred-odd entering cadet-midshipmen, or 12 percent, had previous sea experience. It is interesting to note, too, that in this class over 100 of the young men have near relatives who have served in either the merchant marine, Navy, or Coast Guard as a career. We believe this to be a good sign, indicating that men of the sea are influencing the careers of their sons and nephews, bringing to the profession men with salt water in their veins.

We are not completely satisfied with the number of candidates from the sea. We are making every effort to increase the percentage and have begun a program which we hope will lead to a still greater number of applications from young men who have already gained experience at sea and have found it to be the career of their choice. We are embarking upon a program to distribute press releases concerning scheduled entrance examinations to officials of all seamen's unions. These releases include general information regarding basic eligibility requirements and tell how one can obtain additional detailed information about entering Kings Point. We will attempt to secure space in various union periodicals for the purpose of regularly and periodically presenting information about entrance requirements. We are going to endeavor to arrange, through union officials, for the display of Academy posters and information on bulletin boards in union hiring halls. Finally, our cadet-midshipmen themselves, when they go aboard ship during their second year, will be better prepared in the future to tell the story of Kings Point and its opportunities to any qualified young man with whom they are shipmates.

We do, as many of you know, credit an applicant who has had previous sea experience with a bonus of 5 points on the competitive scholastic test and, in addition, a waiver in age is granted up to age 23 for men who have been in the Merchant Marine and in the Armed Forces. It has been suggested that this allowance be increased. Our problem here, however, is the danger of accepting a young man who does not have the ability to complete the program. It would be quite unfair to a young man if we accepted him for appointment, knowing ourselves that his standing in the examination indicated his inability to keep up with the course of study.

It is our hope that a good percentage of the young men serving aboard ships of the American merchant marine today will set Kings Point as their goal. We hope they will continue to study at sea, prepare themselves for the competitive examination as well as in those subjects that constitute the courses of studies at the Academy. The United States Maritime Service Institute formerly conducted courses for men at sea, but it is our understanding that they are now being successfully handled by the Maritime Studies Institute in New York City, a private organization.

Reverting to our curricula and training procedures, I should like to say that in keeping with postwar trends, extensive use is made of training aids, both audio and visual, but mention of the practical aspects of the curriculum is hardly complete unless reference is made to the conventional laboratories, such as the drafting room, navigational chartroom, physics, chemistry, thermodynamics, strength of materials and hydraulic laboratories. Certain special laboratories, however, are also provided: the gyro lab, the planetarium, the steam and diesel laboratories, the engine-repair laboratory, and the electrical laboratory. The electronics laboratory deserves particular mention. Here the deck cadet-midshipmen are taught theory and practical use of radiotelephones, depth finders or fathometers, radar, and loran.

At the Academy we are alert to changes within the industry which indicate the desirability of changes in our curriculum. For example, indicative of a new marine trend, there will be a gas turbine powered converted liberty ship operating next summer. We have offered gas turbine instruction for some time, and this ship, the *John Sargent*, will have a Kings Pointer, Mr. William Van Cott, as her chief engineer.

Our preparations for nuclear training are further illustrative. On November 11, 1955, addressing the Society of Naval Architects and Marine Engineers at its annual meeting in New York, the Honorable Clarence G. Morse, the Maritime Administrator, said: "This very week we have invited proposals and prices from manufacturers covering a nuclear propulsion plant for a merchant ship. We are asking them, contingent on Congressional approval and funds, to furnish us with a nuclear propulsion plant to be fitted in a tanker-type vessel by June 1959. We are also asking them to submit other proposals for design studies and developments for a nuclear propulsion plan which may offer greater technical and economic advantages for the purpose of having a second ship in operation by June 1961."

Anticipating developments such as these, we at Kings Point have long been planning the program which will be required to train the officers of the future for the ships of the future. Our first task was to determine the qualifications required of the engineering officers of these nuclear ships-to-be. Fundamentally, the marine nuclear engineer will need to be a well qualified steam engineer with "something plus," and this something plus will involve additional education in nuclear physics, nuclear engineering, and prac-

tical experience in the operation of a reactor. * * * The responsibility of the Academy then is to produce engineers with a sound knowledge of marine steam propulsion plants, a background in nuclear physics and study in nuclear engineering.

For the past 14 years we have been in the business of training marine engineers, and the competency of our graduates is a matter of record. As early as 1949, we undertook to develop in our cadet-midshipmen an interest in nuclear energy, and at that time we sponsored at the Academy a public forum the Citizen in the Atomic Age, with Maj. Gen. Leslie R. Groves as the principal speaker. Since that time, we have arranged for a number of exhibits on atomic energy, including a permanent panel display showing the schematic flow of nuclear power from the point of its generation in the reactor, through the heat exchangers, to the turbine, to the generator, constructed by Westinghouse and given to us by the Hayden Planetarium; a model of a nuclear-powered merchant ship, provided through the courtesy of the Newport News Shipbuilding & Dry Dock Co.; a model of the *Nautilus* loaned by the General Dynamics Corp.; a power reactor exhibit loaned by Babcock & Wilcox; and a research reactor model provided by the American Machine & Foundry Corp.

In 1950 we gave our first course in the fundamentals of nuclear energy to a selected group of cadet-midshipmen. Since that time time there has been an increasing demand on the part of the young men for this course which as it is now given, includes a detailed study of the atomic structure and atomic particles, of electrons, protons and neutrons, of radiation instrumentation, of nuclear reactions, and of that most important of all known reactions—the fission of uranium—235.

As I said previously, our courses must be geared to the needs of the industry. It now seems that a nuclear-powered merchant ship may be authorized. We are now prepared to undertake the nuclear engineering phase of our program. In preparation for this day, several members of our engineering faculty have been doing graduate study in the field of nuclear engineering. With the beginning of the new term, in March, we hope to offer a course which will treat with nuclear theory, reactor types, and construction features; fuel and fuel elements, shielding problems; types and characteristics of coolants and coolant pumps; heat exchangers; radiation control; radiation detectors and permissible dosages; safety devices and instrumentation; shielding and insulation; radioactive waste disposal; operation, maintenance, and permissible repair procedures as applied to shipboard operation of a marine nuclear-power plant.

Ultimately, the training in reactor operation will need be a part of the engineering program at the United States Merchant Marine Academy. As more and more atomic reactors power our merchant fleet, the number of engineers trained in their operation must be expanded. At that time, the Academy should have its own training reactor in operation. While that day is still far in the future, we must continue to look ahead and plan in order that we may have ready the officers of the future to man the ships of the future.

A year or two ago, Mr. Jimmy Jemail, the inquiring photographer of the New York Daily News, asked me what I thought about flying saucers. I managed to get around that one by telling him that if and when flying saucers came into general use Kings Pointers would navigate them. I should like to say now, but in a more serious vein, that when atomic ships make their appearance, Kings Pointers will definitely operate them—not exclusively, but certainly well in the van.

Thank you, gentlemen.

Hon. Frank G. Clement, Governor of Tennessee, Addresses Dinner Honoring Cordell Hull, Statesman—Author of Good Neighbor Policy

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1956

Mr. EVINS. Mr. Speaker, on Friday evening, last, the Washington Committee of the Cordell Hull Foundation for International Education held a dinner meeting to honor the great Tennessean and also to discuss further plans for the education foundation which will honor Cordell Hull, distinguished Tennessean and late Secretary of State. The principal address of this occasion was delivered by Gov. Frank G. Clement, of Tennessee.

Governor Clement is one of the Nation's outstanding young men in public life and service and is a speaker of renown. As chairman of the board of directors of the Cordell Hull Foundation, Governor Clement is lending his energies and fine abilities to the promotion of this splendid work—to the creation of a living memorial and the perpetuation of the memory of Cordell Hull.

In this connection, Mr. Speaker, under unanimous consent, I include the address of Governor Clement before the Washington Committee of the Cordell Hull Foundation in the Appendix of the RECORD.

Governor Clement's address follows:

GOVERNOR CLEMENT'S ADDRESS BEFORE CORDELL HULL FOUNDATION DINNER, WASHINGTON, D. C., JANUARY 27, 1956

Tennessee politicians used to tell an anecdote on Cordell Hull. It may since have been attributed to others, but the old timers insist it originated with Hull. It was said that the then Member of the National House of Representatives was returning to Tennessee on the train in company with a fast-talking friend who, observing as they looked out of the window at a greening hill, a flock of sheep that had been newly sheared, said, "Why, look at these sheep; they've been sheared." And Hull, after a deliberate inspection, agreed, "Why, yes; they do seem to have been sheared on this side."

That aspect of Hull's nature was well known to his friends and acquaintances. But Cordell Hull was not only a cautious and matter-of-fact man, he also was a visionary.

It was the combination of his commonsense and his vision that made a reality out of our good-neighbor policy.

Good-neighbor policy. That phrase, as introduced by President Roosevelt in his inaugural address in 1933, had not been intended to designate any particular locality. But Cordell Hull then saw, as he later said—I quote him: "I felt that our principles could have little effect in the world unless they produced a bounteous harvest in our own neighborhood."

He then set out to make it mean something right here in the Americas. It was an arduous, and some thought, Quixotic undertaking, for the relations between the United States and the American republics to the south of us at that time were indeed vexed.

How well Hull succeeded is dramatically implied by the fact that the term "good neighbor policy" came to be the peculiar name by which United States inter-American relations were designated.

Yet, my distinguished listeners, I am not sure that even that tribute measures for us the significance of Mr. Hull's success, or the range of his vision.

Let us pause for a moment to place his arduous and quixotic undertaking in historical perspective.

When President Monroe enunciated his famous doctrine in 1823, we had but recently broken the political bonds of our own colonial condition and our main concern with the American Colonies to the south of us was that they not give way to a new and perhaps aggressive imperial power. Internally we were absorbed in the conquest of our own continent and could give no interest to the internal problems of Latin Americans. We remained sideline rooters during the following years in which Latin American republics established their independence and repelled aggression, until the final round. We did intervene in 1898, in what we called the Spanish-American War.

Under President Theodore Roosevelt, and then beginning to feel our industrial might, we developed what might be termed a big brotherly interest in the younger members of the American family of republics. It also bore the name of intervention.

World War I ushered us, with whatever misgivings, into the place of a world power—and the years following, chiefly because of our mass-production-technology system, increased our industrial might fantastically. We were beginning to mature. Yet our attitude of provincial impatience toward our fellow American republics did not change until Mr. Hull took office.

He has summarized the inter-American situation at that hour.

"Over a long period until almost 1933 the United States had pursued policies toward some of the Latin American nations of so arbitrary—and what some of those countries considered so overbearing—a nature that prejudice and feeling through Central and South America against our country were sharp indeed.

"Our inheritance of ill will was grim. It was probated under the name of intervention: intervention in Panama to separate Panama from Colombia and build the Panama Canal; intervention in Mexico; intervention in Cuba; intervention in Haiti; intervention in Nicaragua.

"Piled high on political antagonism was economic resentment. The high tariffs of preceeding administrations, coupled with the panic of 1929, had brought grave economic distress to the Latin American countries."

Some of you may remember that our Latin American trade shrunk by three-quarters between 1929 and 1933. And the year before the Democrats came in, some of the Latin American countries, stung by our high tariffs, actually conferred with one another to form a customs union for defensive action against us.

"Good neighbor policy." Hull saw that it had—in his own words, "to embrace a broad and basic set of mutually beneficial principles, political, economic and moral. But policies and principles were not enough. * * * We should have to give them acts as well as words * * * but action, even though right, was not enough. It also had to be highly delicate and tactful."

And he made the bedrock of those mutually beneficial principles: "A religious adherence to nonintervention."

Coming from the reconstructed South, Mr. Hull knew something about intervention from the Latin American point of view.

"Highly delicate and tactful"; in those words Hull expressed the essential quality of the action that has developed good neighborly relations among the Americas, and in

those words he still points the way to the future.

Even in the disorganized and dismal days at the beginning, he spoke of the future with confident prophesy. "I think that commerce will develop and progress more during the next generation through the leadership of the people of North and South America than any other people on the planet."

And true to that prophesy we in the United States today find that Latin America provides our greatest nondomestic market—our trade last year amounted to about $3½ billion each way, or 40 percent of all our foreign trade.

I will not labor here a record that I am sure you are all familiar with. It should suffice for me to recall the four inter-American conferences in which Hull personally led the United States delegations in the succeeding 7 years—Montevideo in 1933, Buenos Aires in 1936, Lima in 1938, and Habana in 1940, where his now historic Pact of Habana, guaranteeing hemisphere solidarity in case of armed attack, was adopted unanimously. Actions taken at these meetings formed the keystone of the present Organization of American States.

I believe we can all agree that the good-neighbor policy among the Americas will take its place alongside the Monroe Doctrine in its historical significance and that Cordell Hull is its father.

Perhaps more clearly than any other North American of his day, Cordell Hull saw how much good neighborliness among the Americas depended on mutual understanding. As clearly, he saw the role of reciprocal education in developing it.

A group of leaders who believed in his vision and were concerned for the development of inter-American relations established in Nashville about 5 years ago the Cordell Hull Foundation for International Education, with his blessing.

"I am deeply grateful for the honor you have conferred upon me by associating my name with this foundation for closer cultural cooperation between the peoples of our own, and the other American Republics, with whose leaders it was my privilege to be associated so many years," he said.

"Better understanding and collaboration among the free nations of the world, and more intimate contacts among their citizens, are desperately needed in the present world situation. It is especially important that the citizens of each of the independent countries of this hemisphere cultivate a proper knowledge and appreciation of the institutions and civilizations, the accomplishments and aspirations of all the others. There is no more effective way in which to further this cause than through a properly organized educational interchange such as that in which your organization is engaged.

"Only through such activities can we hope that men and women everywhere will keep alive and constantly renew faith in the dignity of the individual, in institutions of government founded upon the consent of the governed, and in enduring peace based on freedom and justice. These are the abiding values of a truly Christian civilization, and their preservation requires faith in their eternal worth, stanch determination to uphold them and willingness to make whatever sacrifices may be needed to that end."

The foundation's development and progress originally was assigned to Vanderbilt University. The leaders found, however, within a short time, that it needed wider horizons and contacts than we were able to provide in Tennessee, and at this juncture International House in New Orleans renewed its previous offer to administer the work since it was embarked upon similar educational activity and had accumulated much experience and background in educational matters.

About 2 years ago, the foundation was transferred from Vanderbilt University, with Tennessee's blessing, to New Orleans where International House generously undertook by contract for $1 a year, to carry forward this great program.

After Mr. Hull's death a few months ago, the late Mr. R. S. Hecht, Mr. A. E. Hegewisch, and Mr. Charles Nutter, officers of the foundation, paid me a call in the State capitol in Nashville, and offered me the chairmanship of the board. In my capacity as Governor of Tennessee, I accepted immediately and henceforth the governor of the State that gave Cordell Hull to the world will hold this high honor.

It is in behalf of the foundation and its 5-year campaign to raise $10 million endowment that I come before you this evening—come before you, I may say, wholly convinced of its importance.

Wholly convinced that the $10-million endowment will prove to be, not a donation on the part of those who contribute it, but an investment.

An investment that will repay itself in the stimulus it will bring to economic development of undeveloped areas in the Americas—an investment that will multiply and fortify many opportunities there for profitable enterprise.

An investment that will repay itself in the peace and security of the Americas.

And my conviction in this matter, my friends, does not come of hearsay. Nor do I have it merely on the authority of others. A few weeks ago, I completed a month's tour of South America. That inspection has deeply impressed me with the importance of the Cordell Hull Foundation's inter-American aims.

There are many here who know much more about South America than I do. My brief brush with that continent and our mutual problems and opportunities there has not qualified me as an expert. But I offer myself as exhibit A: An average American citizen who has been given the unusual opportunity of a 30-day tour in the company of a select group of Latin-American-minded businessmen, a tour through nearly every South American country, where in each country leaders received us sympathetically and to whom we listened and with whom we exchanged views about our mutual problems.

I assure you I am not an expert. But no man can travel 15,000 miles on a mission, visit 10 countries and 16 cities, talk with the presidents of 5 Republics, the ministers of education of 9 with hundreds of other people from ambassadors to oxcart drivers, without forming some impressions and even a few opinions. I will try to confine this to my impressions.

The Americas. God and geography made us neighbors. What with one small hemisphere among us, nothing could be more obvious than the need to be good neighbors. And we have been, since 1933, increasingly good neighbors.

Let me remind you how good with a few summary facts and figures—and how great the need to be good.

Latin American markets are as important to the United States as all of Europe and more important than Asia, Africa, and the Oceania combined.

About 30 percent of all United States private long term foreign investment is in Latin America—more than $6 billion.

The economic wellbeing of every section and every special interest group in the United States is affected by our relations with Latin America.

Latin American military strength is relatively small, yet Latin American resources are vital to the strength of a free world.

Therefore, the strength of the United States is an essential to the freedom, independence, and prosperity of the other nations of this hemisphere.

Highly disciplined groups of Communists are busy, night and day, illegally and openly, in the American Republics. Their success anywhere in Latin America would quickly change all security maps.

None of my fellow Americans that I met on the southern continent was looking for a handout. What they did seek universally was an exchange of goods and services for mutual profit. They lack highways, they lack industry, they lack industrial know-how—in most of the South American countries. But their undeveloped resources are enormous and South America's population and wealth are growing faster than any comparable territory in the world today.

The present rate of 2.5 percent population increase per year exceeds that of any other major region of the world, and is at least twice that of the world average.

The rise in wealth and economy is double that of the population rise.

No one denies that these nations face great problems but the opportunities they offer are far greater.

If we have been important to each other in the past, it is my belief that that is not even a preview of what we can be to each other in the future, and it is scarcely a glimpse of the mutual political, economic, and cultural worth that a closer relationship might bring to us. There is, however, a condition to our attainment of this happy state.

A distinguished citizen of Bolivia, last year reviewing the wide cultural differences between Latin America and the United States, concluded, "then the Latin American and the North American ought to admit, man to man, that no fit of enthusiasm, over a couple of cocktails, can make either of them start a new life just to please the other fellow."

I agree with the soundness of that view. But even that sort of a man-to-man agreement calls for a greater understanding of our differences than many of us now have.

"Abiding cooperation between the United States and the other nations of this hemisphere will not be the result of wishful thinking or mere accident," said Milton Eisenhower's report to the President. "Rather, it will flow only from adherence to consistent programs, honorably and consistently observed." Let me say amen to that and continue to quote as he puts first things first—I quote:

"The first requisite for good relations among nations is, as we have said, genuine understanding—understanding among governments and peoples." End of quote.

And there is no other known way of bringing about genuine understanding, save by education—education in some one form or another. And, as such, Cordell Hull recognized the importance of the educational foundation in behalf of which I appeal to you tonight.

The idea is not new to us. Already thousands of Latin American students are attending our universities, and we have opened our doors and our hearts to them all. They come among us in increasing numbers each year, and we learn things from them and about them, and they take home the things we know to use in development of their own countries. We welcome this contribution to a developing profitable relationship—we want to expand it.

Doctors trained in this country joined Latin-American-trained doctors in stamping out many diseases which help to keep the population increase in check, a factor promarily responsible for the phenomenal population growth noted. Our engineers, our scientists, our chemists and others have done much to train Latin Americans for work in Latin America, and American equipment has moved in rapidly behind this trailblazing.

The student of today is the leader of tomorrow—be it in finance, business, industry or government. Within 20 or 30 years from

the day a Latin American student graduates we may expect to find him in a position of importance and trust.

But we have little more than brushed the surface. And there seems to be in this country among many a faulty conception of the sort of educational interchange that is needed. It seemed to me better understood everywhere I went among the South American countries.

Every minister of education, every President with whom I talked was alert to the opportunity that the Cordell Hull Foundation offered for training and educating the youth of their respective countries. And they were enthusiastic about it.

Many of them were ready to take immediate advantage of the foundation's scholarships. For example, in Argentina, Dr. Atilio Dell 'Oro Maini proposed at once to send a doctor to the United States to make specialized studies in tuberculosis and to observe United States development in this field.

And I might add here incidentally, that since Tennessee has one of the best tuberculosis experimental centers in the country, I offered to make the way smooth for him with the State institutions, should he be sent to Tennessee—we were doing a brisk business there right away.

And again in Ecuador, Dr. Hector Romero Menendez of the University of Guayaquil, proposed to bring a group of from 12 to 15 students from his school of economics over here for a 7-weeks intensive course in English, history, economics and United States business know-how.

As I said, the South American educational leaders were alert to the importance of education to our mutual understanding and they were warm in their endorsemnt of the Cordell Hull Foundation, but everywhere they said the same thing.

The affable and witty President of Uruguay, Luis Batlle Berras, put it pleasantly. When we told him that we were promoting a reciprocal education program through the Cordell Hull Foundation, he said quickly, "We are way ahead of you in that respect. If you will stop any school boy in my country, be he in the city or the country, you will find out he knows a lot about your country."

Then he shrugged and added with a smile, "I plan to be in the United States soon, but I will not embarrass any American school boy during my visit by asking him the same question about Uruguay."

Yes, everywhere we went educational leaders were intensely interested in the Cordell Hull Foundation and their chief interest was in the reciprocal aspect of the educational interchange of our program. This is an aspect of mutual understanding that we in the United States have been inclined to overlook. In viewing the undeveloped areas of various American lands to our south, we are sharply aware of what they lack in the material form of roads, and mills and sewers and plumbing and automobiles and in the skills of merchandising and manufacturing and technical know-how generally, that contribute to modern industrial production. In short, we have been keenly aware of their educational needs to understand and deal with us, but we have been unaware of what we need to know—or how we need to know it—to understand and deal with them.

It is the purpose of the Cordell Hull Foundation to promote among the peoples of North and South America a reciprocal educational program.

Our incidental mission on the southern continent was to reorganize the committees, local to each country, for promoting interest in the foundation scholarships and screening applicants and to organize new committees in countries where they did not exist. This was successfully carried out and we are prepared greatly to extend the service that the foundation may perform.

We hope that the funds we plan to raise will educate at least 300 worthy and needy students annually in a wholesome interchange between the United States and the other American republics.

This prospect would warm the heart of Cordell Hull because he had a vibrant and constant interest in education as a means to fuller understanding between the peoples of the Americas.

We feel that it does us honor in Tennessee to honor the memory of one of us who came from the Tennessee hills to leave his mark upon the world—

Who served 12 troubled years, longer than any other man, as Secretary of State of our Nation.

Who established the good neighbor policy in Latin America and launched reciprocal trade treaties that still stand as the most concrete advance toward the removal of trade barriers.

Who fathered the United Nations, man's current forum for peace and order in the world and civilization's best assurance against another fatal world war.

And whose career of international achievement won him the Nobel peace prize, man's greatest recognition and accolade to man.

And we feel that there is no more fitting way to honor him than through the living memorial of this educational foundation that bears his name.

The General Assembly of Tennessee found the Cordell Hull Foundation of sufficient worth as a perpetual memorial to an illustrious son—and of sufficient worth to the future peace and development of Tennessee and the United States to make an appropriation for the foundation 2 years ago. I confidently expect to see the next General Assembly of Tennessee renew and increase the amount of that appropriation.

Yet the foundation program is not a local enterprise, either in its service or in our responsibility for it and I recommend it to the consideration of our national Government as well as to the consideration of private citizens in all parts of this country.

And to you who have or seek to have a material Inter-American interest, I repeat that this continent to the south of us is the fastest-growing region on earth. In the next half century, Latin America's population is expected to double that of the United States and Canada. The greatest market the world has ever seen or perhaps will ever see, is growing with explosive force before your very eyes.

Collectively, on both continents, we have still greater and higher aims. We are mutually interested, in the first place, in peace with honor. In the interest of this honorable peace we put up a united front in the family of nations. We must not be content, however, to be united and weak in spots; hence, our mutual economic development is essential to bring to this union all the strength we can muster.

In the name of the Cordell Hull Foundation, I want to propose a further and natural development in the Good Neighbor policy—and one that would warm Cordell Hull's heart—to the end of introducing a new era among us. I want tonight to dedicate the Cordell Hull Foundation to the achievement of that new day—the day in which good American neighbors grow into best friends.

Friendship is a two-way street. We can accomplish only half of our purpose by bringing South American students to the United States. We must send our boys and girls to Latin America, if we are to beget the understanding on which real fellowship builds.

The Master said, "It is easier for a camel to go through the eye of a needle, than for a rich man to enter the Kingdom of God." Now we know that that won't keep a rich man out of Heaven, but it does give him a heavier responsibility than those more lightly burdened. As with a man, so with a nation. And let us remind ourselves, those of us who constitute figuratively rich Uncle Sam that we have the greater responsibility—the responsibility to stand united and strong, but also to offer hope to the hopeless and relief to the distressed of the world.

At our last stop, Bogota, Colombia, I sat in the office of the Minister of Education, Dr. Gabriel Betancur Mejia. I had told him we were already good neighbors, now we wanted to be become best friends. He smiled and replied, "I agree. But friendship can only come through faith; faith in each other, and in God."

One day, during my stay in Brazil, I stood on top of Corcovado Mountain at the foot of the famous statue there and looked back toward the valley, where, below a broken strata of fleecy clouds, there appeared mistily the spires and towers and structures of the distant city of Rio de Janeiro and, abutting it, the bright water of the bay and beyond, the plain, stretching away out of sight. And I remembered I was so high up that far below me, I could see a transport plane, like a metallic dragon fly, approaching the city.

Then I looked upward at that giant, white, marble figure of the Master—that mountaintop, overshadowing, watchful, gentle-faced figure of Jesus Christ—and I knew in my heart that I faced the symbol of inter-American unity. I knew in my heart that, whatever our future human failures might be, as long as the spirit here venerated watched over us and received our worship, the way to fast friendship was sure.

I thank you.

Statehood and Defense

EXTENSION OF REMARKS
OF

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1956

Mr. BARTLETT. Mr. Speaker, under leave to extend my remarks, I should like to bring to the attention of the Members an editorial from the San Francisco Examiner reprinted in the January 14, 1956, issue of the Anchorage (Alaska) Daily Times:

FIVE MILES AWAY

The political news from Washington gives the strong impression that Alaskan and Hawaiian statehood bills in the new session of Congress will have the support of the administration, and if true this is important news.

For some inexplicable reason the Eisenhower administration opposed statehood for Alaska at the last session, although approving the same status for Hawaii, and since the two matters were considered jointly both fell by the wayside.

This was unfortunate for many reasons, first because Alaska and Hawaii are equally and fully entitled to full membership in the American family of States, and their people have been rated as second-class citizens and Americans too long.

The second and bigger reason is that the progress and prosperity of the whole Nation would be served in a major way by taking Alaska and Hawaii into the Union.

The third reason and biggest of all is that the security of America urgently requires that Alaska and Hawaii be integral parts of the United States and not remain as vulnerable appendages and mere expendable outposts as they are now and will continue to be as long as statehood is denied them.

For a background against which this third and biggest reason may be properly viewed,

we recommend the appraisal given by Gen. Joseph H. Atkinson, the American military commander in Alaska, in a copyrighted interview with the magazine U. S. News & World Report.

His primary interest is of course in Alaska, and since there is not much controversy over Hawaiian statehood any more—it simply got boxed out in the Alaska debate—his remarks apply particularly to the wisdom and the need of getting our northern outpost into the family.

What General Atkinson said was that the people who think of Soviet Russia as being remote from America are making a bad mistake.

Declaring that if America is ever attacked by Soviet Russia the shortest route and quickest way for the enemy to reach us will be from the Murmansk area and the Siberian Peninsula across the polar basin, he said this puts the Russians not thousands of miles but a mere stone's throw away.

"Their seacoast peninsula out there through the Bering Strait is only 55 miles from Cape Prince of Wales, American territory on the Seward Peninsula, so that the 2 peninsulas are only 50 miles apart. Of course, our closest geographical point of contact with the Soviet Union is at the Big and Little Diomedes—Big Diomede belonging to the Soviet, and Little Diomede belonging to us, and that's only a difference of 5 miles."

With our potential enemy 5 miles and fewer minutes away, it is suicidal folly to leave anything undone that might make Alaska less vulnerable to attack.

Until Alaska is made a State, we have not done all that is necessary and all that is in our power to make the risks of war too great for taking by the Russians.

Subcommittee on Post Office and Postal Operations

EXTENSION OF REMARKS
OF

HON. CHARLES S. GUBSER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1956

Mr. GUBSER. Mr. Speaker, yesterday the Subcommittee on Post Office and Postal Operations, of which I am a member, submitted its report.

The committee made no attempt to interpret the data presented, and I have no quarrel with the report. However, I do believe that it is possible for the report to be misinterpreted unless additional facts are given. Knowing that the committee under the distinguished leadership of the gentleman from Texas [Mr. DOWDY] does not want such misinterpretation to result I submit for the RECORD the statement of the United States Post Office Department analyzing the report:

STATEMENT OF THE UNITED STATES POST OFFICE DEPARTMENT ANALYZING THE REPORT OF JANUARY 30, 1956, OF THE SUBCOMMITTEE ON POST OFFICE AND POSTAL OPERATIONS, UNITED STATES HOUSE OF REPRESENTATIVES, ON GENERAL AND FINANCIAL MANAGEMENT, DECENTRALIZATION, AND REORGANIZATION OF THE POST OFFICE DEPARTMENT, JANUARY 30, 1956

The Subcommittee on Post Office and Postal Operations (of the House of Representatives Committee on Post Office and Civil Service) has released its report of January 30, 1956, entitled "Report on General and Financial Management, Decentralization, and Reorganization of the Post Office Department."

While the report disclaims any intention of interpreting figures, it nevertheless presents data which, standing alone, could lead to incorrect inferences unless accompanied by fuller analysis.

The Post Office Department has therefore prepared the accompanying statement in an effort to provide an authoritative and more complete interpretation of the figures reported in summary in the subcommittee's report.

The Department believes that the statements, figures, and facts herein will clarify any inquiry that might be prompted by a reading of the subcommittee report.

FISCAL ADMINISTRATION

The subcommittee report, by not interpreting the figures used, unfortunately fails to give the present postal administration deserved credit for the economies it has initiated and the savings it has captured.

Table C of the subcommittee report shows a reduction, between 1953 and 1955, of $62 million in the operating deficit; this is described as being related to mail volume and management activities. At the bottom of page 2, the report implies that costs increased substantially for personnel, facilities, and management, and that these increases were overcome by relief from airline subsidies and savings in transportation.

The $62 million figure, being a single net amount which combines the effect of increased volume, savings, capital expenditures, and many other elements, effectively obscures most of the facts about the operational savings achieved by postal management since 1953. The implication that expenses increased considerably and that these expense increases were largely offset by relief from subsidies and transportation savings is similarly unfortunate.

An accurate method of measuring improvement in efficiency of the Department is to compare the change in operating expenditures between 1953 and 1955, and then take into account the change in total volume of mail handled. To do this, of course, actual expenditures must be adjusted, as the subcommittee report does to some extent in its table C, to eliminate the effect of wage-rate increases and other items not equally affecting the various years, and other factors not relating to the efficiency of operations.

Exhibit I, attached hereto, is a summary showing the various major elements making up the changes in figures between these years. It is based upon and ties into the subcommittee's summary statement of 1953 and 1955 expenditures appearing in its table A.

This new comparison in exhibit I shows that the Post Office Department decreased its operating costs in 1955 from 1953, despite the fact that it handled 8.4 percent more mail in 1955 than it did in 1953:

[In millions]

	1953	1955
Total costs (table A subcommittee report)	$2,722.6	$2,712.2
Deduct airline subsidies and other subsequently eliminated costs	93.2	----------
Total	2,629.4	2,712.2
Add amounts borne in 1955 for subsequently added costs of pay increases, fringe benefits, and railroad rate increases	78.5	----------
Total	2,707.9	2,712.2
Less increase in capital expenditures	----------	13.5
Comparable costs	2,707.9	2,698.7
Percent decrease	----------	.4
Mail volume (millions of pieces)	50,948.2	55,233.6
Percent increase	----------	8.4

In terms of cost per piece of mail handled, the foregoing table reveals that in 1953 the cost averaged 5.32 cents compared with 4.89 cents for 1955, a reduction of 8.1 percent.

Even the foregoing is not complete in measuring efficiency. As shown in exhibit I, one of the major increases in cost in 1955 was the deliberate and necessary expansion of the city carrier service to meet the needs of the growing geographical spread of urban and suburban populations. In order to meet these uncontrollable service needs, the Department added more than 7,000 carrier routes in the 2-year period and thereby increased its expenditures for carrier services in 1955 about $44.7 million over 1953 (excluding the wage increase).

The significance of this service expansion may be measured by the fact that the number of man-years of carrier service increased by 10,000 in 1955 over 1953 (8 percent); the number of carrier routes increased 7,000 (9.3 percent), and the number of families served increased by 3.5 million (11.3 percent).

If this abnormal service situation had not existed, the comparable expenditures in 1955 would have been 2 percent lower than 1953, and the unit cost of handling a piece of mail would have shown as 4.81 cents compared to 5.32 cents for 1953, a reduction of 9.6 percent.

With all items on a basis of accounting comparability and with increases in capital expenditures and abnormal circumstances eliminated, these statistics are the measure of the management efficiency of the Department during this period. This is the way the efficiency of any business would be measured.

The statement of the subcommittee report that the reduction of the deficit is due to the absence of major increases in cost coupled with some postage-rate increases and relief from airline subsidies overlooks some major factors. The data in the preceding analysis and in exhibit I includes all factors, and the favorable results shown thereby are supported by data as to the usage of manpower in handling the increased mail volume.

The following is a table making this comparison between 1953 and 1955:

	1953	1955	Percent change
Total man-years	510,439	512,047	+0.3
Less city delivery	124,312	134,254	+8.0
Man-years excluding city delivery	386,127	377,793	−2.2
Mail volume (billions)	50.9	55.2	+8.4

Thus, despite the 8.4 percent mail volume increase the total years of employment increased only three-tenths of 1 percent.

Actually the record of this administration of the Post Office is better than that. If city-delivery service is excluded as a factor of comparison (since as previously indicated it is influenced primarily by residential expansion and not by increase in mail volume) there has been an actual decrease in manpower usage in post offices and elsewhere of 2.2 percent since 1953. With an 8.4 percent increase in volume this indicates an increase in working efficiency of more than 10 percent.

TRANSPORTATION COSTS REDUCED

The subcommittee report on the savings effected by the Department in the area of transportation is accurate, as far as it goes, and reflects considerable credit on the present administration.

It is true as the subcommittee report states that (after eliminating the effect of railroad rate increases) there was a saving of $47.3 million in the transportation of mail by rail.

But again, this is only a fraction of the story available by reference to all the figures.

The subcommittee properly notes the fact that certain events occurred to reduce trans-

portation costs which are not really creditable as economies realized by the postal management.

Specifically these items consist of $70.7 million in relief from airline subsidies; reimbursement from the military for the cost of transporting surface mail to the Armed Forces overseas (actually amounting to $2.5 million); and reduction in backlog in foreign terminal and transit charges in 1953 (the amount applying to prior years is actually $7.1 million). The sum of these costs borne in 1953 but not in 1955 is $80.3 million (see exhibit I).

As the subcommittee's table A clearly shows, the net reduction in all transportation costs from 1953 to 1955 was $118 million, after absorbing a railroad rate increase of $31.3 million. This means there was a total reduction in transportation costs of $149.3 million in 2 years. Of this only $80.3 million was the result of the relief from airline subsidies and other items ctied by the subcommittee.

The management savings in transportation, therefore, amount to $69 million in the 2 years ($149.3 million less $80.3 million). This amount includes savings in rail transportation (as stated by the subcommittee), air transportation (including savings resulting from rate reductions ordered by the CAB upon petition by the Department), and miscellaneous net savings in all other transportation costs.

This is a reduction of 13.6 percent in transportation costs achieved in the face of an 8.4 percent increase in mail volume.

Two further points regarding transportation in the subcommittee's report warrant comment. One is that the discontinuance of considerable weekend RPO service which it mentions as a factor in producing savings was a discontinuance of unnecessary service that did not affect the delivery of the mails adversely.

The other is that the acknowledgment that the Department saved $27 million per annum under new arrangements with the railroads does not credit the fact that this was the result of many hundreds of individual actions negotiated by the Department to bring railroad charges to a space-used basis in order to make these charges competitive with other transportation means.

POST OFFICE DEPARTMENT REORGANIZATION AND DECENTRALIZATION PROGRAM

As the subcommittee report states, decentralization of postal operations was urged as early as 1908 by the Penrose-Overstreet Commission. It was also urged at various times in the 45 intervening years as the accumulation of redtape in the Department grew increasingly serious.

By November 1953, when the program was begun by the present administration, the postal system had grown to five times the size it was in 1908, when the need was first officially advanced.

The report, while not actually attacking the principle of decentralization itself, implies criticism of the manner in which the Department has put it into effect.

The subcommittee report states that the Department did not follow the recommendations of the first Hoover Commission to the letter. Actually, the Department established its regionalization under the guidance of the firm of management consultants that had first investigated the Department for the Hoover Commission and formulated its recommendations.

There were some slight departures from the original recommendations, since refinements and modifications are bound to take place in any such massive undertaking when broad plans are being translated into actual operations.

It should be added that the Hoover Commission recommendation for decentralization was made during the previous administration and was available to the then Postmaster General and his Deputy for 3 years, but was not acted upon in that period.

There is in the subcommittee report an implication that regionalization is resulting in an elaborate superstructure of supervision with the addition of numerous new positions.

The implication is not supportable. In any case, the subcommittee report does not indicate that most of these people are either handling workloads previously handled in Washington or in the field, or they are performing specialized and technical functions that did not previously exist. The effect of decentralization has been to contribute to a reduction of total payrolls, not to increase them. This subject is discussed in detail in the section of this memorandum entitled "Cost of Reorganization."

The subcommittee report states that decentralization now "sets up three new levels of supervision and administration."

This is an unfortunate conclusion. By decentralizing the postal service the Department has actually removed many excessive layers of supervision which were superimposed on postmasters within the Department in Washington itself and has reduced those levels to a maximum of three. A postmaster with a problem today finds his answer, depending on its scope, from 1 of these 3 levels, and these levels are close at hand. The general function of the headquarters staff is rapidly being converted to that of a policy-making, research, executive-control, and program-review body only.

The subcommittee report also suggests that the creation of the position of district manager "will create a serious impediment to postmasters in the management of their offices."

The exact opposite appears to be the case in actual experience. On January 16, 1956, the executive committee of the National Association of Postmasters of the United States went on record, at their regular annual meeting, with the following resolution:

"Whereas Postmaster General Summerfield, through the progressive program of decentralization, now nearing completion by the Post Office Department, has given home rule to the postal establishment, and

"Whereas the aforementioned program of decentralization has not only improved the efficiency of the postal establishment but has also added dignity and security to the position of postmaster, and

"Whereas the postmasters of the United States have been immeasurably helped in the performance of their duties by the highly qualified regional staffs appointed by the Department, and especially by the district managers with whom they work on the closest possible terms: Be it

Resolved, That the executive committee of the National Association of Postmasters of the United States, meeting in regular session January 16, 1956, at Washington, D. C., commend and thank Postmaster General Arthur E. Summerfield for his courageous pioneering and planning in carrying out this massive program of decentralizing the great United States Postal Establishment."

Department files are filled with letters from grateful postmasters commending the decentralization program in general and their district managers in particular. State organizations of postmasters have passed similar resolutions.

A typical observation, from the editorial column of the September-October 1955 issue of the Gator Postmaster (official organ of the Florida chapter of the National Association of Postmasters) seems particularly relevant:

"Assistant District Manager Johnny Thornton (district 7, Miami) was by our post office today. His visit brought to mind what a fine, capable hardworking team, District Manager Eugene Dunlap and Assistant Manager Thornton make for district 7. It also reminds us of how much nearer the postmasters feel to the Department under decentralization. Requests and questions get so much quicker response than in the past. We can only feel that with a huge operation of the magnitude of the Post Office Department, the region and district setup make for a much more efficient organization. The district manager, the assistant district manager and the regional office, know much more about our individual offices than could ever be possible with a centralization of authority in one location. May I comment that all sentiment which has come to the attention of the editor has been 100 percent in enthusiasm for the new program. The regional and district offices have been lavish in their praise of our cooperation. We want them to know we feel the same way."

To imply, as the subcommittee report does, that regionalization will mean making the postmaster an impotent figurehead and could lead to the elimination of the office entirely, is to create a straw man. The Department has no more intention of doing this than it has of eliminating the mail service itself. The purpose of regionalization is to help the postmaster do a more efficient job for his patrons at less cost to the taxpayer.

The district manager represents the backbone of the entire regionalization program.

The substance of the matter is:

1. Decentralization was badly needed when the present administration undertook it.

2. Decentralization is working amazingly well, considering the short time it has been in effect, both from the point of view of better service and from that of greater economy.

3. Decentralization is a decided factor for better morale among all employees since they can have their problems settled swiftly by informed personnel on the spot, instead of having to wait months and even years, as they did in the past, to get answers to their questions.

4. Decentralization is welcomed and praised by those the subcommittee is most concerned about, the postmasters themselves.

COST OF REORGANIZATION

Under this heading, the subcommittee report appears to demonstrate two major points: (1) That the new organization of headquarters and regional offices has caused an increase of 1,446 in personnel in 2 years but no region is completely organized and fully staffed at this time. (2) That the cost of general administration functions in 1956 will be $15 million more than the cost for general administration in fiscal 1953.

These are wholly incomplete indications as to the staffing and cost of the present administration's reorganization. Both figures require analysis.

The fact is that many functions and a large amount of workload have been transferred from post offices to regional offices and now appear in administrative costs for the first time. Although appearing to increase general administrative expenses, these transfers have actually resulted in material savings to the postal service as a whole. Furthermore, important amounts of the increased costs have nothing whatever to do with the reorganization program but are new or augmented management functions that will pay for themselves many times over in operational savings.

The total increase in staffing in administrative positions in Washington and in the regional offices, between January 1, 1953, and

October 31, 1955, was 1,674 (excluding inspectors). This increase included the following:

Increase in positions in the regional controller offices caused exclusively by the transfer of workloads from post offices to permit centralized disbursing, vehicle accounting, retirement accounting and mechanized payrolls	883
Transfers of supply functions and vehicle supervision from post offices to the regional offices	175
Addition of professional and technical personnel in the fields of industrial engineering, rate research, internal auditing, statistical analysis, personnel, transportation research, systems and procedures, and others, in headquarters	243
Total	1,301

Apart from these listed changes, none of which is due to the decentralization of management, the total increase in administrative staffing is only 373 persons. The 883 persons added to the regional controller offices in the accounting and disbursing area (when increased by 280 more authorized) will ultimately absorb an estimated workload of more than 4,000 persons previously engaged in this work by old-fashioned methods in post offices. This program is well under way and will be completed in 1956.

The increase of $15 million in apparent dollar costs of general administration is subject to the same kind of analysis. The following table shows the factors which have brought about the increase in this category of expense from 1953 to 1956:

[In millions]

Financial and disbursing functions transferred from post offices to regional offices (resulting in reduction in post office expenses by about $18.4 million)	$4.6
Increase in inspection service to meet conditions of increased depredations, greater volume of business, etc	2.5
Establishment or expansion of industrial engineering, rate research, internal auditing, statistical analysis, transportation research, systems and procedures, etc	1.5
Increased research and development work on labor-saving devices	0.6
Total not related to regionalization program	9.2
Increases that might be attributable to regionalization	6.6
Total increase, 1956 over 1953	15.8

At the most, therefore, the increase in general administrative expenses attributable to the regionalization is only $6.6 million. This is less than half of the savings achieved simply by transferring certain finance functions from the post offices and mechanizing them in the regional offices. The value of the technical and professional people added to the administrative staff has been well demonstrated by the substantial savings realized in transportation, personnel, and other costs as already demonstrated by the Department. It is confidently expected that these savings will not only recur each year under the new organization, but will continue to grow as the full benefits of modern business methods and skills are felt throughout the entire postal service.

NOTE.—The Department intends to give full consideration to the seven recommendations of the subcommittee. This does not mean that the Department agrees at this time with any or all of them.

EXHIBIT I.—*Post Office Department analysis of changes in expenditures, fiscal years 1953 and 1955*

[In millions]

	Expenditures as shown by table A of subcommittee report		Increase or decrease (−)	Changes attributable to management action and volume changes		Capital and major service expenditures		Changes attributable to other causes	
	1953	1955		Increases in costs	Decreases in costs	Increases in city carrier service	Increases in capital expenditures	Increases in costs[1]	Decreases in costs[2]
Personnel:									
Postmasters	$133.5	$136.1	$2.6		$0.1			$2.7	
Supervisors and clerks in post offices	926.7	943.5	16.8		1.7			18.5	
City and special delivery	502.2	556.9	54.7			$44.7		10.0	
Rural carriers	192.4	194.9	2.5		1.3			3.8	
Custodial salaries	58.0	59.5	1.5	$0.3				1.2	
Vehicle service salaries	32.0	33.3	1.3	.7				.6	
Postal transportation service salaries	181.0	180.2	−.8		4.4			3.6	
Total field salaries	2,025.8	2,104.5	78.7	1.0	7.5	44.7		40.4	
Facilities:									
Rents, including allowances, 4th class	31.3	36.3	5.0	5.0					
Local vehicle transportation and carfare	24.0	27.4	3.4	3.4					
Purchase of vehicles	1.0	5.4	4.4				$4.4		
Communications service	1.9	2.4	.5	.5					
Field utilities, building supplies, and maintenance	13.3	19.7	6.4	2.9			9.1		
Equipment shops and field supplies	28.3	33.9	5.6						
Stamps and accountable paper	14.5	7.4	−7.1	.5					$7.6
Total facilities	114.3	132.4	18.1	12.3			13.5		7.6
Transportation:									
Water transportation	17.5	12.0	−5.5		3.0				2.5
Foreign terminal and transit charges	17.3	6.2	−11.1		4.0				7.1
Truck transportation	70.9	72.9	2.0	2.0					
Railroad	313.1	297.2	−15.9		47.2			31.3	
Air transportation	135.9	48.5	−87.4		16.7				70.7
Total transportation	554.7	436.8	−118.0	2.0	70.9			31.3	80.3
General administration	21.5	29.5	8.0	7.6				.4	
All other expenditures	6.2	9.0	2.8	1.7				6.4	5.3
Total expenditures	2,722.6	2,712.2	−10.4	24.6	78.4	44.7	13.5	78.5	93.2

[1] Salary and fringe benefit increases required by law, and railroad rate increases.
[2] Airline subsidies and other costs in 1953 subsequently eliminated.

NOTE.—Figures do not necessarily add, owing to rounding.

Reds Winning Asia on United States Fumbles

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, January 31, 1956

Mr. HUMPHREY. Mr. President, a good many of us are increasingly concerned over the obvious failure of our policies to make headway in Asia. The short-term consequences of this failure are becoming more and more obvious. The long-term consequences are incalculable.

A succinct and important analysis of our present difficulties in Asia has just been prepared by Dr. Hans J. Morgenthau, the distinguished director of the University of Chicago's Center for the Study of American Foreign Policy. Mr. Morgenthau has recently returned from a trip to the Far East, and his article appeared in the Washington Post on January 29, 1956.

I commend the article for reading by my colleagues, because I think it places proper emphasis on some shortcomings in the policies which are presently being pursued.

I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REDS WINNING ASIA ON UNITED STATES FUMBLES

(By Hans J. Morgenthau)

The traveler returning from Asia carries with him three lessons for American foreign policy:

That communism is irrelevant as an ideological issue; that the Soviet Union and Communist China are winning the cold war, and that the deterioration of the American position is due primarily not to its intrinsic weakness, but to our identification with political, military and economic policies which are foredoomed to failure.

Wherever communism has been successful or has made inroads in Asia, it has done so

not because it has been able to attract the masses to its philosophy, but because it has offered, or seemed to offer, remedies for specific grievances. Similarly, the relative lack of success of Communist infiltration in Hongkong, Cambodia and Thailand is directly proportionate to the relative lack of grievances which Chinese communism could exploit.

Conversely, the three mass defections from Chinese communism must be attributed not to anticommunism per se but to specific and in a sense unique circumstances.

The Chinese soldiers who refused to return to Communist China after they had been captured in the Korean war were members of former units of the Nationalist army who had most recently been captured or surrendered and whom the Chinese Communists wanted to get rid of as liabilities.

The overwhelming majority of the approximately 800,000 refugees who left the Communist part of Vietnam for the south are Catholics who had lived in the north in compact communities and left in a body under the leadership of their priests; the balance is composed of the families of soldiers of the army of South Vietnam who happened to live north of the demarcation line.

Taking these lessons to heart, the Communist offensive tries to meet the actual concerns of the peoples of Asia. All Asians, as are all men, are afraid of atomic war; thus the Soviet Union poses as the defender of peace. All Asians are opposed to colonialism; thus the Soviet Union poses as the enemy of colonialism. The educated classes throughout Asia seek technological development; thus the Soviet Union poses as the champion of that, too.

Communist China, on the other hand, uses four more specific weapons to extend its influence: general cultural propaganda, the cultural domination of the Chinese communities throughout southeast Asia, control of labor unions and economic domination.

From Japan and southeast Asia, an unceasing stream of visitors enters Communist China to return with reports which uniformly reflect satisfaction if not enthusiasm. What these visitors are satisfied and enthusiastic about is not Chinese communism but the restored dignity and power of a great nation. And the delegations which Communist China is sending (for instance, to Japan) make their impact by identifying themselves not with Chinese communism but with the great tradition of Chinese culture.

To understand the influence which Communist China exerts in the Chinese communities of southeast Asia, one must keep in mind that the oversea Chinese are essentially nonpolitical. They have only two primary interests: to pursue their businesses and not to be molested in their community life by the majorities among which they live.

For protection they look, as they have always done, to China, and they do not pay much attention to its ideological coloration.

However, many of the gifted youth of these Chinese communities in southeast Asia go Hongkong to study and from there disappear into Communist China. Others accept the scholarships which Communist China offers them to study there. Thus Communist China trains an elite which may well take over the leadership of the Chinese communities of southeast Asia.

The other natural opening which Communist China has in the Chinese communities of Southeast Asia is the labor unions. Their very existence testifies to grievances which await exploitation.

Finally, Communist China has recently started an economic offensive which swamps Southeast Asia with cheap consumer goods. In so doing, it tries to make Chinese businessmen—and non-Chinese as well—economically dependent.

How does the United States meet the Communist challenge in Asia? With a policy which is ineffective and in good measure self-defeating; one composed of blunders, bluffs, and military and economic measures conceived without regard for their intrinsic merits or their political consequences.

One such blunder was Secretary of State Dulles' statement that Goa is a Province of Portugal. This statement exploded like a bomb among our friends, spreading consternation, derision and regret. The Hong Kong Standard in an editorial praising the United States for its anti-colonial record in Asia, called the statement "poorly timed and undiplomatic and * * * apt to be seized upon as ammunition for propaganda against the Western powers * * *"

The Ceylon Daily News called it a glaring example of the "shortsightedness of American diplomacy in relation to the East * * * The back-slapping Krushchev is no model of diplomatic finesse, but it is not surprising that with such a clumsy rival as Dulles he is streets ahead in competition for Asian good will."

Only a week later, Secretary of the Army Brucker provided an example of our policy of bluffs. After a 2-day visit to South Vietnam, he declared in Saigon that "with a little more training, the Vietnamese army will be the equal of any other army in its ability to combat the enemy and will be able to defend itself against the Vietminh if attacked."

My visit to South Vietnam happened to coincide with that of Brucker, and I asked the question—which he answered so confidently—of a great number of American, Vietnamese and other officials. They were unanimous in their conviction that at present and for the foreseeable future the army of Vietnam is no match for its Communist opponents.

Yet our tendency to meet a real threat with a bluff is not limited to verbal utterances. SEATO, the codified military alliance of the United States, France, Great Britain, Australia, New Zealand, Pakistan, the Philippines and Thailand, is a case in point.

I happened to be in Bangkok when the deputies of the SEATO powers met. It was a distressing performance. Only the United States, on the one hand, and Pakistan, Thailand and the Philippines, on the other, seemed to be really serious about the business—and for entirely different reasons.

We seem to have convinced ourselves that Thailand and Pakistan are military assets of considerable magnitude on the mainland of Asia. There is nothing in the actual situation which would justify such enthusiasm. Little needs to be said about Thailand, a traditionally misgoverned state with a traditionally quiescent population whom the revolution of Asia has bypassed. Pakistan, on the other hand, is a monstrosity of a state in whose viability, let alone defensibility, even few Pakistanis believe.

It is, then, not surprising that neither Thailand nor Pakistan takes its membership in SEATO quite as seriously as we do. Strong neutralist tendencies have recently come to the surface in both countries. For the Asian members of SEATO, and that goes for the Baghdad Pact as well, membership is primarily an entering wedge into the Treasury of the United States.

Thus we give military and economic aid to anybody in Asia who declares "to be on our side," and we don't seem to care about either the intrinsic merits of such aid or about its political consequences. Since we have not chosen our allies but they have chosen us, we are receiving the uncertain support of the weak while alienating the strong.

Such a policy can be advertised as a great success in the short run, but we should know that we are deceiving nobody but ourselves.

In the long run, such a policy can neither be improved nor reformed nor even continued as it is. If catastrophe is to be averted, it must be abolished.

In Memoriam: Harry Sandager

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1956

Mr. FOGARTY. Mr. Speaker, on January 5 of this year, several Members eulogized a former Member of this body, Harry Sandager. Harry had ably represented the Second Congressional District of the State of Rhode Island immediately preceding my tenure of office. Among his many accomplishments, Harry Sandager was a driving force in one of Rhode Island's most vigorous and active trade associations, the Rhode Island Automobile Dealers Association.

The executive secretary of that organization, Margaret T. Boodry, has recently sent me an In Memoriam published by the association. This article gives some indication of Harry's tireless and devoted efforts in the interest of the better welfare of all the people of my State. Under leave to extend my remarks, Mr. Speaker, I would like to include that In Memoriam in the RECORD:

IN MEMORIAM: HARRY SANDAGER

Seldom is an association, particularly a trade association, as fortunate as the Rhode Island Automobile Dealers Association has been in having a member such as Harry Sandager. Among the many qualities which characterized him were integrity, sincerity, a broad knowledge of human nature, and a disposition to render unto every man his just due. To these qualities was added the ability to perceive how an act or policy would affect the general good and, in addition, he had the charity of viewpoint that permits an individual to forego a selfish advantage if such advantage in any way might result in disadvantage to the generality. Because of this uncommon virtue, Harry Sandager was a great boon to our organization.

Harry Sandager was born in Cranstone, the son of Maurice and Louise (Larsen) Sandager. His Danish and German background was manifest in his disposition to look in apparently cool fashion at the things that might be incendiary to an individual with a different racial background. United with these characteristics was a quick mental response and a wit so spontaneous as to be considered Irish. As a school boy he earned money harvesting vegetables at the Budlong Farm. Upon graduating from Cranston High School he became a reporter and later sporting editor of the Pawtucket Times. It was while in this capacity the opportunity presented itself to go to Washington in the capacity of secretary to Congressman Walter R. Stiness. This was the start of a political career which eventuated in his own election to Congress in 1938 and later as national Republican committeeman from Rhode Island.

About 1922 he became associated as an executive with Dutee Wilcox Flint, then operating the largest automobile dealership in the world. In 1931 the Flint empire was broken up and Harry purchased the Cranston

branch, of which he had been manager. At that time he organized Harry Sandager, Inc., and the business has been conducted at 721 Reservoir, Avenue, Cranston, since under that name.

While in Washington with Congressman Stiness he studied at George Washington University and Georgetown University, obtaining degrees from both institutions. As a member of Georgetown's first class in the School of Foreign Service, he was a classmate of Ambassador Willard L. Beaulac, of Pawtucket, who is now Ambassador to Chile. While at Georgetown he was awarded the James A. Farrell award for highest general average in the School of Foreign Service of Georgetown University.

In 1928 he was elected to the State legislature from Cranston and in January 1936 was elected Republican minority leader in the house. In 1938 he was elected to Congress and during his career on the Hill developed a friendship with Senator Taft of Ohio and Speaker JOE MARTIN. Their confidence in him and their opinion of his political sagacity was such that he was frequently called upon by them for information and advice. As a delegate to the Republican National Convention in 1948, and again in 1952 when he was an alternate, he worked for the nomination of Senator Taft. He was popular with Republicans and Democrats alike, and though he held political convictions, he frequently expressed regard and admiration for the man to whom he lost his seat in the House, Congressman JOHN E. FOGARTY.

When the Rhode Island Motor Vehicle Dealer's License Commission was created in 1945, he was named as a member and he continued as a member to the time of his death.

In his newspaper days he had been president of the Southern New England Football Association and later president of the National Roller Polo League.

About a year ago the Cranston Lions Club, of which he was a member, gave a dinner in his honor entitled "This Is Your Life." This dinner was a testimonial to the high regard in which he was held by his associates in the Lions Club, and was notable for the presence of teachers whose pupil he had been in school days, newspaper associates, sport enthusiasts, automobile dealers, and legislative and political leaders.

A cultural appreciation with a background of study and reading reinforced by an extraordinarily acute memory made Harry both an unusual conversationalist and a wonderful companion.

His activities for the welfare of automobile dealers were generous and never ending. Hours and hours of his time went into collating material of interest to the dealers and the development of news items for the newsletter of which he was editor. In addition, he had served the association as president, and director, being director at the time of his passing.

To his widow, Mildred A. (Fitzpatrick) Sandager, to his surviving sisters, Mrs. Harry Paye of Attleboro, Mass., and Mrs. Frank Fearney of Lake City, Fla., and to his associates, Robert F. Halligan and John Marchant, and the employees of Harry Sandager, Inc., the Rhode Island Automobile Dealers Association conveys deep sympathy.

The manner of his passing on December 24, 1955, was expressive of his generous instincts because he had just presented gifts and conveyed yuletide greetings to some friends. Perhaps this was just as he would have wished it and to him preferable to "drawing the draperies on his couch about him and lying down to pleasant dreams."

RHODE ISLAND AUTOMOBILE DEALERS ASSOCIATION.
JANUARY 21, 1956.

Research and You

EXTENSION OF REMARKS
OF
HON. BARRY M. GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Friday, January 27, 1956

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent address entitled "Research and You," delivered by George R. Seidel, eastern district manager of the extension division, public relations department, of the E. I. du Pont de Nemours Co., of Wilmington, Del., which it was my privilege to hear at a meeting of the Rotary Club in Ithaca, N. Y.

I am informed that the cost of printing the address in the Appendix of the RECORD will be $200. Notwithstanding that estimate, I ask unanimous consent that the address be printed in the Appendix.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

RESEARCH AND YOU

(Address by George R. Seidel, eastern district manager, extension division, public relations department, E. I. du Pont de Nemours & Co., Wilmintgon, Del.)

It certainly is a privilege to be here today. When one considers the value of an audience's time any sincere speaker, before he accepts an invitation, must ask himself what he can possibly offer that justifies the acceptance of an invitation—what can he bring that will be new, fresh, interesting, or amusing.

I asked myself this question, not in regard to this particular meeting but before undertaking any talks of this sort. In other words, what personal experiences could I share with you that might be unusual and perhaps contribute to a different outlook on life.

This is a tough asisgnment for any man and calls for a good deal of humble soul-searching. It is obvious, because I stand before you, that the question was answered in the affirmative and so it is equally obvious that I owe you an explanation. The reason is this: For 19 years I worked in the research laboratories of a large chemical company and the lessons learned there might, it seemed to me, be interesting and valuable to you.

Research workers approach problems on a small scale—through a microscope so to speak—in order to evaluate the potentialities of a big, new idea. So let me start with what is to me a startlingly big figure and later focus the microscope. Our records show that we spend $63 million per year on research, and that only one chemical idea in a hundred proves successful and results in a new product. These are extremely long odds and no ball team could win a pennant with such a batting average. It is for this reason that I appreciate and value the significance, worth, and scarcity of a successful experiment. These occur so seldom and after the expenditure of so much money and hard work that I have come to place any winning experiment on a high pedestal.

As citizens of the United States, you and I are privileged to share the most successful experiment in human endeavor that the world has ever known. Under God, not one of us can lay much claim to our wonderful way of life. But the hard work and faith of our forefathers and those who have been working shoulder to shoulder with us have resulted in a way of life that the dreamers never imagined and the theorists said just couldn't happen. They couldn't have predicted such a complex society as ours, much less understand how it works. As a matter of fact, no one could have forseen the magic result of free men being allowed to invest their best in cooperation with other free men of good will. There have been far more than 100 countries and civilizations that have sought the key of successful living that we posses. If, per chance, we should happen to let this successful experiment slip through our fingers, it is probable that it could never be regained. We should, therefore, appreciate the value of these United States and dedicate our lives to the continuance of those principles and ideals upon which they have been built and made strong.

It seems to me that our society—the table upon which our daily bread is served—is supported by four legs: The church, home, school, and factory. Much that I have to say to you will deal with the technical aspects of our industrial system but let me assure you that we agree with the physician who, addressing his fellow doctors, reminded them that medicine must always remain more an art than a science. By this he meant that the general practitioner must understand and know his patients better than his medicine. Applied to industry, this means that the right treatment of people is the most important aspect of doing business—more important by far than the most modern and well-equipped laboratory, or factory, or salesroom or home office, for each of these is only as effective as the men and women who make them tick. I would therefore like to discuss with you something of our industrial system and end with a spiritual appeal.

American industry—which includes the products of the farm—is based upon so many attributes that only a relative few can be listed at this time. It is hoped that you will continue the list where I leave off, but it seems to me, that ingenuity is certainly one factor that is responsible for America's industrial might. We used to speak of Yankee ingenuity but this virtue cannot be ascribed to any section of this country. American ingenuity has allowed us to tackle the impossible and often times succeed against 100 to 1 odds.

A successful company must be frugal. I lived among the Pennsylvania Dutch and know something of their careful habits. In the same sense, let me assure you that an efficient, well-managed plant doesn't just happen—it is the result of careful planning and know-how regarding the operations of every detail of the business. Waste and laxness are luxuries that are unknown to any successful business.

Americans like to work hard; they rejoice in the privilege of facing each day's job as a strong man ready to run a race. We all hope and pray that the day will never come that we won't know the satisfaction of an honest day's toil. Only one thing is possibly better; the peace and blessing of the solid night's rest that follows. Some pelicans lived on the waste of a fishing village in California and later died of starvation when the fish waste was converted to fertilizer. The villagers had become fond of the pelicans and hated to see them die. But how to teach them to fish again? Some hard working pelicans who had not known the luxury of free meals were imported and soon taught the starving pelicans how to fish again. We pray that Americans will be given sufficient time to teach the peoples of the world the virtue and satisfaction of honest, fruitful work.

Our wonderful political system was deliberately excluded as one of the legs supporting our table of plenty. Ours is a government of,

by and for the people and as such it is our servant. So it is that free enterprise and political noninterference are two more basic principles upon which our civilization is built. Men are free to try their hand at anything they think they can do as well as or a little better than the other fellow and they are also ready to assume the responsibility of failure or reap the rewards of success. Political noninterference means that Americans have never had a king, or dictator, or hierarchy, or bureaucracy that presumes to know enough or be so wise as to guide the overall actions of our lives and the livelihood of our people. Perhaps, as a result, there is some lost motion here and there but while a few are following the wrong track, the majority is building a better society and an ever higher standard of living. The point is amply proven by the impressive record of our accomplishment in almost every realm of human endeavor.

Finally, so far as this listing is concerned, mass production is of prime importance. Many more than 1 in 100 of the experiments we try in the laboratory are scientifically sound, but industry never considers a small scale model as successful. Enough of the new product must be profitably made so that everybody can buy it in the market place. To this end we have reduced to practice the best ideas the world has to offer so that all of us benefit by the discoveries made here and abroad. Not only that, we are ready, willing, and anxious to share our know-how and philosophy of plenty with the rest of the world. The record also shows that America's might is based on and shared by the individual's well-being. What we make and what we have does not go to build an arsenal or stock a warehouse. Our wealth is made for and shared by the average citizen to a degree that has been unknown by every society but our own.

Hard work, frugality, ingenuity and the rest are useless until they are brought to life by human endeavor. In most large companies this is accomplished by a team of five. Parenthetically may I add that this team has no crystal ball, no magic wand and no secret formula. The things that flow from the laboratories and plants of America do not just happen—they must be made to happen. This means lots of hard work against steep odds.

And now let us focus the microscope; our first team member is research. The search for new knowledge and the never ceasing improvement of established products is basic to the chemical industry and the du Pont Company. But let me repeat, there is nothing magic about research beyond the willingness to work hard and invest large sums of money without any assurance of dividends. More specifically, creative research depends upon individual initiative, keen perception and, perhaps, the conversion of established raw materials into products that had not been previously made. This can be illustrated by an example from our own laboratories.

For many years, the research efforts of a number of us had been concerned with dissolving a black sea sand in sulphuric acid to give a black solution from which a white pigment is made. Some years ago we were asked to find a new use for this sand. Theoretically it appeared that the black sand could be converted into titanium tetrachloride which could be purified by distillation, thus simplifying our manufacturing procedure. However, the new process involved the handing of highly corrosive liquids in very special equipment at high temperature so that this proved to be one of the toughest engineering jobs ever tackled by du Pont—the Hanford Atomic Energy Plant being the most difficult. Many millions of dollars were spent and there were dark moments when failure seemed inevitable. This problem was eventually solved so that commercial amounts of a clear, fuming, distillable liquid that we call "tickle" were available—what next?

The literature indicated that titanium metal had been made in small quantities by reacting tickle with metallic magnesium. We confirmed this in the laboratory but building a full size plant was another major undertaking. Suffice it to say that today we are making titanium in competition with a number of other companies. The metal is as strong as stainless steel and half as heavy; it is as corrosion-resistant to sea water as platinum; it has good elevated temperature properties. To date, the proposed use for titanium is in the blades and disks of jet engines and in airplanes generally for fasteners, structural members and skins. It strength, lightness, and elevated temperature properties permit the design of an airplane that will outmaneuver, outperform and, if necessary, outfight a rival made of conventional metals. I'm glad that America has titanium metal.

Another factor that the research man must keep in mind is the application of known technology to new problems. In the case of titanium metal, we had learned to handle corrosive liquids at high temperatures in special equipment. What else could we do with this new know-how? Every chemist has a chart of the periodic system behind his desk so it was apparent that silicon—a first cousin to titanium—might be studied. Silicon dioxide is sea sand and therefore one of the most abundant compounds in the earth's crust. Furthermore we discovered that the good properties of titanium were quickly lost if common impurities such as carbon and nitrogen were present in small amounts. In other words, what unique properties might very pure silicon possess? (Silicon of approximately 90-pereent purity has been known for years and used in large quantities to make special grades of steel.) We made some hyperpure silicon whose purity is measured in parts per million. The electrical industry melted this in an induction furnace to form a single crystal of even greater purity. It was then discovered that silicon is not a true metal, for one criterion of a metal is that it conduct electricity—silicon is a semiconductor of electricity and as such can be used to replace a vacuum tube in many electronic circuits. Hyperpure silicon now has to sell for $380 per pound but only a nickel's worth is used in a transistor although at this early stage in development a transitor costs as much as a radio tube. It is expected that costs will be reduced as experience is gained but even on a break-even basis, the transistor has the advantages of extremely low current demand, ruggedness, long life, and smallness.

Tackling the so-called impossible is one of the main reasons that our batting average is so low and our successes so unexpected. The new products of Dacron polyester fibers and Mylar polyester films are two products that owe their existence to the faith and technical tenacity of 1 or 2 men. More than 20 years ago chemists argued that it was impossible for a polyester (chemically similar to alkyd paint vehicles) to be as strong and tough as Nylon. Dr. E. F. Izard, of this country, and Dr. J. R. Whinfield, of England, undertook the impossible. There were literally millions of different substances that can be reacted to form a polyester but since chemistry is a science, some intelligent choice and elimination was possible. Suffice it to say that, after 20 years of hard work, both men concluded independently that there are only two molecules that can be reacted with one another to form a unique polyester that we now call Dacron, as a fiber, and Mylar, when formed into a sheet.

So, another new product was born. What is it good for; what chance does it have on the market place? Mylar polyester film is unique because its properties are so well balanced; it is tough, resistant to many chemicals, has good electrical and thermal properties. Other materials may excel in 1 of these 4 qualities. Teflon is more chemical and heat resistant; mica has better electrical properties—I don't know any plastic material that is tougher. Therefore it is possible to build an electrical motor that is almost one-half the weight of its predecessor partly because of Mylar wrappings; movie films made from Cronar (as Mylar is called in the motion-picture industry) should be tougher, less moisture sensitive and almost unaffected by age as compared to former movie film. It should be very satisfactory as liners for bottle caps and large drums. Here are samples of metallized and decorative films that are being evaluated for use on acoustical tile and panels.

Let me emphasize that this development wasn't luck. It took almost 20 years of painstaking research, the investment of a man's lifetime, the best of research facilities, sympathetic management, helpful associates, adequate resources to support all these and—faith.

The second member of our team is the engineer. It is he who must develop the chemist's idea to the point where a practical plant can be built; it was he who designed a plant for the manufacture of titanium metal—the second most difficult engineering task ever tackled by Du Pont. Without the engineer's help many new products would never see the light of day.

The third member of the team belongs to the manufacturing department. It is his job to turn out material in good yield, of excellent quality, and at a price to meet competition. They must be able to cope with any variation in raw materials, any disruption in services, and have the foresight to minimize such dislocations. They are the ones who keep the miracle of our mass production operating at peak capacity, 24 hours a day and 365 days a year. The near miracle that too many of us take for granted is well represented every time we drive into a filling station and say: "Fill 'er up." For gasoline—and thousands of other products—to flow in never-ceasing abundance requires a know-how and devotion to duty that is uniquely American.

The salesman is the fourth member of the team. Many times I have called upon a customer with one of our salesmen and tried to utilize their equipment for the handling of a new product. Never were we refused, for no businessman can long compete if he thinks that his product or process is good enough—even against 100-to-1 odds. In general, it was necessary for us to return to our laboratory and pilot unit to devise a different approach or design special equipment to solve the problem and then try again. The cooperative spirit that is thus developed between the salesman and his customer is an important contribution toward the constant improvement and change that characterizes America's industrial advances.

The last and perhaps most important member of the team is top management. It is their responsibility to separate the chaff from the wheat; to lend encouragement at dark moments; to supply capital with wisdom and courage; to furnish overall direction in a fast moving and challenging age. Perhaps the role of management can be illustrated by a story. Many years ago, a salesman who had apparently known better days called on me. His clothes were somewhat overworn and he was literally run down at the heels. Even so, there was a trace of having held a highly responsible position. After he left I inquired as to his background and learned that he had been the owner of a wooden box company when corrugated boxes came on the market—he scornfully kicked a hole in them to emphasize his conviction that corrugated boxes would never replace wooden boxes. As his

business declined, he poured his personal fortune into the company—until it failed. When I knew him he was a salesman for corrugated boxes. So, the responsibility of top management is to avoid the manufacure of wooden boxes at the beginning of the corrugated box era.

This is the team of a big company and yet these functions, in varying degree, are essential to all businesses regardless of size. The main thing about companies—large and small—is their dependence upon one another. This can be illustrated by taking a drive, in your mind's eye, through the streets of any city and on to the outlying areas. Small shops, banks, hotels, grocery stores, filling stations, restaurants and department stores give way to automobile assembly plants, huge refineries, research centers hiring hundreds and even thousands of highly skilled technicians and scientists, plants for making paint or rubber or textile or ocean-going liners. It is incomprehensible that each enterprise fits into the overall success story of these United States of America—but, strangely enough, the experiment works and wonderfully well. Little stores and huge factories are as essential to one another as the need of the factory owner for a loaf of bread and the corner grocer for a new automobile.

To further illustrate the interdependence of large and small businesses, let me cite a few examples:

Had I spoken to your children in high school today, they might have tried to make cellophane in your bathroom tub tonight—and they could do it. Depending upon their skill, the product would have to sell for $50 to $500 per pound and it would be brittle, cloudy, and yellow in the sunlight. To make cellophane and sell it on today's market place requires the investment of $20 million and a wealth of skill and experience. For whom is the cellophane made? The butcher—all meats are now wrapped in transparent films—the baker, and the candlestickmaker. I thought this a clever phrase and questioned my wife as to why candles should be wrapped in celolphane. She looked surprised and simply said, "Of course candles should be wrapped in cellophane." The women folks had spoken and no mere man questions such authority.

The resources and technical skill required to make nylon are beyond the scope and abilities of any stocking manufacturer or textile mill. Yet, it would be equally impossible for us to knit stockings or weave fabrics. We are absolutely dependent upon innumerable textile and knitting mills to use our products.

We estimate that 2,000 workers in a modern neoprene plant can produce as much rubber as 80,000 Malayans sweating in the jungles of Indonesia. Why? The modern industrial worker has equipment, machinery, and tools valued at more than $20,000 per man; the native laborer works with a hoe and a machete worth about $2. In other words, the American worker produces more, is worth more, and is paid more.

Still another example: Because of tractors, weed killers, insecticides, fungicides, fertilizers, defoliants, improved seeds, etc., the farmer of today produces many times as much as his forebears raised some 150 years ago. It used to be that 90 percent of our people lived on the farm, now 10 percent are engaging in farming. This has greatly raised the standard of living of the farmer and at the same time provided a full market basket for everyone—and still our cup runneth over.

The industrial capacity of America is brought home when we realize that 530 million pairs of shoes are made in the United States every year. This is more than 3 pairs for every man, woman, and child in this Nation. And don't think your wife has them all, mine has a few pairs, too. This illustrates how our productive capacity is made for and distributed to everyone and is not stocked or set aside for an emergency. What we make, everyone uses and enjoys.

Besides their interdependence, all companies in a free society must make a profit—they must succeed—in order to stay in business for any length of time. Your business and my company, regardless of who "we" are, are successsful when the consuming public—which means each of us and particularly our wives—walks into your store and buys our product. In other words, American industry is particularly indebted to the collective appetities and the insatiable list-of-wants of the buying public.

No matter what we have today, the average American fully expects that next year's model will be better and hastens to the market place to sign on the dotted line. I bought a new car in 1953 and my 16-year-old daughter said it would be impossible to build a better automobile. Today, my 18-year-old daughter is trying to convince her dad that the old jalopy is ready for the scrap heap. Our wives open their crowded closets and exclaim with feminine accord that they don't have a dress to wear. If, however, she wore her dresses until they were threadbare the textile industry would collapse. Have you analyzed the soundness of a man's argument when he is about ready to buy a new car? The battery is dead so, he explains to his wife, we might just as well buy a new car.

Some critics claim that we overemphasize the value of our automobiles, improved plumbing, automatic devices, and the world's greatest steel tonnages. We no longer defend our material blessings; we are only anxious that our critics have as many, for this would help to solve the world's problems and ease its tensions. Nature's bounty is unlimited and the productivity and energy of freemen is boundless. America is pointing the way toward shared plenty.

But if we stopped here—and so many folks do—we would have told the least important half of the story. We lead the world in libraries, art museums, hospital beds, parks and playgrounds, and we have sufficient leisure time to enjoy them. We voluntarily support the Red Cross, community chests, and our churches. As a matter of fact, there has been a 70-percent increase in church membership during the past generation, outstripping the population growth by 2 to 1.

In other words, the United States of America is the most winning team that mankind has ever placed on the field of human endeavor. This is a powerful fact to remember as we face a world which is divided into two warring ideologies. For a time, it appeared that free men might be doubting their own abilities and were uncertain as to the rightness of the path they were following. Although we are still not complacent, and I trust we never will be, the average American is becoming accustomed to accepting world leadership. He confidently and humbly believes that the brotherhood of man and the fatherhood of God is vastly superior to that ideology which lauds the supremacy of the state and the diety of superman.

Please don't misunderstand me. No one is saying that we can let down our guard and rest on our laurels. The climb ahead may be steeper and more difficult than any we have tackled in the past. But I am saying that I believe America is on the right track and has the strength to climb to any height. The incentive to work hard is ever present and the rewards, both material and spiritual, were never greater.

One of the few and really serious dark clouds on the horizon is the fact that our colleges and universities are graduating half as many engineers as they did 5 years ago. During this same short period, Russia is reportedly graduating twice as many scientists and engineers. The net result is that Russia is supposedly graduating 50,000 technically trained men per year as compared to 25,000 reciving degrees per year in the United States of America. I don't think it would be safe to conclude that our graduates are better trained than theirs. Rather, it may be true that our students are selecting the easy courses and thus avoiding mathematics, English, physics, chemistry and other difficult studies. If this be the case, a moral decline is indicated which would have far reaching effects. As parents and civic leaders, it is our solemn responsibility to face and reverse this trend.

To end on a cheerful note, let me tell you of meeting with a service club in Simsbury, Conn. It was the first meeting they had held since their town had suffered from Diane's floods. The narrow Farmington River had risen many feet and spread out a mile wide. Many homes were destroyed beyond reclamation but some were found to be solid even though flooded above the second floor. On a Friday noon, teams of six men from this service club rapped on the front doors of those homes which could be repaired. The young man telling me the story said that his team was met by a husband and wife who were dirty, in tears, and ankle deep in muck. The look of gratitude on the faces of man and wife was more pay than money could ever measure. Six pairs of willing hands make a big difference when added to those of a heartbroken two. The first tasks were undertaken with shovels, then they reached the scrub-bucket stage, followed by ripping up flooring and even replacing floor beams. Then came paint and wallpaper. There are seven warehouses full of furniture and supplies ready to install as soon as they are needed.

At the meeting, 50 percent of those present were new members for it was an honor to belong to such a club. People are anxious to help one another and to be challenged to do their best. It's incomprehensible that such a spirit will ever die, so that by the continued effort of everyone doing their best and working together, free men should meet each challenge with confidence and thus continue to build a better tomorrow here and, by example, to end of the world.

Mayor Oliver Reelected for 24th Time

EXTENSION OF REMARKS
OF
HON. CHARLES E. BENNETT
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1956

Mr. BENNETT of Florida. Mr. Speaker, I feel it fitting to pay tribute to the fine mayor of Baldwin, Fla., who has just been reelected to that office for the 24th time. He is Mayor Lonnie Oliver. When the Jacksonville Journal's reporter, Jim Massey, talked with him on the occasion, a large portion of the success was attributed to understanding human nature, but another large portion was attributed to loyalty, "loyalty to my people and loyalty to my oath of office." I believe that his loyalty and honesty are the qualities which his constituents most admire. His warmhearted affection for folks and his sense of humor are also qualities which everyone admires in him. At this point, Mr. Speaker, I include a part of Mr. Massey's article:

The election news that came in from Baldwin today told an old familiar story. Mayor

L. C. Oliver has been reelected for the 24th time.

His knack of winning in every election since 1928 was again demonstrated yesterday when he emerged the victor over J. G. Cross by a vote of 277 to 50 for another 2-year term.

"I'm very happy and, of course, very thankful," Mayor Oliver said today, who does other things beside being Baldwin's chief executive.

He's also the municipal judge, the freight and passenger agent at Baldwin's Seaboard station, a deacon in his church, owner and operator of a hotel, and he's the chamber of commerce besides.

Only once in his long political career was Mayor Oliver defated. That was in 1933. He did not seek relection in 1947. Otherwise he has served consecutively and has had opposition in every race expect one.

Words America Lives By

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Tuesday, January 31, 1956

Mr. MARTIN of Pennsylvania. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a short article by the distinguished historian, Bruce Catton. His article is on the subject Words America Lives By.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WORDS AMERICA LIVES BY

(By Bruce Catton, editor, the American Heritage)

The British officers saw nothing unusual about it. They had caught a spy inside their lines at New York. Under the laws of war his life was properly forfeit, and they were going to execute him. That was all there was to it.

So the file of Redcoats led the way to the execution. The prisoner, bound, stood with the rope about his neck. He was a young man, the name of him Nathan Hale, and he had a quiet dignity that impressed his captors. Just before he was swung off into eternity one of these, moved by sudden sympathy, asked if he had any last message. He replied calmly:

"I only regret that I have but one life to lose for my country."

Then the signal was given, the execution was performed, the body was cut down and buried without marker or headstone, and everything was over.

Except that the words young Nathan Hale uttered kept on living. Something was involved here that the executioner's rope could not kill, not the rope, or the file of musketeers, or all the might of the British Empire. That something was the simple patriotism that this new country had inspired in the breasts of men who were fighting and dying to make the country free. Hale's words spoke for everybody—for the patriots who fought and won the American Revolution, and for the millions of their descendants who, since then, have put their lives in the balance whenever the country needed them.

Hale's own story is extremely simple.

He was born at Coventry, Conn., in 1755, was educated at Yale, and became a schoolteacher. When the Revolution began he joined a Connecticut regiment, serving at the siege of Boston and winning promotion to captain. When the British seized New York in 1776, his regiment was sent down to that vicinity, and Hale had a part in a daring little expedition that captured a British provision ship under the very guns of a man-of-war.

When the American command needed information what the occupation troops were doing. Hale volunteered to act as a spy. Disguised as a Dutch schoolmaster, he got inside the British lines, did his dangerous job effectively, and was finally caught and hanged. He was 21 at the time of his death.

That is all there is to his story * * * but it is a vital part of the heritage of all Americans: our real national wealth, that goes on yielding returns generation after generation, inspiring men to greatness, keeping the Nation alive and strong. If we ever forget the story we lose something priceless. From 1776 to the present day, it has been the battle cry for all men who have loved their Nation and its future a little more than their own well-being:

"I only regret that I have but one life to lose for my country."

The Spirit of Jacksonville

EXTENSION OF REMARKS
OF
HON. CHARLES E. BENNETT
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1956

Mr. BENNETT of Florida. Mr. Speaker, Mr. Louis Riviere, of Jacksonville, Fla., a beloved and respected veteran leader in our community, has sent to me a poem he has written on the history and spirit of our hometown. Under leave previously granted I herewith submit the poem:

THE SPIRIT OF JACKSONVILLE

(By Louis Riviere)

It was May the third, nineteen hundred one,
That dreadful holocaust laid our city low;
But ere those fiery embers died away,
Stout hearts were planning again to grow.
With determined zeal those thirty thousand,
Vowed that rebuilding would be their theme;
With their small resources and dauntless courage,
They went to work as one magnificent team.
Trainloads of lumber and shiploads of brick,
A bright new city was showing its face;
Soon those scars began to fade from view,
A new Jacksonville was setting the pace.
Outside capital showed an interest,
To make investments they could hardly wait;
And ere the decade had passed o'er the rim,
Three ten-story buildings, first in our State.
Another decade broke over the Saint Johns,
Greater expansion of her utilities;
Then war-clouds thundering o'er the horizon,
Potent danger to her inherent liberties.
Five thousand of her stalwart citizens.
Laid aside their work and answered the call;
Ere the din of war had ceased its roar,
Eightscore of those men had given their all.
The nineteen twenties brought blessings of peace,
The dream of a St. Johns River bridge came true;
Fine school facilities for growing children,
Rewards for the trials she had struggled through.
Railway terminals and a radio station,
A growing airport showing her civic pride;
Municipal docks to meet the great ships—
That came steaming in with the rolling tide.
Nineteen thirties brought financial distress,
Those early thirties were a lesson indeed;
Retribution is no respecter of persons,
A people must pay for their vice and greed.
But Jacksonville's pride arose once again,
A great naval air station was the score:
And shipyards turned out great ships of steel,
For all mankind was restless to the core.
World war number two broke in all its fury,
December seventh we shall never forget;
All Jacksonville with one mighty heart throb.
Vowed with the Nation this attack must be met.
During this conflict thirty-three thousand,
Of her citizens marched away to war;
Those staying at home built a hundred ships,
To back up the cause they were fighting for.
Population of one quarter million,
Confidence abounds where her people live;
Twenty million invested in church properties,
And untold moral values those churches give.
War activities brought many new people,
A friendly welcome caused thousands to stay;
And twenty thousand new housing units—
Kept men and factories busy everyday.
Sixty thousand happy, carefree children,
Growing up to take their places among men;
Nineteen million dollars in school facilities,
To develop their minds so they can win.
Jacksonville, where the railroads meet the ships,
Helping speed the flow of maritime trade;
As those swift airplanes make their daily calls,
Jacksonville, Florida, where friendships are made.

The Tragedy of the Unmet Bed

EXTENSION OF REMARKS
OF
HON. EDNA F. KELLY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1956

Mrs. KELLY of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article entitled "The Tragedy of the Unmet Bed," by Arthur Feigenbaum, superintendent of the Jewish Chronic Disease Hospital, of Brooklyn, N. Y.:

THE TRAGEDY OF THE UNMET BED

(By Arthur Feigenbaum, superintendent, Jewish Chronic Disease Hospital, Brooklyn, N. Y.)

The Great Architect of the Universe, in drawing up plans upon His trestleboard for the construction of man, conceived one of the most intricate mechanisms that has never been duplicated. Man's anatomy is so constructed that every sinew, fiber, blood vessel, nerve, and organ has a specific function to perform, and the proper teamwork and coordination of each makes for a healthy individual.

Unfortunately, like all structures, time, stress, and often abuse wear out parts bringing with it disability, impairment, and death, or chronic ailments of long lingering duration. Millions of victims each year are stricken with chronic diseases—atherosclerosis, hypertension, kidney disorders, cardiac conditions, asthma, diabetes, and to this list are added many of the numerous mysterious maladies that continue to take a heavy toll,

such as Parkinsonism, muscular dystrophy, multiple sclerosis, cerebral palsy, and mental disorders.

Fortunately for civilization, medical science has within the short span of the last 100 years found effective ways and means of combating many of the infectious diseases by vaccines, sera, sulfa drugs and antibiotics. As a result, many of the infectious diseases such as typhoid fever, diphtheria, smallpox, yellow fever, bubonic plagues, and poliomyelitis, are being eradicated from the face of the earth. Even as this is being written, tuberculosis is slowly but surely being wiped out bringing about the closing of many tuberculosis hospitals. The appearance of INH, combined with streptomycin and PAS may be the means of preventing tuberculosis. In the State of New York, the Neponsit Hospital, Seton Hospital, Trudeau Sanitarium, and Brooklyn Thoracic Hospital have already closed their doors, with the Bedford Hills division of the Montefiore Hospital scheduled for an early closing. Antitoxins and other prophylactic measures have been used for many years to prevent diphtheria, smallpox and to lessen the harsh effects of whooping cough, measles, scarlet fever, and others.

Tragedy still lurks in the corners and the blot on the escutcheon of civilization is the increase in the magnitude of the chronic disease problem. An impression exists that chronic diseases affect only the aged, but statistics prove the contrary. At the present time it is estimated that 25 million persons, or more than one-sixth of the population, have a chronic disease, bringing with it nearly 1 million deaths annually, and the loss of almost 1 billion days of productive activity.

In 1900, there were in the United States 3,500,000 persons over 65 years of age. In 1955, this number increased almost fourfold, with the number of 12,500,000 persons 65 years of age, and with the prediction that in 1980, this number would reach 18 million. It is estimated that 467.1 out of every 1,000 individuals between 65 and 75 will become a victim of a chronic disease with prolonged or permanent impairment. Chronic or long-term diseases take a heavy toll in all age groups—almost 50 percent of the chronic illnesses affect people below the ages of 45, and 16 percent of the chronic illnesses affect people below the ages of 25, with more than three-quarters of the persons in the productive years from 15 to 64 years of age. Thirty percent of these numbers will require hospitalization. This certainly will create a catastrophic situation in the near future if we do not take proper precautions. Statistics listed below show the number of unmet beds, and with it lack of rehabilitation centers, research areas, and diagnostic clinics as part of these units.

The record as it now exists, shows little though given to the construction of appropriate facilities and long-range planning. Action is needed now with appropriations set aside for construction of hospitals, rehabilitation centers, nursing homes, etc., after study by a special committee appointed by the President or by the Commission on Chronic Illnesses.

The building programs for future facilities for chronic diseases should include facilities for prevention with appropriate clinics for diagnosis and followup of discharged cases, including:

1. Home care planning with periodic checkups at the hospital;

2. Teaching facilities for members of the medical staff, medical students, and allied professions;

3. Rehabilitation sections;

4. Research centers with an animal experimentation division for the study of problems of chronic diseases and of aging;

5. Appropriate clinics of special type for ambulatory patients;

6. Operating rooms for general and special surgery as cardiac, and neuro-surgery;

7. Sheltered workshops to teach the chronically ill to become self-supporting and self-sufficient;

8. Recreational facilities with consideration and inclusion of music therapy;

9. Educational facilities;

10. Vocational guidance; and

11. Team work with all specialists included.

These hospitals should be furnished with all equipment of a generalized hospital, plus all specialized equipment needed for diagnosing these ailments.

The Jewish Chronic Disease Hospital of Brooklyn is one of the outstanding examples of what a chronic disease hospital should be, as it incorporates practically all facilities as indicated above.

The writer is a fellow of the American College of Hospital Administrators; past president of the Hospital Council of Brooklyn, Long Island and Staten Island, and at present a member of its executive board; holds memberships in the American Public Health Association, American Hospital Association, the Hospital Association of New York, and the Greater New York Hospital Association.

Baldwin Junior Class Opposes 18-Year Vote

EXTENSION OF REMARKS
OF
HON. CHARLES E. BENNETT
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1956

Mr. BENNETT of Florida. Mr. Speaker, I have received the following thoughtful letter from the junior class of Baldwin High School, Baldwin, Fla. They indicate a high regard for the privilege of voting, and modestly suggest that the privilege may be best earned and best fulfilled if the voters have had in appreciable degree, some of citizenship's normal experiences of earning a living, paying taxes, and so forth. As the Congressman from this district of Florida, I am indebted to them for their thoughtfulness in considering the subject and writing about it. The letter is as follows:

BALDWIN SCHOOL,
BALDWIN, FLA., *January 23, 1956.*

Hon. CHARLES E. BENNETT,
United States House of Representatives, Washington, D. C.

DEAR SIR: We, the junior class, have debated on the question of 18-year-olds voting. Our committee reached the conclusion that 18-year-olds should not be allowed to vote. We would like for you to present our views in the coming session of Congress. The reason for our decision was based on the opinions of students that most 18-year-olds

are interested in getting a job and making a living. At the age of 21 they are usually settled and have time to be concerned about politics.

Yours truly,

JUNIOR CLASS,
MARIE BELL, *Chairman.*

His Nephew Tells the Shocking Truth About Cardinal Mindszenty

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 25, 1956

Mr. MULTER. Mr. Speaker, Cardinal Mindszenty has now entered the eighth year of his imprisonment by the Communists. His defiance of communism is an example to the entire world. On November 20, 1955, the American Weekly published the first of three articles on Cardinal Mindszenty by his nephew, Laszlo Szamosfalvi, one of the first of his relatives to escape through Hungary's Iron Curtain. I direct the attention of our colleagues to this article which is as follows:

HIS NEPHEW TELLS THE SHOCKING TRUTH ABOUT CARDINAL MINDSZENTY

(By Laszlo Szamosfalvi, as told to Helen Mamas Zotos)

A veil of deliberate secrecy and silence has shrouded the name "Mindszenty" since my uncle's "trial" and imprisonment, nearly 7 years ago. The circumstances of his confinement, his whereabouts, his illnesses, all details of his martyrdom, which I shall reveal, have been as closely guarded as countless other secrets the Communists skillfully withhold until a propitious time.

Such a time came momentarily this past July when the Iron Curtain lifted for an announcement that stunned the world and left in its wake, as the Communists intended, the false impression that Hungary's prince primate has been "released."

As the cardinal's nephew and the first of his relatives to reach safety in the free world, I shall tell his story as he himself might wish it told. I am encouraged to do so because he cannot now speak for himself and because he believes that one of our greatest weapons against communism is the truth. His whole life has been dedicated to truth; he never wavered, and it would be fitting at the last if the truth should set him free.

I have known my uncle intimately, having spent a great part of my boyhood years in his household. After my own mother's death, Mindszenty's mother, who is my mother's sister, took her place for me. (In Hungarian tradition, he is my uncle, although his mother is my aunt.) My personal experience with communism, together with information from the Hungarian underground, from "indiscreet" Red agents and other sources, enables me to call the Communist "bluff."

My information includes letters from the cardinal's mother, excerpts from a diary kept by a fellow prisoner and smuggled, bit by bit, out of prison, reports on the violent fate met by those who were his persecutors, and recollections of my own three perilous missions of mercy to the imprisoned primate, from the free world.

In Budapest on July 16 of this year Hungarian Communist authorities announced a so-called "interruption" of the Cardinal's life sentence. The news came buried among numerous other items over Radio Budapest's 8 o'clock evening roundup, "Chronicle of the Day." It said: "The Ministry of Justice has granted Jozsef Mindszenty, upon his as well as the Roman Catholic Bishops Conference's appeal, interruption of his imprisonment, taking into consideration Mindszenty's old age and state of health. As residence, he was assigned a building of the church appointed by the Bishops Conference." Then, as quickly as the curtain lifted, it fell again, locking further comment away from Western ears.

This announcement, timed as a display of Soviet good faith at the opening of the Geneva summit conference, was a hoax. My uncle was not freed. Perhaps he will be some day, but at this writing he remains a Red captive.

I received word from the Cardinal's mother following this proclamation. She said: "You are pleased about the release of dear uncle, but it did not happen.

"Naturally the radio broadcast the news, and everybody was overcome with joy as everybody thought that it really happened.

"My dear, I visited him—thank God he is healthy and well, but only the good Lord knows when he will be set free."

As a prisoner Cardinal Mindszenty has not been treated any differently than the criminal behind bars. In an attempt to disgrace him in the eyes of our people, the Communists have prevented him from wearing his clerical robes. He has been deprived of his breviary, his rosary, his crucifix and prohibited from saying Mass and confession. He has been kept under constant surveillance, incommunicado, with even reading and writing materials denied him. Nevertheless, as communism failed to stifle the soul of the Hungarian people, so have untrustworthy officials been found in prison who, risking their lives, did befriend him and treat him with the respect due his holy office.

Because such men exist, we have been able to learn what went on inside Vacz prison where Mindszenty was kept captive many years. It was with their aid that a diary from the pen of Dr. Laszlo Toth, a leading Catholic journalist, my uncle's friend, a codefendant at the trial and a fellow inmate in prison, was slipped out of Vacz and Hungary. These excerpts help construct the cardinal's story:

"VACZ, *May 1949.*

"Saw him in the prison yard for the first time since the trial, but could not speak to him. The ordeal of the last 6 months has cast its shadow on his saintly face, and hardened its softness into a frozen mask; he has aged terribly."

"MIDDLE SUMMER, 1949.

"The hero of the 4-year struggle with the atheistic forces in Hungary occupies a privileged position among Vacz prison inmates. His trial and sufferings are known to everyone in the prison, and with every week that passes the grandeur of his figure, which true piety constructs, is increased through the stories circulated around the prison cells. In the history of modern peoples, there is scarcely any other example of a man, who, a half-year after his trial, became a martyr in the eyes of his countrymen. The cardinal looks pale and thin. The heat is oppressive in the cells and it is impossible to sleep."

"WINTER, 1949–50.

"The cardinal is slowly recovering his mental and physical strength; the marks of strain on his face have begun to disappear. Thank God. The first sign that the turn for the better had taken place in his general condition was when the cardinal asked the prison warder to try to get him a book—The Imitation of Christ.

"The warder told me, however, that the governor of Vacz prison had never heard of that book. Instead, he sent the Cardinal 10 volumes of the complete works of Lenin!

"From time to time I meet the cardinal during the daily half-hour walk. He says very little, but never has his diction been more lucid and pointed. What he does say is very simple: that every suffering has a deep meaning, and that we must trust in God. In his mouth these words acquire a remarkable wealth of meaning and authority. They travel swiftly from cell to cell, from floor to floor. Their effect has been quite marked upon the 2,000 inmates of this prison.

"Every day I see practical proof of the fervent and pious love of the inmates of Vacz prison for Cardinal Mindszenty. When passing his cell they take off their caps and cross themselves.

"It is a bitter winter's morning; the first heavy fall of snow came during the night, wrapping the prison yard and buildings in an impenetrable white silence. The food situation is getting desperate; every night deaths ocur; two priests died last week."

"MARCH 1950.

"We are shivering in our cells both from hunger and from cold. The bread ration has been cut again. A moving scene occurred yesterday in the prison yard. A youth fainted and then collapsed while clearing away the mud. The cardinal, who happened to be taking his daily walk, was the first to help him get up.

"'I am hungry; I can't stand this any more,' whispered the youth.

"'Take the loaf of bread from me, please,' the cardinal whispered back, although he himself had little to eat.

"With tears in his eyes, the youth kissed the cardinal's hand. When they parted, the cardinal told him, 'I shall pray for you.' For more than 4 weeks the cardinal sent his loaf of bread every second day to that boy. This noble gesture was commented upon both by the inmates and the prison's warders."

Undated, presumably 1951:

"When the cardinal was transferred to Vacz, it was estimated that among the inmates there were many unbelievers, especially liberal Marxists who quarreled with the Orthodox Communists of Stalin's school.

"But the cardinal's presence in the prison has had a tremendous influence on the revival of faith among the 2,000 inmates. In the cells of Vacz prison religion has become a living spiritual force. I have witnessed many cases when the atheistic Marxists—former avowed enemies of all religion—have rejected Marx's dialectical materialism and embraced the Catholic faith * * * Such occurrences have given me consolation for my sufferings."

Undated, presumably spring, 1952:

"The cardinal has been removed from the general prison's ward somewhere else. I am sorry that I won't see him any more during the walk in the prison yard. But he has been carrying the burden of the prisoner's life with nobility and dignity. We do not see him any more but we feel his presence everywhere in prison." (End of diary.)

As I think back to the days before my uncle's arrest, I remember the words of his final pastoral letter, circulated seven years ago last week (November 18, 1948), in which he forecast his own fate. "None of my predecessors was so without means of defense as I am * * * compelled to face untruths * * * as I am * * * (but) when compared to the sufferings of my country my own fate is unimportant."

Mindszenty might repeat those words today, for certainly few Christians have been more persecuted for their faith, more defamed and tyrannized, or more selflessly persistent in their dedication to truth and liberty since Christ carried His Cross to Calvary.

At the time, Mindszenty was speaking of the diabolical plot that was to lead to his debasement at AVH political police headquarters at Budapest's 60 Andrassy Street (renamed Stalin Street). He knew that arrest

was imminent well ahead of the fateful hour when 16 policemen surrounded the palace of his Holy See at Esztergom the day after Christmas in 1948. He laid aside his robe, bade good-by to his mother and alerted his priests with these words: "If a live Cardinal cannot help defend his country, perhaps a dead one can."

Hurriedly he scribbled on the back of a worn envelope a message to his bishops. It was to become an immortal indictment of communism and the Cardinal's best-known declaration.

"I have partaken in no conspiracy whatsoever," he said. "I shall not resign my episcopal See. I shall not make any confession. If * * * you should read that I confessed or * * * resigned, and even see it authenticated by my signature, regard that as merely the consequence of human frailty; and in advance I declare such acts null and void."

My uncle is a man of immense courage. He foresaw what would happen at 60 Andrassy Street. He had been there times before to protect the unjustly accused and tormented. However grim, however humiliating his own experience there was to be, he was prepared to face it. "Other men possess far greater talents," he had said to me, "but I have nerve."

At Red police headquarters Mindszenty was starved, tortured, brainwashed, drugged. Irrefutable documentary evidence has been brought out of Hungary and submitted to Western intelligence by eyewitnesses, as well as by officials who assisted in the conspiracy and who later fled. They included a doctor who gave Mindszenty drugs, a graphologist who forged damning documents, and two public prosecutors who detailed precisely how Cardinal Mindszenty's will was shattered.

The man who shared my uncle's cell for a time preceding trial escaped recently to bring me this fresh account: "Mindszenty was threatened with death if he would not confess according to Communist dictates at the trial. He collapsed many times in our cell when they brought him back from interrogation; he had recurrent nightmares. For days at a time he was not fed, but was given ice-cold enemas, stimulant pills and injections which I myself saw the doctors administer."

Mindszenty's crackup followed on the 25th day of arrest, and 13 days later, authorities were able to bring him, shockingly different from the man Hungary knew, to a so-called "trial" before a "People's Court."

There the churchman was made "publicly" to "confess guilt" to charges of treason, of plotting to overthrow the government and of illegal dealings in foreign currency.

On February 8, 1949, a life sentence was imposed, and the cardinal was whisked away, never to be seen again except by his captors, for a time by fellow prisoners, and rarely, with special permission, by his mother.

Mindszenty, as martyr, rallied all Christianity to his cause, and his voice, silenced, cried out louder through prison walls. Fear of reprisals, public demonstrations, pilgrimages, liberation attempts (which were made and will be related later), and fear of real release by "unreliable" prison warders, compelled the Red regime not only to hide the cardinal but to change his whereabouts at regular intervals. Before last July's announcement, there were in fact numerous "interruptions" of his sentence.

Since 1949, he has been in a dozen different prisons and detention villas, not only in Hungary but in Czechoslovakia. Once when the Russians became afraid, he was even moved to Soviet territory. Such precautions were taken to cover these movements that often three different points of confinement were designated simultaneously for him in three different regions, leaving wardens to argue who was responsible for the prisoner, while Mindszenty was shunted to a fourth unnamed place. There were times when my uncle himself did not know where he was.

One of my uncle's principal concerns throughout his lifetime has been the welfare of political victims of Hungary's ever-changing governments, of Nazi and Communist tyranny. To see justice rendered to them, he would carry their complaints from internment camps and prisons even up to Parliament. Now who in Hungary can look after him, can see if he has enough food, a bed to sleep on, a crucifix to pray before? Who is there to champion his rights?

The Communist conspiracy did not end with the imprisonment of my uncle. His persecution continued, and in Csehimindszent, Hungary, the village of his birth, the conspiracy extended to our family. We were made to suffer not only his loss, but Communist abuses and retaliations for his alleged crimes.

His Nephew Tells the Shocking Truth About Cardinal Mindszenty

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 25, 1956

Mr. MULTER. Mr. Speaker, the following is the second in a series of three articles on Cardinal Mindszenty by his nephew, Laszlo Szamosfalvi. This article appears in the November 27, 1955, issue of the American Weekly:

HIS NEPHEW TELLS THE SHOCKING TRUTH ABOUT CARDINAL MINDSZENTY

(By Laszlo Szamosfalvi, as told to Helen Mamas Zotos)

Last July the Hungarian Communist authorities gave the world the false impression that Cardinal Mindszenty had been released after serving nearly 7 years of his shameful life sentence for "treason and espionage." He is still a prisoner behind a veil of secrecy and silence.

In my opening chapter of this story last week, I was able to lift that veil for the first time—because of my personal experience with communism, with the help of the Hungarian underground and "indiscreet" Red agents, excerpts from a diary kept by one of my uncle's fellow prisoners, and letters from his aged mother.

This is the story of her tragic martyrdom.

In Csehimindszent, Hungary, the village of Jozsef Cardinal Mindszenty's birth, the shadow of his cross has fallen over those dearest to his heart. The martyrdom of his family, particularly of his aged mother whom he adores, has been no less courageous than his own.

With my uncle's imprisonment in February 1949, the Communists turned their fiendish conspiracy upon our home, and we were made to suffer not only our grief at his ordeals but also abuses and arrests.

It is on the face of Mindszenty's mother, the widow Janos Pehm as she is known, that the lines of his anguish are most perceptibly drawn. To her the Communists imparted the painful task of wrestling with the sorrow of her heart and comforting her son in prison. As his only visitor in the last 7 years, she has shared most of his suffering. It became her poignant duty to attempt to undo the torments of his persecutors.

Following the Hungarian Communist announcement of my uncle's "release" last July—the first official news of him since he vanished from the Budapest "courtroom"—Mindszenty was removed (our underground discovered this secret) to a villa in southwestern Hungary. This villa formerly was the summer residence of the bishop of Pecs. It is located a few kilometers to the northeast of Pecs in Puespok Szent Laszlo, a village in the Mecsek Mountains, some 25 miles from the Yugoslav frontier.

There, Mindszenty's mother was permitted her latest visit with him. On a prearranged date recently, a car of the AVH security police manned by plainclothesmen called for her in Csehimindszent, as it always came to take her, each time alarming the people of our village who feared her arrest.

Of this visit she was soon after able to tell me:

"I want to see the freeing of my poor son. The only difference is that he is not in prison but in a villa situated in a dense forest, like others he has been in. He has three rooms. A priest is with him. I can tell you the poor soul would have preferred to go to his Holy See at Esztergom, but they took him instead to this resting place. It pains me that our Jozsi has been imprisoned now 7 years and they do nothing. Last year I requested that they release him to me or to a cloister, but they never answered, so all is in vain. * * *"

In another message she explained: "There has been great confusion because the radios broadcast they would release him; while they have made no move. Only the dear population made inquiries about him. Some said that they had seen him in Esztergom, others, in Csehimindszent, and still others in Budapest, saying Mass at St. Matthew's Church. The population became very excited. They did not want to believe that nothing had happened."

To be confined in a villa may seem better than to be locked up in prison. Nevertheless house arrest cannot be stretched to mean freedom, and while Cardinal Mindszenty's physical surroundings appear superficially improved, the Communist act of clemency remains a grotesque Communist bluff.

In this villa Mindszenty continues to be completely isolated from the outside world. He speaks to no one, receives no newspapers, not even Communist Party organs, and cannot move about at will, appear in public, or communicate with his church and his people.

All roads leading to the village of Puespok Szent Laszlo have been closed by police forces and are heavily partolled. Access to the area is further prohibited by a new government warning that uranium is being mined there, a convenient pretext to keep the Hungarian people from discovering his whereabouts and trying to see him.

In no manner, in fact, has the outrageous wrong inflicted upon the Cardinal been corrected. His sentence has not been nullified; his church rights have not been recognized. His title as Hungary's Prince of the Church, stripped from him with all his church properties at his trial, has not been restored. Nor has his innocence been affirmed.

Even the priest-companion assigned to him—in a seemingly magnanimous gesture—is no priest at all, our underground informs me, but a Communist "suggester" who carries on the sinister job of brainwashing in the hope that the primate will give up his unrelenting opposition to communism.

Mindszenty's guilt in 1949, and now, has been only his refusal to betray God and surrender his church to atheism. In his villa-prison his spiritual dedication has not weakened. Despite his atheist keepers he carries on the humble requirements of his office, celebrating morning mass and devoting many hours to prayer and contemplation. Once each week, as has been his ritual for some 40 years, he fasts on bread and water and sleeps not on a bed but on the bare floor.

Meantime, in Csehimindszent, our family attempts to endure the penalties pressed upon us by the Communist conspiracy. In a police state any penalty short of death is no penalty, and only Moscow's intervention saved Mindszenty from execution. Immediately after my uncle's trial the Communists sought to purge our family and to cut us away from our means of subsistence.

Four sons of Mindszenty's elder sister were arrested because, they were told, "Mindszenty is your uncle." One of them, my cousin Gyula Tarlo, recently reached Austria after imprisonment in Hungary and many efforts to escape. He had been arrested five times.

The son of the cardinal's second sister, with whom Mother Pehm lives, was also jailed and sentenced to slave labor—a punishment that still continues—because he wrote a letter to the authorities for Mindszenty's mother, asking permission for her to visit her captive son. The list of other more distant relatives forced to work at farm labor is endless.

Nevertheless we kept together as we could, cherishing as peasants our Magyar inheritance of three traditions—freedom, the soil, and the cross—which Communist treachery has temporarily taken from us and from all of Hungary. We took much encouragement from the heroism of our matriarch, Mother Pehm.

In the house where she brought young "Josi" into the world 63 years ago—a house which is now in ruins and under constant police surveillance—Mrs. Pehm continued to live in the way of humility and self-effacement that has characterized her life. She is a small, fragile woman, always dressed in black. At 86 she is one of the very old ones in the village. Being long accustomed to the hard labors of the peasant, however, she still works from dawn to dusk in the vineyard.

Mother Pehm regarded her cardinal son as her "little wealth." and often she is heard to whisper now in her martyrdom, "They have taken away my 'little wealth'; now I have nothing." When he was only 10, she decided to send him away to school—an extraordinary act for a peasant woman and one that drew comment from our neighbors that, "Those Pehms have bitten off more than they can chew."

While she had not urged (but certainly quietly inspired) Mindszenty to become a priest, she wept for joy at his ordination. The telegrams that came on the day of his first mass gave her an opportunity to say, "You see, the good God helped us chew what we bit off."

Last summer Mother Pehm worked with special patience in the vineyard. She had been bedridden throughout the previous winter—her asthma is very troublesome—and she had seen the cardinal but once in nearly a year. On her next visit she wanted to take him a gift from home and thought, "What better than a bottle of wine from his own vineyard."

That fall she brought from the field the sweetest, roundest grapes in the community and she pressed the grapes into a wine of the right pungency for the cardinal's taste.

Beneath her black shawl, on visiting day, she carried her treasure with her—only to have it smashed against the wall by a laughing prison guard.

Mindszenty's love for his mother has been no less tender, and in his early twenties he wrote two books—banned by the Communists—on Christian motherhood, which are a testimonial to his own mother's love.

A passage from the Face of the Heavenly Mother, wherein he describes Mother Mary's sufferings with Christ, was prophetic of the sorrow that he and his mother now share:

"Continual grief united mother and son just as firmly as moments of joy. When Mary looked into Jesus' eyes, she saw the mortal anguish on Mount Olivet. * * * But a time came when she was mortally wounded by the swords. * * * As once the Lord turned her love to mother's milk so now He turned her sorrow to tears. * * *

"Jesus and Mary met. * * * They stood gazing into each other's eyes. One glance of the mother uncovered everything that had happened the previous evening, during the night and that morning. The sweat of blood in Gethsemane, the traitor's kiss, the 30 pieces of silver, the trial * * * the stripping of garments and the scourging, the mocking, and the crowning with thorns * * * the mother knew all these things."

It fell to the Cardinal's mother to reconstruct, during her visits with him, the events of his bitterest days. For Cardinal Mindszenty has no personal, real recollection of the harrowing period between his arrest and imprisonment. He remembers nothing of 60 Andrassy Street, the torture chamber of the Communist secret police where he was drugged and brainwashed. Nor does he recall his confession to charges of treason and conspiracy before a so-called people's court. It was his mother who had to lift the curtain of this blackout, during which, as he later told her, "I thought I was dead."

Six weeks passed after the court sentenced my uncle to lifetime imprisonment on February 8, 1949, before Mindszenty's mother was permitted her first visit with him. In the last 7 years, she has been allowed to see the Primate only 30 times, the visits totaling but 25 hours.

Her first appeal to see him brought no reply but the arrest of her grandson. So great became her desperation that by March she pleaded in a wire, reply prepaid: "I am his mother. I cannot be forbidden to see my son." After this wire she was taken to Budapest to see him for the first time since he had bade her farewell on the day of his arrest. His last words were, "Don't cry, mother. If I should die, it will be for the freedom of Hungary."

With a grill between them and two policemen in the room, Mindszenty learned from his mother's cautious words of the Communist outrages inflicted upon him during the early days of his martyrdom.

"My son, you have been sentenced to life imprisonment," she told him. "You will be here forever."

"Mother," the cardinal consoled her, "it will be all right one day."

"Everyone in the family, everyone in the country, in the whole world, is praying for you," she said, trying to reassure him.

"Mother," he said, "they shall not pray for me; they shall pray for the same thing I am praying for."

In the year 1950, Mother Pehm saw her imprisoned son only once, despite repeated entreaties. Later it became evident she was kept away because he was gravely ill and had been sent out of Hungary to convalesce.

By January 1951, Mrs. Pehm learned his whereabouts. Without asking permission, she went to a Budapest villa—and found him. Behind a guard's back, she dashed into the house—just as Mindszenty appeared from his room.

Opening his arms to her, and weeping, he called out, "Mother, I dreamt you would come." Comforted with the sight of him, and fearing to stay beyond this embrace, she darted swiftly out again. Only then did the guard notice her. "Rotten old witch, beggar," he shouted, "be on your way."

Since the cardinal's arrest Mrs. Pehm has stopped counting the years, for fear they will all pass away before her son is freed. In letter after letter she writes me:

"I pray for the release of my poor suffering son * * * that our gracious Jesus should liberate him * * * But I fear I will not be alive then, as I am old * * * If I can only live long enough to have a long talk with him; this is all I wish."

The Fate of Cardinal Mindszenty's Betrayers

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 25, 1956

Mr. MULTER. Mr. Speaker, I have previously directed the attention of our colleagues to two articles on Cardinal Mindszenty by his nephew, Laszlo Szamosfalvi. The third and final article of the series appeared in the American Weekly for December 4, 1955, and is as follows:

THE FATE OF CARDINAL MINDSZENTY'S BETRAYERS

(By Laszlo Szamosfalvi, as told to Helen Mamas Zotos)

The irony of communism is that it destroys itself. Those who push it along its sinister course very often are trapped in the web of their own treachery.

In my country we believe "God writes straight with crooked lines." We are a religious people, and, in trying hours, take hope in knowing that from suffering will come good, and, from evil, punishment for the evildoer.

So it was that in the aftermath of my uncle's imprisonment, in 1949, the Communist conspiracy boomeranged, and God turned His wrath upon Cardinal Mindszenty's persecutors.

By imprisoning our primate, Hungary's Reds virtually elevated him to sainthood. Instead of destroying him and the faith of our people, which was their design, they created a hero and a martyr and brought upon themselves the anger of all Christianity. As Mindszenty had prophesied, a dead Cardinal was worth more to the cause of freedom than a live one, and before an aroused world he became, in the Communists' blood-stained hands, a liability of fantastic dimensions.

God's vengeance swiftly swept over the Communist Party and they saw, too late, the dreadful mistake they had made. In doubt and panic, crucifier turned against crucifier to strike down all who could be blamed. Of some 31 'respectable" Communists entrusted with my uncle's arrest and conviction, only 3 remain at liberty in Hungary today. Two successfully escaped to the West. Twenty-six met a violent fate.

Trapped in the web first were the three Ministers of Interior who served before, during, and after my uncle's trial. Minister Laszlo Rajk, who seated the Cardinal's doom years ahead of the courtroom scene, was hanged as a traitor in 1949. Janos Kadar, his successor, who grilled my uncle at the trial, was imprisoned until recently. Sandor Zold, who inherited the ministry after successfully conducting an anti-Mindszenty scare wave, became so hysterical through fear that he shot himself and his family.

Justice Minister Istvan Riesz had served faithfully in his post 6 years before colleagues conveniently discovered that he was an American spy. His sentence before another mock court was 25 years, but in his cell vengeful prisoners terminated it promptly by beating him to death.

In 1947 I spent 6 months at 60 Andrassy Street, headquarters of the AVH secret police and the same horror chamber to which my uncle was brought following arrest for trial preparation. I had refused to join the Communist army, and was beaten up by the notorious Gabor Peter—the same man who, by terror and intimidation, built up the

case against the cardinal. A Moscow-trained police chief and professional hatchet man, Peter was arrested in 1953. A recent jailbreak attempt failed and he is now fulfilling his life sentence.

His sidekick, Lt. Col. Gyula Decsi, arrested my uncle and was most directly responsible for his physical breakdown. He had charge of the brainwashing and personally extorted the cardinal's "confession". But in doing his job, he, too, committed an antistate crime and was imprisoned.

Of the 16 arresting officers only one managed to escape the Communist sword by fleeing to the West. The leader of the group, Gyula Oszko, also tried to escape, but failed. He was shot by Soviet guards on the Austrian frontier. A third policeman was found dead at headquarters, while the remaining unlucky 13 were sped out of Hungary into Siberian slave labor.

These were not all. The handwriting expert at the trial, two of the doctors assigned to Mindszenty, and the propagandist in Communist party boss Matyas Rakosi's private office also have died. A third doctor went insane, while the prison warden himself, was imprisoned 4 years. The cardinal's defense attorney, Kalman Kiczko, who was forced on my uncle in place of the one he had chosen and who put up no case at all, also died, repenting not having performed my lawyer's duty.

Vilmos Olti, the judge who pronounced sentence, and the young public prosecutor avoided the dire fate of the other conspirators, but both for a long time were out of a job.

Time and again in the years of my uncle's captivity the Communists have had shocking reminders of their mistake in daring to desecrate Cardinal Mindszenty. Even before his ordeal his fame as a protagonist of freedom was widespread and he was held in veneration by the world. In prison he became a glowing symbol of the Communist debasement of religious faith and of the dignity of man. His message, though muted by prison walls, rallied Christians the world over to save him.

In 1949, shortly after his imprisonment, an attempt to liberate him was made by elements of the Hungarian and Polish undergrounds and friends in America. The Cardinal at the time was in a prison hospital at Koebanya, a suburb of Budapest. Hungary's borders were freer then, and contact was easily established with prison guards to ensure his safe delivery.

A demonstration was arranged to divert the authorities' attention, and detailed maps of the prison grounds traced the path he would follow to freedom. The gateway was to be made by seaplane which was to land on the Danube River near the hospital at a given time. Everything was well prepared, when Red counterspies intercepted a message and the plot failed.

Hungary's announcement of my uncle's "release" last July was an attempt to cover the Communist mistake. Months before the Soviet smile at Geneva the Kremlin had decided that this single act of "relaxation" would make an impression on the free world. Within Hungary it was aimed at appeasing the Cardinal's devoted flock, about to start work on the harvest. Because of the critical food situation this phony gesture was made to induce cooperation.

The announcement itself was riddled with lies which left holes for Communist retreat. The Reds referred to Mindszenty neither as cardinal nor archibishop of Esztergom. Thus they stripped him of his titles to show that the regime still refuses to recognize his sacred office.

They said my uncle and the board of bishops had asked for clemency. This was false. In fact, throughout his lifetime my uncle has tenaciously refused to direct any appeals to communism. As for the board of bishops, they are under the cardinal's jurisdiction, not he under theirs.

The Communists claimed clemency had been granted because of Mindszenty's old age and poor health. My uncle's "old age" is 63, and his health, as the Communists well know, has never been better in prison.

Apart from its propaganda motivation and lies, the announcement stemmed from a longing to be rid of the primate forever and to white wash the whole Mindszenty affair. More than anything, the Communists would like today to disengage themselves from their prisoner but under terms that would save the face of the Communist state in Hungary.

Early in 1954 they offered him a release conditional on his leaving Hungary. The cardinal asked his captors how many other Catholic priests were still imprisoned. When they told him some 623 he declared, "Then I shall be the last to think about leaving."

Later they modified their terms and offered to free him on condition that he: (1) renounce the Vatican and authority of the Pope; (2) abdicate as primate and go into village exile as an ordinary priest; (3) not resume his anti-state activities; (4) not issue any uncensored statements concerning his imprisonment; and (5) personally express desire for clemency.

These had long been the aims of the Communist antichurch drive. They were in fact the very alternatives offered to Mindszenty before his imprisonment. Even in jail he turned them down, refusing to compromise with communism. "I have my own conditions—not those you put before me," he told them on many occasions.

The Communists never really wanted to imprison my uncle. They would have much preferred to exile him or kill him "accidentally."

I myself intercepted a top-secret paper drawn up by the Communist hierarchy proposing his murder by a fake accident in September 1948. Only three copies of this document existed. Party Boss Rakosi's plan was simple—an army motor truck was to "accidentally" collide with a car carrying my uncle on the road near his palace.

Frantically, I dashed from Budapest to Esztergom to alert the cardinal. His only comment to me on this, the last time I saw him, as I remember, was: "A dead Mindszenty will be more useful to the Hungarian nation than 100 live Rakosis."

Although the Reds wished so desperately to be rid of him, they were afraid. when the test came, to have him die their prisoner. During periods of long illness they gave him the very best care.

For three years following the cardinal's "trial," he was mentally not himself. He suffered from the tortures of his brainwashing and was physically and spiritually exhausted. He suffered an attack of pneumonia and underwent a thyroid operation.

During these years I ran missions of mercy for my imprisoned uncle from the free world. Three times I crossed the borders of Hungary from Austria to visit my aunt, the cardinal's mother, in Csehimindszent and to bring her wonder drugs—antibiotics and penicillin—that she could carry to the cardinal. Each time I made my way safely in and out again—at the risk of my life.

Apart from by uncle's blackout concerning the "trial," today he is in good physical health and has complete use of his mental faculties.

Throughout his lifetime Mindszenty has been an unyielding foe of communism and a patriot. There never was any doubt in his mind as to his eventual arrest, imprisonment, and perhaps death at the hands of his foes. Even the Pope cautioned him when be bestowed the red hat upon him in 1946: "You may be the first whose red blood will stain the blood-red of the cardinal's cap."

He could have escaped but would not. Time and again, when it was suggested that he leave Hungary, he shook his head and said, "I must stay home with my people. We are in a period of storms and disturbances but the Hungarian Church has outlasted the storms of centuries. She is under the protective wing of God."

A curtain of silence has again been lowered over Mindszenty since the false news of his release. It covers a great Communist dilemma. Who can predict how the Reds will extricate themselves from their own conspiracy? Knowing that my uncle, too, remains under the protective wing of God it is my hope that God will swiftly "write straight these crooked lines."

In court Mindszenty had the last word. He ended his final plea for justice with a prayer. It would seem fitting to give him the same last word here. "God give us peace in these days, not merely in the future but in these days," he said. "I ask for this peace for my church, the love of which is constantly with me, for the Hungarian state to which I have shown by obedience, and for my own soul."

The case of Mindszenty is not closed.

To Help the American Farmer, Why Not a National Institute of Agriculture for Research and Development?

EXTENSION OF REMARKS
OF
HON. ALFRED D. SIEMINSKI
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1956

Mr. SIEMINSKI. Mr. Speaker, though I do not have one farm in my congressional district, nonetheless our people are greatly interested in the farmer's welfare.

While I am not an expert in agriculture or legislation dealing with it, I do nevertheless have an idea that I wish to bring to the attention of the House that might conceivably help the people in agriculture throughout the United States.

Everyone seems to be concerned about surpluses, but precious little is being done about it. I am wondering if the Congress could wisely go into the question of whether there should be created a new agency entitled "The National Institutes of Agriculture." This agency would concern itself wholly with research and development within the agricultural field. Who knows what research might bring? Surpluses may be turned to good use; a new farm product might be developed, and so forth. There are unlimited fields and horizons in agriculture that have not as yet been touched by our scientists. Would it not be wise to start such a program?

I enclose a letter that I received from the Assistant Secretary, Mr. E. L. Peterson, which is self-explanatory. I also enclose a list showing the "amounts available for research and related man-years for fiscal year 1956 within the Department of Agriculture."

As the session goes on, I expect to talk further about this National Institutes of Agriculture.

The letter and table follow:

DEPARTMENT OF AGRICULTURE,
Washington, D. C., January 26, 1956.

Hon. ALFRED D. SIEMINSKI,
House of Representatives.

DEAR CONGRESSMAN SIEMINSKI: This is in reply to your letter of January 10, 1956, re-

questing certain information on the Department's research programs.

The attached table shows for fiscal year 1956 amounts available for research by the various agencies of the Department and the estimated man-years of employment related to this research in total for each agency.

Under provisions of the Research and Marketing Act of 1946, the Department has authority to enter into contracts with States, agencies of States, private firms, institutions, and individuals for research and service work, making and compiling reports and surveys, and carrying out other functions relating thereto when these services or functions to be performed will be carried out more effectively, more rapidly, or at less cost than if performed by the Department of Agriculture. The Department of Agriculture and Farm Credit Administration Appropriation Act, 1956, provides that not less than $1,500,000 of the Department's appropriations for research and service work shall be available for contracting in accordance with our authorizations.

The Public Health Service is not conducting any research for us in the agricultural field; however, in carrying out certain phases of our research, there is close cooperation with the Public Health Service to enable both agencies to keep each other well informed.

We hope this information will be helpful and we appreciate your interest in the Department's research programs.

Sincerely yours,

E. L. PETERSON,
Assistant Secretary.

United States Department of Agriculture—Amounts available for research and related man-years, fiscal year 1956

Hitting Where It Hurts—Iron Curtain No Barrier to Radio Free Europe

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Tuesday, January 31, 1956

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Hitting Where It Hurts—Iron Curtain No Barrier to Radio Free Europe," appearing in the Boston Globe of January 25, 1956.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HITTING WHERE IT HURTS—IRON CURTAIN NO BARRIER TO RADIO FREE EUROPE

(By John Crosby)

No one has ever satisfactorily succeeded in measuring the reaction of an audience to a program or, for that matter, even in measuring the size of the audience.

An infinitely more complex job is that of measuring the results of radio programs beamed to the other side of the Iron Curtain—to Czechoslovakia, Hungary, Poland, Rumania, and Bulgaria.

Still, the job is done and done pretty well.

Chief of the audience research section of Radio Free Europe is Robert C. Sorensen who find out how many of RFE's programs are getting through and what they are accomplishing through three sources—refugees, travelers, and sailors who have been in the target countries; newspapers, magazines, and radio broadcasts from behind the curtain; and letters from listeners.

Interviews with refugees and travelers take place along the periphery of the Iron Curtain in Munich, Stockholm, Hamburg, Frankfurt, Vienna, Rome, Athens, Instanbul. Some of them take as long as 10 hours.

The hardest part is getting the interviewed to stop telling what he thinks the interviewer wants to hear and tell what he really knows.

If the RFE is hammering away at Soviet agricultural policies, for instance, it wants to know what the people really think about those policies.

RFE also wants to know what the people want to be informed about, it being difficult on this enlightened side of the curtain to tell precisely where the areas of ignorance are.

Soviet broadcasts and press reveal a lot about RFE's effectiveness. It has been attacked by Soviet press or radio more than 1,800 times in the last 19 months, more than any other foreign radio group including Voice of America.

For angry reaction, President Eisenhower's Christmas greetings probably set some kind of record. The broadcast was attacked by Khrushchev himself and his remarks were repeated in 34 different attacks by the Soviet-controlled radio and press in satellite countries.

Letters indicate that the favorite type of program is news, especially news about western thinking. Listeners like to hear comparisons between western salaries and their own.

They like comedy with a political slant, the sort of thing that shoots barbs in the Communist way of life.

They like music, particularly that of composers barred for political views.

Most dramatic example of RFE's effectiveness took place in January last year when there was a major shakeup of the Polish secret police, including the removal of the Minister of Security and the arrest of three of his top officials.

This followed 3 months of broadcasting by Joseph Swiatlo, formerly of the Polish secret police, who revealed over RFE all the corruption and intrigue within the organization.

RFE has ways of measuring audiences at least as good as Nielsen in this country. In the 5 countries they broadcast to there are 5 million radio sets that can receive the programs, and it is known that 3 to 5 people are generally clustered around each set.

Moreover, listening is not—as in this country—casual; because it is illicit, people listen with intense concentration so as not to miss anything.

Now that the Kremlin is making an effort to be friendly with the United States, attacks on our Government have decreased.

But attacks on Radio Free Europe have greatly increased.

Last October, in Geneva, Molotov claimed that the people from the five satellite countries who have escaped to the West and gone to work for RFE are "the scum of society thrown out of the people's democracies."

That was, the RFE people feel, about the most flattering thing Molotov could have said. To deserve an epithet like that, RFE must be hitting where it hurts.

Our Greatest Need: Wisdom

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Tuesday, January 31, 1956

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a thoughtful and timely article by Dr. Julius Mark, senior rabbi, Temple Emanu-El, New York City.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OUR GREATEST NEED: WISDOM

(By Dr. Julius Mark, senior rabbi, Temple Emanu-El, New York City)

Our world needs many things today, but its chief requirement is wisdom.

We have made incredible progress in unveiling the secrets of nature. We have made the earth yield more abundantly than ever before in human history. We have pushed back the frontiers of disease with wonder drugs and vaccines. We have witnessed the human life-span prolonged to a remarkable extent. We have unlocked the door of the atom, resulting in an inexhaustible source of power not only to destroy, but to build, to heal, and to open new avenues for making life healthier and happier.

In view of the astonishing progress that has been made by science and technology, one might think that ours would be an age of optimism, serenity, and hope. Yet, as we look about us, we find that the very opposite prevails. Our world, alas, suffers from fear, tension, and insecurity. It is obvious that there is lacking in modern life something which prevents us from enjoying the fruits of man's prodigious progress.

More than 2,000 years ago, the author of the book of Job in the Bible, examining his own times, was as bewildered as are we, when he declared: "Man putteth forth his hand unto the rocks; he overturneth mountains

by the roots; he cutteth out rivers from among the rocks; he buildeth the floods from overflowing. That which is hidden, man bringeth to light, but where is wisdom to be found? Man knoweth not the price thereof." (Job 28: 9 ff.)

Despite astonishing progress made since the days of Job, man himself has hardly changed, a fact which is in a large measure responsible for the present-day spirit of pessimism and defeatism. Our knowledge has been increased immeasurably, but man has remained substantially the same. How few and puny are his achievements—as a human being. From the beginning of this century up to the outbreak of World War I, our horizon was filled to overflowing with the wildest of dreams and most extravagant of hopes.

Sociologists believed that they would soon abolish poverty and eliminate crime. Scientists felt that, through the conquest of disease and the prolongation of human life, man would not only be healthier and live longer, but would be happier. Industrialists claimed that the machine age would provide man with so much leisure that universal education and culture would be inevitable. Religionists dreamed of the brotherhood of man being near at hand, since closer relationships were being developed through advances in communication and transportation.

The fallacy inherent in these dreams consists in this: While we considered the amazing progress that had been made in the conquest of nature, we left out of account human nature, which is man himself. Because our material progress has not been paralleled by moral progress, the wonders man has achieved have come to represent a threat rather than a promise—which only wisdom can achieve.

What is wisdom? For one thing it is not synonymous with knowledge, since men possessing knowledge may be cruel, vindictive, destructive. Wisdom is a combination of discernment, discretion, and sagacity. It involves a certain amount of knowledge, to be sure, but it is principally the knowledge of human beings and the mutual respect, mutual sympathy, and mutual understanding which may be derived from that knowledge. "Give me understanding," cried the Psalmist, "and I shall live!" (Psalms 119:144.)

The tragedy of our times is that we have succeeded in splitting the atom before acquiring the wisdom to unite humanity. Our major need today is not for more knowledge as to how to fly through the stratosphere, but more understanding of how to walk upon the face of the earth like human beings created in the image of God. Not more science do we require, but more of the milk of human kindness. Not more bombs to destroy should be our aim, but more of the balm of healing and building up the wounds of mankind fallen into disunion. Not more "know-how," but "know-why"! Not more knowledge is our greatest need, but more wisdom!

Footnote to Mr. Truman's History

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Tuesday, January 31, 1956

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Footnote to Mr. Truman's History," written by Arthur Krock, and published in the New York Times of Tuesday, January 31, 1956, which illuminates another phase of the important public service of the late James Forrestal, our first Secretary of Defense.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IN THE NATION—FOOTNOTE TO MR. TRUMAN'S HISTORY

(By Arthur Krock)

WASHINGTON, January 30—In his clear and factual account (in the New York Times of January 27) of the origins, assertions and first congressional execution of the Truman doctrine of 1947, Mr. Truman apparently did not estimate certain Navy activities in the Mediterranean in 1946 as pertinent to the background. But those who had first-hand familiarity with these activities believe that in promoting and initiating them the late James V. Forrestal, as Secretary of the Navy, laid an essential foundation of the Truman doctrine.

A year before President Truman went to Congress in person to submit the Greek-Turkish aid bill, a measure which was the first step in the doctrine that eventually included the Marshall plan, the Communist rout in the Italian elections of 1948, the successful Berlin airlift, the Atlantic Pact and NATO, Forrestal was seeking ways to meet the deteriorating allied situation in the Mediterranean. Forrestal had been copying in his diary dispatches from Ambassador Averell Harriman in Moscow that ceaselessly warned this Government of the aggressive Russian policies since manifest to all. Through Navy intelligence the Secretary knew of the steady weakening of British power and realized the disastrous effect this could have on the interests of the free world in the Mediterranean.

About this time shipping conditions in that area made it at last possible to return to Turkey the body of its wartime Ambassador, Ertegun. When the late Adm. Forrest Sherman proposed to Forestal that the body go home on a battleship he saw an opportunity to make a show of United States power in the Mediterranean as a reminder of it to the Russians and as reassurance to the hard-pressed anti-Communist nations in that region.

By February 28, 1946, Forrestal had chosen his battleship—the celebrated *Missouri*. The ship had three significances: it was one of the most powerful of war vessels; the Japanese surrender terms had been signed aboard; it was named for the President's home State. In approving the plan Secretary of State Byrnes suggested that the mighty Navy task force also designated for the area should escort the battleship. The task force was unable to join the *Missouri* for some months. But meanwhile the great warship, after delivering Ertegun's body to his nation, visited Piraeus, Algiers, Tangier, and Naples. Finally, accompanied by 2 aircraft carriers, 7 cruisers, 18 destroyers, and 7 auxiliary craft, she called at 40 Mediterranean ports.

A WORLDWIDE ALL-OUT EFFORT

The effect was, as Forrestal had foreseen, to impress the Soviets and the Mediterranean peoples threatened by them with the reality of a nation strong enough to resist Moscow, and with its forces in a state of readiness to do so. Mr. Truman, referring to his first submission to Congress of the Truman doctrine in the form of the Greek-Turkish aid bill, wrote: "America had served notice that the march of communism would not be allowed to succeed by default." But the beginning of that notice could fairly be credited to Forrestal's dispatch of the *Missouri*, which President Truman, of course, fully understood and had approved.

The retreat of Moscow from aggressive threats and pressures in Iran removed one source of tension in the Mediterranean area. But on February 24, 1947, the British Ambassador informed the State Department that the British no longer could supply financial-military support to Greece and Turkey. Forrestal at once concentrated his mind and energies on the problem with which he had first grappled with the dispatch of the *Missouri*.

He recommended to Secretary of the Treasury Snyder an immediate mobilization "of brains and talents." On March 4, he beat this gong at a lunch with a group of Senators, ambassadors, and Cabinet members. On March 5 Forrestal was expounding his ideas to Clark M. Clifford, the President's special counsel. The consequence of that meeting was a memorandum that reflected the thinking of Forrestal and Clifford, also of Marx Leva, a Forrestal aide who later became Assistant Secretary of Defense. According to that document:

"This country cannot afford the deceptive luxury of waging defensive warfare. * * * By providing outstanding economic leadership this country can wage its attack successfully. * * * This product will have to prove its superiority to the commodity Russia has been peddling. * * * We must create the conditions under which a free world society can live * * * by an all-out effort on a worldwide basis [to] assure productive enterprises directly useful to the country involved and to world trade."

A week later the President presented the Greek-Turkish aid bill to Congress. This was a lineal product of the dispatch of the *Missouri* to the Mediterranean in 1946.

Address by Hon. Alexander Wiley, of Wisconsin, at Wisconsin Dells, Wis.

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, January 31, 1956

Mr. WILEY. Mr. President, during the past weekend I was pleased to deliver an address in Wisconsin Dells in my State, in the course of which I referred to one of the most significant problems affecting the fourth estate in our country and, indeed, affecting every American citizen. I refer to the shortage of newsprint.

I send to the desk the text of my address, and ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SENATOR WILEY SAYS THAT CONTINUED UNITED STATES PROSPERITY CALLS FOR BOLD PROGRAM OF ECONOMIC INSURANCE—SUGGESTS THAT EXPANSION OF NEWSPRINT PRODUCTION IS A KEYNOTE TO OUR FUTURE ECONOMY—URGES ACCELERATED AND EXPANDED PROGRAM OF RESEARCH AND DEVELOPMENT ON NEWSPRINT

It is a real privilege to be present at this testimonial dinner for Miss Isabelle Drumb.

For 20 years Miss Drumb has been with you in Wisconsin Dells.

She came to this community one day to help her esteemed father in his time of need and stayed to help all of you. Wisconsin Dells is a finer, better and more prosperous place to live, because she did her job well as publisher of your paper.

Isabelle, your many friends and neighbors here tonight know and respect you as an

effective crusader for community betterment.

Your many colleagues from Wisconsin's newspaper fraternity, who are here tonight, know you and respect you as a most ardent champion of the constructive role that the press plays in America.

The fact that we are tonight paying tribute to the tremendous contribution that Miss Drumb has made to this community and to the newspaper profession, sugegsts the main themes for my comments tonight.

I wish that we had time tonight to review the past—to examine these last 20 years. They hold many important lessons for the future.

But I am certain tonight that Miss Drumb would like to have me look to the future and share a few facts and thoughts on a subject we are all interested in—America's present and future prosperity.

FACTS ON UNITED STATES BRIGHT ACHIEVEMENTS

What are a few of the facts of our economic prosperity?

1. We have all heard a lot recently about reaching the threshold of a $400 billion economy.

Consider that fact in this perspective:

When you sent me to Washington as your Senator 17 years ago, I recall that the gross national product—that is, the dollar value of our total output of commodities and services—was only $70 billion.

Last year it was $388 billion, and now we are well on the way to the $400 billion mark.

2. The number of persons employed is another index of our prosperity.

In July 1953, when we reached another peak in our economic growth, nearly 62½ million were employed. Our employment reached nearly 65 million this December.

3. This record prosperity has brought income disbursements to an annual rate of $318 billion.

Because our average consumer prices have stayed the same, while taxes have been somewhat lower, this increase has given our country nearly $2 billion of increased buying power.

4. This expanding income has shown up in an increased weekly wage to more segments of our population.

For example, the average weekly wage of manufacturing workers was at a new high—nearly $80 a week at the end of last year.

5. We are able then to spend more. Our spending has increased from $248 billion in early 1954 to $275 billion in the last months of 1955.

In nearly every area of economic activity there is evidence of progress and prosperity.

These multi-billion-dollar figures may not be too easy to comprehend, but they do translate into more dollars and cents right here in Wisconsin Dells and elsewhere throughout Wisconsin and all America, in United States savings banks' deposits, savings and loan associations' accounts, defense bonds, equities in homes and farms, home appliances, shares in United States corporations, life insurance, and other readily tangible yardsticks of our well-being.

INCOME PRODUCING SOLUTIONS FOR FARMERS OUR MOST URGENT PROBLEM

Now, unfortunately, there are important exceptions in our booming economy.

We are quite aware of the widespread condition of depressed farm income.

This, of course, is the sobering fact which casts the darkest shadow on our economic prosperity.

Farm income has definitely not kept pace with the soaring income of our general economy.

This is not the occasion for a speech on the farm problem. So, let me simply say that there are few more urgent problems before Congress and the American people than to provide sound and realistic income-producing solutions for our farmers.

The cornerstone of a bold new program of economic insurance for future United States prosperity must be an adequate farm program.

EXPANSION OF NEWSPRINT PRODUCTION A KEYSTONE TO FUTURE ECONOMIC HEALTH

Tonight, I should like to devote the bulk of my comments to another phase of insurance.

I want to refer to your own profession, and one of its most significant problems—the shortage of newsprint and the related problem of the price of newsprint.

Ninety-four percent of all the newsprint consumed in our country is for the printing of newspapers. And the plain fact of the matter is that our papers simply aren't getting enough newsprint.

NEWSPRINT ONLY A PART OF THE PAPER PICTURE

Let me set forth a few facts on the newsprint situation. I don't presume to be an expert on it, but I have studied it, to a fair extent, as opportunity permitted.

We are all, of course, aware that the tremendous complexity of American industry, our terrific output of goods and services has skyrocketed the uses of paper and paper products in our country.

For example, paper containers are being used in virtually every single step of American production, distribution, and consumption today.

Newsprint production and consumption, although a considerable part of the paper picture, nevertheless represents only one phase of the huge expansion in paper needs. Thirty-four and one-half million tons of paper were used last year—417 pounds per person.

It is estimated that a baby born today in America creates a lifetime demand for no less than 15 tons of paper—for all types of needs.

WISCONSIN'S AND AMERICA'S GREAT PAPER INDUSTRY

The flourishing paper industry of America is one of the great miracles of America.

The paper industry of Wisconsin is one of the great pillars of Wisconsin's economy. From the paper industry have come not only the sinews of economic health for our State, but great contributions in terms of leadership in every community throughout our State.

Meanwhile, newsprint demand is also soaring.

It is estimated that the demand for newsprint in our country in 1956 will be 6.7 million tons. This will represent an increase of 125,000 tons over 1955.

By 1965, newsprint requirements will have further increased, and to such a point as to involve a potential deficit of 1.3 million tons of newsprint per year. That represents an exceedingly serious situation facing the newspapers of the United States.

Few developments could strike harder at the heart of future American prosperity than to be faced with stringent restrictions on the capacity of American newspapers to reach the American consumer. The recent experiences during the press stoppage in Detroit showed that the lack of this vital advertising medium, for example, was directly responsible for a drop of 25 percent in the sales of used cars.

SMALL PAPERS PARTICULARLY AFFECTED

The newsprint shortage is a source of particular concern to the small weekly newspapers of America. A weekly paper with a circulation of, say around 3,000, and with a varying number of pages from 8 to 16, uses around 1,000 and 2,000 pounds of newsprint per week.

This newspaper cost for newsprint would be anywhere from $65 to $130 per week. It is estimated that the cost of newsprint represents around 15 percent of the total cost of the average small weekly, and up to as much as 55 percent of the total cost of large metropolitan dailies.

NEWSPRINT EXPANSION COSTLY, DIFFICULT

The big problem, obviously, is to assure an adequate and continuing supply of newsprint and at a fair price. But the expansion of newsprint production is not an easy or quick matter.

The capital investment required for a new newsprint mill is enormous, around $100,000 to $120,000 per daily ton. Thus, the total capital outlay for 1 new mill could run from $30 million to $48 million, and that wouldn't include the cost of the purchase of any forest lands.

It is estimated that a mill of minimum economic size requires, on a sustained yield basis, nearly 500,000 forest acres. And they must be located near enough to the mill site to permit economic transportation of pulpwood.

These, then, are but a few of the aspects of this situation. I could refer at length to the situation up north with our good neighbor. I note, for example, that the president of the Canadian Pulp and Paper Association estimates that demands for Canadian newsprint will rise from 6.2 million tons last year to 12½ million tons by 1980.

But time does not permit too detailed a presentation on my part.

MANY FACTUAL STUDIES

Now, there have been study after study made of the newsprint shortage.

Congressional committee after committee has surveyed the subject, and they have made a considerable number of important recommendations and findings.

What we need, however, basically, is more newsprint, and not simply more volumes of studies.

Of course, the studies can contribute to getting more newsprint, and I am in favor of them.

Thus, the Department of Commerce believes that it would be desirable to expand the collection of statistical information on the United States paper and publishing industry, and on world consumption and production of newsprint. These surveys would be carried on in cooperation with the newsprint manufacturing and newspaper publishing industries.

As the long-term trend in production and consumption becomes more clearly understood, all sections of the industry would be in a better position to cope with the problem.

But studies must provide a basis for action, and it is definitive action that is required.

EXPAND PAPER RESEARCH

One type of action which is required is to speed and expand our research and development programs into new methods of obtaining inexpensive and large supplies of newsprint.

Already there have been considerable experiments with bagasse. There has been research and expanded use of hardwoods, research and experimentation on expanding the production of newsprint from waste paper.

In my judgment, every encouragement should be given to the private sources working on all phases of such experimentation and research. And the fullest possible use of our own governmental facilities, particularly our great Forest Products Laboratory at Madison, should be directed to this task.

Research and development on newsprint will pay impressive dividends, tangible and intangible.

The time to start is now. The quicker we get underway on expanding the program, the better off we will be. Each passing day of action in low gear will cost us something in the days and years to come. Pennypinching in Federal research is not only short-sighted; it is self-defeating.

We can ill afford to have weekly or daily newspapers go out of business because of shortage of modest-priced newsprint, or because of any other solvable problem.

A healthy American newspaper industry is a sure standard for a healthy economy as a whole.

An informed America will be a safe and secure America. An America denied adequate newsprint can hardly be sufficiently informed of all the tremendous problems at home and abroad requiring our attention.

CONCLUSION

In conclusion, may I say that I am sure none of us are interested only in setting new records of material prosperity. The life work and philosophy of the person we are honoring tonight suggest the real and abiding goals of our Nation. We want to see an America healthy in mind and body. We want to see more useful work for everybody. We want greater opportunities for education and greater protection against the problems of complex, modern life.

We must constantly seek out solutions that will protect and strengthen our Nation from foreign peril and help keep the world at peace. We, in Wisconsin, can take pride in the fact that we have pioneered in finding constructive solutions to our problems.

We can take pride in the example set for us by Isabelle Drumb.

Two Hundredth Anniversary of the Birth of John Marshall

EXTENSION OF REMARKS

OF

HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, January 31, 1956

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Simon E. Sobeloff, Solicitor General of the United States, on October 26, 1955, at a meeting sponsored by the mayors' committee of Baltimore, Md., commemorating the 200th anniversary of the birth of John Marshall.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is pleasant to find myself in the company of so many judges and lawyers; I am enjoying a busman's holiday.

Appropriately enough, the senior United States Senator from Maryland, is here. Not only does he bear the proud name of John Marshall, but he is associated in an important way with these ceremonies, which are a part of a nationwide program begun by the President and the Chief Justice at the Philadelphia convention of the American Bar Association last August. Senator BUTLER was appointed a member of the general committee by the Vice President, and at the instance of Chief Justice Warren the Senator was named to the executive committee which has direct supervision over the entire plan of the committee. I am glad to greet him in his several capacities.

I also note with satisfaction the presence of many laymen; and this is well, for we are not in a meeting of the bar association. We are gathered for a community celebration to commemorate the birth 200 years ago of a man who is the possession not of a single professional group but of the entire American people.

The character of this assembly would be sufficient warning, if warning were needed, not to be excessively professional or needlessly philosophical. If you want the elaborate details of Marshall's life and his public service, and a scholarly discussion of his decisions, I commend to you the classic Life of John Marshall by the late Senator Beveridge. If any of the lawyers here thirst for erudition in constitutional law, I respectfully refer them to the Bar Library. In the minutes to which I am necessarily limited I shall avoid minute biographical treatment of the subject and any pretense to legal profundity. The most that I can possibly hope to give, even in barest outline, is some intimation of the significance of John Marshall in our national life.

It is undeniably true that, more than any other man, Marshall gave utterance to principles which have guided our Nation from its infancy even to this day. More than a half century ago Mr. Justice Holmes, himself a revered figure in American jurisprudence, state it for us with poetic beauty: "If American law were to be represented by a single figure, sceptic and worshipper alike would agree without dispute that the figure could be one alone, and that one, John Marshall." The intervening years confirm that judgment.

The traditional portrait of Marshall's personality does not do him full justice. We are likely to think only of his gravity and dignity. Marshall showed that a man can be earnest and able in his work without being dull or stuffy in his human relations. The testimony of his contemporaries discloses that he was no mere legal machine, but a warm and delightful human being—simple, fun-loving, interesting in public speech and private conversation, informal off the bench, full of anecdote, a good family man, a courteous, friendly, even convivial companion and neighbor, and not averse to an occasional mint julep. His judicial colleague for 24 years, Joseph Story, pays him this superb compliment: "I am in love with his character, positively in love." Also he said, "I love his laugh; it is too hearty for an intriguer."

Marshall was our fourth Chief Justice, and President John Adams, who appointed him, boasted that his gift of John Marshall to the United States was the proudest act of his life.

It was during Marshall's tenure that the Court first achieved great prestige. The power and the dignity of the Court had not yet been recognized when he ascended the bench. So lightly was the office esteemed before it was transformed under Marshall's leadership that the first Chief Justice, John Jay, had accepted appointment from George Washington with great reluctance and gladly resigned his post to run for Governor of New York. John Rutledge resigned from the Supreme Court, to become chief justice of South Carolina. When the seat of the Government was moved to Washington, no provision was made for the Supreme Court, and it was assigned space in a committee room in the basement under the Senate Chamber. Patrick Henry refused the Chief Judgeship. And if you will pardon a provincialism, I wish to note that Robert Harrison, a Marylander, preferred the Chancellorship of Maryland to a seat on the Supreme Court of the United States. He must have thought Annapolis more exciting.

Later, when Oliver Ellsworth resigned as Chief Justice, Adams, at Marshall's suggestion, offered to reappoint Jay to his former post, but the latter refused, saying that he had "left the bench perfectly convinced that under a system so defective, it would not obtain the energy, weight, and dignity which is essential to its affording due support to the National Government, nor acquire the public confidence and respect which as a last resort of the Justice of the Nation, it should possess." Marshall then recommended one of the Associate Justices, Patterson, but the President did not approve. Instead, he named Marshall himself, who took a week before formally acknowledging and accepting the appointment.

John Marshall was born on the Virginia frontier. He was a cousin of Thomas Jefferson. They were antagonists all their lives, and in truth it must be said that their differences were not only on the lofty level of ideas. Jefferson has been referred to as the "unloving and unloved cousin."

Marshall attended a course of law for less than 2 months at William and Mary College. This is the extent of his formal legal education, but it by no means marks the limit of the preparation in mind and character which equipped him for his great career. He met with early success at the bar. In the Revolution he had served as a soldier for 6 years, participating in many campaigns and attaining the rank of captain. His undaunted courage and humor in adversity cheered and inspired his men. He went through the gloom and agony of Valley Forge. Knowing the woes that flowed from the weakness of the Confederation, Marshall felt deeply the need for an effective National Government, and this was a passionate faith with him. He declared that he entered the Army a Virginian and left it an American.

It has been said of Michelangelo, whose present fame rests on his painting, that his contemporaries recognized his preeminence as sculptor, architect, and poet. So it is, in a measure, with Marshall. Although his fame justly rests upon his career as a great Chief Justice, there were many facets of his early experience which earned him high distinction and, what is more important, this experience doubtless enriched his service on the bench. His was a considerable activity both in law and politics. Office holding included membership in the Virginia House of Burgesses, the State council, and again in the State legislature when the question was whether to call a State convention to consider ratification of the new Constitution of the United States. Marshall's voice was raised in behalf of a Constitution Convention and he was ably supported by Madison; but powerful pleas were made in opposition, notably by the eloquent and influential Patrick Henry.

This is not the time to recount the struggles, great and momentous, which led to final ratification. It is sufficient to note that Marshall had an important part in formulating the Constitution and in its final adoption, and his intimate association in the convention with men from the North as well as from his own section, we may be sure, also left a deep imprint upon his thought on the subject of nationalism.

From its birth, storms and dangers surrounded the infant Republic, particularly in its relations with England and France, who were at war with each other. Each was capturing with impunity American merchant ships.

In our generation we have seen how difficult is the position of a nation that wishes to maintain its neutrality. The difficulty is increased if the would-be neutral is a small or militarily feeble country. The belligerents feeling that they need not respect the rights of a neutral unable to enforce them, often direct their efforts to compel the neutral to aid them by discontinuing commercial relations with their adversary. The young Republic desired only to remain at peace with both.

Marshall was sent on a diplomatic mission to Paris to gain recognition for the rights of American commerce and respect for our flag on the seas. With Marshall, Charles C. Pinckney and Elbridge Gerry were our envoys

extraordinary to Frace. Theirs was no easy task.

To those of you who seek relaxation in novels portraying high intrigue, devious diplomacy, and fraud, both plain and fancy, allow me gently to commend instead the spirit of historic inquiry. I refer you to a grotesque but absolutely authentic chapter of history. It is, in short, the story of the corruption of Talleyrand, the wily French Foreign Minister, an unfrocked bishop, an adroit and utterly unscrupulous man, a sort of land pirate in striped trousers. When Marshall and his colleagues sought an audience with Talleyrand they were put off for many weeks and allowed to cool their heels. Then, through his agents, known in history as X, Y, and Z, Talleyrand brazenly sought to induce the American representatives to pay him a bribe as the price for officially receiving and treating with them.

The United States was then a weak and struggling country but President John Adams had frankly and publicly resented the insolent and altogether outrageous behavior of Citizen Genêt, sent by Talleyrand to this country to stir up internal dissension. (Does this have a modern ring?) Talleyrand sought to avoid the subject which brought the Americans to Paris, namely, French depredations on American commerce. Instead, he tried to make it appear that France had been insulted by Adams and was the truly aggrieved nation. He got his agents to suggest to the Americans that to solace France and repair the hurt to its honor, the United States should make it a loan of money. It was further proposed and persistently pressed upon the American envoys, that for an additional sum of $250,000 it could be arranged to soften M. de Talleyrand, and that then the American ministers would be publicly received and the negotiations for which they had come could proceed.

The American envoys were bombarded with every form of argument and pressure. A veiled threat of war was presented as the alternative. It was urged upon the envoys that their weak country could not afford such a war and the bribe to the French foreign minister would be a cheap price for peace.

John Marshall rejected this naked blackmail. He behaved throughout with a firmness and a sense of honor which does eternal credit to his reputation. The mission was finally abandoned and the envoys returned home. Marshall and his colleagues exposed the whole sordid business in a report which is one of our national glories. This was the occasion of the famous remark attributed to Pinckney: "Millions for defense but not one cent for tribute."

Marshall later, at the urging of George Washington, ran for Congress and was elected. Thereafter, Adams appointed him Secretary of State and a year later Chief Justice. Thus began the great service, which was to last 34 years and become the capstone of Marshall's monument.

Let us pause to consider the extraordinary equipment which Marshall brought with him to the bench. His firm and exalted character and his powerful and well ordered mental faculties are, of course, important components. But in addition to these endowments, board and rounded experience in life prepared him for his historic role as expounder of the Constitution. Good character and a measure of ability and learning are indispensable in a judge, but the insights of wisdom are not often developed except through life's experience. Books can supply judges, as well as laymen, with only part of their resources. All experience fashions a man, and strive as he may for release from human bias and prepossessions, no man completely frees himself of the experiences and conditions—of which he is the product. Here was one who had been seasoned in the field of war; in the active practice of law, where he attained the coveted prizes of success; by long and arduous political combat; by the part he played in the legislative arena, both in his State and the national sphere; by engaging in diplomatic contest with crafty adversaries; and finally by service as Cabinet officer. In touching life, and public life particularly, in so many aspects, Marshall came to know the nature and complexities of government. Can it be doubted that in this process he assimilated a variety of influences which converged to ready him for the unprecedented task of judicial statesmanship for which he was destined?

In a series of decisions during the incumbency that stretched over three decades, Marshall "unveiled the Constitution," to borrow Lord Bryce's words, thus giving our Federal system its distinctive nature. His guiding principle and purpose was to achieve a permanent union of the States as a nation and to avoid repetition of the disastrous sectional divisiveness and inadequacies of the old Confederation which washington called a rope of sand. He firmly established the power of judicial review and the authority of the judiciary to declare invalid legislation found to be in violation of the Constitution. This function, original in the art of government, is now accepted as an established feature of American institutions. He defined the relation of the Union to the States and fixed the national character of the United States as a sovereignty created by the people themselves rather than a mere league of states.

Reconciliation of conflicting claims between State and Nation remains as an ever-recurring problem in the Supreme Court and to this day the opinions of Marshall are beacons to light the way. He gave vitality to the commerce clause of the Constitution which is designed to protect interstate and foreign trade from crippling encroachments by rival States; yet he was careful to leave ample scope for the exercise of State power in its legitimate field. When John Marshall became Chief Justice constitutional law was a virgin field and there were no precedents to guide him. His task was to create precedents and his chief reliance had to be on broad principles of justice and reason. This called for deep independent thinking and the exercise of the highest qualities of a lawyer. No scissors and paste-pot performance would do.

Marshall's colleagues on the Court were not weak men. They were men of marked ability, but so complete was their recognition of the wisdom of the course he charted, that in only one constitutional decision did he find himself in dissent from his brethren. In a majority of the cases he wrote the decision of the Court.

Even in this sketchy treatment of Marshall's work as a judge, I cannot fail to mention one celebrated trial in Richmond over which he presided while "riding circuit" as Supreme Court justices were called upon to do in those days.

In the prisoner's dock, charged with treason against the United States, was a man of the highest distinction—Aaron Burr. Burr had served as Attorney General and as Vice President. He had failed by only a single vote to win the Presidency in his contest with Jefferson. He had been a lifelong opponent of Marshall in politics. Moreover, Burr, you will recall, is the man who in a duel had shot Marshall's friend, Alexander Hamilton to death.

If, in such circumstances, the hand that held the scales of justice should quaver, it would be understandable. But Marshall's hand did not quaver. He remained imperturbable and impartial in his rulings, despite the fierce clamor against the defendant from the mob and from Burr's enemies in high places. Finally, Marshall instructed the jury to acquit the defendant, chiefly because under the Constitution no person may be convicted of treason unless on the testimony of two witnesses to the commission of the same overt act or on confession in open court. The prosecution, Marshall declared, had failed to meet this constitutional imperative. Marshall's decision brought down on his head an avalanche of denunciation and abuse. He was burned in effigy and there was foolish talk of impeachment.

After the trial, William Wirt, later Attorney General, who was the prosecutor for the Government in Burr's case, was asked why he did not tell the Chief Justice that the people of America demanded a conviction. Wirt's reply is as eloquent praise of Marshall as could be given any judge. "Tell him that. I would as soon have gone to Herschel (the renowned astronomer), and told him that the people of America insisted that the moon had horns as a reason why he should draw her with them."

To select a particular decision or an isolated expression from Marshall's pen, in order to denominate it as his superlative contribution, would be an undertaking from which I should shrink as being too presumptuous for me. But it is permissible to quote an illustrious modern interpreter of the Constitution, Mr. Justice Frankfurter. He has said that the familiar sentence, "we must never forget that it is a constitution we are expounding," expresses the core of Marshall's constitutional philosophy and is the most important utterance in our constitutional law.

We may well accept this evaluation. Today the words are so familiar as to appear axiomatic, a platitude almost; but we are indebted to Marshall for its coinage and for the powerful influence it has exerted. It is a constant reminder that a constitution is to be read not mechanically but with deep understanding of its nature and underlying purpose; for it is intended, as Chief Justice Marshall said, "to endure for ages to come, and, consequently, to be adapted to the various crises in human affairs." It expresses a majestic conception of the duty that falls to judges when questions of great delicacy and far-reaching implications are raised between the Government and its citizens, and between Nation and State. It indicates the temper of mind specially needed when making specific application of necessarily indefinite provisions of permanent law.

Again, it was Holmes who warned that it is idle to appraise a man apart from the circumstances in which he lived. "A great man," he said, "is a strategic point in the campaign of history." How fortunate for us and for future generations that in the crucial formative period of the United States a man of Marshall's character and intellectual endowments, his extensive experience and deep comprehension, occupied for a third of a century the exalted seat of the Chief Justice.

Marshall's generation is not alone in having had to face crises. The founders of our Government foresaw "various crises in human affairs," and sought to provide a charter firm but flexible enough to meet the changing needs of an expanding society. We, too, have problems and perils, many of which are fundamentally not unlike those that challenged Marshall's genius. It was Adams who wrote into the Declaration of Rights in the Massachusetts Constitution the doctrine of the separation of powers "to the end that it may be a government of laws and not of men." Commenting on this, Woodrow Wilson who, before becoming President, was a distinguished professor of political science, said: "Constitute them how you will, governments are always governments of men, and no part of any government is better than the men to whom that part is intrusted * * * So far as the individual is concerned, a constitutional government is as good as its courts; no better, no

worse. Its laws are only its professions; it keeps its promises, or does not keep them, in its courts. For the individual, therefore, who stands at the center of every definition of liberty, the struggle for constitutional government is a struggle for good laws, indeed, but also for intelligent, independent, and impartial courts."

The two statements are not inconsistent. We do not permit justice to be administered according to personal caprice but under the rule of law; but laws are not self-executing and their administration is necessarily by men. It is essential, therefore, that they be men of integrity, judgment, and independence. Marshall's generation had suffered the affliction of a subservient judiciary and this is one of the grievances enumerated in the Declaration of Independence.

To the struggle for good laws and an able and impartial judiciary, John Marshall dedicated his great powers. His fame will endure as the master builder of our Federal judicial structure. Beyond this, he remains 120 years after the close of his life indisputably the exemplar of the great judge.

Competing Demands for the Use of Land

EXTENSION OF REMARKS
OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, January 31, 1956

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an outstanding statement on conservation by Mr. Virlis L. Fischer of the Sierra Club, presented on December 9, 1955, at the annual convention of the Western Forestry Association in Portland, Oreg.

Mr. Fischer, it seems to me, makes a convincing and effective case for preserving what comparatively little remains of our original natural heritage. His statement is so well documented and so clearly presented that I believe it should be called to the attention of the Senate.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

COMPETING DEMANDS FOR THE USE OF LAND

(By Virlis L. Fischer, Sierra Club, presented December 9, 1955, at the Convention of the Western Forestry Association, Portland, Oreg.)

The Sierra Club is indeed grateful for this invitation to be represented at the 1955 convention of the Western Forestry and Conservation Association. While the 9,500 members of our organization come from all walks of life, we are united in the common bonds of love of the outdoors. Our membership includes a number of professional foresters, and many of us, by the very nature of our appreciation of the outdoors, become amateur foresters. Most certainly, we are interested in forestry conservation, and we have a great deal of admiration for your industry for its program of tree-farm development and technological progress in greater utilization. We think it highly commendable that you are looking ahead to being in business several hundred years from now, and we should like to express our confidence in the ingenuity of the forestry profession to solve the future problems of the industry.

We are also grateful for many instances of cooperation which have helped in the preservation of the redwood groves, sugar pines, and a number of parks. It is therefore with some feeling of kinship that we approach the "competing demands for the use of land," which certainly are diverse and not restricted to the lumber industry.

If someone were to take a knife and slash a gaping hole in a priceless painting, we would call it an act of vandalism. But when someone proposes building a modern high-speed highway across the Joshua Tree National Monument, we don't call it vandalism. We consider it to be one of the "competing demands for the use of land." Yet the effect would be about the same.

On the one hand, this national monument was set aside to preserve an absolutely unique and irreplaceable desert flora and landscape for the enjoyment of the American people for all time. On the other hand, certain commercial interests in a nearby town were eyeing the payroll spending of a military base located on the opposite side of the monument. In order to attract this payroll to the cultural advantages the town had to offer, which incidentally were not unique, they operated on the theory that the shortest distance between two points is a straight line. In this case the straight line would be across the middle of a great national monument. That such a highway is not conducive to enjoyment of the park did not matter. It would bring a volume of traffic whizzing by, not to see the features for which the park is noted, but merely to get someplace else in a hurry. And it could be expected that in time the roadside would become littered with the usual debris—and the unique desert flora would be graced by a new species known as the kleenex bush.

In recent years, this case could be multiplied many times over. We have just gone through the greatest conservation battle in recent history—the threat of Echo Park Dam in Dinosaur National Monument. There have been various threats to several national parks, wildnerness areas, and wildlife refuges. Currently, there is the plan to build dams on the superbly beautiful upper McKenzie River—a plan engineered in such a way as to suggest we can have our cake and eat it, too. But what is not realized is that the cake will be spoiled.

When it should be rather obvious that our dedicated lands have been set aside to preserve outstanding examples of the most magnificent scenery in America, or features so unique as to be irreplaceable once destroyed, it might be well to take a good look at the underlying causes resulting in what we are calling "competing demands for the use of land." It should be remembered that the conservation movement is only about 50 years old in the United States. It was a revolutionary idea. Perhaps it is expecting too much that all of us can be brainwashed in 50 years.

In general, the pressures against our scenic and recreational resources arise from the desire of local interests to exploit their commercial values. The motives are often made to appear quite altruistic. But these are public lands, belonging to all of us, and not to just the local interests. When we get away from the immediate area public support for such plans is usually nonexistent. For instance, it was not the people of Ohio advocating Echo Park Dam, nor New Yorkers urging a highway across Joshua Tree National Monument. Even in the case of the Mount Ranier tramway proposal, when you got as far away as Portland, public support largely vanished. Although not the purpose of the parks, economic benefits in tourist trade do accrue from their proximity. But sound management dictates that this be regarded as a byproduct, and, welcome though it may be, it is not something to be milked dry at the expense of the park's grandeur.

It is perhaps a human failing that many of those living nearest great scenery appreciate it the least. There appears to be a tendency to accept as commonplace those treasures near at hand. But behind this seeming lack of appreciation is something deeper and more basic. It has to do with the cultural level of a young nation. As a nation only about 150 years old, in the mad quest for personal gain, we have squandered our resources at a rate the like of which the world has never known. It is illustrated by the old forest policy of cut out and get out; by the slaughtering of the vast hordes of buffalo; by the tragic extinction or virtual extinction of 40 species of birds and mammals in our short history.

Fortunately, enlightenment has come, but it hasn't yet reached us uniformly, nor pierced all the dark corners. Our attitude toward our heritage of scenic beauty is reflected by the coins and debris so thoughtlessly tossed into Morning Glory Pool in Yellowstone; by the acts of vandalism in carving names in public places; by the carelessness of those who have made the litterbug problem a national disgrace. It is even reflected by those who cannot look at a beautiful waterfall without wanting to divert it through a penstock and measure it in terms of kilowatts. It is reflected by the visitor to Crater Lake who, standing at the rim of one of the world's most inspiring natural wonders, remarks, "Look at all the timber going to waste." And it has happened.

Our attitude is further reflected in our failure to provide adequate funds for protection and maintenance. Not to mention new facilities, nor expansion to provide for the rapidly growing needs of an impending population of 300 million people with leisure time and the means to enjoy it.

It does not necessarily follow, however, that our remaining scenic lands are doomed to commercialization. For it is inconceivable that our vast industrial progress, bringing with it an increasing standard of living, will not be accompanied by an advancement in our social thinking. We are therefore optimistic that America's great heritage of scenic beauty can be enjoyed and yet preserved, intact and unspoiled, for the enrichment of our lives—and for the future.

It is encouraging, indeed, to note that progress toward this end is being made. The broad public support aroused on the side of conservation in all of these recent issues is significant. Without doubt, Dinosaur National Monument is the outstanding example. Here was a place only a handful of people had ever seen, and yet tens of thousands instinctively rose up on the side of park preservation to opopse this needless invasion. And they won in spite of almost insuperable odds. It should be an object lesson for a long time to come to all those willing to comprehend its meaning.

We can be proud that the national park idea was born in America. It was such a splendid idea that other nations have borrowed it. It gets away from the estates of the feudal barons, which amounted to private parks for the privileged few, and replaces them with a system of parks to be enjoyed by all. And we are convinced that the overwhelming majority of visitors, and they reached 50 million in the national parks alone last year, like the parks and want more of them, not less. Is it any wonder, then, the public resentment at every attempt to destroy or despoil them?

When we read of the staggering increases in attendance at our State and national parks, wildlife refuges, and in our national forests for a variety of recreational uses, we can only conclude that outdoor recreation is here to stay. And here to stay also are the means of providing it.

Perhaps it would be informative to call attention to what Japan has done—a nation with an older civilization than ours and one which takes pride in the beauty of its countryside. It is a nation with 90 million people

living in an area the size of California. Here in this crowded space where land is at a premium, 4½ percent of her total area has been set aside in national parks. This compares with the 1½ percent in our national parks and wilderness system.

Or, let's make a comparison closer home with Canada—a culturally superior nation in several respects. In the Province of British Columbia, over 9 million acres have been set aside in the Provincial park system and over 1 million acres in national parks—a total of over 10 million acres in one province, all dedicated for the recreational enjoyment of her people. E. G. Oldham, Forester, British Columbia Parks and Recreation Division, explains it in the following statement:

"British Columbia is noteworthy for its enchanting, colorful, and rugged scenery. With the conviction that recreation was a vital part of everyday life and that certain beauty spots were the heritage of all, British Columbia has set aside nearly 10,000,000 acres as Provincial park lands. We extend a hearty welcome to everyone to visit and share the enjoyment of this natural wonderland.

"Everything possible has been done to preserve the aesthetic beauty of these areas and any improvement work done has been with a view to accenting the feeling of being close to nature's unspoiled wonders.

"The name 'parks' in the more accepted definition of the word could not apply to most of the areas set aside for your enjoyment. In many cases they are vast stretches of primitive and rugged paradise for those who wish to escape from the confines of modern civilization."

The contrast in these comparisons is such as to lead us to wonder not whether we have saved too much, but too little. Therefore, we would like to suggest a long and thoughtful look at the words of Newton B. Drury in speaking of our scenic lands: "Surely we are not so poor that we need to destroy them, nor so rich that we can afford to lose them." To heed these words will accompish three things. First, it will end many bitter controversies; second, it will be regarded as a real service to your fellow man; and, third, it will enable you to practically write your own ticket in public goodwill.

Food Surpluses

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Tuesday, January 31, 1956

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by Mr. George McLain, chairman of the National Institute of Social Welfare, before the Committee on Agriculture and Forestry.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY GEORGE MCLAIN, CHAIRMAN, NATIONAL INSTITUTE OF SOCIAL WELFARE, BEFORE SENATE AGRICULTURE AND FORESTRY COMMITTEE, JANUARY 19, 1956

Mr. Chairman, my name is George McLain, and I am chairman of the National Institute of Social Welfare, whose Washington address is 300 New Jersey Avenue SE., with main headquarters located at 1031 South Grand Avenue, Los Angeles, Calif.

The text of my talk before you today hinges upon this question: "Why would the Congress of the United States rather spend $700,000 per day to rent warehouses in which to store billions of dollars worth of surplus food bought with taxpayers' money, or give it to other nations, than distribute it to our own needy Americans?"

During the holiday season each year, for the past few years, Harold Stassen, then head of the International Cooperation Administration, announced that our Government was busy making up Christmas baskets, stuffed full of fat turkeys and all the trimmings, for the needy of foreign lands. When will such charity and benevolence be bestowed upon our American needy?

Over the radio, on television, and in large paid ads we are urged to contribute to CARE to pay for the transportation of more of these food packages to the needy of the world. Why are the needy in our country prohibited from receiving CARE packages?

In the summer of 1953, at the request of the President, $15 million worth of surplus food was given to Communist East Germany.

President Eisenhower included in his 1956 state of the Union message a proposal to repeal section 304 of Public Law 480, which prevents us from selling food commodities to Russia or her satellites.

Such an effort to relieve a food shortage in Communist countries, if one exists, while at the same time arming ourselves and our allies to the hilt in order to resist aggression from the same source, is a type of diplomacy that I—and I think most of my fellow Americans—find hard to understand or accept.

A proposal was made just a few days ago by several Members of this Congress that our surplus farm crops be disposed of by providing for increased industrial use—in the manufacture of rubber, industrial alcohol, motor fuel, plastic, and other products.

It is my opinion that there is enough produce grown which is not fit for human consumption to supply these needs without snatching grade A food from the mouths of hungry Americans.

We spend billions of dollars each year trying to impress every other human being on earth with our superior form of Government; our universal prosperity. Our international by-word seems to have changed from "land of plenty for all" to "land of plenty for all, and then some." These people in foreign nations are supposed to think that such is the result of our form of Government.

But, I ask you, what is the good of spending all these billions of dollars when these selfsame foreign people can pick up their newspaper most any day and read where some poor soul in this country has died of malnutrition or starvation?

To illustrate that point, I should like to take you back to last October when two tiny brothers, aged 6 and 7, died of poisoning. Doctors said they died from eating poisoned mustard during their forage through garbage cans in search of food.

The younger brother, 6-year-old William Baughman, Jr., died with this plea on his lips: "Please, may I have a ham sandwich?"

A neighbor told newspaper reporters that she was kept awake at night by screams of the hungry children.

Mrs. Helen Baughman, mother of the 2 boys plus 5 girls, had applied for relief at the Louisiana Welfare Department 1 whole month before the death of her 2 sons.

She got no results. The welfare worker didn't see any urgency in her case.

Neighbors told how the seven children scrounged through the area for food.

Mrs. Nelson MacClure, who lived on a nearby street, said the children came at all hours of the day and night with pleas for food.

I say to you, there is no true food surplus; there is only a lack of equitable distribution of American produce. I further emphasize that these surplus foods, because of lack of proper distribution, have endangered the economy of our Nation, not to mention the health of those persons who should right now be receiving it.

We propose that United States surplus food stamps be created and portioned out to the unemployed, victims of disaster, and to low-income groups to supplement their income, including those on public assistance and general relief. The needy will benefit through such a program; and the American people will receive a return on their tax dollars invested in this surplus-food program.

In 1954, Congress amended Public Law 480 which made available to the States, surplus food which which could be distributed to nonprofit school-lunch programs, charitable institutions, needy Indians, nonprofit summer camps for children, and on occasion, to the victims of floods and other disasters.

Under present law, surplus foods may also be distributed to persons or families who have been determined to be needy by appropriate State or local agencies, which would include those on public assistance such as the aged, the blind, physically handicapped, and dependent children.

But distributing this food to the needy has been left up to the States. As a result, hardly a dent has been made in the reserves of surplus foodstuffs, because most of the States refuse to appropriate the necessary funds for the storage, handling, and distribution—even though the Federal Government is willing to deliver these commodities to the States free of charge after satisfactory arrangements for distribution has been made.

For instance, in California, the State left the receipt of surplus food commodities up to the 48 counties. Only a few responded.

As a result, when rain delayed the usual 6-week pea-picking season in San Luis Obispo County, in March 1954, schoolchildren of migratory farm workers fainted in the classrooms from hunger. Their families had been living on flour and water gravy. Interested citizens went from door to door in the town asking for canned food, etc., for these hungry people.

I ask you—why should these people have to dig deeper in their pockets to help feed hungry neighbors when they have already—as taxpayers—spent billions of dollars to buy up farm surpluses?

In January 1955, more than 1,000 members of farm-labor families—put out of work by continuous heavy rains—were found to be starving.

The Fresno County Supervisors refused to give these migratory workers relief—even United States surplus foods—because they did not meet the residence requirement of 3 years established by the counties of California. Only through much pressure from irate citizens was a state of emergency declared and some of the food released.

Here again, interested ranchers and other citizens had to make pleas to the public for the donation of canned food, potatoes, beans, and other staples for distribution to these starving families.

Public Law 480 as amended so far by Congress is not the answer—the answer is in the issuance of surplus food stamps.

The issuance of such stamps would immeasurably benefit low income American families; would help the farmer in solving the problem of over-abundance of produce; and would raise the standard of living and strengthen the economy of all America.

A bill to accomplish this has been authored on a bipartisan basis by Republican Senator AIKEN of Vermont, Democratic Senator HUMPHREY of Minnesota, and Republican Senator YOUNG of North Dakota. Demo-

cratic Senator KERR of Oklahoma, has also sponsored a similar bill.

To realize more fully how desperately recipients of public assistance need this surplus food, take a look at the amount of monthly payment they receive which must not only cover the cost of food, but of clothing, shelter, medical care, and the many other necessities of life.

In the Social Security Bulletin dated October 1955, issued by the United States Department of Health, Education, and Welfare, we find 298,000 cases wherein the families on direct relief received a nationwide average of only $53.55 per month. Two hundred thirty-eight thousand, seven hundred and seventy permanently and totally disabled recipients received a national average of $55.24. Two million, two hundred and nine thousand, four hundred and sixty-seven persons receiving aid to dependent children had a national average payment of only $23.98 per month. One hundred and four thousand, one hundred and forty-four blind persons received a national average payment of $56.71 a month, and 2,550,130 on old-age assistance received a national average of $52.55 per month.

In considering the Surplus Food Stamp plan there most certainly should be a provision that domestic need have priority over foreign consideration and that no political subdivision of the United States shall impose any residence requirements against applicants or recipients.

In closing, may I again emphasize that there is no true food surplus; there is only a lack of equitable distribution of this American produce, and I believe that the issuance of surplus food stamps to the needy of America is the answer to the now existing surplus.

Thank you, and may I add the following:

HOW THE SURPLUS FOOD STAMP PLAN OPERATED

Excerpts from a letter sent by Senator ESTES KEFAUVER, Democrat, Tennessee, to the editor of the Washington Post:

"The food stamp plan was tried with considerable success before World War II, abandoned during the war, and never revived.

"It operates by supplying to low income consumers additional purchasing power, which they could use in any retail store to buy any of a list of surplus food. Its aims were to reduce farm surpluses and to improve the dietary standards of those whose need was the greatest.

"Operations under the plan were simple. Local welfare agencies certified families as eligible to purchase food stamps. Such families were permitted to purchase regular stamps, which were orange in color, up to the value of their customary food purchases. This averaged about $1 per week for each member of the family. These orange stamps could be used to purchase any food product.

"With each dollar of orange stamps that they purchased, they received in addition, 50 cents worth of free stamps, which were blue in color. These blue stamps could be used to purchase only those foods which had been declared to be in surplus supply by the Secretary of Agriculture.

"The purpose of making the receipts of the free stamps contingent upon the purchase of the regular stamps was to be sure that the free stamps represented a net addition to the total demand for surplus food. The stamps were treated as cash and could be spent in any retail store. The retailers pasted the stamps on $10 cards and redeemed them through their wholesalers, banks or local offices of the Department of Agriculture. The plan functioned through the normal channels of trade.

"The distinctive feature of the plan is that any expenditure made on it would increase farm income by about the same amount. This would come about as a result of the fact that those participating under the plan would, of course, increase their purchases, while higher income consumers would be expected to purchase just about as much as before. This is really the distinctive feature of the plan.

"All of the increase in consumer food expenditure under this plan will be reflected in growers' income.

"One of the most desirable attributes of the food stamp plan is its flexibility, as supply and demand conditions change, new products could be put on the surplus list and others taken off. The amount of free stamps given with each purchase of regular stamps could be varied with changing conditions. The general classes of recipients could be altered from time to time. The plan would also lend itself to emergency conditions. Finally, its overall scope, which is determined by the number of free stamps issued, could be increased or decreased at will. We could always know its cost because it would be determined in advance."

What of the Small Operator?

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, January 31, 1956

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "What of the Small Operator?" published in the Pendleton East Orgeonian of December 14, 1955.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHAT OF THE SMALL OPERATOR?

The East Oregonian has said many times that the present trend of the Federal program for agriculture may result in the demise of the family size farm. Knowing full well what would happen to the business economy of Umatilla County if wheatlands were controlled by a few big operators, we have repeatedly urged that first concern in the development of a new farm program must be for the small operator.

The present program of flexible price supports and acreage reduction has seriously crippled the owners of small wheat-producing acreages in this region. They are summer fallow farmers and having to take a one-third reduction in that land on which they can produce wheat, plus a reduction in the price per bushel they receive for that wheat has drastically reduced their incomes.

We seriously question whether the soil bank plan proposed by the Department of Agriculture would be of much help to the small operator. Of course it would help him if he were paid sufficient to keep land out of production. But we doubt the Department of Agriculture is considering payments of size that would help the small operator to the extent that he needs help.

The man who produces on small acreage can make it if he is permitted to produce all that his land will give. That is why we have thought the domestic-parity plan was the best solution for him of all the solutions thus far offered to the wheat grower. He would get 90 percent of parity for that wheat he sold for domestic use, and he could put all the rest he produced into the market for feed and export for what it would bring. He could produce to a maximum and therein lies his only opportunity to keep the man with the mortgage away from the door.

There are many men in agriculture who do not share our concern for the small operator. They believe the trend in agriculture has reached the point that only the big operator can survive and that the agricultural picture would be improved if only the fellow who farms profitably on a large scale were producing. This does not take into consideration the fact that many small operators are better farmers than the big fellows, and are caught in an economic squeeze only because of their size.

Perhaps it is not possible to make a good argument strictly on the basis of economics against the big farmer getting bigger and the little farmer locking the barn door and placing himself on the labor market. Perhaps it would be easier to plan and operate a farm program if all the small operators were liquidated.

We have been unable, however, to distinguish between the end results of the application of this thesis to agriculture and business. We doubt that many readers of this newspaper would want all the small businesses in their communities to be liquidated as the result of a Federal program. We are convinced their sympathies are with the small-business man, that they would not want him to be gobbled up by the big-business men.

The day may come in business and agriculture when Federal programs will make it almost impossible for the little guy to survive. But the day has not yet come that we can afford to adopt a program that will have that result. The farm program will have that result within a very short time if people outside of agriculture are not awakened to the full impact of that result and rouse themselves to speak out against it.

Liberalism

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, January 31, 1956

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Liberalism," which I wrote some months ago, and which was published in the American Scholar, in its issue for the autumn of 1955.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LIBERALISM

(By HUBERT H. HUMPHREY)

Liberalism, as a political philosophy, is based on the assumption that freedom is essential for the full development of the human personality and that, therefore, men should be free. The ancestry of liberalism may be traced back to the beginnings of literate man, but its name and formal identity did not become current until early in the 19th century, when it was adopted as a party label in Spain and by a British reformist bloc of radicals and Whigs.

The roots of liberalism are religious, philosophical and scientific. The doctrine represents the culmination of a development which goes back at least to the words of the Hebrew prophets, the teachings of the Greek philosophers, and the ethics of the Sermon on the Mount.

The fusion of these influences—some of them largely incompatible with the secular humanism of the Renaissance and the enlightenment of the 18th century—combined with the political and economic en-

vironment of the 19th century to create the philosophy and form the movement of liberalism. In its essence, liberalism was antiauthoritarian; its one distinctive aim was the liberation of man from traditional restraints.

Equating liberalism with freedom, as we have, and taking note of liberalism's ancestry help us to understand the confusion which today is frequently associated with the term. Although the emancipation of man has been the enduring hallmark of liberalism, the variable ingredient, which has differed with men and with the passing of years, is emancipation from what? The practical application and, in fact, the relevant definition of liberalism thus vary with the forces, institutions and traditions which restrain men. The problems of freedom are quite different in a feudal age from what they are in a technological age.

The authors of the liberal creed are heterogeneous. There is a broad gulf between the Whig aristocrats, content with the revolutionary settlement of 1689, and the Benthamite radicals of the 19th century. There are profound differences among the Physiocrats, preoccupied with the problems of French agriculture, the Manchester economists of England's industrialized Midlands, the Founding Fathers and the Jacksonian "Democrats." It is argued—and with good reason—that their agreements far exceed their differences and that they all partake of the same tradition; but the fact that vital differences do exist makes the use of the term "liberalism" quite difficult in political communication. Difficult as an understanding of the term may be today, however, the growth of liberalism is indeed the story of man's striving for civilization and dignity.

The evolution of the liberal creed paralleled the progress of western society from a status-based church-dominated culture to an ever more democratically oriented civilization. The striving for freedom in every age helped change the structure of society. This in turn meant that the locus of power criticized by liberals shifted from church to state and from state to private concentrations of economic power.

In the late Middle Ages and during the Renaissance, the prevailing society was organized on the basis of status: the rights and responsibilities of the individual were determined by his place in the stratified and hierarchic system. The social stress was upon acquiescence and conformity.

Tendencies toward liberalism are early discernible in generations of protest against this authority. The protest was twofold: the religious revolt was closely associated with a desire for economic freedom.

The medieval system was bound to be challenged successfully as both theological and economic forces strove for freedom from the existing order. The bearers of the challege were aided by the development of new needs and interests, generated by the slow commercialization and urbanization of Europe, which in turn fostered the emergence of a new middle class.

The new commercial class was the most active force throughout Europe in the struggle for freedom from the restraints of the medieval order. It was the natural enemy of the medieval political organization, primarily because the divisions and disorder of the feudal "state" constituted a serious barrier to trade and commerce. In the late medieval period, therefore, the new middle classes alined themselves with the monarchs against the nobility and, through the success of this alliance, gained freedom from the complicated and conflicting economic regulation of the feudal aristocracy.

Once the claim of the monarchy was successfully established and a unified system of law imposed within the new nation-states, the middle classes turned their attention to means of controlling the "divine right" of the kings they had brought to power. Freedom was now conceived as a problem of the ruler and the ruled. The ruled, in this case the commercial classes, now demanded a rule of law binding upon king as well as subject. The work of Hobbes and Locke focused on the problem of liberty as it related to ruler and ruled, and while their specific conclusions differed, they agreed with each other and with later liberal thinkers that governments were instituted to serve men.

This individualism was a basic characteristic of 18th-century thought. Since liberalism as a coherent and defined philosophy was a product of a series of great economic, social, and intellectual changes which culminated in the 18th century, it even today bears the stamp of the Enlightenment. The period of the Enlightenment was characterized throughout Europe and America by a more or less unified set of principles, attitudes and beliefs. It was a period of optimism and revolution, of naive faith and debunking. It was, above all, a period of emancipation in religion, politcis, economics, and art. The unifying concept of the Enlightenment was the belief in natural law. The discoveries of Newton had been interpreted as proof that there was a natural order of things in the universe, that the laws of this order might be discovered by human reason, and that these laws furnished absolute and immutable standards for the conduct of governments and men. The implications of this doctrine were many.

First, it suggested that the potentialities of human reason were limitless. If reason could discover the laws of God and nature, there was nothing it might not do. Man could reform himself, his society, and his government. And if he could accomplish all this, was he not good and, even more important, was he not perfectible? The optimism of the century was based on this view of man's relationship to society and the universe. Problems were to be solved by an application of reason, and defects of character were to be removed by education. Men of the enlightenment could, to a certain extent, agree with Condorcet that at last reason had burst into history and progress was inevitable. The enlightenment's linear concept of progress saw all history as a process of progressive emancipation from superstitution and restraints. Not only the mind of man, but history as well, was a blank tablet on which each generation could write its own record.

Second, the concept of natural law as applied to the political scene became the doctrine of innate natural rights inherent in each individual. This concept of natural rights has been persistent in the history of Western civilization. It was expounded by both the cynics and stoics in the ancient world, systematized and expanded by St. Thomas Aquinas for the medieval church, and formed the basis of the 18th-century struggle for political freedom. In this latter period the doctrines of natural rights and individualism were joined to produce the belief that all men had the right to possess that which they acquired by their own labor, to speak and write as they chose, to petition and to form combinations, and to worship according to their consciences. There is no clearer embodiment of these principles than the Declaration of Independence and the American Bill of Rights; and there was no clearer exponent of these principles than Thomas Jefferson.

Third, in economics the doctrine of natural law again combined with individualism to become the basis of 18th-century laissez faire. The economists, beginning with Adam Smith, maintained that there were certain simple, universal laws governing the economic realm, which if left to function undisturbed would bring order out of chaos and general welfare out of private interests. The content of these laws was not only known by their exponents, but was pressed upon the populace with a rare, religious vigor. These simple, immutable laws were as follows: (a) All men were born with the natural propensity to trade and barter; (b) human actions were dominated by the profit motive; (c) the profit motive stimulated maximum productivity; and (d) maximum productivity was the greatest social good. Therefore, the pursuit by each individual of his own self-interest, or profit, resulted inevitably in the greatest degree of social welfare.

The liberalism of the late 18th and early 19th centuries had much in common with the attitudes described above, as well as with the earlier concepts of Hobbes and Locke. Although Bentham discarded the doctrine of natural law as "nonsense upon stilts" and substituted the principle of utility, the economists associated with utilitarianism retained its content in developing the principle of the natural harmony of interests. Ricardo, Malthus, and later, Herbert Spencer described the preestablished harmony of the economic realm in much the same terms as Adam Smith.

Liberalism indeed showed itself to be a product of the enlightenment. Individualism, unrestrained independence, the individual as a law unto himself, and pseudo-anarchism characterized the spirit of liberalism for that day. Liberalism was thus a reflection of the political, social, religious, and economic aspirations of a rising middle commercial class, influenced by scientific naturalism and the spread of rationalism and secularism. The influence of the Christian faith of human brotherhood under a common father likewise remained strong, even though the Reformation had destroyed the concept of an intervening priesthood. In fact, the elimination of the priestly hierarchy caused individual personality and conscience to acquire even greater significance. Each individual had the responsibility even for salvation.

Individual initiative was also of paramount importance economically. The introduction of private enterprise replaced the rigid system of status by a more flexible system of contracts. Privilege based on birth was being destroyed by enterprising individuals. Francis Bacon's lesson that knowledge is power fitted well with the growth of science, and man saw new knowledge challenging old authority.

Liberalism had barely begun to express itself as a formal political philosophy when it ran into the impact of industrialism. It grew out of an essentially preindustrial, commercial environment and yet almost immediately had to cope with the economic, social, and intellectual consequences of the industrial revolution. The rise of huge concentrations of wealth which dwarfed the individual rendered obsolete the society of small enterprisers which Adam Smith and Jefferson had in mind. The human values of liberalism were threatened by industrialism; and the political and economic noninterventionist doctrines of liberalism made it difficult for liberals to act to protect those values.

The economic manifestation of 18th century liberalism, already referred to above, based itself on a "natural harmony of interests." If individuals were left free to pursue their self-interest in an exchange economy, based upon a division of labor, the welfare of the group as a whole would automatically result. The classical liberals described a self-equilibrating economic mechanism free from all teleological influences. Moral goals and ethical criteria were to be available for passing ultimate judgment on the system but did not play a part in determining the sequence of events. The one propelling force was the self-interest of the individual which was harnessed to the public good because, in an exchange economy, man must serve others in order to serve him-

self. The free market operated in accordance with the free choices of individual buyers and sellers, which determined the allocation of resources in the society. The assumption was that in a freely competitive economy, in which no one would be prevented by status from engaging in economic activity, the income received from such activity would be a fair measure of its value to society.

The logic of such an economic creed implicitly supported the institution of private property. Private property, however, accompanied by the onward rush of industrialism, led to the development and triumph of free capitalism and the institution of the factory and its accompanying evils. The development of absentee ownership, which stemmed from private property, further accelerated the difficulties faced by a liberalism geared to a commercial small-entrepreneur economy. With the state abdicating many important areas of activity, private interests readily stepped in to fill the vacuum. To meet these new problems, liberalism in the 19th century split in a number of directions.

The Manchester laissez-faire school, represented by Cobden, Bright, and Herbert Spencer, tended to remain orthodox and insisted on restricting the role of the state. Cobden opposed factory legislation, and Spencer, in the name of liberalism, opposed almost every state activity. Spencer, idol of two generations of American businessmen, would even forbid government, either local or national, to assume responsibility for the paving, lighting and sanitation of cities.

The radicalism of Bentham and Francis Place represented a school which was prepared to make some adjustment in the antistatist philosophy in order to preserve the human values of liberalism, although Bentham's chief advice to the state was "Be quite."

The political thinking of John Quincy Adams, as a part of American federalism, represented another approach to the problem. His ideal of abolishing poverty was to come into being by exploiting and distributing the technological fruits of science through state industries, and he thus strikingly anticipated some American liberal departures of a century later. However, the defeat of Adams by Jackson in 1828 put an end to this brief era, and presaged the beginning of a new concept of government serving as a balancing and regulatory force in the political economy.

The career of John Stuart Mill, the most articulate of the 19th century liberals, summed up the transformation of liberalism under the impact of industrialism, from laissez faire to radicalism to a near-socialism. Caught between theory and fact, die-hard utilitarians at first opposed measures such as child labor regulations as unwarranted interference with economic laws and individual liberties. The moral and economic dilemmas of this position, however, were soon felt, and a new collectivist approach developed. Living conditions of the poor, as Marx and others pointed out, belied the assumptions of classical economists. This new thinking embraced such odd allies as Owenite Socialists, old-line Tory paternalists, trade unionists, Church of England moralists, and romantic-humanitarian followers of Southey and Coleridge. Soon John Stuart Mill's concessions to collectivism signalized British liberalism's withdrawal from doctrinaire individualism toward compromise with the necessity of state controls. The contributions of T. H. Green played an important part. In a series of such compromises, British liberalism broadened its ideological base to include progressivism of all stripes, from individualism to Fabian socialism. America alone remained a stronghold of classical laissez faire. In America, the enlightened conservatism, which in England as early as the 1820's, exerted a decisive restraint upon economic individualism, did not play the same role. Here enlightened conservation was diverted by the slavery issue.

In historical perspective, we can see that the complex forces which comprised liberalism yielded emancipating principles. The feudal system was destroyed. Capitalism replaced the static society of the Middle Ages. A functionless aristocracy was removed from control. Tyrants were challenged and curbed. The middle class was left free to employ its creative energies in expanding the means of production and vastly increasing the wealth of society. In setting about to limit the sovereign power, liberals helped make constitutional government, with its accompanying civil liberties, a reality. Liberalism, as formulated in the 18th and 19th centuries, indeed seemed relevant to its time.

One other major byproduct of this liberalism was the impetus given to political democracy. Most of the early liberals were not democrats and feared popular government, but democracy, as expressed by representative government, was the logical outcome of their position. The names of liberals like Jefferson, Bentham, Mills, and de Tocqueville became inseparably linked with the struggle for universal suffrage.

The identity of democracy and liberalism, however, was by no means universally granted and still is a subject of serious discussion. Guido de Ruggerio wrote in his History of European Liberalism:

"From a formal point of view, democracy does not deny the right of private associations and local bodies; but, in substance, it corrupts them by its failure to understand the constructive value of the liberty which should govern their creation and operation. * * * Thus, the democratic state is the result of depriving the citizens of their rights and conferring them upon a general will, a single and indivisible sovereign people. * * * The general will, as democracy demonstrates in practice, is only the will of the numerical majority. The omnipotence of the majority is the practical corollary of democracy; and the formal respect for the rights of minorities loses all effectual sanction just because the individuals have forfeited all power to insist upon their rights, by conferring them bodily upon the state.

"The concentration of an immense power in the hands of an often fictitious majority is genuinely tyrannical; and it is therefore no error to place democracy and despotism on the same plane. * * *"

Efforts were made to harmonize the objectives of liberalism with the processes of democracy. The term liberal democracy was used by some to breach the gap in an attempt to modify majoritarianism and relate it to the concept of individualism. Many liberals, of course, denied that a gap existed and used the terms liberalism and democracy interchangeably. In fact, however, a clash was inevitable between democracy and liberalism as it developed and reached fruition in the 19th century.

The new industrial society which came into being in the late 19th century brought with it problems not contemplated by the philosophers of the 18th and early 19th centuries. A new power came into being. It was represented by concentrations of vast wealth in relatively few hands and was used to influence and control government, destroy competition, and increase the maldistribution of wealth. Here, then, was a new menace to freedom, as threatening to the individual as the power of a 17th-century despot, which required new strategy and new attitudes from those desiring to protect individual liberty.

Anatole France incisively expressed the dilemma of the liberal whose "law, in its majestic equality forbids the rich as well as the poor to sleep under bridges, to beg in the streets, and to steal bread." It became clear to many that more than political liberty was needed to achieve freedom for man.

It was in such circumstances that a new generation of liberals, hostile to concentrations of power which threaten the individual and keep him from realizing his potentialities, began to call upon government to intervene in behalf of preserving freedom and restoring balance in the society. This new liberalism came to see that the same forces which had once released the productive energies of Western society now restrained them; and that the very forces which had demolished the power of despots now nourished a new despotism.

Twentieth-century liberalism thus tried to adjust itself to the realities of an industrial civilization. It met with both partial success and tragic failure. The failure was in Europe. Only in England under a brilliant Lloyd George government before World War I was a belated effort made to catch up with industrial realities. In France, the Radical Socialist Party (Liberal) participated in the Popular Front of the 1930's, but even here the efforts were too late and the forces of economic power too great. Instead of liberalism, socialism, communism, and fascism seemed to represent a more specific response to the industrial challenge and therefore swept the working populations and the middle classes.

In the United States, liberalism did seem to make the turn and remains today a dominant political force. An expanding frontier and the blessings of natural resources were partly responsible. They provided greater freedom for action, delayed the rise of the trade union movement, and, in turn, severely handicapped efforts of Marxism to gain a foothold here. Partly responsible too were a series of brilliant political leaders who helped reshape liberalism into an instrument for dealing with industrial society. They included Theodore Roosevelt, who first saw the democratic possibilities in big government and the need for big government to meet big business; Woodrow Wilson; and Franklin D. Roosevelt, who completed the transformation of American liberalism from an antistatist creed to a philosophy willing to use the State to achieve freedom—an end shared with traditional liberalism.

It would be well here to refer to Franklin Delano Roosevelt's observation with regard to liberalism in America. In 1938 he wrote:

"Generally speaking, in a representative form of government there are usually two general schools of political belief—liberal and conservative. The system of party responsibility in America requires that one of its parties be the liberal party and the other be the conservative party. This has been the division by which the major parties in American history have identified themselves whenever crises have developed which required definite choice of direction. In Jefferson's day, in Jackson's day, and in Lincoln's and Theodore Roosevelt's and Wilson's day, one group emerged clearly as liberals opposed to the other—the conservatives.

"One great difference which has characterized this division has been that the liberal party—no matter what its particular name was at the time—believed in the wisdom and efficacy of the will of the great majority of the people, as distinguished from the judgment of a small minority of either education or wealth. The liberal group has always believed that control by a few—political control or economic control—if exercised for a long period of time, would be destructive of a sound representative democracy. For this reason, for example, it has always advocated the extension of the right of suffrage to as many people as possible, trusting the combined judgment of all the people in political matters rather than the judgment of a small minority.

"The other great difference between the two parties has been this: The liberal party

is a party which believes that, as new conditions and problems arise beyond the power of men and women to meet as individuals, it becomes the duty of the Government itself to find new remedies with which to meet them. The liberal party insists that the Government has the definite duty to use all its power and resources to meet new social problems with new social controls—to insure to the average person the right to his own economic and political life, liberty, and the pursuit of happiness. That theory of the role of government was expressed by Abraham Lincoln when he said, 'the legitimate object of government is to do for a community of people whatever they need to have done, but cannot do at all, or cannot do so well, for themselves, in their separate and individual capacities.'"

Liberalism today stands generally committed to the qualified use of state power to achieve the values of freedom and human dignity. Like their ancestors, modern liberals recognize that concentration of power, whether in private or public hands, is the enemy of freedom.

In the economic realm this has led the mainstream of American liberalism in the direction of a form of mixed economy which would include within it a diversification of ownership. Government power would be exercised through the indirect controls of fiscal and budgetary policy, rather than through direct physical control and central committee planning. This has been accompanied politically by an emphasis on the preservation of rights, particularly as they relate to the need for dissent and opposition within a democratic society. The guideposts of Justice Holmes have thus been an essential element of modern American liberalism.

In Europe this new resurgent liberalism is attempting to find a home within the social democratic movement. An increasing number of liberal socialists have come to see that total concentration of economic power in the state apparatus is a threat to political freedom, and that economic planning through the price mechanism and a relatively free market is, in many respects, more efficient than planning by state direction.

The liberalism of today does not seek the abolition of the price system, but it does seek the regulation and control of the profit system so as to bring about modifications to suit the requirements of a changing world. In thus invoking the agency of government to protect and assist the individual, liberals call attention to two profoundly important changes which government itself has undergone since the day when Gournay, the 18th-century Physiocrat, proclaimed the ideal of laissez faire.

First, despite the notorious shortcomings of bureaucracy, the techniques of public administration are incomparably superior to the prescientific methods of the 18th and 19th centuries.

Second, and foremost, the Government agency invoked by liberals is one democratically controlled and subject to the will of people who speak, write, and assemble freely and who are effectively organized into political parties, trade unions, business and professional groups, fraternities, religious, and other independent associations.

Accordingly, liberals have evolved a program of government action which, by a striking consensus of both critics and adherents, has come to be known as the welfare state.

The welfare state is based, in the first place, upon acceptance of collective responsibility for providing all individuals with equality of opportunity. This implies, as a minimum, the elimination of disparities brought about through racial and religious discrimination, and the universal availability of adequate educational facilities.

Second, in a society as richly endowed as our own, the welfare state assumes responsibility for the basic economic security of those who are unable, through no fault of their own, to provide such security for themselves. This implies aid to those who are disabled by reason of accident, illness, youth, or old age; minimum wage legislation and unemployment insurance for all workers; and aid to economically disadvantaged groups through support of labor unions, consumer organizations, small farmers, and independent business.

Third, the welfare state assumes the responsibility for reducing great disparities in the distribution of wealth and bringing about a closer coincidence between the income of the individual and his contribution to society. This implies an appropriate tax policy and a forthright attack upon monopoly and other business arrangements which exaggerate differences in income.

Finally, the welfare state assumes the responsibility for promoting the full employment of our manpower and the full utilization of our resources. These, in turn, spell the objective of full production within the limits of an intelligent human and natural resources conservation and utilization program. Thus, contrary to the contention of its critics, the welfare state is concerned with the production of wealth as well as with the spending and distribution of wealth.

One other modern challenge to traditional liberalism is represented by Sigmund Freud and the development of psychoanalysis. As man began to learn more about himself, some of the earlier conceptions of liberalism came into sharp question. The liberal faith had been based on the judgment of man as a reasonable and good being. By acquiring knowledge and applying the scientific method, man could discover the laws of the universe as they related to his problems and solve them. The end result would be good, since man was good.

Man's study of his own psyche, however, raised disturbing doubts about these presuppositions of liberalism. Even with education, men were not necessarily guided by reason; and psychoanalysis discovered that evil was perhaps as essential an ingredient of man as good. In the latter sense, the psychoanalytic challenge to liberalism came close to the Christian theological notion of original sin, which has had its modern political expression in the works of Reinhold Niebuhr. Since men could be children of light and children of darkness and since man's subconscious was a cauldron of complexes and neuroses which interfered with the supremacy of reason over emotion, the liberal's faith in man's reason, man's goodness, and the scientific method was severely undermined. The Nazi eruption was the cold historical symbol of man's capacity for evil.

How liberalism responds to this challenge will in large measure determine its propensities for survival. The new discoveries need not in any way lead us to doubt that the goals of liberalism are as valid today as they always have been. The new insights into man which we have achieved now make our earlier faith appear naive, but this new understanding can give us strength and direction as it places the problems faced by liberalism into clearer focus. One essential adjustment which we must make is the need to embrace morality as an active, aggressive force in modern life. We can no longer take morality for granted and assume its superiority in man or its eventual victory over the forces of evil.

The liberalism of today, therefore, must strive to achieve freedom for man within the context of the problems which now face him. It should have no set of fixed dogmas concerning the kind of society in which individuals most fully realize themselves. Beyond a basic commitment to the dignity and worth of the individual, the content of liberalism from age to age and from nation to nation will vary with varying conditions. Liberalism may one day challenge and another day cherish the church; in one age it may seek less government intervention in economic affairs, and in another age, more; it may at one time be hospitable to the specific interests of the business community and at another time it may be hostile. The liberal approach must be experimental, the solution tentative, the test pragmatic. Believing that no particular manifestation of our basic social institutions is sacrosanct or immutable, there should be a willingness to reexamine and reconstruct institutions in the light of new needs.

Liberalism, therefore, lacks the finality of a creed, and thus it is without the allure of those dogmas which attract the minds of men by purporting to embody final truth. Whether liberalism can survive in a world seeking security and finality cannot now be predicted. If it does not, our civilization perishes with it. Our task, therefore, is to strengthen and support it with all of our energies and intelligence. We must release ourselves from the shackles of yesterday's traditions and let our minds be bold. Our striving for liberty, must relate itself to and come to terms with the historic demands of equality—which, likewise, has a noble tradition tracing back to the Stoics and the Christian Fathers. With Hobhouse, we must remember that "liberty without equality is a name of noble sound and squalid results."

Finally, liberalism must cement its destiny with that of democratic self-government and the need to protect democrary against its totalitarian enemies from within and without. In the struggle for survival between democrary and totalitarianism, liberalism finds its own struggle for life intimately interwoven. Liberalism, therefore, even as it recognizes the necessity to preserve the spirit and fact of dissent in the political community, must recognize its ultimate loyalty to a majority-rule society and to the protection of all the factors which make such a society possible.

Our faith is that liberalism will survive and prevail. Our faith is bolstered by awareness of man's disquieting sense that no individual and no generation can discern the content of freedom for all time. We state for all to hear that liberalism possesses a durability as strong as man's eternal quest for freedom.

The Refugee Problem as an American Problem

EXTENSION OF REMARKS

OF

HON. THADDEUS M. MACHROWICZ

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1956

Mr. MACHROWICZ. Mr. Speaker, several months ago a survey was made of the Polish refugee and emigrant centers in Europe by Mr. Walter Zachariasiewicz, executive secretary of the Polish Immigration Committee in New York. This survey was made on the basis of his personal inspection tour and study of these centers made in May and June of 1955.

His report is very valuable to all who are interested in an equitable solution of the problem of the refugees from the American point of view. It is based on facts and his vast knowledge and understanding of this problem. Since his survey is typical of the problem of refugees

of all nationalities, under leave to extend my remarks, I include herewith portions of the report together with some of his recommendations.

The report and recommendations follow:

At the very outset I wish to express my opinion and fear that the impact of the new policy of coexistence may cause profound changes in countries behind the Iron Curtain and among refugee groups.

We are dealing with a problem that is at once: humanitarian, political, and social. It is an American problem.

The President of the United States stressed this problem (April 22, 1955) in the following statement:

"It is imperative that we join with the other nations in helping to find a solution to these grave questions. These refugees, escapees, and distressed peoples now constitute an economic and political threat of constantly growing magnitude. They look to traditional American humanitarian concern for the oppressed. International political considerations are also factors which are involved. We should take reasonable steps to help these people to the extent that we share the obligation of the free world."

These words are of the same importance as of today.

The statement made by Eisenhower from which I have quoted, stresse mainly the social phase of this problem. During and after the Second World War forced migrations of millions of individuals created perhaps the greatest upheaval in the history of mankind. It has become an international problem fraught with incalculable social consequences and pressures, not to mention the political dynamics behind them.

Political observers realized the political importance of these elements only recently when Soviet Russia suddenly radically changed her political strategy which still puzzles our diplomats and political observers.

Our foreign policy has until now been dominated by a justified fear and danger of war with Russia. The same applies to Soviet Russia. In a review of their means and strength the Soviets could not overlook the danger of having hostile satellites in case of war. Hostile millions of Poles, Czechoslovaks, Lithuanians, etc. would constitute a great menace to them in case of war.

This fact, among others, had perhaps an important bearing on the new attitude and policy of the Kremlin.

But the United States also realized that the peoples behind the Iron Curtain are an extremely valuable potential in our favor. America knows that the freedom loving oppressed peoples, now in bondage, are our close and reliable allies. Hence the activities of the Voice of America, Radio Free Europe, and other agencies. Their aim is: To encourage the peoples behind the Iron Curtain as well as the refugees and old emigrant groups on this side of the curtain, to resist communism and prevent cooperation and subservience, to block penetration and fifth columns in the free countries. In other words: American policy was directed toward one goal, namely, to support and strengthen millions of our allies in their resistence to communism. The task of allying the nations now enslaved, and their refugees, with the cause of America grew in importance the closer the danger of war grew. This concern and appreciation should continue to be seriously considered in our foreign policy.

REFUGEES AND OLD POLISH COMMUNITIES

Our Government (together with private civic organizations), has in this endeavor strong support from refugee groups. Their influence, their voice, and moral encouragement still play an important role in the activities of our agencies abroad. One should also mention the part millions of Americans of Polish descent played in this program of strengthening the Polish people in their resistance to communism as a valuable contribution toward our growing success in the cold war against the Soviets.

The Polish refugees have a splendid record: the Polish underground during the war, the services of Polish groups in French, Belgian, and German undergrounds during the war, the part the Poles played as contingents of the allied forces—all this and more, rendered in the common cause on the side of the allies—distinguishes them and qualifies them for special consideration and trust.

The nations behind the Iron Curtain and their refugee groups all over the world, as well as the old emigrants, now citizens of many countries, relentless and uncompromising in their attitude towards communism, rely exclusively and wholeheartedly on the United States whose destiny they conceive as that of the liberator and crusader of democracy and christianity. They still are, in spite of disastrous political defeats, our devoted friends, most reliable in faith and loyalty. A good deal of this attitude may be attributed to the splendid work of Radio Free Europe, the Voice of America, and the humanitarian mission of many American institutions.

I realized that during my contacts with various groups of different countries. I watched their attitude, I listened to their opinions, hopes and fears, also to their frustrations. These groups follow attentively the programs of free Europe. They implicity trust and account whatever is sent to them over the waves. They still see themselves not as wrecks but as soldiers of a cause common to all who ardently desire the freedom of Central and Eastern European countries, which is also the American cause.

FUTURE AMERICAN CITIZENS

"It is well for us, however, to remind ourselves occasionally of an equally manifest fact: we are one and all immigrants or the sons and daughters of immigrants" (President Eisenhower in his first state of the Union address, Feb. 8, 1953).

Several thousand refugees will soon come to this country under the existing laws. They will establish themselves and grow into America's soul and soil. Their roots will be cities and farms, their life will flow into the broad, deep stream of American life.

The medical and political screening which everyone of them now has to undergo (under conditions that defy description) is but a superficial scrutiny that does not tell the story.

Of importance is their spiritual value. Let us not forget that there will always be the danger of red fifth column in this country, as everywhere. No matter what shape the new Communist deal will take, there will always exist the danger of red fifth column.

In these immigrants the United States will always have stanch, faithful, and valiant defenders of our democracy against the inroads of Communist fifth column. This thought contributed greatly toward any approach and evaluation of what I have seen and heard.

TO MAINTAIN THE SPIRIT

It seems to me that we are somewhat derelict in one particular field, in the field of conditioning the prospective immigrants to whom we are to open the gates. We must not break their spirit or shatter their fondest hopes. It is now that they need our help and encouragement. In trying to evaluate my experiences and observations I came to the conclusion that it is important now to assist the groups that will remain where they are, as well as those who will eventually come to the United States. I am convinced that assistance should be offered all Polish refugee groups as well as groups of old Polish emigrants in many countries to maintain the spirit of resistance to Communist infiltration.

We have an ideological, political, and financial investment there. We have for years maintained spiritual intercourse with them, we have spoken to them daily through our agencies over microphones, conveying to them the voice of America about a free Europe. What we have been telling them everyday became their spiritual spine, their faith in us.

What now?

It is my conviction that we should continue to support them financially and morally. We must continue what we have started. Our assistance at this moment is essential, necessary, and important to our cause.

To let them down now would be disastrous in effect.

Especially now.

One may ask: Why now?

My answer is: Because they are now exposed to the most dangerous influence from Moscow and Warsaw.

LURING REFUGEES TO RETURN HOME

As you will see in my report the Communists have become very much interested in the emigrants and refugees. It is no secret that the Cominform is now luring refugees to return to their homelands. Special boats carry hundreds of children from France to Poland for free vacations. Warsaw agents, supplied with large amounts of money, finance and patronize Polish schools in Germany, France and Belgium (mostly among old emigrants), innumerable cultural and social activities. Polish Communist agents have behind them: consulates, embassies, and unlimited amount of * * * money.

They persist in their wooing of the refugees because they know how great is the influence of these groups on the morale and resistance of the Polish people in Poland. To illustrate: The Guild of Free Polish Newspapermen in France issued an appeal dated July 29, 1955, to the Polish groups in France, from which I quote:

"During the last few months the Communist Warsaw regime started among the Poles in France and in other countries an intensive campaign: 'return to your country.' This campaign is politically a part of the widespread attempt of diversion conducted by the Soviet Government and the Communists among political emigrees from all countries behind the Iron Curtain.

"The Guild of Free Polish Newspapermen therefore considers it its duty to remind you that every such campaign initiated by the Soviets, its agencies and the Communists among the emigrees from behind the Iron Curtain has only one purpose namely to weaken the strength of resistance of our people and their desire for independence."

The present lure is aimed at importing as many "witnesses" as possible to have them spread disbelief, to encourage others to surrender to a status which they call "reality."

Those who are watchful and experienced know that the Communists are masters in their calculations "a la longue." They know why Communist agents are spending millions of dollars to penetrate, indoctrinate and bring back to Poland and other countries refugees as witnesses. They are now hard at work to establish new lines of propaganda and break down the resistance of the nations behind the Iron Curtain because their resistance played an important role in exposing the weakest point of the Soviet menace.

The aim of the Soviets in their new political attire is to strengthen their weak strategic and political position at home by wining over the Poles and Czechoslovaks, the Lithuanians, Rumanians, Hungarians, etc.,

preparing themselves for future action. The refugees are their convenient and desirable target. The Soviets are bent on breaking the resistance of the satellite countries using the refugee groups for that purpose.

The Communists are now smiling not only at their enemies but also at their victims.

AFTER GENEVA

I am submitting this report after the Geneva conference where a wave of optimism and reconciliation has been set in motion.

"Tolerance," "cooperation," "mutual understanding," "better atmosphere" are the slogans behind this new philosophy and policy, which perhaps may be acceptable to the United States and Great Britain since it denotes only a policy as it touches only the outer spheres of an experiment from which there is an escape and return should it become exigent to return and withdraw.

But to the nations behind the Iron Curtain and to refugees strewn over the world there would be no way of return should they accept the policy of coexistence.

To them it means surrender.

There can perhaps be a kind of coexistence between the totalitarian strong and the free but there can be no coexistence between the strong and the weak, between the oppressors and the oppressed, between a powerful Soviet Empire and her satellites without radical changes and new international guarantees based on justice and freedom.

The refugees know that.

They fear the new trend which they believe is based on generalities, slogans and wishful thinking, on illusions and calculations and perhaps miscalculations. Hence their despair and struggle against the lure from Moscow and Warsaw, Prague, Budapest or Bucharest.

Their anxiety is now greater than ever before.

Greater therefore now is the need of our support.

I am afraid that should this come-home campaign even moderately succeed a radical change would occur in the attitude of the enslaved nations.

We well remember what good use we have made in our own propaganda when Polish fliers Jazwinski and Jarocki, Professor Korowicz, and Jan Hajdukiewicz, Cwiklinski, Panufnik, Klimowicz, and other escapees, including Swiatlo. They became valuable assets to our propaganda. On can imagine what the Communist propaganda machine would do with a few hundred witnesses as returnees; how they would exploit the disappointments of their new captives, how destructive such a campaign, if sucecssful, would be on the morale of the peoples behind the Iron Curtain.

I have been under the impact of these elements during my visits and conversations. I have sensed the danger of this new threat.

I have gone into great detail in describing conditions in various Polish communities abroad to show how dangerous are the new stimuli, how unhappy those who still refuse to abandon their creed and their hopes.

My report is in a way an alarm addressed to those who are interested in this sector of the front in our cold war:

"Do not abandon them now after having fed them day in and day out messages of the Voice of America about a free Europe. Now is the time, regardless of the political and diplomatic course we have adopted, to stand by, to continue even increase our moral and financial support of those who remain our most faithful and loyal allies."

We are morally responsible for them and for their plight. They are not yet expendable.

RECOMMENDATIONS

I. Immigration

I have no intention and no authority to go into the differences of opinions in the matter of the existing Immigration Act or Refugee Relief Act as expressed in various bills and debates. I only take the liberty of submitting suggestions and recommendations regarding the operation of the existing provisions to alleviate shortcomings and injustices so prevalent and deeply felt everywhere among the refugees.

(a) Asylum for political escapees: It seems to me that the Department of State should have special, discretionary powers in granting immigration visas or legal status in this country for deserving escapees. This would save in many instances prolonged and complicated action by Congress.

(b) United States Health Service restrictions: One of the redtape injustices quite prevalent and causing immeasurable suffering is the provision that excludes those who are afflicted, even in the smallest degree with TB from obtaining immigration visas.

Tuberculosis has long ceased to be a dangerous social disease. The progress of medicine has now produced means of checking and combating TB. Under proper care and in favorable conditions applicants for permission to emigrate to the United States would quickly overcome this handicap. With rest, proper food and care these TB applicants would soon be able to live a normal life, especially in America. To wreck their life, their future, because of this, regardless how serious affliction—imposed by a stiff and heartlessly invoked provision seems to me to call for revision. I have seen many victims of that rule who undoubtedly merit the highest consideration, such as victims of concentration camps, underground heroes, separated families—unfortunately they were sentenced to slow death, denied the only opportunity to escape, because they have tiny spots on the lungs. Once legislation like Refugee Relief Act is to some extent a humanitarian measure it shouldn't apply the same medical standards to victims of persecution or long camp life as we apply to regular immigrants living normal lives in free countries. In many cases the rejection of one person denies from immigration the whole family including quite often many children.

(c) Interpretation of misdemeanors: An applicant whose record shows two sentences for misdemeanors is automatically excluded and rejected. The nature of these misdemeanors and the circumstances under which sentence was pronounced need be studied and properly interpreted and evaluated. Many of them are of such trivial nature and direct result of semihuman conditions that to use the sentence in denying the refugee a chance of starting a new life seems to be cruel.

(d) Necessity of coordinating medical examination with political screening: It happens not infrequently that due to protracted political screening applicants are not receiving their visas during the 4 months validity of medical examination. In such cases they have to undergo troublesome and costly medical examination for the second time.

(e) Call for more discreet investigation: Not a little embarrassment is caused in many cases by local police investigators trying to collect confidential information on applicants. They approach mostly neighbors of the applicants asking about applicants' political affiliations and beliefs, whether they are not Communists. That, of course, creates suspicions since the neighbors are not aware of the prospective emigrant's plans and do not know in what connection the investigation is being conducted. The complaints of this nature reached me in Belgium and Austria.

II. Refugees and escapees welfare

(a) Liquidation of substandard camps in Germany and Austria: We should not relax our pressure on now sovereign Germany and Austria in connection with closing those dreadful camps which are not fit to live in. Some more suitable settlements should be provided for the refugees who should also more closely be integrated into economical life of Germany and Austria.

(b) Problem of employment: One of the greatest sources of distress among refugees in Germany results from the fact that some refugee camps and settlements in rural sections in that country offer the refugees no chance of employment. This should be remedied. The camps or settlements should be placed in or near industrial centers or large cities to enable the refugee to earn money and be occupied. It seems to me that this claim of refugees is justified and would be helpful. The presence of so many refugees in Germany is not an act of German tolerance or charity but a result of their war crimes. It imposes upon them continuous duties and obligations.

(c) Shelter for escapees in Germany: There is an obvious necessity of establishing an adequate center for recent escapees in Germany, under joint administration and control of German and allies' authorities.

(d) Transfer evacuated United States Army housing projects to refugees: Since the United States Army is evacuating built by themselves housing projects in Austria there is an opportunity to improve the refugees' lot by shifting at least some of them to the evacuated premises.

(e) Refugee and escapee camp at Trieste: The living conditions in that camp need improvement very badly and might perhaps be subsidized from USEP or FOA funds. The present place is gloomy, overcrowded, with poor light.

(f) Disposal of seized property from enemy aliens: It would be a good idea to use part of the enemy aliens' World War II property seized from them by the United States Government for raising standards of living and helping rehabilitation of refugees in Germany, Austria, and Italy.

(g) Deciding date for escapees: Great relief and justified improvement in the situation of escapees would come from an extension of the date which qualifies the escapee to benefit from USEP's assistance. The dateline for those who escaped from the geographical boundaries of Soviet Russia is drawn along the year 1945, whereas January 1948 is the date for escapees from other countries.

(h) Expansion of USEP's field offices: USEP do extremely good work—but only there, where they operate. But escapees who happen to be in countries where there are no offices of the USEP are deprived of its assistance and protection. Hence my recommendation that the extension of the USEP should be widened to embrace also Scandinavian countries.

(i) Escapee assistance to their families: It often happens that refugees, especially escapees leave behind them their families. Their natural desire, after escaping from an oppressed country, is to help their families, especially when those families are thrown out of their homes. Unfortunately some escapees are in no position to send packages to their families since they remain idle for a long time in camps.

I should therefore suggest that such escapees should be assisted in sending packages to their families behind the Iron Curtain as a sign of their new better life.

(j) FOA, CARE parcels: I would kindly recommend that the FOA and CARE parcels service continue and even be extended. The moral, psyscological and social effect of FOA cannot be described or measured. It is invaluable.

(k) Cooperation with refugee groups: Many American organizations and foundations operating in European countries among refugee groups jeopardize their own work by

disregarding existing local refugee organizations. The consequently make many mistakes. It seems to me that those who operate there would benefit greatly by inviting local emigree groups to cooperate in their plans and execution of their plans as consultant agencies. This would eliminate many grievances and mistakes and much waste.

The Harris-Fulbright Bill

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1956

Mr. CURTIS of Missouri. Mr. Speaker, under unanimous consent, I insert into the RECORD a letter which I have just written to the editors of the St. Louis Post-Dispatch along with the editorial appearing in the St. Louis Post-Dispatch to which I refer.

I am very disturbed about the smear attack which seems to be gaining momentum which has been embarked upon by certain groups who disagree with the philosophy of the Harris-Fulbright bill. There is plenty of honest argument on both sides of this issue and there should be no occasion whatsoever to resort to this kind of procedure. Incidentally, if what has been referred to as the gas and oil lobby has been using improper or possibly illegal tactics in promoting this legislation, these matters should be investigated and brought to light. However, there seems to be no specific charges made against the gas and oil lobby of improper or illegal conduct. Unless a bill of particulars is forthcoming I think, in fairness, the attacks should cease inasmuch as they would then properly be dubbed smear attacks.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., January 26, 1956.

EDITORS,
St. Louis Post-Dispatch,
St. Louis, Mo.

GENTLEMEN: I read with interest your editorial appearing in the Monday, January 23, 1956, Post-Dispatch, entitled "The New Gas Gouge," in which you discuss the proposed Fulbright-Harris bill to exempt natural-gas producers from Federal regulation.

I am enclosing for your consideration an editorial appearing in the Chicago Daily Sun-Times of January 23, 1956, a newspaper which has the reputation of being independent and liberal in its thinking. I think this would be excellent material for your Mirror of Public Opinion so that your readers will realize that there is more to this issue than the activities of what your editorial refers to as the oil and gas lobby.

Tragically, your editorial is geared to impugning the motives of those with whom your editors disagree instead of presenting the facts and logic of your own position. Can't we keep public discussion on a higher plane? It appears to me that the smear approach is resorted to when facts and logic are absent. If this is so we, all being interested basically in the consumer, are hurting the consumers' interest when we avoid honest debate.

Yours very truly,
THOMAS B. CURTIS.

P. S.—I am also enclosing some comments made on the floor of the House and the additional prepared remarks appearing in the January 25, 1956, CONGRESSIONAL RECORD in which I call attention to what on the surface appears to be a serious smear attack by the Columnist Drew Pearson on the integrity of the majority of the House Members who supported the Harris bill. Knowing that your newspaper carries Drew Pearson's syndicated column and being a newspaper which has the reputation of being a responsible journal, my remarks are quite pertinent to your policy of publicizing Mr. Pearson's statements.

[From the St. Louis Post-Dispatch]
THE NEW GAS GOUGE

Almost every St. Louis householder uses gas in some form—in stoves or furnaces or water heaters. Industries here are heavy gas customers. To each of these consumers, and to millions more across the country, the present Senate debate on the Fulbright bill should be a matter of personal concern. For the bill would cost gas consumers money.

The oil and gas lobby, which the Wall Street Journal reported was spending $1.5 million to promote the bill, naturally denies this. Gas producers argue that their prices will not rise rapidly if Federal controls are prohibited by the Fulbright bill. Suspicious consumers might then ask why the lobby is putting so much money and effort into its campaign if it expects no return.

This has been a most persistent campaign. Repeatedly the gas industry has tried to prevent or escape from field regulation by the Federal Power Commission. The Moore-Rizley bill of 1947, the first attempt, did not pass. The Kerr bill of 1949 was vetoed by former President Truman.

In 1954 the Supreme Court held that producers were subject to FPC regulation, and the new legislation is an attempt to escape from the High Court's ruling. The House passed the bill by 209 votes to 203. If the Senate passes it, President Eisenhower is expected to sign it. Then what?

In 10 years the field price of gas sold to pipelines has increased more than 100 percent. Testimony on the present bill referred to further increases up to 15 cents per thousand cubic feet, which would make the price about 25 cents. Consumers would have to pay this added expense of unregulated gas prices, but that is not all they would have to pay.

Much of the gas consumed locally goes to industries at a low rate because they agree to burn other fuels when a utility needs their gas for residential heating. This gas already is sold at less than 25 cents. If the price rises to that figure, many industries will convert to other fuels. The residential consumer will have to pay for this loss of revenue to utilities and pipelines.

Senator DOUGLAS, of Illinois, who has fought the gas-oil lobby constantly, estimates that the full effect of a 15-cent gas field-price rise would be to add 27 cents to the residential consumer's bill. That would be a 35-percent increase.

There are more than 18 million residential gas customers in the Nation. Their average annual gas bill would be increased $23.45, Senator DOUGLAS believes. In Chicago's colder latitude (and this would be true of St. Louis, too), the average gas-heating bill would go up by $41.25.

Senate opponents of the Fulbright bill think it would gouge consumers out of some $600 million to a billion dollars a year in behalf of gas producers. Of course the lobby denies this, too, and the answer all depends on just what price increases the producers intend if they are free from Federal regulation.

If the lobby does not really intend to increase prices much, then why all the long fuss and bother about escaping from price regulation? That is the unanswered question which should make millions of gas customers and their elected representatives suspicious of the Fulbright bill.

Led by big oil companies, the lobby is making one more desperate effort to avoid utility regulation. Let the customers beware. Let the Senators who represent the consumers stand up and be counted for them when the vote comes.

Let's Try Patriotism

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Tuesday, January 31, 1956

Mr. MARTIN of Pennsylvania. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Let's Try Patriotism," written by the national commander of the American Legion, Mr. J. Addington Wagner, and published in the American Legion Magazine for February 1956.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

"LET'S TRY PATRIOTISM"

(By J. Addington Wagner, national commander of the American Legion)

During February Legionnaires will have two opportunities to try a little experiment. On February 12th we will celebrate Lincoln's Birthday, and on the 22d we will mark the day of Washington's birth. On both those national holidays observe carefully what happens. Walk or drive around your community and see to what extent the flag is displayed. It will of course appear before public buildings, but the chances are you will not find it waving in front of 1 house out of 4 or 5. If you do, your community is indeed unusual.

This neglect of our flag does not mean that many Americans have no love of country. Nor can it be said that they are unpatriotic. But the sad fact is that most Americans are apathetic when it comes to our national colors and this apathy is a dangerous symptom. Another danger sign is the sneering way in which some people talk about patriotism and flag waving in attempting to prove how progressive and sophisticated they are in their thinking.

Actually such people prove something quite different—that they are ignorant of this Nation's history and the reasons for its greatness. Still, it is something worth thinking about. It cannot be dismissed lightly because it indicates far more than the ignorance of an individual. It expresses an attitude that must have been fostered because it is an unnatural concept.

Since the beginning of time man has taken pride in his native land. Some of the greatest pages in history tell of men who have shown this love of country by heroic actions in its behalf. These men were not merely patriots; their actions made them superpatriots. And many of them were flag wavers, literally as well as figuratively. We have had a great many such men in our own history. As a matter of fact, it is because of such men—more than a few of whom have been Legionnaires—that we are a free, independent, and great Nation. What has happened in recent years to cause some Americans to talk about patriotism with a sneer,

scoff at the display of our flag, and deride fellow Americans who happen to take pride in their country, and believe that this Nation should come before all others?

This is something that is relatively new, an attitude that has been developed only in the past two or three decades. Prior to that time there was no compulsion about patriotism. No American used to salute the flag or stand for our national anthem with a self-conscious feeling that this was something he had to do. Those earlier Americans did more than show respect for their flag; they felt something deep inside them that ofen made Old Glory look a bit blurred as it went by.

To many of our modern-day sophisticates such a reaction is incomprehensible. They consider it sloppy, sentimental poppycock. If they have taken certain courses at certain institutions of higher education they are likely to couple patriotism with a 5-ruble word, "chauvinism." This show of education still does not alter the fact that such a person is not quite as bright as he pretends to be. The fault may be his own since he may have been exposed to a proper education about this country, and it didn't take. On the other hand, he may be another victim of a certain segment of educators whose allegiance is not to the United States of America we know, but to some fuzzy concept of one-worldism or totalitarianism.

Let me emphasize as strongly as I can that the great majority of professors and teachers in this country are loyal, dedicated Americans who are doing their utmost to instill in our children a love of country based on understanding. Unfortunately, there are a few educators who have set a different goal for themselves. Aiming to prepare our boys and girls to be citizens of the world, or pawns in a highly organized collectivist society, they decry love of country as something shameful, reeking of the poisoned air of nationalism. Fortunately, such teachers are a small minority, but they do a lot of harm and can undo a lot of the fine work being done by the loyal and patriotic majority of teachers.

However, education is not the only field in which such subversives operate. The attempt to weaken this country by fraying the ties of patriotism that bind us together is not restricted to classrooms. It is a widespread campaign that operates on many fronts, and its danger is expressed in the Biblical injunction: "If a house be divided against itself, that house cannot stand."

We now understand, in general, how Communists operate within a country. We know that one of their major objectives is to set class against class so that in the resulting choas they can move in and seize power. Think how easy we will make their task if we permit ourselves to be broken up not into fragments but into millions of human particles without the strong, cohesive force of patriotism to bind us together!

We can take it for granted that the Communists are part and parcel of the conspiracy to make patriotism unpopular. However, it is a grave mistake to think that they are the only ones who are involved in this project.

Americans are inclined to oversimplify things, and this seems to be especially true when it comes to communism and other forms of subversion. Too many people have the naive notion that the Communists are bushy-bearded Russians who speak in heavy foreign accents. This comic-book caricature of a Communist lingers in many minds even though we have seen far different types exposed as dedicated Communists and Soviet agents.

Just as there are different kinds of Communists, many of them difficult to spot, so there are various manifestations of communism. Even Stalin was unable to achieve absolute conformity to his idea of communism, though he murdered millions in his attempt to do so. It should not be surprising therefore to find that communism outside the Iron Curtain has not always measured up to the rigid standards prescribed by the Kremlin bosses.

Expert opinion has it that today there are only about 25,000 Communist Party members in this country. That low figure has given many Americans a false feeling of security. To them this is proof positive that there aren't enough communists left in this country to worry about. To their way of thinking all the rest of the commies and the pro-commies have seen the error of their ways and are now conservatives or even reactionaries. Nothing could be more fallacious than this strange notion, and few concepts are more dangerous. The simple fact is that most of the trouble we are having within our country stems from the activities of people who, while not communists, have repeatedly acted as stooges for communist causes.

Since the Bolsheviks staged their first blood bath in 1917, hundreds of thousands of people in this country have participated in Communist activities. Many of them did so innocently, and backed away from the conspiracy when they learned the truth about it. At the other extreme are people who have participated in Communist swindles for decades, zigging and zagging with every twist of the party line. Yet in many cases these people never allied themselves with the Communist Party technically, and scream indignant denials if anyone dares to hint that they are actually Communists or pro-Communists.

These subversive characters have as devoted allies another type of person who can best be described as a collectivist. Such an individual is a Communist of a sort, in that he subscribes to a certain tenet of Marxian doctrine without going all the way as a doctrinaire Communist must. In some cases a person of this sort may even oppose the Russian variety of Marxism as a thing to be bitterly deplored.

Still, this does not keep the collectivist from joining hands with the Communist when the chips are down. And the chips are likely to be down when any individual or any organization does something which will hurt communism. Shouting loudly that they hate communism, the collectivists move in a body to annihilate their hated enemies, the anticommunists. Psychologists may offer a better reason for this strange phenomenon, but it could arise from the fact that communism and the ideology espoused by these people have common roots. When anyone strikes at communism he is bound to hit a raw nerve in the collectivist anatomy.

Thanks in large part to such people, we have committed one folly after another in our foreign relations and in our domestic affairs. They are the kind who in the 1920's and 1930's became at least emotionally involved with the bolshevik revolution, and propagandized this country into making its greatest diplomatic blunder—the recognition of Red Russia. Many of these people eventually recognized their error, and wanted nothing further to do with Russian communism. But even so, a great many of them changed their ideology in only one major respect. They turned not from communism but from the Kremlin's particular brand of communism.

Overlooking the fact that the all-powerful totalitarian state inevitably means a police state, these people dream of utopias in which everyone will be taken care of from cradle to grave by a benevolent and all-wise government. As prime movers, they will of course have important roles to play in this brave new world, but they will undertake this because of their great love for the comman man who so needs their guidance.

Certainly there is no law against dreaming, but too often the collectivists who specialize in this sort of stuff are guilty of selling their phony notions under false pretenses. Their streamlined version of the world of the future is made to look so dazzling and plausible that many people never notice that it bears a trademark that looks amazingly like a hammer and sickle.

Unfortunately, it is not possible to dismiss these people as visionaries or crackpots. Most of them are well educated and they are likely to be persuasive talkers. Many of them occupy strategic positions where they can command attention, if not respect. While they may not always succeed in selling their collectivist doctrine, they often do an extremely effective job of undermining faith in American traditions and ideals. And in so doing they aid and abet the Communist conspiracy.

The third group that presents a serious problem to us are the one-worlders, the people who are diligently trying to bring about a world government. Like many collectivists, these people really believe that their globalistic nostrum will cure mankind of all its ills. But in their headlong rush toward the millenium they blithely overlook realities. And one hard reality is that their one-world would be achieved largely at the expense of our United States. That this fact does not trouble them is evident in the way they persist in whittling away at our national sovereignty, but I need hardly point out that the American Legion is not going to sit idly by while such people try to persuade the American people that national suicide is in their own best interest.

This is not to say that we should become isolationists. That is neither desirable nor practical in our present world. There are 2 billion people on this earth, and we must learn to live with them. Indeed, we are learning; and I dare say that Legionnaires, thanks to their service in the great wars and in Korea, had an unusual vantage point for their lessons in international living. Because of this advantage, which unfortunately many one-worlders lack, we discovered a highly important and basic fact. From practical experience we know that this country and the citizens of this country can count on being respected only as long as the United States remains strong. We know from bitter experience what happened to our prestige after World War II ended and it began to appear that the United States was no longer the same mighty Nation that had won victories around the globe. That is just one reason, but a compelling one, why we as citizens and veterans are unalterably opposed to those foolish people who want to weaken this Nation's sovereignty and limit its power in their do-good attempts to promote world government.

However, we know what we are up against in opposing these people because we have learned of the power they possess. This was demonstrated when the American Legion ran head on into the UNESCO propagandists. When a preliminary report by an obscure committee gave these people an opportunity to circulate a story that the American Legion might reverse its previous stand against UNESCO, that story made favorable headlines and editorials from coast to coast. When the American Legion reiterated its former opposition to UNESCO, by an overwhelming vote at the national convention in Miami, powerful newspapers, magazines, and broadcasters distorted the story and viciously smeared our organization for failing to toe the mark of the one-worlders, as they toe the mark.

Naturally, we don't like this sort of thing but we can take it. Indeed we are used to it. We have been similarly attacked, time and again, because we have performed what we felt was our patriotic duty by calling attention to the activities and records of individuals and organizations operating in manners detrimental to our country's welfare. For thus daring to discuss Communists and col-

lectivists the American Legion has even been denounced as subversive and un-American. However, that is just another indication of the fact that it is high time Americans started pulling together to fight the powerful forces that are arrayed against us—the forces of communism, collectivism, and one-worldism.

What should our strategy be?

Bear in mind that these three forces sometimes operate independently of each other, sometimes they work as a team, and on some occasions they seem to be pitted against each other. However, they show remarkable harmony and unity when it comes to opposing traditional Americanism, the Constitution of the United States, and people who love this country and despise its enemies. At all costs, and using all sorts of trickery, they work incessantly to discredit and destroy all three.

Obviously the best way to foil these people is to form a united front based on a strong, uncompromising, and undivided allegiance to this Nation, its Constitution and its Flag. In short, the need today is for positive, forthright, and outspoken Americanism.

And that in turn calls for a greater pride in our Nation. This is something that can best be developed by a better knowledge of this country's history, so that we may know precisely why this Nation and this Nation's system of government are the best that man has been able to devise. Too many people are ignorant of these things and are therefore easy prey for un-American propagandists. This lack of knowledge is the reason why too many American GI's succumbed to Communist brainwashing in the Orient. It also explains why so many Americans fall for the brainwashing that is constantly being practiced on them by the Communists, the collectivists, and the proponents of world government.

For the past few years we have been suffering from a growing inferiority complex of international dimensions. This causes us to worry about the opinions of even such fellows as Krishma Menon and Jawaharlal Nehru. As a result we have been easy marks for our enemies and a source of dismay to our friends. If we intend to win the present cold war, it is esesntial that we get over this weakness and develop some faith in ourselves. As the next step we must express that faith by showing the world what we believe and how far we will go to defend our beliefs. Only in this way will we stop the constant probings and humiliations practiced on us by the Kremlin bosses, and end the doubts of our friends and allies.

But first we must pick up where we left off a long time ago, and show some patriotism.

India: Neutral Against Whom?

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, the so-called neutrality of India is a matter of concern as this Congress approaches the question of foreign aid to India. As part of my remarks, I am including an article by Freda Utley which appeared in Human Events on January 28. This article by Miss Utley is pertinent and timely and I commend it to all Members who are interested in India's attitude toward the United States.

INDIA: NEUTRAL AGAINST WHOM?

(By Freda Utley)

On January 17 Senator KNOWLAND said:

"Can our economic system survive prolonged burdens of building a system of collective security and a system of neutralism at one and the same time? * * * If the neutralists are to receive the benefits and have none of the responsibilities of those in the collective defense system, will not this act as an incentive plan to build up the fence sitters?"

India, to whom we have sent half a billion dollars of unrequested aid in gifts and loans, is the prime example of our futile and dangerous policy of being equally, or more generous to "neutrals" than to proven allies. This policy, as the California Senator also warned, will be reappraised "on the main streets of America" if the Executive and Congress fail to abandon it. Let us leave aside the fact that India, whose Congress Party is dedicated to the nationalization of basic industries, has so discouraged private investment that General Motors and Ford have suspended their Indian manufacturing activities. Let us consider only the political consequences of our self-defeating foreign aid policy.

The triumphant, flower-strewn progress of Messrs. Bulganin and Khrushchev during their recent visit to India has proved that Nehru's land is no longer even neutral, but the friend of our enemies. This has begun to be realized by the British press, if not yet by the American public and Government.

Newspapers such as the liberal Manchester Guardian, together with the London Times (whose enthusiasm for peaceful coexistence with the Communist totalitarian tyrannies has matched its former advocacy of an understanding with Nazi Germany), have been equally perturbed by the evidence that the Soviet Empire is as hostile to Britain as to the United States. In the words of the consistently anti-Communist Spectator, there was such panic at Khrushchev's diatribes against British imperialism, that even the Manchester Guardian and the Times were impelled, on the same day, to publish leading articles in which the liberal conscience could be seen chasing its tail over the sins of our fathers who were not sufficiently brotherly toward their colonial subjects.

According to Taya Zinkin, the able and witty correspondent of the Manchester Guardian in India, Nehru's attitude toward his excessively honored guests, was like that of an "eager mother presenting her daughter and straightening a last strand of hair before the curtsy." As she also reported from New Delhi on November 18, "The visit to India of the Russian leaders marks a decisive phase of Indo-British relations: it is the end of the honeymoon."

Since the British worm is turning, maybe it is not too much to hope that the most patient of all beasts of burden, the American taxpayer, may begin to ask what is the sense of giving economic aid to an India whose President on November 18 proclaimed that his country and Communist Russia "are very close to each other," and that "every day the bonds of friendship between the Soviet world and India are being further strengthened."

Nehru's and U Nu's methods of enforcing "popular enthusiasm" for the Communist leaders smacked of the totalitarian compulsions employed in the U. S. S. R. to ensure attendance at mass demonstrations. According to the London Economist, in both India and Burma, the well-rehearsed, cheering, slogan-shouting school children lined the route by order. As one Indian newspaper, the Madras Mail, had the courage to point out, "What could not have been done in 10 years indoctrination [of the future young voters of India] may have been achieved in one red-letter day"—at the instance of the Indian Government. A note of humor is added by the report from Burma, where the children shouted their pro-Soviet slogans off pieces of paper supplied by the authorities, that a Western newspaper correspondent had no difficulty in also getting them to chant obediently "Long live Dulles" and "Long live Coca-Cola." What is most ominous is that communism has been made to appear respectable and admirable, and the West odious in the eyes of the masses, by the deliberate action of the governments of India and Burma.

As was to be expected, we have our own powerful voices in the American press, and on radio and television, telling us that we should not be deterred from aiding India simply because Nehru loves Russia; or because he has learned from his totalitarian friends in Moscow and Peking how to force or bribe his people to parade and shout and strew flowers, or otherwise express their master's voice in paying enthusiastic tribute to the rulers of the Soviet empire. But it would be worse than folly for us to listen to their voices. We had far better take cognizance of the still, small voice of our friends in Asia who tell us that appeasement is not the road to peace, and that the surest way of bringing on a third world war is to continue our present policy of disheartening our friends and convincing the world that only the Communists need to be feared and conciliated.

There is need for us to be generous, but let us decide, intelligently, to give our aid and support only to those prepared to share with us the heat and burden of the day in the worldwide struggle against the Communist menace. Who, in his senses, can advocate that we continue, unconditionally, to aid India which, under Nehru, has definitely proclaimed itself "neutral" against us? Why should we be generous to such friends of our enemies as Nehru and Tito, and so niggardly to proven allies such as Chiang Kai-shek, Syngman Rhee and Turkey, who are finding it increasingly difficult to stem the dangerous tide of inflation caused by their exposed position, uncompromising hostility to Communist imperialism and consequent need to maintain armies beyond their strength.

If it was wise to promise dollar aid to Nasser to build the Aswan Dam in Egypt, why should we have waited to do so until he had threatened us with securing Russian — probably mythical — help? Why should we teach the world that the easiest way to get American aid is to threaten us by establishing economic, military or political relations with our enemies; and the most likely way to insure America's rejection of support is to be loyal to us? Why should we continue to pour out our wealth for no purpose except to make our actual and political enemies believe us to be so weak that we need to resort to bribery, and cause our friends to despair of our resolution to resist their enemies and ours? In a word, trying to buy friendship or ward off enmity with dollars is equivalent to building the edifice of our security on sand.

"All the American billions poured into Europe since the war, with their immense beneficial effect, have only made America more hated than ever."

This extreme and questionable verdict was not pronounced by an unreconstructed American isolationist. It is to be found in a remarkable book published in Calcutta and called, Blowing Up India. The author, Philip Spratt, is an expatriate Englishman who chose India as his country and an Indian woman as his wife, a quarter of a century ago, after spending several years in British prisons because of his revolutionary activities. As an old-vintage ex-Communist, he is mainly concerned in awakening his adopted country to the real and present danger emanating from Peking and Moscow; in trying to cure them of their neurotic complexes about a no longer existent Western imperialism; and, in demonstrating that

there is no valid basis for their belief that America "being a capitalist power, must try to establish an empire and take over India from the British."

Philip Spratt tells us frankly that all our generosity will avail us nought in this world. The richer countries, he thinks, ought to aid the poorer, but they should have no illusions that this will stop communism since "the main drive of the Russo-Chinese leaders is for military power." China, he writes, "will soon have a standing army of 20 million and a little more rice is no answer to that." With old-time British realism, he concludes:

"In 20 years Russo-China will possess unchallengeable military superiority to the rest of the world. * * * All they will (then) need to do is to address ultimata to other countries to compel them to submit on pain of extinction. * * * The idea that China can be bought out of the alliance by trade or loans is childish. The Chinese Communists are not nationalists. * * * If we continue to make conquest easy for them, there is no reason why (Moscow and Peking) should quarrel; they will go happily ahead to their glorious destiny of ruling the world, and will postpone the question who is to be the eventual boss till it arises."

Thus, he concludes, as every rational American also should, that the only hope of promoting a split between Russia and China is to put up the stiffest possible resistance to the latter's aggression.

Similarly, with regard to India, Philip Spratt tells us, in words reminiscent of Senator KNOWLAND, that our Asiatic policy amounts to one of "gradual surrender" which demoralizes the people on our side. There are, he writes, many Indians who are sufficiently realistic and informed to know that "without American support, free Asia is doomed," and who realize that there is "no reason to doubt" our good intentions because "the interests of America coincide with those of the free Asian countries." But, he continues, there has been a revulsion against us even among our best friends in India, on account of our "painfully weak" policy.

He cites, in particular, our shabby and stupid treatment of Chiang Kai-shek whom we "secretly undermined," prevented from "pressing his advantage and finishing off the Communists, when he seemed likely to do so"; and to whom we "cut off arms aid when he began to lose." Similarly with regard to Korea, he reproaches America for having "weakly allowed herself to be dissuaded by the neutralists and faint-hearts in the U. N." to conclude an armistice at the moment when we had obtained military supremacy and "were in a position to drive the Chinese out of the peninsula and unite Korea." Thus we not only restored "the explosive status quo in Korea," but also "enabled Communist China to claim the advantage in the military exchanges and consequently to obtain an enormous accession of prestige."

All these blunders have naturally disheartened our erstwhile Indian friends, who now "tend to fall into line with the easy, popular neutralism." Hence, the ever-increasing influence of Nehru's evil genius, and representative in the U. N., Mr. Krishna Menon, whom Spratt describes as belonging to "that considerable band of people in important positions in the free world who, though not technically party members, are in fact disciplined Communists." Even if this is disputed, there is indeed "something anomalous in a convinced partisan of the aggressor masquerading as a neutral mediator."

As regards Nehru himself, Spratt does not think that he is "deliberately working for the Communists," although he sometimes fears it in view of the fact that, "with scarcely an exception, he has exerted his considerable influence on the Comumnist side." Nehru reminds Philip Spratt of Franklin D. Roosevelt. He characterizes them both as "consistent democrats at home and consistently pro-Communist in world affairs." He suggests as the explanation not only FDR's and Nehru's "kindegarten innocence about communism," but other shared characteristics, such as their "passion for applause, excessive confidence in their own judgment, a certain failure of intellectual effort," and "an unwillingness to think things out and to grapple with harsh realities." He considers that whatever Nehru's subjective motives may be, objectively he is leading India "rapidly and almost unresistingly into—or at least dangerously near—the Soviet bloc."

This book was written after Nehru had pronounced his enthusiastic eulogy of Stalin after the dictator's death, but before he embraced Bulganin and Khrushchev. After reading it, one wonders why the State Department or the United States Information Services do not devote a few thousand dollars to promoting its sale all over Asia and Europe, and in furnishing copies to all our libraries abroad. It would also be extremely useful if it were published and widely read in America instead of being available only in a paperbacked edition published in Calcutta. Surely money thus expended would avail us infinitely more than some tons of rice given to feed the inexhaustible hunger of India's millions.

What is the solution to our dilemma? Perhaps the London Economist has the answer. In its issue of December 17, it advocated our calling Soviet Russia's bluff by welcoming Moscow's proclaimed readiness to take on its "fair share of the job of aiding poorer countries."

"How long," says the Economist, in an editorial entitled "The Happy Hypocrites," "will it take for Soviet aid to become taken for granted, for Asian recipients to fret at its nakedly bilateral and choosey forms and urge Moscow, as they have urged the West, to channel it through multilateral systems such as U. N. and the Colombo plan?"

In a word, why should we worry because the Kremlin has chosen to meet us on our own ground? "If Russian economic offers are of a kind that helps them (Asian recipients) to avert difficulty and disorder, as western aid does, so much the better." As the Economist implies, if Russian economic aid proves to be a myth and a delusion, so much the better for the free world. Meanwhile, why don't we give aid and comfort to our proved and loyal friends, and let India enjoy the doubtful blessings of friendship with our enemies, the Union of Soviet Socialist Republics, and its younger brother the People's Government of China?

In a word, let the Communists and their friends stew happily in their own juice, while we help those who can be counted upon to stand by us in spite of all the threats and blandishments of Moscow and Peking.

Distinguished Federal Judge, Los Angeles, Renders Significant Decision Regarding Fraud on Government by Citizen Admitting Communist Party Membership

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1956

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, notwithstanding that the Government Printing Office estimated it would make 4½ pages in the CONGRESSIONAL RECORD at a cost of $360, I now present to you and all the Members of this distinguished United States Congress the text of what manifestly is a very important and very informative decision by one of the distinguished Federal judges of the United States District Court, Southern District of California, Central Division; to wit, Chief United States District Judge Leon R. Yankwich, on June 8, 1955, in the case of United States of America, plaintiff, against Sam Title, also known as Sam Teitelman, defendant. I recommend its careful reading.

As a member of the House Un-American Activities Committee, it frequently comes to my attention that many of those persons who appear before said committee as witnesses, and who plead the constitutional privilege of the fifth amendment, are many times those about whom it is established that they have procured their passports to travel abroad by concealment of fact or misrepresentation of what country they are going to or what their mission abroad is.

This important decision deals with a set of facts dealing with the subject of aliens desiring American citizenship which I believe to be very pertinent in connection with our presently existing Federal statutes on such matters.

The text of the case follows:

UNITED STATES OF AMERICA, PLAINTIFF *v.* SAM TITLE, ALSO KNOWN AS SAM TEITELMAN, DEFENDANT, CIVIL NO. 17368, UNITED STATES DISTRICT COURT, SOUTHERN DISTRICT OF CALIFORNIA, CENTRAL DIVISION, JUNE 8, 1955

Action by United States to revoke and set aside defendant's admission to citizenship and to cancel a certificate of naturalization on ground that they were procured by concealment of material fact or by willful misrepresentation. The district court, Yankwich, chief judge, held that concealment of active membership in Communist Party on part of alien seeking admission to citizenship of United States, was a fraud on Government for which citizenship could be subsequently revoked.

Order accordingly.

1. Aliens (71 (1)): Because citizenship is valuable right, once it is obtained by an alien, courts must jealously guard its revocation.

2. Aliens (71 (18)): Revocation of citizenship can be granted only if evidence establishing ground upon which revocation is sought, whether fraud or other, is clear, unequivocal, and convincing.

3. Aliens (71 (18)): In action by United States to revoke and set aside defendant's admission to citizenship and to cancel his certificate of naturalization on ground that they were procured by concealment of a material fact or by willful misrepresentation, record showed continuous participation in affairs of Communist Party, distribution and sale of literature of party, attendance at conventions where policy was determined and pattern of conduct on part of defendant which continued to date of naturalization. (Immigration and Nationality Act, par. 313 (a) (1, 4), 316 (a) (3), 340, 8 U. S. C. A. pars. 1424 (a) (1, 4), 1427 (a) (3), 1451.)

4. Aliens (71 (18)): In action by United States to revoke and set aside defendant's admission to citizenship and to cancel his certificate of naturalization on ground that they were procured by concealment of material facts or by willful misrepresentations, evidence established that pattern of

revolution was taught by Communist Party at time defendant was active participant therein, which was during 10-year period previous to his application for citizenship. (Immigration and Nationality Act, par. 313 (a) (1, 4), 316 (a) (3), 340, 8 U. S. C. A. pars. 1424 (a) (1, 4), 1427 (a) (3), 1451.

5. Aliens (71 (6)): Concealment of active membership in Communist Party on part of alien seeking admission to citizenship of United States, was a fraud on Government for which citizenship could be subsequently revoked.

6. Aliens (71 (4, 6)): Concealment in a naturalization proceeding of a material fact, whether it bears on character of person or relates to membership in forbidden organization or to advocacy of views which are not consistent with attachment to principles of Constitution of United States, is fraud.

7. Aliens (71 (6)): One who embraces a totalitarianism which extolls achievements of party which attained its objective by violent revolution and civil war and which openly and avowedly repudiates democracy and liberty as we understand them cannot be said to be attached to principles of Constitution of the United States, and well disposed to good order and happiness of United States.

8. Aliens (71 (6)): Where Congress of United States imposed conditions for naturalization, nonexistence of which called for its denial, concealment of facts which would have led to discovery of nonexistence of any of prescribed conditions was fraud, for which naturalization once obtained could be revoked, especially when concealment related to membership in organization which advocated forcible overthrow of government.

9. Aliens (71 (18)): In action by United States to revoke and set aside defendant's admission to citizenship and to cancel a certificate of naturalization on ground that they were procured by concealment of material facts or by willful misrepresentation, proof supporting basis for revocation of defendant's citizenship was clear, unequivocal and convincing.

Laughlin E. Waters, United States attorney, by James R. Dooley, and Arline Martin, assistant United States attorneys, Los Angeles, Calif., for plaintiff.

Richard L. Rykoff and Robert L. Brock, Los Angeles, Calif., for defendant.

Yankwich, chief judge.

The action was initiated by the Government under section 340 of the Immigration and Nationality Act of 1952 (to be referred to as "the act of 1952") which authorizes the institution of proceedings to revoke and set aside orders admitting to citizenship and to cancel the certificate of naturalization on the ground that "such order and certificate of naturalization were procured by concealment of a material fact or by willful misrepresentation."[1]

This section merely carries over into the present act the provision of subsection (a), section 338 of the Nationality Act of 1940 (to be referred to as "the act of 1940") and similar provisions in preceding acts beginning in 1906. Such statutes have been sustained upon the ground that it is within the constitutional power of the Congress of the United States to enact legislation providing a method for determining, by an orderly judicial proceeding, whether "one who claims the privilege of citizenship under the certificate of a court has procured that certificate through fraud or other illegal contrivance."[2]

The act of 1952 added additional grounds for denaturaliaztion. However, in this action we are concerned only with the provisions of sections 305 and 307 of the act of 1940 because the naturalization certificate was issued to the defendant on October 24, 1941.

Footnotes at end of speech.

I. THE ACT OF 1940

[1, 2] Section 305 of the act of 1940 provided, in part:

"No persons shall hereafter be naturalized as a citizen of the United States— * * *

"(b) * * * who is a member of or affiliated with any organization, association, society, or group that believes in, advises, advocates, or teaches—

"(1) the overthrow by force or violence of the Government of the United States * * *.

"The provisions of this section shall be applicable to any applicant for naturalization who at any time within a period of 10 years immediately preceding the filing of the petition for naturalization is, or has been, found to be within any of the clauses enumerated in this section notwithstanding that at the time petition is filed he may not be included in such classes."[3]

Section 307 of the act of 1940, read, in part:

"(a) No person * * * shall be naturalized unless such petitioner * * * (3) during all the periods referred to in this subsection has been and still is a person of good moral character, attached to the principles of the Constitution of the United States, and well disposed to the good order and happiness of the United States."[4]

Because citizenship is a valuable right, once it is obtained legally by an alien, the courts, must jealously guard its revocation.[5] And revocation can be granted only if the evidence establishing the ground upon which revocation is sought, whether fraud or other, is clear, unequivocal, and convincing.[6]

In the case before us the Government seeks revocation of citizenship under both sections. In count one of the complaint the Government alleges that the naturalization was procured by concealment and willful misrepresentation, i. e., fraud. The second count is based upon the nonexistence of required qualifications, and states that the defendant was not a person of good moral character, attached to the principles of the Constitution and well disposed to the good order and happiness of the United States.

Behind these allegations is the alleged fact of membership of the defendant in the Communist Party and affiliated organizations within a period of 10 years immediately preceding the filing of the petition.

We restrict our inquiry as to the latter by pointing to the fact that, while in the present state of public opinion, adherence to communism or approval of its doctrines reflects on a person's character, to such an extent that it is libel to falsely accuse one of such adherence or approval of ideas[7]—the "good moral character" in the naturalization statute has reference to the sum total of tendencies or personal qualities which, in our life, induce us to act in accordance with the accepted moral standards of the time—"the commonly accepted mores."[8]

Attachment to the principles of our Government implies full adherence and loyalty to the letter and the spirit of American institutions.[9] Suppression and willful concealment of a material fact may indicate a lack of good moral character. For good moral character implies frankness in one's dealing with one's fellow man and with the Government, and full disclosure when a situation demands it, either morally or legally. In this context, evasiveness may be just as reprehensible morally as direct concealment. So the entire problem turns upon the question of the defendant's Communist membership and affiliation. This is at the root of the Government's case.

In one respect this case is unique. In many of the adjudicated cases in which the criteria of proof were laid down[10] the court had before it the contradictory testimony offered by the defendant himself or by witnesses who testified in his behalf. In the case before us the defendant did not offer himself as a witness. Called to the witness stand by the Government as an adverse party[11] the defendant, other than admitting his signature to certain of the documents executed during the naturalization process, pleaded the privilege against self-incrimination as to all questions relating to his associations or membership in the Communist Party. In this he was sustained by the court, being given the full benefit of the latest declaration of the Supreme Court on the subject.[12]

Having sustained the assertions of this right, I draw no unfavorable inferences from the fact of assertion, adhering to the view stated repeatedly that the contrary attitude does violence to the spirit of our constitutional guaranties.[13] Nor shall I draw the justifiable inferences permitted from failure to produce evidence which it was in the power of the defendant to produce.[14] However, as stated at the trial, the failure to testify leaves the record without any defensive matter except such as is contained in the cross-examination of the Government's witnesses and some documentary evidence offered by the defendant. For the testimony of the two character witnesses has little significance in a case of this character where, as already indicated, the character of the plaintiff is not challenged, except insofar as he is charged with certain deliberate and fraudulent concealments of fact. And if these occurred in the naturalization proceedings, the testimony as to good character by witnesses, at least one of whom showed complete unfamiliarity with the charges made in this proceeding, does not help the defendant's cause.

So we are back to the fundamental problems involved, the character of the Communist Party, the defendant's membership in it, his knowledge of its character, and the concealment of the fact of membership in the proceedings leading to naturalization.

Footnotes at end of speech.

II. THE IRREFUTABLE FACTS

The defendant was born in 1907 in Nilesht, Bessarabia, which, at the time of his birth, was a part of Rumania, but is now a part of Soviet Russia. He entered the United States at Port Huron, Mich., on June 7, 1923, from Montreal, Canada, his last place of foreign residence. He claimed naturalization by reason of marriage to an American citizen.[15] In his petition for naturalization and in his testimony before the naturalization examiners on July 30, 1941, he made oath, in substance, as follows:

"It is my intention in good faith to become a citizen of the United States and to renounce absolutely and forever all allegiance and fidelity to any foreign prince, potentate, state, or sovereignty of whom or which at this time I am a subject or citizen, and it is my intention to reside permanently in the United States.

"I am not, and have not been for the period of at least 10 years immediately preceding the date of this petition, an anarchist; nor a believer in the unlawful damage, injury, or destruction of property, or sabotage; nor a disbeliever in or opposed to organized government; nor a member of or affiliated with any organization or body of persons teaching disbelief in or opposition to organized government. * * * I am, and have been during all the periods required by law, attached to the principles of the Constitution of the United States."

On October 24, 1941, immediately prior to admission to citizenship, he took the oath which, at that time, read:

"I hereby declare, on oath, that I absolutely and entirely renounce and abjure all allegiance and fidelity to any foreign prince, potentate, state, or sovereignty of whom or

Footnotes at end of speech.

which I have hereofore been a subject or citizen; that I will support and defend the Constitution and laws of the United States of America against all enemies, foreign and domestic; that I will bear true faith and allegiance to the same; and that I take this obligation freely without any mental reservation or purpose of evasion: So help me God."

The petitioner also asked that his name be changed from Sam Teitelman to Sam Title, which he had used for some years because of "simple spelling."

The evidence in the record shows clearly that within the 10-year period prior to his application for naturalization, the defendant was a member of the Communist Party, his membership dating, at least, to 1936, when he became a member of the Young Communist League, later becoming a member of its County Committee. The Young Communist League was, at that time, an affiliate of the Communist Party, controlled by it, the key positions in it being held by members of the Communist Party.

In 1937, the defendant became a member of the Communist Party. There is in evidence a duplicate membership book issued to the defendant evidencing by stamps the payment of dues for the months of November and December of that year. There is also a receipt in his own handwriting, dated December 1, 1937, acknowledging receipt of membership book for that year. During that year he was a member of a downtown Los Angeles unit, being later transferred to another. In 1938, he attended a convention of the Communist Party of the United States, which was open only to the members of the Communist Party, chosen as delegates or elected by groups or units.

The defendant participated in the affairs of the convention and listened to the speeches, and was present when the Communist Party organizer for Los Angeles County made one of the important speeches. The defendant attended the convention of the party in Los Angeles County in 1940, which only key members of the party attended. There is evidence that the defendant attended Communist Party gatherings as one of the party leaders in 1941 and 1942. A document published in 1939, entitled "two Decades of Progress" and attempting to depict the activities of the Communist Party of Los Angeles for the period 1919–39, contains a page of greetings from the Communist Party branch of the 14th Congressional District. This lists Lou Rosser, one of the witnesses for the Government in the case, as organizer for the 14th Congressional District and the defendant as organizer for the 44th Assembly District. There is also evidence showing that defendant was a member of the executive committee for the 14th Congressional District and was present at its meetings.

3. So this is not one of the cases in which former party members or informers seek to pin membership on a person who may have occasionally been seen at a Communist meeting, but as to whom there is no showing of active participation.[16] Here, uncontradicted evidence—some of it in the defendant's own handwriting—shows activities, first in the Young Communist League and later the Communist Party, dating back to 1935 or 1936. From his brief appearance and conduct on the witness stand, from the manner in which he answered in writing questions relating to his occupation, residence, and the like, in the documents he was required to file in the naturalization proceeding and the answers given in his deposition which the court had to consider in determining the question of privilege asserted during the taking of the deposition, one gathers the impression that the defendant is a person above average intelligence and education, with good command of the English language, showing no trace of accent, such as may be found in persons to whom English is not a native tongue. This, of course, is due to his long residence in Canada and in the United States. All these lead to the inevitable conclusion that his membership in the Young Communist League and the Communist Party was not fortuitous, but a matter of deliberate choice by a person who understood its purposes and who, beginning with the task of distributing the literature of the party, rose to trusted position of leadership at the county level. Granted that gregariousness is one of the American characteristics and that persons may join many groups without full knowledge of their object, we are not confronted in this case with such a situation. The record before the court shows a continuous participation in the affairs of the party, distribution and sale of the literature of the party, attendance at conventions where policy was determined, a pattern of conduct which continued to the date of naturalization.

III. THE PATTERN OF REVOLUTION

During the period with which we are concerned, 1936–41, a showing of membership in the Communist Party was not, of itself, a bar to citizenship. The proof in this case must, therefore, show that at the time the defendant made the statements and representations alluded to and took the oath of allegiance, and within the 10-year statutory period preceding, the Communist Party was an organization which advocated the overthrow of the Government of the United States by "force and violence."

4. The evidence in the record, oral and documentary, including the documentary evidence offered on behalf of the defendant, shows conclusively that this was the teaching of the Communist Party at the time.

We eliminate from consideration ancient historical documents such as the Communist Manifesto which was issued by Marx and Engels in 1848. It is a historical fact that in the year 1848 and the years preceding it, authoritarian governments all over Europe were crushing by force all democratic movements and aspirations. Indeed, men like Carl Schurz, Louis D. Brandeis and others, who have achieved greatness in American life, were émigrés or sons of émigrés who participated in the political and social agitations which were being suppressed all over continental Europe at or about the time the Communist Manifesto came into being.

So it may be conceded that Marx and Engels used language which sounds inflammatory to us, but which, in the atmosphere of the day, merely opposed violence from below to force and suppression from above used to destroy what we in the United States have considered legitimate democratic agitation.

We need not, therefore, resort to that ancient document to determine the character of the Communist Party. For historical purposes, the Communist Party as it is known in more recent times, is the party which grew out of Russian Bolshevism and which in 1919, held its first meeting in Russia, at which only one country other than Russia, namely, Germany, was represented. This fact is commonly accepted by scholars and historians in the field.[17] Indeed, the commemorative pamphlet to which we have already alluded, and which carried the name of the defendant as an organizer of the Party in Los Angeles County, treats the history of the Communist Party as beginning in 1919, and quotes with approval the preamble of the Constitution of the Communist Party of the United States, which states as its object—

"* * * the establishment of socialism, according to the scientific principles of the great teachers of mankind, Marx, Engels, Lenin, and Stalin, embodied in the Communist International."[18]

This constitution, adopted in 1938, was introduced by the defendant. It shows, as do other documents to be referred to, that the American Communist Party "ties" its aims to those of the Communist International. And in the literature it sponsored and circulated and which is before the court, the teachings of Marx and Engels are accepted only insofar as they are modified and put into practice by Lenin, Stalin and the Communist International.[19] And these teachings, without deviation, urge not a change of the social system by the use of democratic institutions or legal means, but a revolutionary change by force and violence.

So far as Lenin is concerned, the pattern, through the years, is unchanged. On December 1, 1917, and for a brief period thereafter, he recognized the Constitutent Assembly.[20] But a little over a month later, on January 19, 1918, in announcing its dissolution, he stated:

"And by the will of the Soviet power the Constituent Assembly, which has refused to recognize the power of the people, is being dissolved. * * *

"The Constituent Assembly is dissolved. The Soviet revolutionary republic will triumph, no matter what the cost * * *."[21]

His writings for the year 1917–18, which were also introduced by the defendant, and which bear the subtitle "After the seizure of power," defend the forcible seizure of power and the need for "the centralized organization of force, the organization of violence."[22] speak of the needlessness of a "special apparatus of repression" to suppress individual excesses likely to occur.[23] He condemns Parliaments as "institutions alien to the toiling masses."[24] In a note of exultation he writes:

"In Russia the bureaucratic apparatus has been completely smashed up, razed to the ground; the old judges have all been expelled, the bourgeoisie Parliament has been dispersed—and far more accessible representation has been given to the workers and peasants; their Soviets have replaced the bureaucrats, or their Soviets now control the bureaucrats, and their Soviets now elect the judges."[25]

Practically the entire volume is devoted to merciless attacks on German and other European Socialists and social democratic leaders and elements, who advocated change through democratic means and criticized Lenin's tactics.

So far we have confined ourselves to documents introduced by the defendant. How anyone can find in them any advocacy of lawful means for effectuating the aims of communism or even "lipservice" to democratic institutions is beyond our comprehension. For there is none, as appears more fully from other writings by Lenin which are in the record. In one of them he states that the proletarian state can only be achieved "through a violent revolution."[26] This is repeated elsewhere.[27]

The Sixth World Congress of the Communist International held in 1928 stated emphatically that Leninism is the dominant approach and that "the overthrow of capitalism is impossible without force, without armed uprising, and proletarian wars against the bourgeoisie."[28]

This interpretation is adopted by Stalin who expresses it in this manner:

"The dictatorship of the proletariat is a revolutionary power based on the use of force against the bourgeoisie."[29]

We have already referred to the fact that the Communist Party of the United States and the local branch to which the defendant

Footnotes at end of speech.

Footnotes at end of speech.

Footnotes at end of speech.

belonged adopted the gloss which Lenin, Stalin, and the Communist International placed on Marxist teachings. The literature in the record shows that American Communist conventions and American Communist writers pointed not only to these teachings as correct but to the practice embodied in the Russian Revolution and the Communist dictatorship enthroned by it as the way out. The following brief quotations will suffice:

"The experience of the victorious workers of the Soviet Union before, during, and after the seizure of power, throw a brilliant light showing the path which must be followed in every land, the path of Bolshevism, of Marx, Engels, Lenin, and Stalin." [30]

"A time comes when there is demoralization above, a growing revolt below; the morale of the army is also undermined. The old structure of society is tottering. There are actual insurrections; the army wavers. Panic seizes the ruler. A general uprising begins.

"Workers stop work, many of them seize arms by attacking arsenals. Many had armed themselves before as the struggles sharpened. Street fights become frequent. Under the leadership of the Communist Party, the workers organize revolutionary committees to be in command of the uprising. There are battles in the principal cities. Barricades are built and defended." [31]

We are far away from any advocacy of peaceful action. What is described and expounded is the technique of revolution to be followed in America. And again:

"As the leader and organizer of the proletariat, the Communist Party of the United States of America leads the working class in the fight for the revolutionary overthrow of capitalism, for the establishment of the dictatorship of the proletariat, for the establishment of a Socialist Soviet Republic in the United States, * * *". [32]

In one of the speeches delivered by Stalin in the American Commission of the Presidium of the Executive Committee of the Communist International in 1929, he referred to "Comrade Bittelman" and expressed the hope that he and another could be kept in Moscow for a time in order to cure "the American Communist Party of factionalism" and save "it from disintegration." [33] Whether he was so kept or not, we do not know. But in a pamphlet circulated by the Party, he had evidently accepted the Soviet aims and the means of achieving them in America as proper American Communist tactics:

"The only form of government that is truly democratic, a government which belongs to the overwhelming majority of the population and is built and operated by all its toilers, is the Soviet form of government. This, too, is a dictatorship of a class (no government can be anything else), but it is a dictatorship of the working class, which rests upon the alliance between the working class and the toiling population of the farms (the small and exploited farmers), and functions for the sole purpose of suppressing capitalist counterrevolution; abolishing capitalist, landlord, and imperialist exploitation; and building a socialist society—the first stage of communism—for the benefit of all toilers." [34]

From what precedes, the following facts emerge: The Communist Party from 1919 onward has condemned libery and democracy and all the ideals of democratic nations as a means of achieving its aims. To the contrary, it has advocated force and violence as the only means for attaining its objectives. The dictatorship which it once urged as a transition is now, in tragic culmination, advocated as permanent. The American Communist Party has endorsed, approved, and urged application to the American scene of these norms.

Footnotes at end of speech.

We fail to find in any of the documentary evidence produced by the Government or the defendant in this case their disavowal. On the contrary, throughout, there is identification of the American Communist Party with both the aims and the methods of achievement taught by the Soviet leaders and the Communist International. It is immaterial whether the forcible overthrow of the Government is "the immediate" or "the ultimate" aim in the United States. For the statute we are interpreting makes no distinction between immediacy and futurity of such advocacy. It bars membership to anyone who belongs to an organization or group that "believes in, advises, advocates, or teaches" the proscribed doctrine.

IV. CONCEALMENT AS FRAUD

5. What precedes shows the nature of the Communist Party during the period under discussion. The documentary proof was confirmed by oral testimony as to what was taught officially at gatherings attended by the defendant and others. The defendant having helped distribute the type of literature we have analyzed and having otherwise participated actively in the affairs of the party, as an organizer and in other capacities, the evidence is sufficient to charge him with full knowledge of the methods it taught for attaining them by force and violence. More, there is nothing in the record showing any disavowal of these teachings by the defendant at any time. A person holding such views was not entitled to naturalization under the Nationality Act of 1940.[35] The concealment of active membership in such organization was a fraud on the Government for which citizenship must be revoked.[36]

6. The information which the defendant was required to furnish was important to the Government. Disclosure of membership in the Communist Party would not have ipso facto brought about immediate denial of citizenship. But it was a material fact which would have initiated an inquiry to determine (a) whether the Communist Party advocated the overthrow of the Government by force and violence or (b) whether its repudiation of the democratic process and ideals is such as to warrant the conclusion that one who espouses its doctrines is not "attached to the principles of the Constitution of the United States." The concealment in a naturalization proceeding of a material fact—whether it bears on the character of the person [37] or relates to membership in a forbidden organization or to advocacy of views which are not consistent with attachment "to the principles of the Constitution (of the United States)" [38] is fraud.

Speaking of the dictatorship of the proletariat which is the aim of all modern-day communism and the need to break resistance to it by force, Lenin wrote:

"It is clear that where there is suppression there is also violence, there is no liberty, no democracy." [39]

It has already been shown that the American Communist Party, during the period under discussion, embraced not only all the aims, but also the methods used in Russia and advocated and defended by Lenin and Stalin, and the Communist International, of which it declared itself a part. One of the writers who was especially referred to as an American leader by Stalin in 1929 wrote:

"Our party is the United States section of the Communist International which is a world Communist Party and each one of us is therefore a member of a world party. In this lies the greatest hope and promise of success for the world's proletarian revolution and all oppressed and exploited in their struggle against capitalism." [40]

And in the issue of the Communist of September 1939, devoted to the 20 years' history of the Communist Party of the United States, introduced in evidence by the defendant, the same writer, who was one of the editors, characterized the development of the party in the United States in this manner:

"The two decades of our party's life could be summed up as the history of building an American Marxist-Leninist Party, orientated toward making it as good and influential a party as the Bolshevik party of Lenin and Stalin." [41]

In the same issue another writer summed up the attitude of American communism toward Soviet communism in this manner:

"The people of America and other countries are beneficiaries of the achievements of the Russian Communards, who, in 1917, stormed the heavens, and who today have established a socialist society on one-sixth of the earth." [42]

These declarations imply not merely a theoretical approval of the aims of communism as taught by Lenin and Stalin and as practiced in Russia, but acceptance of its antidemocratic technic and strategy by the American Communist Party.

7. One who embraces a totalitarianism which extolls the achievements of a party which attained its objective by violent revolution and civil war and which openly and avowedly repudiates democracy and liberty as we understand them cannot be said to be "attached to the principles of the Constitution of the United States, and well disposed to the good order and happiness of the United States." [43]

CONCLUSION

Dissent from accepted governmental principles in a manner which may "collide with cherished American ideals does not necessarily prove want of devotion to the Nation." [44]

This is the spirit of America, as of every free society. We should be careful, in a proceeding for denaturalization, not to retroject into the past, prenaturalization period, current and post-naturalization expressions of ideas which do not differ from those expressed by many native born Americans.[45] But when we are dealing with the qualifications which are conditions precedent to naturalization we should bear in mind that they—residence, moral character and attachment to the principles of the Constitution—are "exacted because of what they promised for the future, rather than for what they told of the past." [46]

And if these qualifications do not exist, or the information which would lead to the discovery of their absence is concealed or evaded, there is "wongful use of a beneficent law." [47]

[8] American culture is the product of various national cultures. No one is required, as a condition of naturalization, to surrender the individual culture or heritage which he or his forebears brought to this country. For such heritage, in the main, is a part of Western European culture, of which American culture is a branch and a continuation. There is richness in culture diversity.[48] And we should tolerate variations in the cultural pattern although they involve a departure from some cherished ideals.[49] But the Congress of the United States has imposed certain conditions for naturalization, the nonexistence of which calls for its denial. Hence the concealment of facts which would have led to the discovery of the nonexistence of any of the prescribed conditions is fraud, for which naturalization once obtained must be revoked. This is especially true when the concealment relates to membership in an organization which advocates the forcible overthrow of government.

Heirs to the English tradition, we eschew force as a means of achieving social change. The prevalence among certain radical ele-

Footnotes at end of speech.

Footnotes at end of speech.

ments of contrary doctrines in 1940 and before, led to the legislative proscription against naturalization of one who belongs to an organization or group advocating such forcible overthrow.

[9] Ours is the task to apply judicially the conditions prescribed by the Congress. Because of the high worth of American citizenship and the severe implications of a judgment canceling a naturalization certificate, there is imposed upon the courts the burden of requiring that proof leading to revocation be "clear, unequivocal, and convincing."[30]

The burden has been met in this case. The certificate of naturalization is ordered revoked.

[8] See, Petitions of Rudder (1947, 2 Cir., 159 F. 2d 695); *United States* v. *Francioso* (1947, 2 Cir., 164 F. 2d 163); *Schmidt* v. *United States* (2 Cir., 1949, 177 F. 2d 450).

[9] *Orth* v. *United States, supra*, Note 2, *Allan* v. *United States* (9 Cir., 1940, 115 F. 2d 804); *Wixman* v. *United States* (9 Cir., 1948, 167 F. 2d 808). And see, *United States* v. *Hauck* (2 Cir., 1946, 155 F. 2d 141, 143). In *Stasiukevich* v. *Nicolls* (1 Cir., 1948, 168 F. 2d 474, 477), the Court gave the origin and meaning of the phrase "attached to the principles of the Constitution":

"The phrase goes back to the Naturalization Act of January 29, 1795, 1 Stat. 414. It is hardly to be supposed that the Members of Congress of that day, having so recently completed a successful revolution, conceived that the phrase 'the principles of the Constitution' comprehended only one principle; namely, that changes in the basic law must be effectuated only by the procedure laid down in article V. The statutory word is in the plural—'principles,' not 'principle.' It is true enough, as Holmes, Justice, noted in his dissent in *United States* v. *Schwimmer* (1929, 279 U. S. 644, 654, 49 S. Ct. 448, 451, 73 L. Ed. 889) that 'if there is any principle of the Constitution that more imperatively calls for attachment than any other it is the principle of free thought—not free thought for those who agree with us but freedom for the thought that we hate.' But it does not follow from this that the Congress would wish to admit to the privilege of citizenship aliens who were so far out of sympathy with our established form of government that they would like to see it supplanted by a totalitarian regime under which all individual liberties, including freedom of thought and freedom of speech, are swept into the discard. A person is not attached to the kindred principles of free thought and free speech when he invokes the protection of those constitutional freedoms in aid of the struggle of his party to achieve power, being all the while intent upon suppressing the exercise of those very freedoms by others as soon as his party comes to power. In the absence of an authoritative ruling by the Supreme Court on the point, we accept the view expressed by Stone, Chief Justice, dissenting, in the Schneiderman case (*Schneiderman* v. *U. S.*) (320 U. S.) (118) at p. 181, 63 S. Ct. (1333) at p. 1363, 87 L. Ed. (1796) 1798, that there are principles of the Constitution, within the meaning of the Nationality Act 'and that among them are at least the principle of constitutional protection of civil rights and of life, liberty, and property, the principle of representative government, and the principle that constitutional laws are not to be broken down by planned disobedience. I assume also that all the principles of the Constitution are hostile to dictatorship and minority rule; and that it is a principle of our Constitution that change in the organization of our Government is to be effected by the orderly procedures ordained by the Constitution and not by force or fraud.'"

The test thus laid down was approved by the Court of Appeals for the Ninth Circuit in *Tauchen* v. *Barber* (9 Cir., 1950, 183 F. 2d 266, 267). Cf. *United States* v. *Rossler* (2 Cir., 1944, 144 F. 2d 463, 465). For comments on the tests for determining "attachment to the principles of the Constitution" as laid down in these cases, see note, 1949, 47 Michigan Law Review 702; Serena B. Colvin, 1949, Attachment to the Principles of the Constitution in Naturalization Cases, 1949, 1 Alabama Law Review 228.

[18] Two Decades of Progress 1939, p. 3.

[19] When this is borne in mind, Friedrich Engels' statement in the 1886 preface to the English edition of Karl Marx's "Capital," offered in evidence by the defendant, to the effect that in England, "the inevitable social revolution might be effected entirely by peaceful and legal means" (Karl Marx, Capital, 1954, Moscow ed., vol. I, p. 6), loses all meaning. The truth of the matter is that Marx himself did not conceive the possibility of an economically backward country like Russia or China passing to socialism from feudalism or semifeudalism, and he so stated in the preface of July 25, 1867, to the first German edition:

"One nation can and should learn from others. And even when a society has got upon the right track for the discovery of the natural laws of its movement—and it is the ultimate aim of this work to lay bare the economic law of motion of modern society—it can neither clear by bold leaps, nor remove by legal enactments, the obstacles offered by the successive phases of its normal development. But it can shorten and lessen the birth-pangs." (Karl Marx, Capital, op. cit., p. 10.)

But Lenin and his followers used force in attempting to impress socialism upon a country which had only the most rudimentary industrial organization.

In the text references are limited to such of Lenin's works as were introduced in evidence. However, the same contempt for the democratic process and advocacy of violent means of achieving them are found in subsequent volumes of Lenin's works. Illustrative are the following:

"We declare that we are fighting capitalism as such, the free, republican, democratic capitalism included, and we realize, of course, that in this fight the banner of freedom is a fraud if it contradicts the interests of the emancipation of labor from the oppression of capital." (Lenin, Collected Works, 1923, vol. XIV, pp. 80–81, 203–240.) * * *

"No parliament can in any circumstances be for Communists an arena of struggle for reforms for betterment of the situation of the working class. * * * The only question can be that of utilizing bourgeois state institutions for their destruction." (Ibid., vol. XXV, p. 566.) * * *

"A Communist must be prepared to make every sacrifice and, if necessary, even resort to all sorts of schemes and stratagems, employ illegitimate methods, conceal the truth, in order to get into the trade unions, stay there, and conduct the revolutionary work within * * *" (ibid., vol. XVII, pp. 142–145). (As quoted in David Shubb, Lenin, A Biography, 1948, pp. 390, 392–393.)

Stalin carried these teachings into effect. "Lenin is our teacher," Joseph Stalin told Harold Stassen in 1947, "and we Soviet people are Lenin's disciples." (Hugh Gibson in Preface to Shub., op. cit., VI.)

These teachings postulate permanent dictatorship, under which, as Lenin stated in 1917, there "cannot be liberty or democracy." See Yankwich, the Nature of Our Freedom, 1950, pp. 103–105, and references in notes 30 to 34, pp. 118–134 of that text.

The West Is the Future

EXTENSION OF REMARKS

OF

HON. JOHN J. RHODES

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1956

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted, I would like to include in the RECORD an address of Senator BARRY GOLDWATER before the Advertising Association of the West, Paradise Inn, Phoenix, Ariz., January 21, 1956:

THE WEST IS THE FUTURE

(Address of Senator BARRY GOLDWATER before the Advertising Association of the West, Paradise Inn, Phoenix, Ariz, January 21, 1956)

When you honored me by asking me to speak with you this afternoon, I accepted readily, because it not only gave me a chance to visit my native Arizona again, but it also provided me with an opportunity to fly once more across this great land of America. It always rekindles my pride in being an American to travel over the vastness of this country—to see the greenness of its farms, the sprawling bigness of its cities, and the compact tidiness of its small towns; to go through State after State, and to realize as I go that the people I see are Americans like I am, and that, in their hearts, beats the same intense pride of that possession.

Yes, America is God's land, with its mountains and its canyons and its lakes. It is God's land for these things, and His, too, because our concept of freedom, as coming from Him, has given us the spiritual will to create the material might that is also ours. Our material accomplishments of the past can be nothing as compared with the almost unimaginable potential that we face today as a Nation.

Part of this great future stems from the tremendous expansion of our population which is taking place at the present time, and which will continue. Another part of our future rests with what man does with his new knowledge of the atom. Its promises of peacetime developments almost stagger the imagination of men. Another part of our future comes from the exer-expanding and dynamic free enterprise system, which is our system of economy. This is a material expression of our spiritual might—the expression of a people constantly seeking higher standards of living, constantly seeking and achieving greater opportunities, and constantly endeavoring to build a better America.

Included in this future will be the ever-increasing demands for goods, services, and jobs from this new population; the constant demands for a higher standard of living from the current population; and the overall increased needs for schools, hospitals, churches, highways, power, and water and sewage facilities. All these, and more, are the needs of a dynamic society.

Naturally, in this future, is included the future of business, and business is potential. But business, as potential, means not only opportunity, but also problems and responsibilities. Business must provide the jobs and job opportunities for the expanding labor force. It will take money to provide these jobs. That means new capital for investment, expansion, production, distribution, research, and product development.

You, as citizens of this great community of America, face a great potential, likewise, and, in this potential you, too, have responsibilities and problems. Your particular responsibility is better advertising, more vigorous promotion, and better dessimination of knowledge, so that business can more readily sell its new goods to the new population. As advertising people, your responsibilities also embrace the selling of our free-enterprise system and our constitutional form of Government.

America faces a future that challenges the imagination; and, in that future, the West looms dominantly. Here, in the western part of these United States, we will see the real great growth of this country in the coming years. Here, in the West that is still new and, in many respects, undeveloped, we will see the marvels of tomorrow unfold. Here is our challenge. Here in the West are the opportunities for tomorrow.

I hesitate to bore you with figures on this happy day, but, nevertheless, figures are necessary to prove my point that America's future lies in the West. Nowhere in the Nation has the growth been more rapid, or, likewise, the potentials or the problems greater than here in the West. For the 11 Western States, the 10-year period from 1950 to 1960 is certainly a decade of opportunity. During the previous 10-year period, from 1940 to 1950, the center of the population of the United States took its greatest strides toward the open spaces of the West. In fact, that movement westward is the greatest since the period between 1880 and 1890. Between 1940 and 1950, the West had a 40.9 percent increase in population, while, during that time, no other region increased by more than 13.3 percent. Of the 11 States comprising what we call the West, seven increased their population by percentages ranging from 25 to 53 percent, and in only one of the Western States was the increase less than 10 percent.

During the decade between 1940 and 1950, more than 3 out of every 5 counties of the West increased in population. At the same time, in the United States as a whole, nearly one-half of the counties lost population, and nearly one-fourth lost 10 percent or more—this, despite the record gain of 19 million in population. This extreme rate of growth is further evidenced in the cities of the West, and, to mention but a few, Denver, Colo., increased 38 percent in that period; Los Angeles, 49.8 percent; and this great, thriving city of Phoenix had an increase in population in that 10-year period of over 78 percent. These figures compare with a 22 percent overall average increase for the standard metropolitan areas in the Nation.

All of that took place between 1940 and 1950, but, the latest figures available show that the West continues to be ahead of the Nation in the rate of population growth since the last census. These figures show that, since the census was taken, the population of the West has increased by 11.6 percent, or twice the national average of 5.1 percent. The Pacific Division alone shows a 12.1 percent growth, and the Mountain Division 10.3 percent. Of the 28 States in the Nation that increased by 5 percent or more, 9 were located in the West. Of the 9 States which increased by 10 percent or more, half were Western States.

Looking into the future at our population estimates, the Bureau of the Census predicts a 35 percent increase for the Western States, against 17 percent for the United States as a whole for the current decade. Prof. Morris E. Garnsey, who wrote the interesting book, America's New Frontier, has said that it is not inconceivable that the population for the Western States should provide residence for as much as 33 percent of the Nation's population by 1975. This same economist predicts a 1975 population for the United States of 200 million, which would mean, if his predictions are true, that between 60 and 65 million people would reside in the West by 1975.

Yet, I said earlier that this growth brings problems, and these problems are reflected in the West by an increasing need for labor and capital investment funds. This rapidly growing population has had to find jobs, and jobs have been created for them, jobs in industry that have moved from the East, or industries which have been born and grown in the West.

Arizona is a typical example of industrial progress in the West. In the middle 1930's, manufacturing was practically nonexistent in this State, and yet, today, manufacturing contributes the largest share to our total State economy. Arizona's remarkable rise in the manufacturing fields can be matched by other States of the Far West, but I use this State because it is my home State, and I have a natural and deep regard for it. You

will pardon, then, these exclusive references to Arizona statistics.

The Bureau of the Census estimated that our population would be 1,036,000 in 1960. It has already exceeded that figure, and is approaching 1,200,000. The labor force in 1950 was 265,000, but the estimate for 1960 is 362,600. This means an estimated investment in Arizona of slightly over $1 billion.

To bring this down to more reasonable and more understandable figures, I might remind you that this population increase in Arizona is running along at the rate of slightly over 1,400 persons per week. A new population means new jobs. New jobs mean new capital to provide money for jobs, job opportunities, and for goods and services. We can expect to see growth in a number of business firms maintain the same ratio as it has always had, and we find, in studying this, that, as human population grows, so does business population. The ratio of growth between the two has been fairly constant in the past. Now, to give you some idea of what we here in Arizona can look forward to in the way of new business firms, let us recall that, in 1950, Arizona had 18,900 business firms. By 1960, using the ratio of the number of firms to nonfarm population, we can expect to see something in the neighborhood of 32,000 businesses in operation in Arizona by 1960. In fact, if we use this same ratio figure and apply it to the projected population of the West, we westerners can expect to be doing business in 1960 with an excess of 750,000 new businesses.

You ladies figure prominently, too, in this new picture we are viewing, for, in 1950, in the State of Arizona, there were 68,000 of you employed, and, by 1960, we can expect that figure to be approximately 100,000.

To provide power for this expanding population and economy of the West will require capital expenditures in excess of $5 billion in the 1950–60 period. I mention this figure only to show you the tremendous amount of capital that is going to be needed in our West as we grow.

One might sit here and listen to these astounding figures and think that this migration to the West has just started. In truth, it has been going on ever since the early days of our history, but it has only reached these gigantic proportions in the last 10 or 15 years. What is the reason for this continuing trek toward the West?

The West is new, and the West will be new tomorrow and for many tomorrows to come. We are not bound by tradition. Our legislatures have kept up with the modern needs, and we find new laws, instead of antiquated ones, existing in most of the Western States. Young men and young women have come to the West from the East with new ideas, and they have developed these ideas unhampered by existing local traditions or laws, both of which, in many cases, are obsolete for the times.

To these young people who have come to the West, we who were born in the West owe our undying thanks. The pioneer of yesterday was important in laying out the land and describing its boundaries and in settling this great country, but the pioneers of today have provided the youth and the vision and the capital and the know-how to build this West into the thing that it is, and to keep it growing in the future. As the population swings to the West, more of the need for factories and distributing points in the West grows with that population, so that we can see more and more of this migration from the East and central portions of the United States.

The challenge which exists in this growth is not only to fields of capital, but also, to you, as I mentioned earlier. Upon your shoulders rests the job of selling these products, and upon your shoulders rests the job of selling that which has made this country and this West the thing that it is, both in the field of economy and in the field of government. Yours must be a constant vigil to see that the freedom of our enterprise is maintained: to see that our young people understand this great system of economy, and realize that no other system in the world has produced so much for so many people—and no other system in the world can do it, because all have been tried in the thousands of years of recorded history. None has produced like the free enterprise system, and the only obstacle which I can see on the horizon is that which rests in the apathy of our people toward our freedom, whether that freedom be the personal freedom of man or the freedom of our enterprise.

There are far too many in this country who, whether knowingly or unknowingly, advocate a little bit of socialism. There are too many people who feel that the Federal Government should have a greater and greater hand in guiding our local destinies. I like to be charitable to these people, and think that they know not what they do, and I like to devote my time to attempting to change their views.

Ours is a freedom that comes from God, and by our adherence to that concept, we have become a strong, spiritual people; and because of this spiritual strength, we have, likewise, become strong materially. Freedom, not the Government, has created this material wealth. Nothing comes from Government that is not first put into Government; and if we ever forget that to the point that we fail to live by our spiritual standards, if we ever forget that to the point that we fail vociferously to proclaim our allegiance and belief in that concept, then this great constitutional government of ours will go, and with it will go the economy that has produced more for more people than any in the history of the world.

Yes, you have a grave and abiding responsibility in this future of the West; just as I and all the people of the West have. Under our guidance and work, the West can grow to unbounded proportions, but its growth can be directed, and we can profit by the mistakes of the past that have been made in other sections of the country. Out of this, someday, our children can gather and thank us for our firm belief in the things that have made America good, just as we, today, thank our fathers and our mothers and those who came before us to settle this land and to give it to us in the form that we received it.

Tax Relief From the Federal Excise Tax on Gasoline and Special Fuels Used on Farms

SPEECH
OF
HON. HERMAN P. EBERHARTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1956

Mr. EBERHARTER. Mr. Speaker, while it is possible that some of my remarks that will follow may be critical of the Eisenhower farm program in general, I would like to assure the distinguished membership of this august body that I rise in support of the legislation pending before us at this time.

H. R. 8780, as explained by our beloved chairman, the Honorable JERE COOPER, of Tennessee, and others who have preceded me in addressing the House today, would provide tax relief to the farmers from excise taxes imposed on gasoline and special fuels when these fuels are used on the farm for farming purposes.

This legislation was endorsed in principle in the President's farm message as presented to the Congress on January 9, 1956. However, it is significant to note that one of my very able and distinguished colleagues on the Committee on Ways and Means, the Honorable A. SIDNEY HERLONG, of Florida, had a proposal similar in purpose pending before the committee since March 10, 1955. His legislation, H. R. 4804, was never reported on by the Treasury Department despite the fact that such a request for a report was made by the committee on March 25, 1955.

We should not fool ourselves into thinking that we are solving the Republican farm problem by the enactment of this measure. The total revenue loss to the Federal Treasury from the bill is estimated to be $60 million per year. Treasury officials advise us that they anticipate 5 million claims for refund will be filed as a result of this refund procedure. By simple arithmetic you can arrive at a very small average annual refund that might result. But the relief is even more distorted than that when it is realized that many of our small farmers do not own mechanical equipment used on the farm that consume either gasoline or special fuels. Therefore, I suggest that while some farmers will realize no gain from this provision, the large corporation farm may realize another Republican windfall.

I do not quarrel with any economic relief that might be granted to any farmer. We all recognize that little benefit has befallen our American agriculture since the Eisenhower administration took office. The Democrats are anxious to do everything possible to assist the small farmer, the medium size farmer and the big farmer in their present Republican plight. We Democrats want to restore to our entire farm population the prosperity and economic well-being that was enjoyed by that important segment of our economy under Democratic administrations. I would suggest that the time is long overdue for the Congress to relieve the American farmer of the shackles of the "dynamic conservatism" for agriculture that has been imposed upon him to his economic detriment by the Eisenhower administration.

My congressional district is essentially industrial in character. The people I represent come from the factory, the shop and the store but like the farmer they are Americans who work with their hands and with their minds. They join me in realizing that the farmer's economic well-being means their economic well-being. For that reason I have always supported forward-looking farm legislation because I knew that my vote was not only a vote for my constituents but also a vote for the economic integrity of America.

I believe it important, Mr. Speaker, that we make it clear that by granting this tax relief to agriculture we are giving no suggestion of endorsing the principle of earmarking funds so that Federal revenues derived from highway uses

would be solely used for highway purposes. I believe it would be dangerous if an inference should be drawn from this legislation that the Congress intends such an implication of earmarking. Rather than being intended as earmarking legislation, this measure has been favorably reported to the House by the Committee on Ways and Means to partially relieve the farmer from the price-cost squeeze that has been imposed upon him by the irresponsible and short-sighted Republican farm program.

It is my hope, Mr. Speaker, that the Eisenhower administration will see fit to support other meritorious tax legislation that will grant more substantial tax relief to not only our American farmers but to all our American taxpayers. It is essential that such tax reduction, particularly granting relief to low-income taxpayers, be enacted during this session of Congress so as to restore balance to the Federal tax burden borne by our citizens. This balance was distorted by the tax cuts given primarily to corporations and to high-income families during the Republican 83d Congress. I would suggest to the responsible fiscal officials of the Eisenhower administration and to my colleagues in the House that tax reduction which would restore our taxing system to the principle of taxation according to ability to pay is long overdue. In the meantime, I support the enactment of H. R. 8780.

The Dairy Industry

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1956

Mr. NORBLAD. Mr. Speaker, under leave extended to me today, I include herewith the address by the Honorable JOHN BYRNES of Wisconsin before the Wisconsin Farm Bureau Federation:

TEXT OF REMARKS OF REPRESENTATIVE JOHN W. BYRNES, OF WISCONSIN, BEFORE THE WISCONSIN FARM BUREAU FEDERATION, GREEN BAY, WIS., NOVEMBER 15, 1955

I face you with mixed emotions. I am, of course, honored that you include me on your program. I've greatly admired your organization and its splendid and constructive work at National, State, and local levels. On the other hand, I recognize that I am a novice speaking to experts. That puts me on a bad spot.

You are farmers. You have spent your lives building the dairy industry into the principle economic force in Wisconsin. You have intimately experienced the problems of that industry. As Representative in Congress from this area and this State, I have been only a student of your problems. My endeavor has been to learn about them as best I can in order to judge what Government can and cannot do to assist in solving them—not only for your best interest but for the best interest of all of our people.

I hope you will excuse my presumption, therefore, in speaking to you about the dairy industry. I promise to confine myself to those aspects with which I am most familiar—the economics and politics of the dairy problem.

We're hearing a lot from the politicians these days about the role of the Federal Government in solving the dairy problem.

In the western part of the State, Congressman JOHNSON calls for the maintenance by the Government of a fixed, high price for milk—with the details worked out pretty much by the Farmers Union.

Congressman REUSS, who represents the lush green pastures of Milwaukee, calls for Federal payments to farmers to make up any deficit in their income—with the details to be worked out by the Department of Agriculture.

Mr. Adlai Stevenson opposed high rigid Government price supports from this same platform last month. Within a few weeks, however, he changed his mind and supported them.

Our junior Senator from Wisconsin wants the Government to provide 100 percent support for milk. And our senior Senator wants the Government to guarantee a minimum return for milk with direct subsidy payments to make up any difference.

These are all political solutions for the dairy problem. They are political because they rely entirely upon massive action by the Government for success.

We will never solve the dairy problem, or the farm problem, as long as politicians feel they must compete with one another in offering bigger and better pie-in-the-sky in the hope of getting the farm vote. A basic responsibility of the politician, it seems to me, is being honest and practical in dealing with public questions.

These political solutions fail on both counts.

The vote-catching gimmicks each one offers are of dubious practicality. The dairy problem will not be solved with gimmicks.

On the score of honesty, each plan suffers from a lack of candor. They stress what they hope you will get, not what you have to give.

Each one of these political solutions would necessarily put the Federal Government smack in the middle of your milk house, watching you like a hawk every time you patted the rump of your best producer.

Make no mistake about it. Every plan that makes it mandatory for the Government either to maintain high prices through loans or purchases, or provide producer subsidies in the form of deficit or production payments, must inevitably provide for Government control of the volume or amount to be produced. To work at all, such plans must include effective controls because, without controls, they are doomed to failure before they even start.

Their purpose is to provide a Government-guaranteed high return for milk. Unless curbed in some way, the natural result of such guaranteed high return is greater production and no program can long be continued which produces milk for which there is no market.

We can't forget that the overall 7 percent increase in milk production in 1953 and 1954 under 90 percent supports, piled up over a half-billion dollars worth of dairy products in Government warehouses, resulting in storage charges alone of $1¾ million a month. And, costly as a high support purchase program is, the cost of direct producer payments is even more. A direct payment program, at 90 percent of parity, based on present levels of production, would result in a charge of $1¼ billion a year upon the Federal Treasury. What it would be under the vastly increased production which would result from such a program without production controls is impossible to estimate.

Let us also face the political realities.

Such programs will never be authorized by Congress without production controls—no matter what the politician promises in his speeches.

The House of Representatives had an opportunity to vote for higher milk supports last May. The House turned the amendment down overwhelmingly, much to the chagrin of those who had so glibly promised the adoption of a higher milk support program during the congressional election just 7 months earlier.

It was made clear during that debate that, if you want higher milk supports from Congress, you have got to take production controls to get them.

The chairman of the House Dairy Subcommittee put it squarely on the line. He said, "when dairy farmers ask for a control program and are willing to accept marketing quotas in consideration of 90 percent supports * * * I will be on their side." His position was confirmed by the chairman of the full Committee on Agriculture and other committee members.

Let me repeat.

Adoption of any of the political dairy plans we have heard throughout Wisconsin this fall means imposition of production controls upon the Wisconsin dairy farmer. Without controls, they will not work. Without controls, they have no chance of being enacted.

It seems to me, therefore, that it is high time we took a close look at milk production controls. With high-ranking politicians criss-crossing the State all proposing programs which lead to such controls, we have a heavy obligation to ourselves and to this great dairy industry in Wisconsin to find out exactly what they would mean. Already, some farmers in Wisconsin, attracted by the wraping on the package have indicated they are ready to buy. The time has come to take a closer look at the price tag, and when I say "price tag," I mean more than just dollars and cents.

What are the problems involved in Government control of milk production? How will it work, and how will it effect the Wisconsin dairy farmer?

Fortunately our experience with Government controls a few years back is still fresh in our minds. Price controls, rent controls, wage controls, indirect production controls by means of allocation, we had them all. Our memories certainly are not so short that we have forgotten the redtape, the inequities, the individual hardships resulting from these programs. Let me say this. Those inequities, redtape, and hardships will be like child's play compared to those which will raise from any program to control milk production.

Leaving aside the problems of determining overall production levels, enforcement, and the administrative complications, let's take a brief look at the problem of distributing any sales quota among over 3½ million farmers producing milk.

Keep in mind that the object of these controls will be to reduce the amount of milk being produced. That means that some dairy farmers are going to be forced to cut back their present volume. Will the cutback be applied to all areas proportionately? Of course not. It will be necessary to define certain areas—such as those serving fluid-milk markets—as nonsurplus areas. Because of the problems growing out of the distribution of milk, the tendency will be to select certain areas for exemption and to define other areas as surplus producing areas. The cutbacks will be applied, of course, to the farmers in so-called surplus producing areas.

In addition to the area distribution problem, there is the problem of determining individual quotas within an area. For the same reason that areas with a high volume of manufacturing, or surplus, milk will bear the brunt of control, so the individual farmer within an area who is shipping to processing plants will bear the chief burden of the cutbacks.

It must be expected that individual quotas will be allocated on the basis of actual production during some arbitrary period which

may or may not represent normal production. If a farmer was just starting operations during that period, or if he had met with some unfavorable production conditions, his quota will be lower than it should be. His entire operations will be frozen by what is bound to be an arbitrary and discriminatory formula. He will be at the mercy of some Government bureau.

Now, let's turn from generalities to the specific. Let's examine a production control for milk which has seriously been proposed by a national organization which purports to speak in the interest of the farmer—the Farmers Union.

The president of the Wisconsin Farmers Union, as a matter of fact, presented this program to Congress last June.

Under the plan, a national quota would be set and then distributed to the States, by the States to the counties and by the counties to the individual farmers. Compliance would be obtained by depriving noncooperators of support payments as well as fining them for every pound of milk sold above the quota. Farmers with less than 5 cows, or less than 30,000 pounds in sales, or farmers selling class I milk under a Federal order, would be exempt from quotas.

The Farmers Union plan sounds simple. Combined with high support prices, it may even sound attractive. It is neither. It is a snare and a fraud upon the Wisconsin dairy farmer.

Note the exemptions. Note those who will not be controlled, who will not have to cut back their production but who, if they desire, can even increase their production.

First, it removes the 5-cow or less than 30,000 pound producer. That doesn't cut out many Wisconsin farmers, but it does exempt a lot of other farmers in the country. It exempts, in fact, over 2 million of the 3½ million farms with milk cows.

More important, it exempts all farmers "producing solely for class I sales under a Federal or State milk order."

In Wisconsin, about 22 percent of our milk falls in this exempt category. That means that 78 percent of our production would be subject to control. Take a look at some of the other big dairy-producing States. In New York, 80 percent of the milk is sold under Federal or State milk order. In Pennsylvania, 100 percent of the milk is sold under such orders. Mr. Hones has concocted a device which puts a lovely squeeze on Wisconsin farmers, exempting every pound produced in Pennsylvania, 8 out of every 10 produced in New York, and controlling 80 percent of Wisconsin's production. Keep in mind that these fluid milk areas would be free of controls even though a good share of their milk goes into manufactured products.

When I say the burden would fall upon Wisconsin farmers under the Farmer Union plan, let me get specific. That plan would have resulted in 9-percent reduction on the 107 million pounds produced in 1954. But this 9 percent would have to come from the 60 billion pounds produced in nonexempt areas outside of the marketing-order areas. Instead of a 9-percent reduction, it would have amounted to a 15-percent cut in production for nonexempt farmers—8 out of 10 Wisconsin farmers. If the quotas furthermore, as Mr. Hones implies, apply to milk sales only and do not include sale of farm-separated cream, the reduction required would have been 20 percent.

Let me make it clear that the disastrous results of the Farmer Union plan upon Wisconsin dairy farmers apply equally to almost any production-control plan devised. Wisconsin is a surplus-milk-producing State. We produce 13½ percent of the Nation's milk with only 2 percent of the population. We are the No. 1 State in the production of manufacturing milk. With 10 percent of the milk cows, we produce over 20 percent of the milk used in manufacturing in this country. In any production-control plan, as I mentioned earlier, Wisconsin will be considered the No. 1 State as far as surplus production is concerned. Wisconsin will be the No. 1 State so far as cutback in production is concerned. The Wisconsin farmer will bear the brunt of any control program which can be devised.

The exemption of marketing order producers will put the Wisconsin farmer at a further disadvantage. The exempt farmer, already overproducing beyond the needs of the fluid-milk area, under the impetus of high prices would do everything he could to further increase his production—and profits. The Wisconsin farmer would be a controlled farmer forced to reduce his herd and his milk volume. The New York or Pennsylvania farmer would be a free farmer, taking advantage of Government-guaranteed prices with unlimited opportunity to increase his production and sales.

I am amazed that such a plan could be authored and fostered by an organization representing Wisconsin farmers. Mr. Hones and the Farmers Union would serve the Wisconsin farmer better by fighting such a plan every step of the way.

Yes, the price tag of milk-production controls comes high.

In my opinion, to shackle the Wisconsin dairy farmer with such controls would be a disaster not only for him but for his industry and the general economy of our State. Nationwide, it would be a long, possibly fatal step along the path toward Government regimentation of the farmer.

Yet, that is the price that must be paid for the pie-in-the-sky schemes offered by those who have become panic stricken as the result of the unfavorable price developments in the milk industry during the past 2 years.

They seize upon such calamitous solutions because they ignore the causes of this decline and are seemingly unaware of what has happened since.

We have had falling milk prices because of two great economic forces at work at the same time. In 1953, urged on by high milk prices in 1952, we had a gigantic increase in milk production. In the same year, we had the lowest per capita rate of milk consumption in our history. The result was inevitable—drastically lower milk prices. Such prices, combined with high production costs, have produced a tragic decline in net income to the dairy farmer.

Certainly, we must all be concerned with this development. We cannot turn our backs on it. We'd better make up our minds, however, that there is no simple and easy panacea for our troubles.

Fortunately we have had a Government which unlike some politicians, has refused to panic. It has taken the hard, unpopular, undramatic steps necessary to correct these two great maladjustments. Those steps are aimed at leveling off production and increasing consumption. In taking them, the Government, and particularly the Secretary of Agriculture charged with executing its policies, has incurred the wrath and resentment of many dairy farmers.

This search for a handy whipping boy is understandable in view of the hardships which falling milk prices have brought about.

It's time, now, however, to be honest with ourselves and ask whether it is realistic to blame our troubles on those taking the painful measures needed to correct a critical condition, or if it is not more in accord with the economic facts to place the blame where it belongs—on the war and rigid supports which largely caused the disastrous overproduction and the lowest per capita consumption in our history.

The time has come, too, to decide whether we wish to accept political solutions which would go far toward destroying our industry, or whether we wish to give wholehearted support to a program, however painful at the start, which has taken us through a critical period and is putting us on the road to recovery.

The panic-stricken have failed to consider what is happening in the dairy industry today. They have failed to read the signs pointing toward a solution to the dairy problem in the market place—where the only sound solution to our problems is possible.

Under the policies pursued by your Government, there has been a dramatic change in the outlook for the dairy industry.

Whereas, 2 years ago, milk prices were headed down, today they are headed up.

Whereas, consumption then was hitting all-time lows, today it is steadily growing.

Whereas, then, production was increasing way out of proportion to demand, today it is leveling off to manageable proportions.

Government stocks of cheese have been cut from 120 days supply to 80, butter stocks from 120 days supply to 28, and powdered milk stocks from 300 days supply to 18. We are disposing of dairy products in Government hands faster than we are purchasing them.

Of particular note are the dramatic increases in dairy products shipped abroad which your Government has been able to achieve. In the last fiscal year, we sent overseas 25 percent more powdered milk, 4 times as much cheese, 10 times as much butter oil, and 15 times as much butter as in the year before.

Barring a large increase in production next year, we can look forward to a comparative balance between production and consumption which will have a beneficial effect upon milk prices everywhere.

This is no time, I respectfully submit, to trade a working program for a gimmick and a noose.

I do not contend that the present program is perfect or complete. No program ever is. One of the particularly urgent problems which must be solved is the problem of keeping acres diverted from basic crops out of milk production. Such diversion is a major factor in bringing about large, sudden increases in milk production with their disastrous effect upon prices. The soil-bank program, on which the administration is working, and on which it is receiving such valuable advice from your federation, holds great promise. And, it goes without saying, there is much more that can be done, through cooperation between producer and government, to bring about increased efficiency in production and distribution and increased consumption.

Combined with realistic price supports, these steps will give us a dairy program which looks to the market place, instead of a Government bureau, for the farmer's income.

That market place in 1960, I am advised by the Census Bureau, will comprise 179 million people. This means that, in 5 years, there will be 14 million more people to feed with a potential consumption of 10 billion more pounds of milk each year.

To capture and hold that market we must cultivate it. We will not cultivate it by pricing ourselves out of it, by accepting Government-imposed cuts in production, or by making ourselves unprepared to serve it. It will be captured like any other market in America—by furnishing the best possible product in the quantities needed at the lowest profitable price.

It is this choice we must make.

I urge your rejection of any solution which places your economic freedom in the hands of a few men in Washington and your income in the lap of a fickle Congress. If you choose wisely, I for one have no doubt concerning the future of dairying in Wisconsin. It will continue, as it has in the past, to form the solid economic base upon which we can build, in this great State, the good life for us and our children.

The Middle East

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1956

Mr. KLEIN. Mr. Speaker, it is well known that during the visit of Prime Minister Anthony Eden of Great Britain to this country, many decisions will be made, as to future policy in the Middle East. The subject of arms to Israel to maintain the balance which existed in that area is a very vital and important one to us. We should not make the mistake of appeasing the Arabs either to please Great Britain, or the Arab nations, because of our interest in the oil which we are getting and hope to get from that area.

Along these lines I include an article written by Max Lerner in the New York Post on January 27, 1956, entitled "Burning Daylight in Middle East," a resolution adopted by the Manhattan region of the Zionist Organization of America at a meeting held on January 22, 1956, at the Hotel Westover in New York City, and a statement entitled "Which Shall It Be, American Arms or American Armies" issued by the Committee To Save the Middle East From Communism:

[From the New York Post of January 27, 1956]

BURNING DAYLIGHT IN MIDDLE EAST

(By Max Lerner)

We are burning daylight in the Middle East, and the hour of total darkness is fast approaching.

The U. N. censure of Israel avoids the real problem, which is how a full-scale war is to be prevented. While the lights in the Middle East go out, one after another, our administration waits and waits. For what?

Are we waiting for Nasser to offer peace? Why should he do so when he is getting stronger every day? The only thing keeping him and his allies from attacking is that they are still learning how to use the new Communist MIG jets, tanks, and submarines. If, by May or June, the 150 Communist technicians now in Egypt have taught Nasser's men how to use the new weapons, he will start the war.

One reason for the paralysis of the American Government is that the State Department is as pro-Arab as the British Foreign Office. A second is the fear of alienating the Arabs. But behind both these reasons is a third one.

It is oil.

If you want the facts about Middle East oil, there is a long and difficult but wholly objective new book, called "The Middle East, Oil, and the Great Powers," by Benjamin Shwadran (Frederick Praeger, $7).

The facts that emerge are stark enough. The Middle East contains more than half—56 percent—of the world's oil reserves, about 83 billion barrels. It is producing 20 percent of the world's oil. For this the Arab monarchs and governments got $600 million in 1954, with Aramco (Arabian American Oil Co., dominated by our big oil concerns) paying Saudi Arabia $260 million in royalties.

But not all the profits go to the Arabs. Big ones come to the American companies. Aramco was capitalized in 1933 at only $700,000. In 1954 its net profit was $424 million after United States taxes. Oil costs less to produce in the Middle East than anywhere in the world, but it sells at cartel prices, so that the profit spread is enormous.

This sheds light on why the Eisenhower administration has thus far made no response to the sale of Communist arms to Egypt. But it isn't only a question of oil profits. It is also a question of the role of oil in war. The Russians want to control the Middle East oil, while we fear that any move which might anger Egypt would give the Russians a stronger foothold than they have.

You might argue that the real defense against Communist penetration would be stable Arab states based on the welfare of the Arab people. The Shwadran book shows that out of the huge oil royalties we pay Saudi Arabia, only a minute fraction goes to health, education, and welfare, and much bigger sums go to maintaining the king and his wives in luxury and bribing the sheiks to support him.

You might also ask what it will profit us if Israel, the only Middle East democracy, is destroyed by Arabs using Russian arms. Nonetheless Dulles and Eisenhower seem to be succumbing to the Arab politics of blackmail.

We show our surrender by just doing nothing. Henry Byroade, who was stupid enough as our Ambassador in Cairo to let the Russians pull their diplomatic coup while he was asleep, is now back in Washington arguing that Nasser will be angry if we sell arms to Israel. George Allen, who ought to know better, is saying that surely Israel cannot expect a plane-for-plane and gun-for-gun equality with the Arabs, since there are so many more Arabs—a curious argument which says that to those who have numbers will also be given more guns. Allen is preparing American opinion for a State Department "solution" which will dribble out a few arms to Israel—too little and too late to do any good.

The only thinking there is in Washington is wishful thinking. The vestpocket Machiavellis of the State Department are saying hopefully that is Nasser feels strong enough he may make peace with Israel. This, you may remember, was what the British and French appeasers once said about Adolf Hitler.

There is a clear and sensible approach to the problem of Middle East peace, if only we dare take it.

The fact is that Nassar is part of an army junta in Egypt that wants to destroy Israel, but only if it can be sure of winning the war. It will not risk another humiliating defeat, as in 1948–49, and thus risk its own overthrow. If we act to sell arms to Israel, which will restore the balance of arms between both sides, Nasser and his junta will flee a war like the plague, and will make peace.

If war does break out because of our inaction, the Israelis are tough enough to prolong it, and it will end as a world war. It would be ironic if world war III, like World War II, were to begin because an ambitious dictator wanted to wipe out the bothersome Jews, and the Western World was too complacent and paralyzed to act in time.

RESOLUTION OF MANHATTAN REGION OF THE ZIONIST ORGANIZATION OF AMERICA

We, the assembled members and friends of the Manhattan region, of the Zionist Organization of America, viewing with alarm the Communist arming of Egypt and other Arab states, the mounting Arab threats to the security of Israel, the attacks upon American institutions and the insults to the American flag in Arab countries, call upon the Government of the United States to strengthen the American position in the Middle East, by supplying arms for defense to Israel, a staunch friend and reliable ally of the United States.

We welcome the effort of Secretary of State John Foster Dulles to establish peace between Israel and her neighbors, but we call upon our Government to reject the proposal of the Prime Minister of Great Britain to appease the Arab dictators and to force the surrender to them of parts of Israel's territory. We trust that the United States will not swerve from the path of justic and will continue determinedly to uphold Israel's independence and the integrity of her borders.

WHICH SHALL IT BE, AMERICAN ARMS OR AMERICAN ARMIES?

(Statement by Committee To Save the Middle East From Communism)

An all-out attack on Israel is expected before summer. So say close observers in Washington.

Egypt is being armed with feverish haste by Communist Russia for this attack. MIG bombers and jet fighters, machine guns, tanks, rifles, and ammunition are being unloaded at Egyptian ports from Russian ships.

Egyptian officers are in Russia studying the use of these modern weapons. Hundreds of Communist officers are in Cairo training and indoctrinating the Egyptian Army.

Why?

Who supplied the North Koreans with MIG's and tanks? Who supplied the Vietmin? And before that, where did the material and tacticians come from that enslaved 600 million Chinese under Communist rule?

History repeats itself, indeed.

The same techniques that subdued most of the Far East to Communism are now being used in the Middle East.

It is no longer just a squabble between Arabs and Israelis. Russia is using the Arab-Israel conflict as a smokescreen. They have succeeded in confusing good Americans into demanding "get the Middle East out of domestic politics" instead of "get the Russians out of the Middle East."

Meanwhile, Russian submarines, for the first time in history, are preparing to enter the Mediterranean under the Egyptian flag.

The issue is no longer Arab League versus Israel, or Israel versus Arab League. The issue confronting us is this: Russia has launched her campaign to conquer the Middle East, the doorway to Africa and the backdoor to Asia.

Let us assume that Egypt defeats Israel—then who will be sitting astride the Suez Canal? Or if Israel makes territorial concessions in the Negev, as Britain is said to be suggesting, who would then have the free world's lifeline to Asia under control?

Egypt, you think? But Nasser's Egypt is today Russia's cat's-paw and unless stopped will be a Communist satellite tomorrow.

The Arabs may not realize it, but the fact is that Russia is turning them into North Koreans. Biblical Gaza will become the new 38th parallel. If Egypt attacks Israel this summer, it will be in reality a Russian attack.

How long will it take our State Department to realize that June 1950 in Korea is being restaged for June 1956—on the Mediterranean this time?

Must we be surprised again?

Must we wait until it becomes imperative to send American GI's—our sons, husbands, and brothers—to fight again in distant lands—to protect America's vital interests in the strategic Middle East?

Let's beat the Russian plan. The Arab League well remembers its crushing defeat by Israel in 1948. It will only dare attack if Israel remains defenseless against the vast modern arms given to Egypt by Russia.

An American pledge to give Israel sufficient arms for defense will frustrate the Russian plan and prevent an Egyptian attack. This is the urgent need. This is the only way to stop further Russian penetration. This cannot be achieved by trying to

outbid the Russians for Arab friendship. It is wise to help friends. It is folly to try to buy friends.

How many allies will we have left if we pursue a policy of rewarding those who collaborate with the Russians and turn our backs to our democratic friends?

That's why we ask: American arms now, or American armies later?

Which will it be? The answer is up to you.

Your voice raised with those of your fellow Americans can do it. This is the way of democracy.

Join with us in demanding that our Government immediately give to the Republic of Israel, adequate arms for defense.

Once this is done, or even announced, the threat of war can be averted and there will be time to develop an energetic and imaginative American foreign policy to strengthen the free world's position and permanently block the Russians from the Middle East.

We are animated by feelings of equal sympathy for all the peoples of the Middle East. We, therefore, call upon our Government to impress upon all the nations of the Middle East the fact that the vital interests of the free world are at stake there, and that, therefore, the conflicts between them have become relatively minor and must be settled in a manner fitting neighbors faced by a common enemy.

To this end we urge our Government to:

1. Invite representatives of the Middle East nations to an emergency conference in Washington to jointly plan a realistic peace program for the Middle East.

2. Take the initiative in the organization of a Middle East alliance which, as an extension of NATO, would include both Egypt and Israel and the other nations of that area, replacing the abortive, British-sponsored, Bagdad Pact. This alliance will also undertake a vast program of economic and technical assistance to all the peoples of the Middle East.

Powerful Arab and Communist propaganda machines are at work in our country, inflaming the bigotry, fears, and psychoses of various elements in our Nation. Our committee will counteract this vicious, one-sided propaganda and bring the truth to the American people. We will mobilize them in a concerted effort to stop a second and bloodier Korea from erupting in the Middle East.

Time is running out. We need your voice. We need your support. The scope and success of our undertaking will depend on your response. Send us your contribution so that we can arouse the Nation in this emergency.

Your dollars now can save lives tomorrow. Act now.

Resolution by West Virginia Legislature Urging Congressional Action To Effectuate Sale of the Institute Plant

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 25, 1956

Mr. BYRD. Mr. Speaker, the Senate Banking and Currency Committee will begin hearings tomorrow on Senate Resolution 197, introduced by Senator FULBRIGHT. Senate Resolution 197 would disapprove the sale of the Institute Rubber Producing Facility, at Institute, W. Va. I shall appear at the hearings in opposition to Mr. FULBRIGHT's resolution. I am sure that the Members of this House are sufficiently aware of the importance of proceeding with finalization of the Institute sale. I know that they are cognizant of the beneficial effect which the sale of this plant would have upon the State of West Virginia, especially in view of my State's recent history of unemployment.

As an indication of the importance of the Institute sale to the people of West Virginia, the legislature of that State, presently in session, on January 30 passed a resolution memorializing the Congress to oppose any and all measures the purpose of which would be to disapprove and block consummation of the sale of this facility. I am inserting a copy of the memorializing resolution at this point in the RECORD:

Senate Concurrent Resolution 6

Whereas there is now pending before the Banking and Currency Committee of the Senate of the United States a resolution to disapprove the negotiated contract for the sale to private ownership of the Federal Government's synthetic rubber facility at Institute, W. Va.; and

Whereas the report to Congress of the Synthetic Rubber Facilities Disposal Commission shows the pending sale to return to the Government by far its most favorable recovery, on the basis of net book value, of all of the copolymer plant sales; and

Whereas the Disposal Commission's report further shows clearly and conclusively that the pending sale contract fully meets the requirements of the disposal act with respect to—

1. Procurement of fair value price.
2. Market protection for small business.
3. Protection of competitive health of rubber industry.
4. Protection of public against any monopolistic trend; and

Whereas acceptance by Congress of this sale will provide immediate activation of this large facility which has been idle all but 2½ years since 1947, thus giving lucrative employment to hundreds of persons with prospect of steady work at substantial wages by private employers; and

Whereas the entire State of West Virginia, by the United States Department of Labor classification, has been for the past 2 years a class IV–B labor area (meaning highest level of unemployment) and the pending sale would alleviate this condition; and

Whereas the terms of the pending Institute sale contract are equal or superior to those upon which each of the other 12 copolymer plants have been sold to private ownership during the past year, and there appears to be no just reason why the pending Institute sale as the last one should be measured by any other standards than those which have governed the preceding copolymer plant sales; and

Whereas the rejection of the Institute sale contract apparently could have no other result than to deprive West Virginia of a great industrial operation in a facility ready for use, since the willing purchaser could provide himself with the same facilities elsewhere, without limitation as to size other than the limitation he places on his own investment risk: Now, therefore, be it

Resolved by the senate (the house of delegates concurring therein), That the Legislature of West Virginia, in regular session assembled, does hereby respectfully and earnestly memorialize and petition the Banking and Currency Committee of the Senate of the United States to reject the disapproval resolution on the sale of the Institute plant, now pending before it; and further

Resolved, That, should such a resolution be reported to the Congress, that the Members of Congress be hereby respectfully and earnestly memorialized and petitioned to reject the same; and further

Resolved, That copies of this resolution be forwarded to the Vice President of the United States and the Speaker of the House, to all members of the Senate Banking and Currency Committee, to all West Virginia Members of the Congress and, should any disapproval resolution reach the floors of Congress, to all Members of the House and Senate thereof.

An Outstanding Analysis of President Eisenhower's Letter to the Kremlin

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1956

Mr. SCUDDER. Mr. Speaker, the January 30, 1956, edition of the Washington (D. C.) Evening Star carried an editorial which I believe to be an outstanding analysis of the triumph scored by President Eisenhower in his letter rejecting the Kremlin's hollow proposal for a treaty of friendship and cooperation.

With polite firmness the President minimized the Kremlin's latest propaganda move. He did not close the door on continued attempts of the American people to achieve an honorable and lasting peace, but made it clear to the world that we have no intention to jeopardize our efforts by the stroke of a pen when what is really needed is a change of spirit on the part of Soviet leaders.

This editorial comment by one of our Nation's most respected newspapers, entitled "Not by a Pen Stroke," is worthy of wide attention and I desire to include it with my own remarks, as follows:

NOT BY A PEN STROKE

Although maintaining a polite and amicable tone, President Eisenhower has not beaten around the bush in his reply to Premier Bulganin's letter. Instead, while leaving the door wide open for further peace-promoting discussion, he has forthrightly rejected the Soviet leader's proposal for a 20-year Russo-American "treaty of friendship and cooperation." And he has done so in a way that should effectively minimize whatever propaganda advantage the Kremlin may now seek to gain from this latest exchange of missives "at the summit."

In view of its timing, of course, and also its headline-winning personal delivery by Soviet Ambassador Zaroubin, the Bulganin letter unquestionably has been motivated in large part, if not entirely, by propagandistic considerations. There is ample reason to assume, for example, that it has been designed to have a diversionary impact on world opinion in connection with the important talks beginning today between British Prime Minister Eden and Mr. Eisenhower. In addition, since the men of the Kremlin must have realized in advance that the President's response to it could hardly have been "yes," there is solid ground for suspecting that another of its objectives has been to put the United States in the position of seeming to spurn Russia's proffered hand of friendship.

However, even though the so-called neutralists in India and elsewhere may be gulled (as usual) by this Soviet maneuver, the President's letter is so persuasive, and

so much in accord with the realities of the world, that it more than holds its own in the propaganda field. Thus, in explaining why our country takes a dim view of joining Russia in the sort of treaty proposed by Marshal Bulganin, Mr. Eisenhower has emphasized that the full substance of such a pact already exists in the multilateral United Nations Charter. And he has further emphasized that the words of that solemn agreement have not prevented the present state of international tension. And why have they failed in that respect? The answer is simple: Because they have been honored more in the breach than in the observance by the Soviet Union.

President Eisenhower has not stated the case quite so bluntly as this. Nor has he made any direct reference to the Kremlin's recent denunciation of its friendship treaties with France and Britain, or its past shocking violations of similar pacts with countries like Finland. But he has said enough, and eloquently, to make clear why the United States is in no mood to sign an agreement of this sort with Russia—a mere paper accord that might actually "work against the cause of peace by creating the illusion that a stroke of the pen had achieved a result which, in fact, can be obtained only by a change of spirit." It is the change of spirit that is needed most of all right now—a change that would translate the Soviet Union's fair words into deeds of comparable fairness as regards such issues as German unification, self-determination for the satellite countries, and disarmament.

Certainly, it cannot be said that the Kremlin's performances on these matters have lived up to its promises. In Mr. Eisenhower's words, there is no honorable thing that the United States would not do to promote world peace, but what is imperative above everything is some concrete evidence of Russian good faith.

Millions of Acres and They Want More

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1956

Mr. HIESTAND. Mr. Speaker, there is bipartisan agreement that our biggest domestic problem concerns the surplus of farm commodities. The President has wisely recommended the creation of a soil bank to prevent adding to that surplus.

But despite this surplus, we face a bill which would build a series of dams in the upper Colorado River States, thereby creating more farm acreage to add to our surplus of crops. I call it the upper Colorado River boondoggle.

Just how inconsistent can we get?

I direct your attention to an able editorial in the Los Angeles Times of January 26, 1956. I am sure most Members will agree it makes sense.

MILLIONS OF ACRES AND THEY WANT MORE

The Bureau of Reclamation argues that the upper Colorado project is needed for the future. This is the answer to those who point out that our regular surpluses do not indicate the need for the half-million acres which would be brought into cultivation (at a cost of about $5,000 an acre) in the upper Colorado country. The Bureau insists that a growing population will need one day the food and fiber which can be nursed from this feeble land with costly injections of river water.

Representative CRAIG HOSMER has documented the best reply to this crystal gazing. He says there are 21 million acres of good cropland lying idle in 19 Eastern, Southern, and Midwestern States. "They are not woodland or pastureland. They are good, unused farmland in soil classes I, II, and III."

These 21 million acres are in addition to the 40 million acres which the administration proposes to retire from production temporarily in a soil bank and reserve. The total of good, unused farmland under the soil-bank plan therefore would be around 61 million acres, and that's nearly twice as much as all California's farmland, good, bad, and indifferent.

Mr. HOSMER got his figures from the United States Soil Conservation Service. The unused land, all privately owned, is in humid States, where irrigation is unnecessary. Some of it has been cultivated but now lies unused. All of it could be brought into production at costs ranging from $15 to $150 an acre. It lies in States from Florida to Minnesota, from Arkansas to Ohio.

How far into the future is the Bureau of Reclamation looking? First, we have our surpluses to consume. Then, as the needs of a growing population call for it, 61 million acres of fruitful land can be reconverted. And then the Bureau can call for its billions for reclaiming the lean and frosty Colorado River highlands—or even for a project on the moon. For certainly we are not going to need the upper Colorado land before moon communications are established.

Taxes on Gasoline and Special Fuels Used on Farms

SPEECH
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1956

Mr. WILLIAMS of Mississippi. Mr. Speaker, I hope there will be no opposition to this bill. The American farmer is suffering from what is probably the worst farm depression since the early thirties. The exemption of fuel used on the farm from Federal gasoline taxes will lower the cost of farm production very little, but in the light of the farmers' present plight, he needs all the help he can get.

Mr. Speaker, many suggestions have been advances for alleviating the farm situation which is admittedly drastic. Last year, the House passed legislation restoring a fixed 90 percent parity support for basic commodities. Should this bill pass the other body and become law, I am certain it will be of a great deal of help to the farmer.

There is no need to deceive ourselves, however, into believing that any domestic program we may adopt will be the answer to our problem. If we are to solve this crisis, we are going to have to recapture our world markets which we have lost through vacillating foreign policies. We will never recapture our world markets until we wake up to the fact that we are subsidizing our foreign competitors with our tax money. American farmers are being taxed to subsidize their competitors all over the world. Such inane policies are slowly but surely driving our farmers out of business.

The time has come to face up to the facts. Foreign aid is slowly but surely wiping out the family farm.

U. S. News & World Report recently made public a survey showing that the average southern cotton farmer received only 7 cents an hour for his labor, while the average industrial worker received well over $1.50 per hour. The latter has no investment while the farmer has his life's earnings invested in land and machinery. No interest is earned on this investment, of course.

Anniversary of Ukraine Independence

EXTENSION OF REMARKS
OF
HON. EDWARD A. GARMATZ
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1956

Mr. GARMATZ. Mr. Speaker, on January 22 the observance of the 38th anniversary of the independence of the Ukraine was celebrated all over the world, that is, all over the free world, where people could give expression to their thoughts and feelings, without fear of reprisal.

This observance should cause us all to pause and think again of the wonderful blessings of liberty and the terrible price which has been and still is being paid to regain and preseve freedom.

As far back as the ninth century, the Ukrainian Kievan State has been struggling to maintain its independence. Ukraine was one of the first victims of the Communist conspiracy, but despite the destruction of its national churches, the horrible famines, the mass murders, purges, and deportations, the fires of patriotism have not been extinguished. On the contrary, these scourges have but served to strengthen their national pride and loyalty and their determination to continue their fight for freedom and independence.

What does all this mean to the citizens of our country? It means that we must use every resource at our disposal to make known to those nations which are still free, the real meaning of communism, with its policy of enslavement, domination, and destruction of all personal liberties. We must encourage them, and our own people also, to be constantly vigilant and alert to the spread of communism, so we may all be enabled to fight it at every turn, to retain our freedoms.

It means also that we must, by whatever means it can be done, let the people of the Ukraine know that we are in sympathy and full accord with their efforts to regain their freedom and stand ready to do everything in our power, as a nation, and through the United Nations, to help them, so they may again be restored to the community of free and independent nations of the world.

Tax on Gasoline and Special Fuels Used for Farm Purposes

SPEECH
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1956

Mr. BROOKS of Louisiana. Mr. Speaker, of course, I support H. R. 8780. It is a bill which will relieve farmers of the necessity of paying an excise tax on gasoline purchased by them and consumed by them on the farm. This bill corrects an injustice of long standing and by permitting this tax exemption it places Congress in line with our own State Legislature of Louisiana in this respect.

The Federal road program is and should be largely a program providing interstate highways. These highways are needed for national-defense purposes, and they stretch from one end of the land to the other. They are not local in their purposes but are intended to facilitate commerce throughout the land.

We are about to pass another huge road program. This program will provide billions of dollars for interstate highways, needed largely for national defense. It is proposed, however, that such a bill be financed by an addition to our gasoline tax. The farmer is not interested especially in this program. It will provide no special benefit to him any more than to any other individual in the country, and I think it is an act of simple justice that he be relieved of the burden of paying the tax on gasoline and diesel fuels that has nothing to do with the road program.

It has well been said by an able Representative from the State of Tennessee on this floor in the past 2 days that the American farmer is now caught in a price squeeze. While our industrial economy hums on at high pitch, the farmer's condition has steadily declined. Prices for things he purchases continue to mount and his expenses increase with the high cost of doing business in an inflated economy. At the same time, the prices which he receives for his own commodities steadily decline. Unless he is exempt, he faces the possibility that the Federal road tax may be further increased and his burden of taxation may be increased at a time when his financial condition does not permit him to reach out and assume new obligations.

This bill will save our American farmer $60 million. Farmers will file applications to be relieved of the excise tax on gasoline and farm fuels once a year, at the end of the fiscal year. They will receive from the Treasury a check for the amount that they have paid in, representing the tax paid for farm-used gasoline and diesel fuels. In our free economy the sum of $60 million is a small amount. To the average farmer it is a saving which will be of great assistance to him in this period of economic pinch which is pushing him slowly into an intolerable position.

Iowa's Warren County NFO Prepares Resolutions

EXTENSION OF REMARKS
OF
HON. PAUL CUNNINGHAM
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1956

Mr. CUNNINGHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to call to the attention of the membership an article in the Record-Herald and the Indianola Tribune, Indianola, Iowa, on January 26. This article deals with the present farm problem and sets forth the Warren County National Farm Organization resolutions:

WARREN COUNTY NFO PREPARES RESOLUTIONS—ORGANIZATION NOW HAS 1,100 MEMBERS

The National Farmers Organization of Warren County has progressed beyond the mere protest stage and has adopted the skeleton of a farm plan for which it will stand. The resolutions were outlined at a meeting of county and township officers at the courthouse January 16. A copy of the final draft has been furnished for publication.

The organization now has 1,100 members and is growing, according to John Goodhue, county president. The Fifth Congressional District is fully organized. Mr. Goodhue says organization is going forward in other districts and it is hoped to have the State organized within a short time.

The resolutions call for a universal restricted production, according to need, with restrictions on bushel, rather than acreage, production. The plan, in its entirety, would apply not only to grain, but to livestock, dairy, and poultry as well. It would provide for cross compliance so that a farmer, restricted on corn or wheat, could not put the retired acreage in some other feed or fiber crop.

The resolutions are as follows:

WARREN COUNTY RESOLUTIONS

"We, the members of the NFO of Warren County, Iowa, believe that—

"1. No farm program should be inaugurated unless it has the approval of 65 percent of the producers by popular vote.

"2. That the administration and regulation of any and all farm programs should start at the township level as indicated by popular vote and progress systematically up to the county, the district, the State, etc.

"3. If we insist on 100 percent parity (which we believe we are entitled to) it will be necessary to control production of all grains, fiber crops, livestock, and livestock products, including dairy and poultry.

"4. It will be necessary to have what is known as a cross compliance program. In other words, a producer would not merit the benefit of controlling the production of any one farm commodity if he failed to meet the requirements of control of any and all other farm commodities.

"5. All grain and fiber quotas should have a provision for penalty for exceeding that particular quota by an amount equal in value to that part which was in excess of the established quota."

COUNTY COMMITTEE

"6. All administration, regulation and operation of quotas to be placed in the hands of an elected county committee who with the aid of townships or parish committees shall grant, establish and allocate allotments to comply as near as possible with regulations outlined by the State, regional, and national committee. Any producer, if dissatisfied shall have the right of appeal to an agency expressly set up for that purpose.

"7. Farm and feedlot progress and efficiency should be maintained, and we pledge our cooperation in the furthering of better and cheaper production. But in view of the fact that there are many small farms that will be severely handicapped by the application of quotas both as to grains and livestock, we respectfully ask that very consideration be given these smaller operations as to establishment of quotas.

"8. We believe that as far as possible the grain feed allotments be made on an acreage rather than a historical base. We realize the importance of history in the formation of quotas for wheat, malting barley, flax and other related crops.

"9. In the establishment of livestock quotas, that an allotment should be established with history being a primary factor, but that other factors such as adaptability, facilities already established and potential and type of farm should also be considered."

WORLD LICENSE PROCESSORS

"10. A representative group of our organization should be selected to work with the Secretary of Agriculture on research work to enact and embody into law granting the United States Department of Agriculture the right to license processors and to negotiate with the processor for a parity price based on the orderly marketing of the required number of units of any particular commodity required by the consuming public, and to further set up requirements and grades as agreed upon by the processor, the producer, and the United States Department of Agriculture and the consuming public.

"11. We further believe that the storing and sealing of crops and commodities be regulated to a point that it would be consistent for the protection of all parties concerned against drought, pestilence, war, or any other hazard. We believe that any additional storing constitutes a burden depleting our soil for no advantage whatsoever and for that reason we ask that bushel allotments be put on wheat rather than acreage allotments.

"12. That there should be an immediate halt called to the reclamation of arid lands, and as far as feasible discontinue the leasing of Government owned lands for the production of meat animals."

The Third World War

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1956

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to insert the following article from National Review magazine entitled "The Third World War" by James Burnham:

THE THIRD WORLD WAR
(By James Burnham)

PANGS OF FRIENDSHIP

It was reported from Karachi a few days ago that a number of Pakistani political leaders want their country to cancel its present agreements with Washington, and to withdraw from the Anglo-American sponsored Baghdad Pact. They have a plain argument. The United States, they point out, is not supporting Pakistan in either of

its two major international difficulties—the dispute with India over Kashmir, and Afghanistan's campaign to form a new "Pathan" nation (Pushtunistan) by combining northwestern Pakistan with southeastern Afghanistan.

Both of these issues are decisive for Pakistan's national survival. The source of Pakistan's principal rivers are in Kashmir. The Afghan-promoted new nation would include the Khyber Pass, and thus open up Pakistan's strategic frontier not merely to the Afghans (who are subordinate actors in this scene) but to the Russians a step beyond.

For several years, Pakistan has been one of the firmest among the new countries in resisting Soviet encroachments and combatting internal communism. Except on certain colonial matters, she has usually been willing to line up with us, or at any rate her record, from the American point of view, has been a big jump better than that of the "neutralist" nations. (A "neutralist" nation, roughly defined, is one that professes to be on neither side and acts on Moscow's side.)

The Pakistani doubters ask, not unreasonably whether their country's circumspectly pro-American policy makes sense. For the risk, the great risk, that even the faintest pro-Americanism runs in their part of the world, what does Pakistan get out of it?

REWARD FOR BLOWS

Two days following these Karachi reports there came a dispatch from New Delhi that must have added a new piquancy to Pakistani pondering. India has just consented to accept an American gift of $10 million worth of steel. (That brings our Government's 6-year gifts to India up to $250 million, besides loans of nearly $200 million and private foundation grants of about $50 million.) The sequence of events is obscure to no one. The Indian Government officially promotes the triumphal tour of Khrushchev and Bulganin. At its conclusion, Nehru and his Soviet visitors issue a joint declaration of solidarity on the most important international issues. Throughout the just concluded meeting of the U. N. Assembly, India is a consistent supporter of the Soviet position, a consistent and harsh opponent of the United States position.

Ergo, the United States gives India another $10 million—with much more, apparently, soon to come. It is by such performances that our State Department makes itself the world's laughing stock.

LESSON IN LOGIC

What possible conclusion is there for a Pakistan official, or any man with a small minimum of commonsense, to draw? One only, from the evidence: show your friendship with the United States, your opposition to the Soviet Union and to communism, and Washington will be indifferent to you at best, if it does not kick you in the face; play up to Moscow, echo Communist language, sabotage American plans, and the sky is the limit so far as Washington is concerned.

This Pakistan example is only a particularly crude cutting on a well-worn pattern. Colonel Nasser in Cairo has learned his lesson from Professors Nehru and Tito. The obsolescent Czech arms that he is buying may not be worth much to Egypt's Army, but they are powerful enough to blow wide open the vaults of the United States Treasury. Tito has worked the dodge for a take of a billion dollars. Or consider the reverse example of Guatemala: how Washington's generous alarm, interest and promises dried up once Arbenz and his Communists were defeated. If Castillo Armas doesn't want to go broke, he had better discover a renewed Communist threat before long.

It is all very well for the Voice of America to quote the Declaration of Independence and to praise liberty over slavery. But the Voice of America won't guarantee Pakistan's water supply nor man the Khbyer pass; nor will it provide favorable conditions for Pakistan's necessary economic development.

The fathers of our country never tired of repeating that a nation's foreign relations are in general governed by interest, not by gratitude or abstract principle—and properly so. But we seem to be the exception.

CONDITIONED AID

One key to these troubles is the absurd, hypocritical and immoral doctrine of "unconditioned aid" which we have been accepting as a principle of our last decade's foreign policy. "Absurd," because if the aid is truly unconditioned, it is pointless. "Hypocritical," because we and everyone else know that we hope for something in return. And also "immoral," because no government has the moral right to spend the substance of its citizens unless on a reasonable assurance of a recompense to them. In governments the virtue of charity is transformed into a disguised breach of trust.

Specific, well-understood conditions are the only excuse for a gift by one government to another (or another's citizens). For every quid there should be a balancing quo—if not always dollar for dollar, then harbors or airfields, strategic materials, radio stations, military training agreements, even diplomatic help, but always something, something specific, something to one's own national interest.

We shoud treat the neutralist fuss over conditions on aid with scorn, as the blackmail it is. And if we always demand something in return for what is given, the result will be to improve, not embitter, our relations with the other parties to the bargain. We will be treating them as moral peers, not as beggars to whom we toss a handout. By showing that we want something from them and are willing to pay honestly for it, we can only add to their self-respect, and thereby—as always follows—to their respect for us.

A New Citizen Board

EXTENSION OF REMARKS
OF

HON. HORACE SEELY-BROWN, JR.

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1956

Mr. SEELY-BROWN. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD an editorial entitled "A New Citizen Board," appearing in the Middletown Bulletin of January 20, 1956.

Although one may not necessarily agree with the views expressed by the editor, I am sure everyone will find his comments a challenge and worthy of careful scrutiny and thoughtful analysis.

A NEW CITIZEN BOARD

(By Max Convo)

On Friday of last week President Eisenhower appointed an eight-man board to periodically review the activities of the intelligence organizations of our Nation.

President Eisenhower himself spelled out the functions of this new Board and placed particular emphasis on a review of the activities of the Central Intelligence Agency, this Nation's most important data-gathering organization in the field of foreign intelligence.

Theoretically, the President was activating a recommendation made on several occasions by the special task force of the Hoover Commission which studied the intelligence capability of our Nation, but in reality, the creation of this supervisory Board sidestepped the intended objective of the Hoover Commission which was that a joint congressional committee should be created to supervise these very sensitive activities of our Government.

While the appointment of this Board by the President did not make national headlines, it nevertheless constitutes a further step by the executive branch of the Government to retain strict control over the activities of the agencies involved and leaves a wide gap in the necessary control which should be exercised over such agencies by the legislative branch of the Government.

These is no question that the security problems faced by an agency such as CIA are difficult but they are no more difficult than those faced by the Atomic Energy Commission which has the responsibility of developing and maintaining the upkeep of the so-called ultimate weapons on which this country's future may very well depend. And yet, even the AEC has a joint congressional committee looking into its activities.

It is no secret that the CIA has been constructively criticized for its shortcomings in the field of intelligence gathering and its lack of proper direction, but it is also no secret that Allen Dulles, Director of that organization, has thus far headed off all congressional scrutiny by appealing to the White House periodically and waving the "security bogey." Obviously, he has sold the President the idea that even the men who appropriate the money for his operations do not have the right to look in and see what is being accomplished.

In selecting the national intelligence supervisory board, the President has been careful to appoint men who are held high in the national esteem, but while these men are allowed to get a glimpse of what is going on, they will have no authority to rectify situations or exercise even nominal control over the organizations whose activities they must oversee.

The Central Intelligence Agency was created through an act of Congress and its operating funds, while masked in the budgets of other Government organizations, must still be voted on by Congress. Its functions, which are or should be carried out on a worldwide scale, are vital to the formulation of high national policy and while the direction of such policy is a function of the executive branch of the Government, it is also a responsibility of the legislative branch, for in the ultimate stages of national policy, ony Congress has the authority to declare the existence of a state of war.

The fact that CIA activities have been openly criticized by task forces of the Hoover Commission and that Gen. James Doolittle gave only a creditable rating to the organizations all-important German activities should clearly indicate the need of a closer look-see by a permanent joint congressional committee.

It is vital to ascertain just how much intelligence is being independently gathered by CIA in the so-called critical areas of the world and just how much that organization relies on the intelligence gathering activities of such foreign organizations as the Gehlen chain, SIMFA, the Deuxemme bureau, and independent operators.

While these foreign organizations may provide valuable and sometimes vital data, it is imperative from the point of view of our very national existence, that our intelligence organizations be capable of standing on their own legs. By the same token, it is foolish for anyone in CIA to fear a select body of our own lawmakers, while at the same time important tasks and objectives are being assigned to foreign organizations.

In this day and age when total extinction is no longer a writer's fantasy and when a single mistake may spell national doom, this

Nation cannot afford the luxury of relying on the judgment of one person or a tightly knit group of persons whose long-term batting average can be defined by a creditable rating. We cannot, as a Nation, place blind faith in the estimates and judgments of an organization which is supervised by a citizen's committee shorn of all authority to undertake even remedial action.

Supervision must be the task of an impartial joint congressional committee representing the people of the Nation and wielding a measure of authority. The powers of national policy will still rest with the executive, but in a sense, the responsibility will and must be shared with Congress.

There is no novelty in the proposition of dual responsibility, for even the President, not too long ago, applied this rule to secure a free hand in the matter of the off-shore islands guarding the approaches to Formosa—and Congress generously responded.

Last but not least a final point was scored by Hanson Baldwin, noted military analyst of the New York Times, in a recent article on the subject:

"* * * uncontrolled secret intelligence agencies are in a position to dominate policy making and hence government. Their very secrecy gives them power; there are few to accept or reject their findings * * * few, even in the executive branch, know what they do * * * the CIA, for instance, by the very breadth of its charter, is beyond the normal checks and balances of the law. An overpowerful secret intelligence agency is dangerous, not only for the formulation of sound policy, but to the viability of democratic institutions."

Ridgway Charges

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1956

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks, I should like to insert in the CONGRESSIONAL RECORD the following editorial from the St. Louis Globe-Democrat of January 26, 1956, entitled "Ridgway Charges":

RIDGWAY CHARGES

Gen. Matthew B. Ridgway, retired Army Chief of Staff, has renewed bitter accusations against Defense Department officials in a second Saturday Evening Post article. He has so far offered no proofs, cited no specific incidents to support his sensational charges.

The general is unquestionably a capable Army man, an officer with a splendid career record. He deplores what he considers political determination of service policies, as constituting a grave danger to the country.

Yet by charging that Defense Secretary Wilson made military decisions for reasons of political expediency, forcing Army leadership to follow a party line, General Ridgway plunges spang into politics.

These are grave allegations. One wonders why the general did not make them several years ago, when the conditions he asserts were supposed to have been created.

Of course, he would have risked loss of the top Army post, but if the things he complained of were true, then was the time to air them. He would thus have served his country better than if he retained the Chief of Staff job.

General Ridgway is not ingenuous enough not to recognize his charges now, in an election year, carry a heavy load of political shard, aimed at the Eisenhower administration. Since the general has indulged in political indictment, it is fair to ask what his own party affiliation is, if any.

Possibly General Ridgway speaks out so bluntly simply because he resents cuts made in Army personnel and perquisites. Possibly he interprets these as unjust and perilous because of long conviction the ground forces are still of paramount importance in a strategic air age.

Instead of believing the Pentagon policymakers acted to bolster the air arm and Navy, rather than the Army, for reasons of overall security, perhaps he considers politics of economy alone dictated the programs. This thesis is hardly borne out, when the President asks $1 billion more for defense in this election year.

At all events, General Ridgway's accusations demand verse and chapter of proof, if any can be adduced. He should promptly be called before a congressional committee and asked to substantiate his blanket charges.

1956 Events Bring Reminders of 1939

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1956

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to insert the following editorial by David Lawrence from the Evening Star of Janurary 30 entitled "1956 Events Bring Reminders of 1939":

1956 EVENTS BRING REMINDERS OF 1939—FOE'S DUPLICITY AND FRIENDS' PARTISANSHIP PREVAIL AS EDEN AND EISENHOWER MEET

(By David Lawrence)

These are dangerous times in the world. The news dispatches read strangely like those that appeared just a few months before World War II broke out.

There are the same sinister moves by aggressor governments.

There is the same reckless partisanship inside the national legislatures of the democracies, thus encouraging the aggressor government to think that peace-at-any-price is the underlying policy of all political parties in America, France and Britain.

There is the same duplicity behind the scenes as the aggressor builds up armament while piously proclaiming peaceful motives.

There is the same cry that the democracies are unprepared militarily and that they are sacrificing guns for butter, even as the plaintive call comes for more air power to match the enemy's growing strength.

Perhaps the foregoing will strike a note of reminiscence to Sir Anthony Eden, England's Prime Minister, who this week confers here with President Eisenhower. For the famous British diplomat played a conspicuous role in the prewar years and saw the gathering storm from the inside of the Chamberlain government before he resigned dramatically as Foreign Secretary in February 1933. Ahead lay the appeasement of Munich in September 1938 and then all-out war in September 1939.

Few men have had such an intimate experience with the chicanery of totalitarianism, particularly the Russian maneuvers and tricks, as has Anthony Eden. Few in parliamentary life know so well how foreign policy can be made a football of politics to the detriment of a nation.

Many Americans probably have forgotten that as late as 6 months before the war broke out Prime Minister Chamberlain, already disillusioned about the empty promises given by Hitler at Munich, proposed that a draft law be passed but was met by the bitter opposition of Clement Attlee and the Socialist Labor Party. Mr. Attlee on April 27, 1939, told the House of Commons:

"We are opposed to conscription. It will weaken the country. If there is to be a gesture, it should be the conscription of wealth. There is no need for conscription so far as men are concerned. The navy and the air force are up to strength and there are no arms for more men."

All this has a familiar ring—political parties seeking partisan advantage by playing on the emotions of an uninformed citizenry. Here was Mr. Chamberlain, on the brink of war, struggling to make a show of firmness to Hitler, only to be frustrated by a party in opposition that was strong enough to threaten defeat at an election, perhaps on a peace-at-any-price basis, if the Prime Minister didn't accede.

It was this state of affairs which caused Sir Samuel Hoare, Home Secretary until 1939 and later a member of the war cabinet, to write in retrospect:

"The truth was forced upon us that until the people were faced with the stark dangers of actual war, it was impossible to introduce war methods of production and organization, and to form a national government for a single purpose."

These same comments could be written today about the divided Government in the United States. One party controls Congress and the other party controls the White House.

Despite the strong voice of Senator GEORGE, many Democrats in Congress keep up a constant sniping which inevitably must encourage the shrewd men in the Kremlin to believe that this is the time for them to muddy the waters here.

Hitler used the same strategy with his peace offers just before each act of aggression. In fact, he proposed and Mr. Chamberlain signed in 1938 a statement saying the two nations agreed "never to go to war with each other."

The latest effort of the Democrats is to put the Eisenhower administration in an embarrassing position because it has rejected the same kind of offer—a treaty proposed by Bulganin to eliminate war between Russia and America. Some of the Democratic spokesmen in Congress are saying about the President's reply that they were "not consulted on details"—as if direct negotiation with foreign government was ever a constitutional prerogative of Congress—while other Democrats say they don't like "the way it was handled."

What does it all mean? What can be done about it? Public opinion, which trancends petty politics, can command the answer. Hitler understood only one language, just as do the dictators in the Kremlin. That's military force plus economic force. Hitler was allowed almost until the outbreak of war in September 1939, to trade freely and get supplies for his armament machine from every country.

The sooner the free world begins to sacrifice pounds, francs, and dollars of trade and cuts off vital raw materials from the enemy, and the sooner the military power of the United States and its allies is built up at whatever cost is required, the sooner will there be a feeling of real security that a world war can be prevented.

For the assumption that the Kremlin would not dare to start a world war is as spurious as the assumption too often made early in 1939 that Hitler wouldn't dare take on both Britain and France.

America's indecision, too, in those prewar days was an encouragement to Hitler.

Even after the fall of France and after Russia had entered the European war in June 1941, and just a few weeks before Pearl Harbor, the House of Representatives almost defeated the extension of the draft bill. It was passed by a single vote on Auguist 13, 1941.

These are perilous times, especially since this is an atomic age, when political bickering and procrastination can be fatal. It is to be hoped the conferences between Mr. Eden and Mr. Eisenhower will help to strengthen allied solidarity and to bring forth a fearless definition of America's objectives. This definition was sadly lacking in 1939. A lear definition of policy for the United States today is again being befuddled by selfish politics.

Logan International Airport

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Tuesday, January 31, 1956

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "Let's Brag About Logan," which appeared in the Boston Post of Sunday, January 29, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LET'S BRAG ABOUT LOGAN

Boston, long one of the great seaports of the United States, has become one of the great air centers of the world. But too few people, here and abroad, know the facts. We need to brag a little about Logan International Airport.

World travelers know that in most ways Logan is superior, and in many ways unique. There is, for instance, no other great commercial airfield so close to a great city.

If you land at London Airport, it takes three-quarters of an hour out the Great Western Road to get downtown. From New York's Idlewild, the distance is longer. There are long rides from the fields nearest Rome, Madrid, Lisbon, and Paris, too. Here, you can ride from east Boston to State Street, on the MTA in 15 minutes, for 20 cents.

Logan is, also, closer to Europe by an hour than New York. In a 3,000-mile run, an hour is of some consequence.

The airlines know the truth about Logan. It is no accident that most of the great ones fly from here regularly. Although it is necessary to go to New York to board a liner for most European ports, you can fly from here direct to the British Isles, overnight.

According to figures released by the Aircraft Owners and Pilots' Association, the total number of planes in and out of London in 1955 was 98,808. In a comparable period, Logan International Airport saw 90,939 takeoffs of commercial and private craft. It is worth keeping in mind that London field serves all of England, a matter of more than 40 million people.

There are now only 12 airports in the world equipped with proper runways and other facilities to fly jet transports. Boston is 1 of the 12.

The Logan International Airport needs nothing—except a concerted campaign by Bostonians to call its advantages to the attention of the whole world.

In the 18th century, it was neither nice nor necessary to brag about our city. Its eminence was self-evident. In the 19th century, our position in trade, in finance, and in literature, was also very high and very widely acknowledged. This is the 20th century, however, and in the great clamor of the cities for place, our past reputation means little except to sightseers.

A hundred years ago, we were the hub of the universe in the intellectual sense of the term. By a curious irony of progress, we might well become in the next few years the actual hub of the universe because of Logan Airport.

It won't happen, however, unless we blow the trumpets with great loud blasts.

The American Bill of Rights: A Living Force—Address by Hon. Clyde Doyle, 23d Congressional District, California, December 12, 1955, Before Members of the Press, Radio, and Television, Biltmore Hotel, Los Angeles, Calif.

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. DOYLE. Mr. Speaker, by reason of the approval of yourself and all the Members of this House of Representatives, I have heretofore been granted unanimous consent to insert in the Appendix of the CONGRESSIONAL RECORD the text of the following address given by me at a luncheon of the Bill of Rights Commemoration Committee, at the Biltmore Hotel, Los Angeles, Calif., on December 12, 1955.

It seems that this was the 15th annual such luncheon and said luncheon is held in honor of the members of the press, radio, and television. Also present were members of the board of supervisors, city council, city attorney's office, attorneys, judges, leaders of women's groups, community and civic groups—over 100 persons were present, I am informed.

Upon receiving the invitation of the commemoration committee to make this important address on such said occasion, I was interested, and pleased, to be informed that the reason I was thus invited was on account of my membership on, and work as a member of, the House Un-American Activities Committee, and that members of the press, television, and radio family in Los Angeles County had suggested to the Bill of Rights Commemoration Committee in charge that I be the guest speaker on this significant occasion.

The address follows:

THE AMERICAN BILL OF RIGHTS: A LIVING FORCE

(Address by Hon. CLYDE DOYLE, Member of Congress, 23d Congressional District, California; member of House Armed Services Committee and House Un-American Activities Committee; now serving his 5th term in Congress; address given at luncheon of Bill of Rights Commemoration Committee, December 12, 1955, Biltmore Hotel, Los Angeles; Mr. Joe Crail, chairman)

Mr. Joe Crail, chairman, and all members of the committee; honored guests; members of the press, radio, and television; friends, I most cordially compliment the Bill of Rights Committee for making this timely event possible. For many years I have observed the splendid emphasis the committee has placed upon recognition of the importance of the American Bill of Rights to the destiny of our American way of life. For certainly, what protects and defends the freedoms and the rights of individual American citizens, indelibly marks our national pattern of conduct for better or for worse. In my humble but considered judgment, the Bill of Rights is today a living force which we must not hesitate to defend and observe with our utmost diligence and vigilance.

In submitting my brief remarks for your consideration, I know you understand that I can only share out of my own personal experiences, largely gained from 30 active and pleasant years as a practicing attorney at the California bar and over 9 years now, as a Member of our National House of Representatives, where I am privileged to serve as a member of two major committees, the House Armed Services Committee and the House Un-American Activities Committee.

My acceptance of the kind invitation extended me to be your main speaker on this very important and pleasant occasion, naturally caused me to dig deeper into the history and significance of our American Bill of Rights to all American citizens, regardless of national origin or economic station in life. So, it may well be that I today am the chief benefactor, because I am confident my restudy of our Bill of Rights has not only refreshed and strengthened my dedication to its high purposes, but, it has made me more determined to take advantage of every opportunity afforded, to be more vigilant in my protection of the freedoms and rights of all American citizens. Out of my own recent experience thus gained, I advocate that each American citizen not only read the Bill of Rights this very week, we are here observing, but that each also studiously read some of the pertinent history relating to these especially cherished amendments to our Constitution.

It is well that we remember that the American colonists, beginning with early Virginia, were settled under royal charters, granted by the Kings of England. You will also recall that these charters almost always contained very strict and extremely burdensome reservations in favor of the English Crown. They did not fail to enumerate limitations and restrictions upon the exercise of civil and political liberties which must be strictly observed by these early emigrants from England. These colonists did not acquire civil and political liberties as they were then known in England. In fact, as early as 1612 the Virginia colonists protested to the English Crown, against the deprivation of these rights. So, eventually, the Revolutionary War came about.

It is well to remember that only 13 years passed between the signing of our Declaration of Independence dated in Congress at Philadelphia, July 4, 1776, and the date of the passage by Congress of these 10 amendments on September 25, 1789. Thirteen years is a very short span of time, as the history of Nations occurs. It was a very, very short period of time in our early national history. It is also well for us to remember that a total of 124 amendments to our original Constitution of 1789 were actually proposed for inclusion in the Bill of Rights, so determined were the States, that before they would finally accept the new form of Government, they must be guaranteed the civil and political liberties we are today appropriately honoring and reviewing our allegiance to. Seventeen of the 124 amendments were duly accepted by the House of Representatives and 2 of these 17 were later rejected by the Senate. That left 15 proposed amendments of the original 124; these were reduced to an even dozen before Congress approved. Then, on submission to the

States, 2 of this dozen were rejected by the States, thus leaving the 10 we now revere as our Bill of Rights. Yes, it was a real living force to our forefathers. It cannot be less than a real living force to us of this generation, if we would profit by the experience of dedicated men who fought and died, that they might have individual freedom and have it more abundantly.

Each time I visit that certain historical church, St. Johns in Richmond, Va., where Patrick Henry stood at the Virginia Convention of delegates on March 23, 1775, he having been a delegate from Virginia to the First Continental Congress, it gives me an actual sense of renewed and increased devotion for, on each such visit to the church pew from which he spoke, I hope you will not misunderstand me when I say, I can almost hear this great American say:

"There is a just God who presides over the destinies of nations.

"Why stand we here idle? What is it that gentlemen wish? What would they have?

"Is life so dear, or peace so sweet, as to be purchased at the price of chains and slavery? Forbid it, Almighty God. I know not what course others may take; but as for me, give me liberty, or give me death."

Granting that it is a fact that we today do not face the immediate physical dangers of which Patrick Henry spoke, am I placing it upon a level or plane too high above us this day, to urge nevertheless that we have the same attitude and spirit possessed by him?

Whenever I reflect upon the place of these 10 amendments to our Constitution as an historical fact, I also reflect upon the place of the preamble to our Declaration of Independence, also written and declared by daring Americans devoted to the cause of individual freedom at least equal to any in our national history.

I, therefore, submit the proposition that what was then set forth in the preamble to our Declaration of Independence, must logically have had a direct bearing upon the thoughts and attitudes of the framers of our Constitution and our Bill of Rights. To me, with only 13 years spacing these two destiny-making documents, it is crystal clear that the Bill of Rights to our Constitution was written with the awareness by the authors of each of these 10 amendments, that their predecessors in the fight to guarantee individual liberty and justice for all men, had boldly written these for the allegiance and guidance of all Americans for all time—as follows:

"We hold these truths to be self-evident, that all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these, are life, liberty, and the pursuit of happiness."

Granting that these express words are not in the Bill of Rights, I respectfully submit that we cannot approach a crystal-clear appreciation of the true intent and purpose of the Bill of Rights, unless we read into them the high spiritual level declared only 13 years before in our basic Declaration of Independence.

Who is there that contends the 10 amendments are not inalienable? Who is there that contends that life, liberty, and the pursuit of happiness are freedoms for less than all Americans? Who is there that contends that all Americans are not created equal by the same Creator?

No, all the amendments known as the Bill of Rights are, by the plain fact of all American citizens having the same Creator, possessed of the same and equal inalienable rights before that Creator, and, therefore, must be in the sight of manmade laws. The fact that all men are created equal in the sight of the same Creator, is what makes the liberties and rights guaranteed in the Bill of Rights—each and every one of them—inalienable. Not to recognize this basic premise for our Bill of Rights, is to place it on such a low and material level in our thinking, that the whims of evil and designing men could change ours into a Nation governed by mere man rather than by established and revered law.

It must be self-evident, therefore, that, ours being a government of laws and not of men, no American citizen, in or out of public office can choose to respect or enforce less than each and all of the Bill of Rights, as to all American citizens, regardless of their national origin or economic station in life. Our forefathers conceived and established the Bill of Rights as a living and necessary force for all Americans. Just to the extent to which we as a Nation practice what we preach about the Bill of Rights making all men equal in the sight of our laws, just to that extent, will we deserve the blessings—the blessings of our Creator. Just to that extent, will we make for strength or weakness of the spiritual forces which also must be taken into consideration as factors which make our Nation truly a great Nation of freedom-loving men.

Let us here briefly look at the makeup of the Bill of Rights, sometimes also called a Bill of Prohibitions, sometimes called a Bill of Restraints. They make up an integrated list of "don't" for the United States Congress to bear in mind in their legislative processes. Without giving you the full text of each, let me enumerate briefly:

Amendment I guarantees freedom of religion; freedom of speech; freedom of the press; right of peaceable assembly.

Amendment II: Right to bear arms.

Amendment III: No quartering of soldiers in private homes in peacetimes, excepting with consent of the owner.

Amendment IV: Security of persons in their homes; against unreasonable searches.

Amendment V: No person shall be compelled to be a witness against himself in any criminal case.

Amendment VI: In all criminal prosecutions, accused shall be entitled to speedy trial; be confronted with witnesses, and have assistance of counsel.

Amendment VII: Right of trial by jury.

Amendment VIII: No excessive bail or cruel punishments.

Amendment IX: The enumeration of certain rights shall not deny others retained by the people.

Amendment X: The powers not delegated to the United States, by the Constitution, are reserved to the States, or to the people.

It having been suggested to me that some of your many members of the press, radio, and TV present would like to have me briefly discuss the work of the Un-American Activities Committee, which is 1 of my 2 major committee assignments, I will gladly do so. Whatever I say will necessarily be my own opinion.

This committee was made a permanent House committee at its creation in the 79th (1946) Congress; it has only 9 members and all are lawyers excepting 1. It operates under Public Law 601 which, by its express terms charges the committee "to investigate and report to the House the extent, character, and objects of un-American propaganda activities in the United States, and the diffusion within the United States of subversive propaganda within the United States, whether this is instigated from foreign countries or of domestic origin and which attacks the form of government guaranteed by our Constitution, and all other questions in relation thereto, which would aid Congress in any remedial legislation."

As time does not permit of more than just a few comments, I will say that I believe this committee does a very necessary, but a very trying and difficult duty, considering the nature of its task and the types of people it very frequently has to deal with, it is entitled to your commendation for its betterment in procedures, especially as relates to the rights of witnesses.

The House of Representatives itself, last April, adopted the Doyle resolution, House Resolution 151, unanimously. This resolution, amongst other things, eliminates one-man investigations in all House committees. It does not apply to Senate committee investigations.

When I was again yesterday asked how far I went in recognizing the right of a person, under the Bill of Rights, to dissent from my views, I again replied that I would fight for a man's right to say and print and preach whatever he wished, provided he did it within the four corners of the United States Constitution as set out by established law.

The right to patriotically disagree is inherent with American citizenship and the right to be wrong, if not a violation of established law, is another right, guaranteed by the Bill of Rights.

Men who find it a burden to think frequently and clearly on the subject of civil rights for all American citizens, are not contributing toward making our beloved Nation, a living force for civil rights as guaranteed by the Bill of Rights.

I again restate, as I have many times, that I do not criticize a witness before our committee for standing on his constitutional rights as provided in the fifth amendment in the Bill of Rights, if that witness is in good faith with his oath, himself, and the Congress. But, it is disgusting to have a witness raise it when the known facts frequently show that he is merely following the known Communist line of cheating on the committee, even though there is no good faith, honesty, or integrity present in his claim of the constitutional privilege.

Unless President Eisenhower was in error in his state of the Union message of 1954, the objects of the Congress, under Public Law 601, are necessary and of vital importance. The President said:

"The subversive character of the Communist Party in the United States has been clearly demonstrated in many way, including court proceedings. When a citizen knowingly participates in the Communist conspiracy, he no longer holds allegiance to the United States."

The President's reference to court proceedings causes me to say that I am always pleased when a high court clearly states the law, as applied to any of our committee hearings, for much clear statement by the court is needed in this regard.

In Public Law 831 of the 81st Congress in the Subversive Activities Control Act of 1950, Congress declared as follows: section 2—

"As a result of evidence adduced before various committees of the Senate and House of Representatives, there exists a world Communist movement, which, in its origin, its development, and its present practices, is a worldwide revolutionary movement whose purpose it is, by treachery, deceit, infiltration into other groups (governmental and otherwise), espionage, sabotage, terrorism, and any other means deemed necessary to establish a Communist totalitarian dictatorship in the countries throughout the world, through the medium of a worldwide Communist organization."

The Second World Congress of the Communist International, Moscow, July 17–August 7, 1920, adopted resolutions spelling out denial of the right of free speech and of the press when it said—

"Communism repudiates parliamentarianism as the forum of the future—it repudiates the possibility of winning over parliaments; its aim is to destroy parliaments. The work within the parliaments consists chiefly in making revolutionary propaganda from the parliamentary platform."

Who is there who fails to recognize that the resolution adopted in 1920 is still in active force and effect in 1955?

When I was in China, Japan, Italy, England, Spain, and other foreign countries, last, I asked certain intelligence officials whether or not the activities of the Communists in their country were part of well-defined world plans. Their unanimous answer was in the affirmative.

But, in meeting this subversive conspiracy, we must not throw the Bill of Rights out the window. There is no need of doing so. To imitate or copy totalitarian security procedures would be totally disastrous to our American way of life. It would make of the Bill of Rights a corpse instead of keeping it a living force. We must continuously be on the alert lest those who are careless in differentiating between our security needs and our freedoms, under the Bill of Rights, take the easiest path, which does not necessitate noninterference with guaranteed rights. Due process of law must hold preeminence if individual rights and liberties are to be truly preserved as intended by our Bill of Rights. This is essential to make it a living force.

In closing, may I invite you to share with me the proposition that the perpetuity of the Bill of Rights deserves the best of whatever we are in individual patriotic vigilance, vigor, valiant protection of the rights and freedoms of all men, and that by our dedicated lives we increasingly help make our Bill of Rights a greater living force; that this Nation, under God, shall continue to be even a richer blessing to all Americans, everywhere, and in perpetuity.

Small Business Failures Continuing Upward Despite Boom for Big Business

EXTENSION OF REMARKS
OF
HON. THADDEUS M. MACHROWICZ
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1956

Mr. MACHROWICZ. Mr. Speaker, in view of the exaggerated claims of universal prosperity, I think it might be sobering for our Republican friends to read today's issue of the Journal of Commerce, which points out that the number of business failures jumped up again in the week ending January 26 for a fourth consecutive time and is now at a postwar peak. Most of these failures, of course, were in the small-business field, and particularly in the retail trade field.

The article follows:

BUSINESS FAILURES

Business failures continued upward to 284 in the week ended January 26 from 269 in the preceding week reported Dun & Bradstreet, Inc. Rising for the fourth consecutive week, the total was considerably higher than a year ago, when 255 failures occurred in 1954 when there were 233.

Although at a postwar peak, failures remained 26 percent below the prewar level of 385 in the comparable week of 1939.

Most of the week's increase centered in retail trade, where failures climbed to 154 from 125. Slight upturns appeared in wholesaling with 30 as against 26, in construction with 33 as against 32, and in commercial services with 20 as against 19.

Manufacturing showed the only decline. Its toll dropped to 47 from 67 a week ago. Fewer concerns failed than last year among manufacturers and wholesalers, but other lines exceeded the 1955 level. The most notable upswing from a year ago took place in retailing.

The White House Comments on the Livestock Situation

EXTENSION OF REMARKS
OF
HON. HENRY O. TALLE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1956

Mr. TALLE. Mr. Speaker, the entire Iowa delegation in the Congress met with the Secretary of Agriculture, Mr. Ezra Taft Benson, on Monday morning, January 9, 1956, for the purpose of discussing the distress of livestock producers.

On Monday morning, January 23, 1956, the entire Iowa delegation had a lengthy conference at the White House, which was attended by the President's personal assistants and top officials of the Department of Agriculture. At these meetings, the members of the Iowa delegation had opportunity to express their views and to make suggestions for alleviating the acute situation.

Under leave to extend my remarks in the RECORD, I include the following letter from the White House which was addressed to me under date of January 27:

THE WHITE HOUSE,
Washington, January 27, 1956.

The Honorable HENRY O. TALLE,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN TALLE: This letter follows up the visit we had with your delegation last Monday in regard to the current livestock situation.

As you well know, the most important factor causing the sharp decline in hog prices in recent months has been the large supply of hogs marketed. Marketings during the past 2 or 3 months were at record or near-record levels. Moreover, this is the first time on record that the hog and cattle numbers cycles have both crested together. As a result of these supply conditions, prices have felt the impact.

To provide assistance to hog producers, the Secretary of Agriculture promptly took a number of actions. Early in the season the Secretary called in a group to advise as to the actions which the Government should take in the light of the developing hog situation. He has attempted faithfully to carry out those recommendations. A pork- and lard-purchase program has been undertaken as a surplus removal operation to help strengthen prices to hog producers. The purchase program has utilized the kinds of pork products for which there are definite outlets. Through January 21, the Department had purchased a total of 95 million pounds of pork products, at a cost of approximately $41 million. Additional purchases are continuing at weekly intervals to fill maximum needs.

The Department of Agriculture also has been cooperating closely with the hog producers and the meat industry in an intensive pork-promotion program. This widespread promotional effort has provided great assistance in moving the near-record pork output readily into consumption and thereby has been of considerable benefit to the hog industry. The Department has also pointed out to producers the advantages of marketing their hogs at lighter weights in order to reduce the supply and produce a more acceptable product for consumers. Also, the meat industry has been encouraged to adopt improved processing practices and to reflect higher prices to producers for the higher-quality hogs. The industry, in turn, has adopted closer trimming of fat from pork cuts to encourage pork consumption.

The pig-crop report issued by the Department of Agriculture on December 22 indicated that hog producers planned to make a 2-percent downward adjustment in their production of 1956 spring pigs. Marketings of sows and gilts in recent weeks indicate that an even greater reduction might be made. A smaller spring pig crop would, of course, mean improved hog prices next summer, and particularly in the fall, when hog prices usually decline seasonally.

We have been encouraged by the recent substantial improvement in hog prices. There has been an advance in hog prices of more than $2 per hundred pounds in a week. If marketings continue at the currently reduced rate further price improvement in the near future seems likely.

We have received many suggestions from people throughout the country on means of providing assistance to hog producers. These proposals range all the way from completely controlling production, marketing, and prices, to the diametrically opposite view of maintaining a completely hands off policy in the situation.

Some people, as you know, have requested that the administration institute a program of buying live hogs from producers in order to support hog prices. I believe you recognize the difficulties that would have to be successfully dealt with in undertaking a live-hog purchase program, including caring for the animals, and having them slaughtered and the products processed. You can easily imagine the kind of problem that would be encountered in disposing of all of the products which would be produced. It is clear, too, that any such plan would require an effective production control as a corollary.

Other proposals have included supporting hog prices at specific levels, but without suggesting a practical means of doing it. In order to do this the Government would have to devise ways and means of buying any and all hogs or equivalent products which could not be sold in the market at above-support levels.

On the other hand, we have received a large number of communications from people requesting that there be no direct price supports on hogs. Many of these came from farmers and farm leaders who honestly feel that the swine industry would be badly served by such an approach.

As the President stated in his special message on agriculture, the administration is stepping up its hog-purchase program by developing new outlets for pork products. This was one of the proposals presented by your group, and action on it is proceeding vigorously. Certain other proposals which you presented in our conference will be fully explored on January 31 by Secretary Benson at a meeting with the National Swine Industry Committee in Chicago. The Secretary has called this special meeting to discuss with that group what additional steps should be taken to alleviate the current hog situation.

As regards the emphasis placed by several members of your group on the credit needs of farmers, and especially young veterans, I can report to you that a careful canvass is being made of that situation. The Secretary is determined that these needs be promptly and fully met. Yesterday, for example, the Farmers' Home Administration allocated $1 million extra to Iowa for production and subsistence loans.

Our discussion the other morning with you and your associates was very valuable, and we deeply appreciate your taking the time to meet with us. I am certain that much good will come of that meeting for the benefit of the hog and cattle producers of this country. We genuinely seek, as you do, to carry out the most constructive program we can

devise in the interest of producers, both in the short run and over the longer time plan.

With kind regards,

Sincerely,

SHERMAN ADAMS,
Assistant to the President.

Detroit Slowdown

EXTENSION OF REMARKS
OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1956

Mr. RABAUT. Mr. Speaker, the news has traveled far when it reaches the front page of the Wall Street Journal. On the morning of January 30 there appeared in the aforementioned paper an article entitled "Detroit Slowdown." It would behoove everyone to read this story, for it carries an ominous message.

We have heard a great deal recently about the high level of prosperity throughout the country. Mr. Speaker, Detroit has always been a barometer, an indicator of the Nation's economic progress. The facts brought out in the Journal's columns show that conditions are not good, and the effect is being felt in the country's No. 1 industry. It might well be said that as Detroit goes, so goes the Nation. Under leave to extend my remarks, I am inserting in the RECORD the forceful article "Detroit Slowdown":

DETROIT SLOWDOWN—AUTO WORKERS PUT OFF BUYING CARS, TV SETS AS OVERTIME VANISHES—CHINESE LAUNDRY GETS FEWER SHIRTS; MARS FURNITURE'S SALES DOWN TO 10 PERCENT FROM 1955—A "DINGER" SAVES HIS CASH

(By John D. Williams)

DETROIT.—Mayhoup Mithar, a Ford worker who hails from far-off Yemen, a tiny land on the Red Sea, is sending less money home.

Through most of last year heavy overtime pushed up his Ford wages to $100 a week. The folks back home got from $25 to $37 weekly. Since mid-December he's been on straight time at $80 a week and his family now gets from $12.50 to $25 weekly.

Saleh A. Mohamed, another Yemenite who somehow wound up here in the auto capital, still is sending $40 a week to his family. But he has cut down on his spending. "I buy 6 cans beer a week now," says Saleh. "Before I drink sometime 12 cans."

BUDGET SQUEEZE

The auto industry's sharp cuts in overtime just before Christmas are squeezing the budgets of many auto workers. With spending plans geared to high overtime pay, they're now putting off purchases of homes, cars, television sets, major appliances, furniture, carpeting, and dozens of other items. Some are slowing down payments on 1955 purchases. Many retail shops here report a sharp slump in sales.

Alex Work Supplies, a small store about a half block from the Chrysler division assembly plant on East Jefferson Street, is taking in $65 a week now, compared with $80 when Chrysler was working overtime. The owner, who sells such diverse items as work gloves and sandwiches, says: "The fellow who used to drop in for a sandwich and coffee now just takes coffee."

"Our customers are talking this way now—'I like that, but I want to see what will happen at the plant first,'" says an executive of Mars Furniture Store, where 80 percent of the customers are auto workers. He says sales this month are down 40 percent from December's Christmas levels and 10 percent from January 1955.

Banks and finance companies are braced for a rise in delinquencies. "We are turning down twice as many credit requests as a year ago," says an official of a big concern handling retail appliance credit. "The number of requests is about the same as last January." Despite such caution, the company says delinquent accounts now amount to about 4 percent of total outstanding credit, compared with 3 percent to 3½ percent in January 1955.

THIRTY-HOUR WEEKS?

"We're looking for some increase in delinquencies and are trying to be prepared for it," says a credit official at one of Detroit's biggest banks. He adds an ominous prediction: "These auto fellows may have to adjust themselves to 30-hour weeks before it's over."

There's a chance, as the banker suggests, that things may get worse before they get better. As of last week, the industry still was rolling out cars at an annual rate of 7.3 million, well above the most optimistic industry forecasts for the full year. Much more serious than loss of overtime, of course, is the possibility of a further rise in auto industry unemployment. The jobless total in the auto-oriented Detroit area has risen from 52,000 in mid-1955 to an estimated 70,000 now. Much of this rise is due, directly or indirectly, to auto output cutbacks.

The significance of the auto cutbacks extends far beyond Detroit. Ford division alone has 15 assembly plants, from Mahwah, N. J., to San Jose, Calif. Chevrolet has 11 assembly plants around the United States. Parts makers and other suppliers dot the Nation.

Even those Detroit retailers who so far have noted no sag in sales are worried about the future. "Since our welfare is keyed to the health, employment, and pay envelopes of the auto industry, the cut in overtime could have no other effect than a bad one," says an official of a big downtown department store.

BIGGEST READJUSTMENTS

Perhaps the biggest budget readjustments are being made by employees of Ford Motor Co., which for the past 2 years has used overtime more extensively than any other auto maker.

A Wall Street Journal reporter a few days ago dropped in at the United Auto Workers Local 600 union hall, where dozens of Ford workers were lined up to get help with income tax returns (minimum fee: 50 cents for the short form and $1.25 for the long form). Chats with the workers and their wives turned up ample evidence of scaled-down buying plans.

"I think we'll hold off a while on the new furniture we planned to buy," said the wife of a paint department worker whose present $83 a week compares with a 1955 high of $160. "We're spending all we make now, while before we could save $50 a month."

Loss of overtime forced another Ford worker to refinance his car, reducing monthly payments from $100 to $56.

Top weekly take-home pay of a Ford tool shop employee last year was $135. Now he's getting $80. He had big buying plans before the cutback: A $2,000 addition to his $10,000 house (monthly payment: $65) to make room for an expected third child; a $200 TV set to replace a 1951 model; $400 worth of living room furniture; and a new Ford to replace his 1954 model. Said he: "Of course, everything is going to have to wait now."

SAVING FOR A HOUSE

"We had been saving as much as $55 a week toward a small house we hoped to buy," recalled a Ford paint spraygun operator, whose pay has slipped from $120 a week to $85. He's not sure now they'll go through with their home-buying plans.

Across the street from the union hall—within view of the towering smokestacks of Ford's giant River Rouge plant—there's a long row of bars, cafes, shoe stores, groceries, drug stores, card parlors and pool halls. With a few exceptions these small-business men report business is slower.

The Chinese laundry is ironing 33 percent fewer shirts than a month ago. Sales at the Wolverine Cleaners this month are down 10 percent from December. The Hide-Away Bar finds a bright note: "It's slow during the week but week-ends are busier because they're not all working Saturdays now."

The friendly, elderly proprietor of a shoe store offers these economic indicators: In the week ended January 20 his shoe repair volume was $43.55, up 25 percent from the like week of December. But his new shoe sales dropped to $191.24, down 25 percent from December.

Chrysler workers had experienced less overtime than Ford employees. But its elimination brings budget problems, nonetheless. Seated on a bench near the assembly line at lunch time, one worker at Chrysler Division's assembly plant here talks about his finances. "I figure I have to take home $70 a week to keep from going into the hole," he says. His check now runs about $72 a week. Last year he averaged $85 a week—his best earnings ever. With 6 children he has to watch his spending closely. He picks up odd jobs when he can, driving a beer truck and pumping gas.

PLENTY OF WANTS

He has plenty of wants—his De Soto is 6 years old, his TV set dates from 1953, and his major appliances are about 8 years old. But without overtime he sees no way to replace them.

Down the assembly line is a man whose job it is to polish and touch up gleaming new Chryslers. Unmarried, he supports his father. He'd like to spend $175 on a fresh coat of paint for his house and a tree for the front lawn. But he's putting it off. When he was taking home $110 weekly last fall he used to go out four times a week. Down $58 a week now, he stays home all but 2 nights a week.

Based on their current take-home pay, some of the workers probably could spend a good deal more than they do. But they're worried about the future. The Chrysler workers talk more of the prospect of short workweeks than of the overtime pay they've already lost.

Take the "ding" man, for example. He's been working at Chrysler 30 years and has been "dinging" for 25. (A "dinger" takes out small car dents, incurred during assembly, without spoiling the paint finish.) Says he: "We need new carpeting in the living room and the dining room. I'll buy it if I see things pick up late in the summer. But I don't like to take money out of the bank." He has $6,500 there.

TV SET, STORM SASH

For 3 months of 1955 he worked 7 days a week and drew up to $190 a week before taxes. During that period he bought a new TV set and put $940 into new screens, storm sash and a garage door. Now that his pretax weekly pay is down to $79, he's putting off trading in his 1953 Dodge on a new car.

Down the street two blocks from the Chrysler plant is the Jefferson Army Store. Its manager reports: "November was a beautiful month for us, but sales started falling off 3 weeks before Christmas and are now 25 percent below a month ago." He notes an increased customer tendency to shop for lowest prices.

Also near the plant is a Worth Clothes store, devoid of customers despite a big sign

out front: "Going out of business sale—40 percent to 60 percent off." A spokesman says Worth is closing its 4 Detroit stores and points to 2 newly vacated shops in the same block, both of which bear big "for rent" signs.

At the Chevrolet plant at Flint, Mich., a worker admits to busy buying during 1955, when overtime pushed up his weekly take-home pay to about $100. He bought a TV set, an automatic washer, a drier and home insulation. His debts on these items still total about $1,000. What's he to do now that his take-home pay is down to about $55 a week? "Our essentials will come first, even if it means repossessions on some of the things I bought," he says.

NO MORE BOND BUYING

This Chevrolet worker still has $200 worth of United States savings bonds. But he cashed 2 bonds 2 weeks ago to pay his car insurance bill and last week he stopped buying bonds through payroll deductions.

A Pontiac machine operator at Pontiac, Mich., likely will put off trading in his 1948 Pontiac for a used 1954 model and has definitely abandoned plans to buy a television set, although he has $800 in savings. Last June he was working 60 hours a week and pulling down $155 weekly. Now that he's down to $91 a week, he's cutting down on entertainment: "Me and my wife don't go out as much any more."

Due partly to overtime, Ford's total payroll last year shot up to a record $1,117,000,000, compared with $962 million in 1954 and with the previous high of $988 million in 1953. Its hourly workers averaged 44.2 hours a week, with some employees on the job as much as 60 hours a week. That compares with an average of 41.5 hours in 1954 and with 42 hours in 1953.

General Motors' 398,000 wage earners worked more hours last year than in any previous year. Final figures for 1955 aren't available yet, but for the first half of the year the average was 43.5 hours a week, up from 40.1 in 1954 and from 41.9 in 1953.

Three Wishes

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1956

Mr. KLEIN. Mr. Speaker, I recently ran across, read, and was deeply moved by a poem by Nick Kenny that I think worth reprinting in the CONGRESSIONAL RECORD. Its author is a New Yorker who has made an outstanding reputation for himself as a journalist.

As a member of the staff of the metropolitan newspaper, the New York Mirror, and as columnist and feature writer, he has endeared himself to millions of readers.

Moreover, Mr. Kenny, skillful as have been his journalistic achievements, has done more; he has given innumerable indications of his concern for the human needs of the people of his city and country, and has associated himself with many causes that serve the public welfare. As a newspaperman, as radio and TV personality, as popular poet, and, above all, as a man, he has left and is leaving his mark on millions of his fellow Americans.

The poem follows:

THREE WISHES

I wish I had a telescope
To scan the starry skies
But, since I have no telescope,
I'm glad I have two eyes.

I wish I had a kitchen run
By push-button commands
But, while that kitchen's still a dream,
I'm glad I have two hands.

I wish I had a super car
To give my friends a treat
But, till that new car comes along,
I'm glad I have two feet.

Two eyes to look to God above,
Two hands to clasp in prayer,
Two feet to carry me to church,
Why, I'm a millionaire!

—*Nick Kenny.*

Now Let Us Hear From the Automobile Owner

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1956

Mr. MULTER. Mr. Speaker, for some weeks now congressional committees have been hearing from automobile manufacturers and dealers. Each group has been telling how good they were and the faults of the other.

There is a third side to this story: that of the consuming public.

Following is an item I received unsolicited, which is the consumers' story. I am afraid it is all too typical. Incidentally, it confirms one phase of my testimony before a committee of the other body. The item follows:

YOU ARE HELPING TO SEND TENS OF THOUSANDS OF AMERICANS TO THEIR DEATHS EVERY YEAR BY FAILING TO PUT A STOP TO THE FLAGRANT ABUSE OF THE CONSUMER BY THE AUTOMOBILE INDUSTRY

Abuse through—

1. Cars with engines designed for constantly increasing power "to meet competition"—in spite of the fact that the cars' chassis, the cars' safety elements, our public highways, and the maturity of our drivers are not necessarily able to handle this power safely.

2. Cars assembled so rapidly as to breed possible carelessness. (Buick was producing 67 an hour, when I went through the plant in August.)

3. Frequent dishonesty in servicing, with the average consumer unable to know what has to be done or, after he gets the bill, what was done.

4. Making excuses for defects to customers, often as if they were imagined by the new car owner, instead of admitting them and either correcting them properly or seeing to it that the customer gets a corrected car either this year or adequate adjustment when such corrections had been made.

5. Refusal to accept responsibility for a defective product, forcing customer either to accept it or to buy a new one.

6. Lack of any definite pattern in costs to the automobile owner in servicing, parts or gasoline products, with many of these products overpriced, especially by dealers and in tourist areas.

7. Constantly increasing prices for cars with constantly decreasing quality in workmanship, while the companies boast constantly increasing net profits.

8. Dealer policies that result in the cheapest kind of bargaining tactics to sell cars, with the customer never knowing exactly what he is paying, and for what.

The following is a record of servicing required by my 1955 Buick super convertible (cost, $4,086.29):

The first 6 months of servicing is one small evidence of the foregoing.

Please note that many of the "subsequent servicings" reported below were necessitated by careless, inefficient dealer servicing originally. * * * And almost all of the original dealer servicing would not have been necessary if the factory had produced the proper, efficient engineering and workmanship for which the customer pays so highly when purchasing a car.

Picked up car March 11, 1955. Back plastic window had flaw in it. Was replaced.

Trunk flooring torn and sloppy. Replaced, but in process floor greased up and stained.

Left door hanging 1 inch off frame—both doors rattling and banging against locks; when car 10 days old left door jammed and could not be opened. Serviced March 22, March 24, April 11, April 28, May 2, June 1, June 21, July 5, September 27. Apparently, because of body shake and poor engineering originally, these doors always will rattle and bang—and periodically the left door will shimmy out of position so badly that it will jam. It wasn't until fifth servicing that left door was hung flush with dash. Then I was advised that lock had been welded into wrong place. Rattling continued. When Buick servicemen unjammed left door on March 22, they sprung it. When they righted this on March 24 they broke the inside trim. There also is a dent under lock outside. Car had two different locks on doors when new. This was corrected and new striker plates were installed April 28 and again June 21, but chucking noise did not disappear. Body shake of car, caused by only slightly bumpy roads, jiggled doors out of position during summer months until noise became unbearable and left door became more and more difficult to open. I advised Buick that left door was on its way to jamming again. Their eastern service manager insisted nothing was wrong. On September 20 it jammed shut again. They opened it, but door continues to bang around in its frame causing irritating noise that interferes with driver's control of car. Right door also rattles and bangs, but eastern service manager refused to do anything about it when he had the car in New York for going over, because "we might damage something else in trying to reposition this door." In spite of above servicing, I am left with a noisy, unsafe car in spite of original investment of over $4,000 for what should have been a well-engineered, carefully, and accurately assembled car.

Carburetor needed adjustment March 22. Constant thudding noise; low gas mileage. Serviced April 2, 11, 28, June 1. After first adjustment car stalled. Buick man readjusted and cut off all air so had to stop on road for another readjustment same day (April 2). Gas mileage still poor—do well when we average 13 miles per gallon.

Speedometer cable needed readjustment March 22. Serviced April 11. Buick admitted this defect in 1955 Supers. Failed to repair first time. Now O. K.

Top leaked at left side. Serviced March 22 and September 20. Still leaks. Also air pours through the top.

Air coming through vents March 22. Air still is objectionable unless heat is on.

Discovered through skidding noise under car when it stopped or slowed that motor that runs the top was loose. Serviced March 22. Now okay.

Reverse gear caused car to hop March 22. Repaired.

Left front tire fell apart at seam. Had reported "feel steady thump as if tire was bad" on March 22. They could find nothing.

On June 3, after 3 days in Buick shop when the factory representative was supposed to see what he could do to improve ride, a customer, watching as they started to drive out the car for delivery to me, discovered a 5-inch gash in front left tire; it had fallen apart at seams after only 3,000 miles of driving. (Not one of the many men who worked on the car spotted it, although front end was supposed to have been checked.) US Royal (a subsidiary of General Motors) agent insisted that I pay $5 for mileage used, although they admitted it was defective, and although tire was still on warranty, according to Buick. Buick paid when I refused to. Bouncing noise continued in right rear tire which Buick replaced July 9–16. Bad front end of the car wore down these brand new tires which I had put in front in less than 3,000 miles.

Right rear window failed to close; wires were so badly taped, according to Buick dealer who serviced that they short-circuited. Serviced April 4, 11, and 28. Wires were repaired by District of Columbia dealer, but upholstery was not properly restored. It took two follow-up servicings by my own dealer to get it right. Now O. K.

Boot that covers top was improperly designed so that it took three men to snap it on. Serviced April 3 and July 9. Buick sent new boot from factory, same size, but they sent snaps separately for dealer to install on outer rim. Boot still too tight; seams are ripping open.

Left visor was sprung. Rattled and fell into line of vision. Serviced April 11, April 28, and July 9. It's now sprung again.

Front floor carpeting not laid properly; ended below front seat, underlining exposed. Serviced April 11 and July 9. Was relaid first time, but it blew up when the top was down. Reinstated. Now O. K.

Reported oil leak—either from engine or Dynaflow, or both. Serviced April 28, August 22, and September 8. On August 22, when oil was changed at service station, was advised that there was no gasket in engine oil equipment—then they found it. Also on August 22 a Buick serviceman informed me, when I needed a quart of Dynaflow oil after only 6,000 miles that they "all leak." In Flint, Mich., the Buick plant, when I complained that I had needed 2 quarts of engine oil in the last 1,000 miles, they said they were instructed to tell customers that "that's normal for a Buick." When I returned to my own independent serviceman at end of a trip on September 8, he discovered that the gasket in engine oil drain was faulty (Buick dealer admitted "we have had some of those") and the Dynaflow still was leaking. Buick repaired Dynaflow.

Talked to factory representative on May 20 after returning from trip on New York State Thruway in wind when car was impossible to handle, and rattles were unbearable. He asked to go over car himself the next week or so. We made date for June 1 after my frequent calls to pin him down.

On June 1 factory representative supervised checking of car. He said front end needed correction, and wheels were alined. He also tightened power steering wheel to degree where it was hard to handle. I later was advised that this could damage steering gear over period of time. Front end continues to be weak and car still is difficult to handle. Car has had front-end correction and wheel alinement and balancing 4 times in 13,000 miles.

As result of my advising the president of GM that my unanswered letters to him would be left with my insurance papers and that my family were being instructed to sue GM to the hilt if I should lose my life in this unsafe car, the eastern service manager for Buick flew up to see me on June 21. He drove car and insisted it was normal. He did admit a strange noise from rear left tire * * * admitted to chucking of left door against lock * * * and he did suggest that either I bring the car to New York for the Fisher Body man to go over under his supervision, or he would send the man up here to go over it. I chose New York in order for the manager to supervise, hoping this would result in more positive results than in the past. Later was advised that it was against GM policy to reimburse me for the train fare involved in so doing. It was at his instruction that two new striker plates were installed on the doors.

Following is his list of repairs (on a car still new and already serviced as this record indicates so far): Left rear tire was replaced. Front floor carpeting reinstalled. Right quarter drain hole was opened (this had been neglected at factory). Left vent window spring was repositioned. Top boot cover was restitched. Left visor again was realigned. Both door garnish mouldings were reset but the manager telephoned me to say that he would not reposition the right door (which I complained was chucking, rattling, and obviously out of position) because they "might damage something else." He also told me during this call that my complaint of overheating was unjustified—these motors "run hot." Dealer later found that thermostat was defective. Fan belt and power steering belt were replaced.

Brought car to dealer on July 25 to be put in completely safe condition for cross-country trip. Pointed out that motor was running hot, and car pulled to right, especially when brakes were applied. (Note that this was less than 10 days after car was gone over in New York City Eastern Service Division shop.) I also had them put two new tires on front.

Dealer discovered that thermostat was defective.

When I got car on road, found pulling had not been eliminated. Car war almost impossible to handle on road from here to California, and in San Diego (August 15) brought it in to an oldtime wheel alignment specialist who reported the front end to be extremely loose. He corrected this, balanced wheels and changed the cam and caster.

When I returned to tell him car handled better, but still pulled when I applied the brake, he advised that there must be grease on the brake lining. (See story on this after I got home.)

A serviceman who lubricated car (August 8) discovered inner tread of each front tire was worn from defective front end (less than 3,000 miles after brandnew tires were put on front), with compensating wear on rear. He also showed me a drawer full of Buick transmission differential plugs he had to keep on hand because they regularly broke off when he opened them.

Stopped at Buick plant at Flint August 31, where we saw cars coming down assembly line with sprung doors, just as I had complained of in March.

Visited Consumer Service Office, Flint, August 31 to complain of following:

Excessive consumption of engine oil.

Excessive consumption of Dynaflow oil.

Excessive body shake, resulting in loose doors and general noise and discomfort.

Advised that left door was on way to jamming again.

Car scraping bottom on inclines.

Poor handling of the car on the highway.

Young man's comment on use of oil was, "Two quarts per 1,000 miles is normal. We must tell you that, but I wouldn't want it on my car."

Regarding other complaints, he said they would be forwarded to New York City service office (where car already had been serviced.)

Tired of Buick's constant motions without action in correcting faults reported herein, and concerned about continual risk of life entailed by car's poor performance, on September 8 I took car to my own serviceman upon return from coast. He discovered:

Defective rear axle oil seals had leaked so much grease on my brake linings that although right lining could be cleaned, left brake lining had to be replaced.

Defective drain plug gasket had caused leakage of engine oil.

Dynaflow still was leaking.

Tailpipe was hitting against differential as result of body shake.

Because of design of this car, repair of brake linings and rear axle oil seals was an expensive job. This repair bill, including complete servicing was $60, greater than I ever had in the 6 years and 90,000-mile history of my 1949 car (including replacements).

In talk on September 9 with spring man who had corrected the front end of the car, which again was in bad shape as result of 3,000 miles driving over good highways, he advised that in 1 week he had had 3 new Buicks in for change of shock absorbers because of poor performance of those on the Buick.

Brought car to Buick dealer September 12 for repair of Dynaflow leak—also brought along left brake lining to show them. Also to ask for repair of left door which was banging around and about to jam.

Eastern service manager happened to be in that day. He insisted that "there was no trace of grease on the lining." When I picked it up I got grease all over my suit. He also drove the car and assured me that "nothing was wrong with the door."

September 27 left door jammed and could not be opened. Buick dealer opened door. Said car must have been jacked up causing chassis to "spread," thus admitting poor structure of car. Car had only been raised on standard lubrication rack.

Other defects: Body shake caused hood spring to loosen, causing hood to vibrate as you drive. Knobs of heater controls fall off periodically. Car continues to handle badly, and to be uncomfortably noisy as doors shake in their frames.

This car is not "an isolated case" (the term used by General Motors to pass off dealers' reports on customer complaints, and continually used until, according to my own dealer, defective cars reported amount to 3 to 4 percent of sales, a sizable percentage of over a million cars) but is typical of careless engineering in an effort to turn out cars for rapid sales, is indicated by:

The record showing that, while denying the defects verbally and failing to correct them through servicing, General Motors (Buick) picked up the dealer's bills for servicing this car and did some servicing themselves.

Reports from Buick owners and both Buick and independent servicemen whom I met all over the country, plus the Consumer Report on 1955 cars revealing the same problems.

The promotion sent by Buick's main office to all Buick owners, urging wheel switching ever 2,000 to 4,000 miles to prevent tire wear.

Advertisements for the 1956 Buick, claiming new front end geometry, newly balanced chassis, new shock absorbers (although the 1956 cars generally have not been changed basically).

The public is helpless against the literally deadly competition between automobile companies. The reckless pricing and poor quality of auto products and auto servicing. The constantly increasing power of cars. The slowness with which safety factors are being added, and then only as extras. The pack and other price policies that make it impossible for a customer to know what he is buying and for what price.

Isn't it time for Government regulation of the automobile industry?

Miss JANE BARTON,
Albany, N. Y.

(Who has never owned anything but a Buick and had never expected to own anything else.)

Politics Is Not a Dirty Business

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1956

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Yonkers Herald Statesman of October 6, 1955, entitled, "Politics Is Not a Dirty Business":

POLITICS IS NOT A DIRTY BUSINESS

On the testimonial he is listed as the Honorable James A. Farley. He was in his time State chairman and national chairman of the Democratic Party. He was the man who managed the first two campaigns of President F. D. Roosevelt, in whose Cabinet he served for two terms as Postmaster General. And now he is head of a large soft-drink international sales corporation.

But to many who "knew him when," here in Westchester, he is still just plain Jim Farley, from Nyack across the river. Even among Republicans he is accorded the prestige of being one of the smartest politicians of our era. That is why it is worth reviewing his words Monday evening at the testimonial dinner to our new Westchester county judge, George A. Brenner, of Yonkers.

Political ethics, holds Mr. Farley, should be as rigid as the moral code.

"It must be recognized," he told the testimonial diners, "that politics and morality are one and indivisible. * * * Power to do good is the true and lawful end of political inspiration. This power to do good is not to be confused with political zeal, which can be good but which is often mistaken. Politics should bring man ordered progress toward general convenience and usefulness."

Admitting that political power carries with it the responsibility for wise, judicious use, Mr. Farley advised:

"Seek power but love liberty." In acknowledgment of his increasing years, the Democratic Party's elder statesman advised:

"My generation is passing. Maybe we did not handle our problem too well. Maybe we were too tolerant of political transgressors among us. That could be. If so, as a member of an older generation, I would be most remiss if I failed to appeal to young people to take up politics, so that the world may go on to its rendezous with moral destiny.

"We must not shrug off our responsibility by washing our hands of politics as a dirty business. Politics is not a dirty business unless we allow it to become so. It is rather a most serious business which has need of the most high-minded and the most generous-hearted among us.

"Politics should be a joyous dedicated companionship toward advancement of man on earth, just as religion is a glorious companionship toward bringing final, happy fulfillment in eternity. Moral strength must arm the political leaders of the future if we are to keep the country free and by example set the world free."

To those wise words from an experienced man with exceptional political background, we say a hearty "Amen." And particularly we hope the words fall upon receptive ears of our young people. In their hands lies our political future.

Economic Freedom and the Automobile Industry

EXTENSION OF REMARKS
OF
HON. PHIL WEAVER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1956

Mr. WEAVER. Mr. Speaker, as a Member of the Congress and as an automobile dealer, it affords me a great deal of pleasure to commend to the Members of this body for reading, an address by Hon. JOSEPH C. O'MAHONEY, Senator from Wyoming. It was delivered yesterday to the annual convention of the National Automobile Dealers Association assembled here in Washington.

This is typically an American statement in that it offers encouragement to small businessmen throughout America who are in the automobile business. Senator O'MAHONEY recognizes the right of an individual under our free enterprise system to choose his destiny without fear of reprisal or undue pressure from the giants of the automobile industry. It calls for a spirit of fairness and equality for these dealers in their contractual relationship with the automobile manufacturers.

The remarks of the Senator are fair and, I feel, indicative of the viewpoints of every franchised new car dealer in this country.

ECONOMIC FREEDOM AND THE AUTOMOBILE INDUSTRY

(Address of Senator JOSEPH C. O'MAHONEY, Wyoming, before the 39th annual National Automobile Dealers Association convention, Sheraton Hall, Sheraton-Park Hotel, Washington, D. C.)

Two congressional investigations of 1955 have, without a single line of legislation having been written, already produced some beneficial results in the automobile industry. I know that Senator A. S. MIKE MONRONEY, of Oklahoma, who headed the subcommittee of the Senate Committee on Interstate and Foreign Commerce, and I, who had the honor to be in charge of the work of the Judiciary Subcommittee on Antitrust and Monopoly, agree that without the cooperation and assistance of NADA and of the automobile dealers of America little could have been done, so I begin by expressing my deep appreciation to this organization and to the thousands of automobile dealers all over this country who wrote me and who responded to the questionnaire sent out under Senator MONRONEY.

The staffs of both of these committees worked diligently and effectively to assemble the information which you presented us, and by the public hearings we were able to place the facts in a written record for all to see. For the first time, in our hearing dealers and manufacturers were enabled to sit around a congressional table in an open hearing and state their views, face to face. Open discussion is good for the soul. It can now be said that signs are already appearing to indicate a better relationship between the factory and the dealer. The pressures which the dealers felt were used by the factories to compel them to distribute at their own loss more cars than the market could soundly absorb are apparently disappearing and there come to the Senate Office Building expressions from men who ought to know that 1956 may see a new spirit of good will.

FACTORY PRESSURES CAUSE BOOTLEGGING

We shall make a mistake, however, if we believe that the problem of factory-dealer relationship can be solved, or that a rule can be developed which without the sanction of law will preserve the economic freedom of local dealers from the power of central management. It is true that bootlegging in the automobile business was generated because the factories were manufacturing more automobiles than the market would absorb, and that the manufacturer, while insisting upon full payment at the factory gate, pushed more cars upon the individual dealer than he could profitably handle. Indeed, the manufacturer could not have been oblivious to the evils that resulted including the operations of the vacant-lot dealer who, without salesroom or repair shop, entered into competition with the distributor holding a formal franchise from the factory.

The inventory of unsold automobiles at the beginning of 1956 is actually greater than it was at the beginning of either 1955 or 1954 and, if the fears of financial failure which so many dealers entertained before the problem was brought to Congress are to be allayed, the relationship between the manufacturer and the dealer must be placed upon a more equitable, sound and bilateral basis than it has heretofore been. The factory in its own interest must work through contented distributors, whose charters of operation cannot be modified by telephone orders, or private tips from factory representatives who, with or without the knowledge of central management, have presumed to tell the dealer what he must do or else.

No one will deny that automobile manufacturers, the six of them that are left, are managed by able, efficient gentlemen who, in man-to-man dealings, follow a high standard. No one can doubt, however, that a system which places all the risk on the distributor while the manufacturer receives cash on the barrelhead is obviously one which in the end would be as bad for the manufacturing corporation as it has proved to be during 1954 and 1955 for the dealer. A system which allows the manufacturer to convey his orders orally and without record establishes an atmosphere of arbitrary power which inevitably breeds not only discontent, but fear, and finally resentment that is bound eventually to explode to the detriment of all concerned.

THE FRANCHISE SHOULD PROTECT DEALERS' INDEPENDENCE

In my opinion there can be no sound and stable relationship established between automobile manufacturers and automobile dealers unless there is an agreement binding upon the manufacturer that whatever suggestions or orders management desires to convey to the dealer shall be in written form.

The dealer by his reports to the manufacturer lays bare his whole financial status. He has no secrets from the central offices of management and he has no security from the desires and plans of central management or its spokesmen so long as they can be transmitted to him without a record upon which the dealer may make his appeal.

In this position, he stands helpless before an appeal to a board made up by management.

The American system of settling disputes among citizens is through an impartial court sworn to do justly by all parties to the dispute. That is why in almost every community throughout the land we see above the courthouse as the symbol of justice, the goddess with the scales in her hand and the

blindfold on her eyes to shut out all impressions that might tempt her to allow the scales to be tipped by anything but the truth.

The lawbooks are full of cases which dealers have lost in their suits against central management because the nature of the sales agreement under which they operated was such that they had signed away their basic rights and had in fact voluntarily made themselves little more than vassals of the manufacturer. Baseball players and even football players, who are bought and sold by their managers like chattels, have nevertheless contracts which are enforceable in the courts, contracts under which both parties have rights and responsibilities. The defect of the automobile franchise is that the manufacturer's right of termination is an instrument by which the car dealers are reduced to a defenseless position. Despite all the protestations of manufacturers that they wish to be fair and just to the dealer, they have contrived by the common form of franchise to put themselves in an impregnable position, while the dealer is at their mercy. When the holder of a 1-year franchise finds himself approaching the renewal date he is in no position to bargain. Even though he may be a dealer who has made large profits during the post war years when the public was ready to buy anything that ran on four wheels, he is nevertheless just as powerless as the poorest dealer in the land when he sits across the renewal table with the spokesmen for the manufacturer.

DEALERS HELPLESS AGAINST GIANT INDUSTRY

This is not the American pattern under which business is carried on at arm's length by equals whose obligations are assumed by mutual consent. It is a new pattern which has been developing in the fields of industry in which individuals find themselves dealing with large corporations by which they are as clearly outclassed as a featherweight would be in the same ring with Marciano.

Sometimes the man on main street engaged in business with his friends and neighbors imagines that he belongs in the same class as the mighty corporations which deal in interstate and foreign commerce. Let us see how completely dissimilar are the individuals who are the local distributors of motorcars and the manufacturers who make them. The local distributor, even when it is a local corporation, is still primarily an organization that is owned and managed by the same persons. That is not the case with automobile makers like General Motors, Ford, and Chrysler. These corporations are owned by thousands or hundreds of thousands of stockholders whose only participation in the handling of the money they paid for their stock is to sign a proxy for the managers. In the case of the General Motors Corp., the owners or stockholders number over half a million and, as shown in the General Motors Handbook of Information, although more than 90 percent of the stockholders are individual persons, no one individual owns as much as 1½ percent of the common shares. These shareholders live in every State and in many foreign countries, and more than 60 percent own 50 shares or less. In the economic state, which General Motors can properly be called, the individual owner sinks to insignificance. But at least he has a vote, while in the new plan just announced by the Ford manufacturing company little people with small sums of money to invest have been invited to buy voteless stock of the Ford corporation so that they do not have the right even to sign a proxy as in the case of General Motors.

GM A PRIVATE ECONOMIC STATE

In General Motors the 50 largest stockholders own 38.9 percent of all the outstanding stock. The 15 largest own 32 percent. Every lawyer and every business expert who is at all familiar with the control of large-scale corporations knows that the group which can control 30 percent of the outstanding stock in any corporation, in which the great majority of the individual stockholders are the owners of only a few shares, are in fact in control of the corporation. These few stockholders are the rulers of an economic state, the geographical extent of which exceeds local, State, and even international boundaries.

General Motors, for example, has plants in 64 American cities and in 18 foreign countries through subsidiaries created under the laws of those countries. It does business in every State of the Union. The raw materials it buys from steel to plastics, wood, glass, fabrics, copper, chrome, and countless other commodities constitute the economic life of many communities in which they are produced and fabricated. General Motors boasts in its Information Handbook that it has 21,166 suppliers, located in every State and ranging in size from small shops with a dozen or so employees to large mass-production companies in the steel, rubber, and chemical industries.

The dictionary of complimentary adjectives does not contain words enough to praise the engineering skill, the manufacturing efficiency, the managerial genius of the men who have built this organization. Its products include the tools of other industries, the household appliances that make housework so easy and comfortable for the modern housewife, tanks and guns, rockets, guided missiles, and ammunition with which to make war, and its financial strength is so great that imagination can scarcely place a boundary on the activities in which it may engage.

Add to its 500,000-plus stockholders, its 600,000-plus employees, the employees of its 21,000 suppliers, and of its 18,000 dealers, you find that the population of this economic state is greater than the population of some of the States and of most of the cities in the United States. Its gross revenues, which in 1955 were approximately $12 billion, are more than one-third of the total gross income of all the farms and ranches of America in the same year. I make this comparison because the farm industry is carried on by individuals for the most part, while the manufacture of automobiles is carried on by huge corporations. In the instance of General Motors, the world's largest manufacturing corporation, its gross revenue amounting to more than one-third of the gross revenue of the entire agriculture industry, illustrates the nature of the problem that this generation must solve if it is to preserve political and economic liberty for the people of the United States, to say nothing of the people of the world.

While the economic status of the farmer is deteriorating that of the great corporations is improving and by means of steadily increasing mergers and combinations they are exercising such control over the whole national economy that the States have lost the power to protect the public interest while the pressure for the expansion of Federal power continues apace. Federal boards and commissions multiply in number and assume more authority over the lives of the people.

Regulation of private activities by Government was never popular and is not popular now. During both World Wars in which this Nation was engaged, when Congress found it necessary to mobilize all our industrial resources to win, it passed laws giving Government the power to regulate prices, to allocate materials, to place restrictions upon many peacetime businesses in order that the terrible business of war could be carried on to a successful conclusion. In every such act Congress provided that the power should end as of a certain date. When victory did not come as speedily as had been hoped, these grants of emergency power were extended, and even now, in the name of defense and in international relations, the Federal Executive asks authority greater than Congress likes to give—witness the request for power during the next 10 years to make commitments for foreign aid.

Only a few days ago the President, in submitting his annual economic report, advocated a study of the problem of restoring the Government's power to regulate the terms of consumer installment credit, saying that "installment credit has repeatedly been tested and found excellent." He went on to say that, "nevertheless, installment credit sometimes accentuates swings in the buying of automobiles, furniture, television sets, and other consumer durables, thereby exposing the rest of the economy to the hazard of widened fluctuations."

CONCENTRATION OF ECONOMIC POWER CHANGING OUR SYSTEM

What I am pointing out is that concentrated economic power has grown so great that it is changing our entire economic system. It is changing the relationship of citizens to one another, the relationship of citizens to corporations, the relationship of corporations to Government, and, above all, the relationship of Federal Government to the States and to the people. Our system is changing before our eyes, but we don't see it.

Government has the responsibility imposed upon it by the Constitution to regulate commerce in time of peace and in time of war, but Congress has always been slow to regulate and rigidly reluctant to impose Government controls over the activities of its citizens. It yields to such grants only in times of emergency when the life of the Nation itself is at stake. In normal times of peace it desires only to exercise its constitutional power of regulation. By regulation we mean only the establishment of those rules under which the citizen may pursue his private life without the intervention of the Government to say what he may or may not do. The American people are instinctively loyal to the Jeffersonian principle "that government is best which governs least."

The members of this organization, however, have learned from their experience in the last few years that government is not the only institution which assumes the power of control. I dare say it was one of the most important events of the 20th century when the automobile dealers of America in 1954 and 1955 became aware of the fact that they as individuals had to submit to the controls of the manufacturers whose products they thought they were selling as free and independent enterprisers. Now they know that though they themselves were the owners of the properties they operated, they were frequently compelled to surrender their own judgment as to what they thought was best for their business affairs by the pressure of factory representatives who bore no responsibility for the orders they gave or for the results that followed.

Lest it be through that I am overemphasizing the General Motors Corp. in this discussion of the concentration of economic power, I want to point out that it has been known to economists and others for almost 50 years that in modern organized business the giant units which have appeared have separated ownership and management and have stepped with controls into the vacuum Congress left by failing to regulate. The stockholders don't manage. They merely furnish the capital. Management is concentrated in a few hands, and a comparatively few such organizations are greater in economic power than many of our States and cities.

Statistics available in the Library of Congress show that there are 25 corporations in the United States whose revenues are larger than those of any State or municipality, except the 5 largest, namely, the city of New York, and the States of Pennsylvania, California, New York, and Ohio. New York City ranks second to the Federal Government

among all the public bodies of this Nation in the amount of revenue it collects. In 1954 our largest city received total revenues amounting to $2,866,000,000. Six corporations, national and in some cases international in scope, collected more money from the people that year than did New York City. They are, in the order of their magnitude, (1) General Motors, (2) Standard Oil Co. (N. J.), (3) American Telephone & Telegraph Co., (4) United States Steel Corp., (5) Sears, Roebuck & Co., and (6) General Electric Co.

The Metropolitan Life Insurance Co. collected $2,176,000,000, which is more than the State of Pennsylvania, the largest revenue gatherer of all of the States. Chrysler Corp. collected $2,072,000,000, or more than the State of California, the State of New York, or the State of Ohio, the revenues of which were respectively $2,300,000,000 for California, $1,924,000,000 for New York State, and $1,090,000,000 for Ohio.

"SO WHAT?" TOTALITARIANISM

This is a situation which cannot be waved off with a toss of the head or with the derisive jibe "So what?" We know now that the economic decisions which are reached behind closed doors in the offices of these great economic states reverberate throughout the land and affect business not only in every State, city, and county, but affect likewise whole segments of the population. Our very way of life is being altered and methods of totalitarianism are succeeding the methods of democracy.

National business of the size above indicated cannot be conducted without affecting all interstate and foreign commerce. The Constitution gave to Congress the power and the duty to regulate such commerce in the public interest. If that constitutional authority is not exercised so as to preserve our economic freedom, political freedom itself will be in danger. We cannot afford to close our eyes to the cold war which envelops the world for it is an economic war. There are two contrary principles involved in this conflict. One is the principle of Soviet Russia that the dictators of the proletariat shall tell all the people of the world what they can or cannot do, both economically and politically. The other principle is the one which we have inherited from the framers of the American Constitution, namely, that no individual, no dictator, no group, no class can govern this land, either politically or economically, according to its own will. To the latter principle all Americans still adhere.

If we wish this principle to prevail, then we must quickly get about the task of providing through the Federal Government the rules—not the controls—under which our economic system shall work, the laws to guide business, not the discretionary boards to control it.

THE AUTOMOBILE INDUSTRY HAS LEARNED THE FACTS OF LIFE

The automobile dealer has learned the economic facts of life the hard way. Management in the automobile industry has likewise seen the writing on the wall and seems ready to make adjustments. To be just, however, these adjustments must have the force and effect of law. They should be adjustments of freedom, not mere adjustments of control. They must be adjustments that will clearly define powers, duties, and responsibilities. If that be done, we in America can show all the peoples of the world that dictatorship of any kind need not be tolerated because social justice can be achieved by the people themselves.

There are certain steps which it seems to me should be taken immediately. I shall not here discuss proposals which the Committee on Antitrust and Monopoly have before it covering the larger field, but I do not hesitate to express the first step which I feel should be taken by which the automobile industry can lead the way on the road back to economic liberty.

LET'S WRITE A CONTRACT ENFORCEABLE IN THE COURTS

The first step would be the negotiation of a sales contract between automobile manufacturers and dealers carrying provisions of mutual responsibility and enforceable in the courts.

Such a contract should eliminate completely all oral orders or suggestions to the dealers by factory spokesmen with the threat of force.

Such a contract might well be flexible enough to protect the dealer and the factory in years of high or low public demand, of high or low production. It might be feasible, for example, that the allotment of cars to distributors for sale could be made annually by mutual consent upon the historic basis of public demand with a provision for a bonus of extra cars for the distributor with a good record in an area of high demand, and a provision to the effect that in times of high inventory and difficult sales the factory bear a part of the loss resulting from over production.

If dealer councils are necessary to maintain a sound basis of mutuality between the factory and the dealer, then both the manufacturer and the dealer should have an equal hand in selecting the persons to sit upon the councils. The dealers should have the right to organize in their respective regional areas and elect the members who are to represent them on such industry councils.

The pattern of procedure should be established by Federal law so that it would have a permanent status, and not be subject to fluctuation with the changes of managers.

This should be a rule of order ratified by the national Congress, and it would point out to every other industry how a self-governing economic system could be established, abolishing arbitrary powers for either management or Government, but establishing under written contracts mutual rights to which all parties concerned could appeal in case of disputes to the judicial system established by the Federal Constitution.

Grand Opportunities in Ireland

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Tuesday, January 31, 1956

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Grand Opportunity," appearing in the Boston Post of Sunday, January 29, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GRAND OPPORTUNITY

Deputy Prime Minister William Norton of Ireland, who visits Boston this weekend, is a refreshing change as a visiting statesman. He asks for no handouts, no charity, no loans. Instead he offers American industries a chance to make some money in Ireland by taking up free land, hiring plentiful labor, accept cash grants and tax concessions.

Whether this highly individualistic approach to relations with a nation long friendly and intimately entwined in Irish-American cultural sympathies will work out is in the lap of the future.

But, here is an opportunity for many well-to-do Americans of Irish ancestry and sympathy to really do something for the Old Sod. They have long praised it, celebrated its glories on St. Patrick's Day, and wept over its tribulations. Here is a practical way to offer some substantial testimony of their sincerity.

Eire has done a magnificent job of hauling itself up by the bootstraps. The air age opened a gateway to Ireland of immense importance. The merits of a great people are obvious. Their needs are plain. It's about time to stop crying into the beer about the Old Sod and do something about it.

Does Greater Boston Suffer From Hardening of the Arteries?

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following radio address I delivered over station WMEX, Boston, Mass., on Saturday, January 21, 1956:

DOES GREATER BOSTON SUFFER FROM HARDENING OF THE ARTERIES?

Ladies and gentlemen of the radio audience, greetings. What happens to Boston, the nerve center of New England, is not only of importance to people living in the city and in the metropolitan area, but has an effect on everyone who visits Boston to shop or to transact business.

Boston is an old city, that must adjust itself to many new and compelling circumstances.

Realizing this need, and in an effort to focus attention on the most urgent problems so that solutions may be forthcoming, Boston College has sponsored a series of seminars to explore the economic, fiscal, and political problems of this key city.

Public officials, leading merchants, professional men, and citizens contributed their valuable comments on all aspects of the situation.

I cannot possibly cover or do justice to all factors in this brief broadcast. So, I am taking the liberty of selecting some of the highlights that will be of interest to the average citizen.

Any diagnosis of Boston would have to include a recognition of the need for regional planning and the seriousness of Boston's financial problem.

Because I do not have the time to report what the conference of last year had to say on these vital issues I have decided to bypass them in my remarks and dwell instead on some aspects of the transportation problem. For the motor age is exerting the greatest impact on our cities.

Mr. P. A. O'Connell, general chairman of the second annual conference, presented some revealing facts on the parking problem.

He stated that "parking is absolutely necessary if we are to attract people to trade and do business in Boston."

He stressed the fact that suburban cities and towns are taking a substantial amount of business away, because people cannot find a place to park in the traffic jungle of Boston.

Christmas retail trade, nationwide, was the largest in history. Yet a recent report tells us that trade in Boston, during December of 1955, was less than the corresponding period in 1954. The colder-than-average weather

of last December, plus the press of all-day parkers in the center of Boston, were given as reasons for the failure of trade to keep up with the national average.

It was almost 10 years ago that the State legislature gave Boston permission to arrange with private parties for the construction and operation of a garage under Boston Common, in an effort to meet parking demands. At long last the project appears to be shifting into first gear, but in the meantime, the congestion has become much worse.

In the center of Boston, there are 50 million square feet of general business accommodations. Office space accounts for 48 percent of this total; retail facilities 29 percent; manufacturing space 18 percent. Three hundred and fifty thousand people a day use these accommodations. One hundred and fifty thousand come by passenger cars. As of last May there were about 21,500 parking spaces in the downtown business district, of which 15,700 were off-street, and 5,800 on-street. Unless a tremendous effort is made, thousands of cars carrying potential customers will never find room to stop in the business district. Their only alternative is to stay out of Boston.

By contrast, the city of Washington, D. C., with a population about the same as Boston, has parking facilities for 27,000 cars in an area much smaller than Boston's. The Washington Board of Trade cooperates by printing and distributing maps showing where the parking spaces are located for the convenience of shoppers. In the midtown area alone there are 170 off-street parking places.

Failure to provide accommodations for the automobile is costing downtown merchants in Boston, not only a lot of customers, but also a considerable real estate investment.

Other cities, as Mr. O'Connell pointed out, are desperately trying to catch up with the automobile age as they finally realize that major adjustments are necessary. One of them is the sprawling community of Los Angeles. In 1919, the downtown area did 74 percent of the business of Los Angeles County. By 1950, it had dropped to 35 percent, and in 1954, to 29 percent. Dallas, Tex., has had the same experience. Retail sales in downtown Dallas, through 1947 to 1953, stayed at $170 million, while total retail sales for the metropolitan area rose from $226 million to $837 million, or a gain of $611 million. Downtown marked time while the outskirts picked up all the new business.

In 1929, Harvard College paid $510,000 for the property located at 161 Tremont St., in Boston. In 1954, it was sold for $80,000, or less than one-sixth of its original cost. In 1924, Harvard paid $612,000 for the property at 165–6 Tremont Street. In 1954, it was sold for $100,000. These deteriorating values are tied up with the fact that, when business leaves downtown in order to reach the customers who cannot, or will not, brave the battle for parking space, it seldom if ever returns.

Municipal off-street parking is good business. It helps the city government, the taxpayers, industrialists, merchants, customers, and citizens.

The United States Chamber of Commerce figures that each new off-street parking space generates about $20,000 in retail sales and creates new jobs.

With each passing day, there are more cars on the streets.

It is imperative that we provide more space for them, both at rest, and in motion, if downtown business is to survive.

The Commonwealth of Massachusetts with great courage and realism, is building great arteries to free the circulation of motorcars upon which the economic life of Boston depends.

The modernization of highways, which is the largest program of the State government, bears witness to the need of providing room for the vast number of people who are transported by automobiles.

In this connection, I want to speak of a new public instrumentality that has been developed to meet the situation.

It is the toll-financing method.

By it, the legislature authorizes the creation of a revenue authority, that is able to build certain facilities with greater speed, and at less cost, than they can be built as a purely public undertaking.

The first one, and it is highly successful, is the Mystic River Bridge Authority.

It built—and it operates—the great double-deck bridge that links Boston with Chelsea and the north shore.

Ephraim A. Brest, chairman of the authority, testified concerning the problem, and how it was conquered.

For nearly half a century there had been proposals to replace the old drawbridge, but they were chilled by estimates of cost, and by lack of funds.

Finally, when draw openings had mounted to more than 7,000 a year, creating a bottleneck of not only vehicular traffic, but waterborne traffic as well, the long-deferred job had to be done.

The Mystic River Bridge Authority was organized, and it went to work. The bridge was completed in less than 23 months.

It was a model of efficiency during construction.

And it is operating in the black.

At no stage was it hampered by the bureaucratic redtape which hampers even the best of State officials. For example, the authority had to relocate 700 families to make way for the structure. There were many understandable protests that might have delayed and even defeated the project if it were beholden to political pressures. In the public interest, the families had to be relocated, but the authority was sympathetic and cooperative. Arrangements were made for the moving of 54 two-decker and three-decker houses in Chelsea, to a new location 2 miles away. In the movement, the tenants were not forced to leave their homes for even one night, because temporary utilities were provided for them.

Boston could well use similar authorities.

The consolidation of several vehicular facilities with the airport, and the port of Boston under one revenue bond authority, the combined responsibility to be self-sustaining, would help to solve another Boston problem.

The mystic River high-level bridge was built, and is operated, without cost to the Commonwealth or the cities that are joined by it. Not one penny of Federal funds is involved.

Another element of transportation that is directly tied in with the automobile, is Logan International Airport in East Boston. Potentially, because it is nearest to Europe, and because of its size, it could be the finest in the world.

It has the longest commercial runway in the United States. In 1954, it handled more than 5 milion pounds of mail; more than 7 million pounds of express, and 25 million pounds of freight. It was an air terminal for one and one-half million passengers.

Arthur D. Cronin, former member of the State Airport Management Board, reiterated the fact that commercial airports have just scratched the surface of their revenue potential. This does not refer to the revenue that comes directly to an airport from rentals, leases, and fees from the airlines themselves. He emphasized the much greater revenue that could be built up from nonaviation revenue * * * from restaurants, parking concessions, sightseeing facilities, observation decks, etc.

In 1954, the observation roof at the Newark Airport took in paid admissions of more than $350,000, while the airport restaurant grossed more than a million dollars.

In the same year, and although it was handling more passengers, Logan produced less than one-half in one category, and less than 10 percent in the other category.

The reason?

According to Mr. Cronin, this was due to the lack of an adequate terminal building at Logan despite repeated requests to the legislature for appropriations for such a building, and even though the need was recognized and plans were drawn and accepted for such a building as far back as 1945.

Again, we come up against the problem of parking.

There is plenty of land available for parking on the 2,200 acres, but there were facilities a year ago for only 530 cars. Both travelers and visitors complain about the congestion.

The management must go hat in hand to the legislature for funds, instead of being able to act efficiently under a self-sustaining independent authority with the right to raise and spend its own money.

Transportation is but one of the many problems affecting the economy of Boston.

The College of Business Administration of Boston College is to be commended for promoting the series of conferences that will lead to a better future for the city that is the very heart of New England.

Thank you for listening.

None Are So Low as the Narcotics Pushers

EXTENSION OF REMARKS

OF

HON. ANTONI N. SADLAK

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1956

Mr. SADLAK. Mr. Speaker, under leave to extend my remarks today, I wish to include an editorial from the Hartford (Conn.) Courant of January 17, 1956, which is most timely in view of the continued investigation and hearings by my Subcommittee on Narcotics of the Ways and Means Committee.

The editorial follows:

NONE ARE SO LOW AS THE NARCOTICS PUSHERS

Police authorities are making a determined drive to rid the city of drug peddlers and users. It is good to see a couple of pushers arrested for a change. The victim of the narcotics habit is a medical as well as a criminal case. But there is not much that can be said in extenuation of the characters who make money from the sale of narcotics. They should be put out of circulation for a long time.

When you lift up the narcotics log, you are likely to find a lot of strange things under it. One thing turned up by the recent arrests was the apparent solution of a mysterious death. Another was a sidelight on the high cost of living as a narcotics addict. One of the victims testified to police that he had spent $3,700 in 6 months for narcotics.

With this as a base figure it is not difficult to see how narcotics addiction is tied to other kinds of crime. The addict is living way beyond his means even if he doesn't spend a penny for room or board. And, as the addiction grows deeper, the amount of narcotics needed grows greater. Thus the addict digs a pit that gets deeper and deeper. There is no way out until the addict either dies or is arrested and placed in an institution.

Of all the forms of criminality few are as low as that of seducing the young and pan-

dering to the weaknesses of the addict through the sale of narcotics. Let us hope this renewed activity by local police and Federal authorities will mean the end of the road for the pushers.

Our Civil Defense Agencies

EXTENSION OF REMARKS
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1956

Mr. GUBSER. Mr. Speaker, frequently our civil-defense agencies are criticized unfairly. Rarely are the fine accomplishments of these agencies given the publicity they deserve. The enclosed article from the Sunday supplement of the Palo Alto Times, Palo Alto, Calif., is an exception to the rule, and I submit it herewith for insertion in the RECORD:

THE NIGHT OF THE FLOOD—CD'S CHANCE TO "PUT UP OR SHUT UP"

(By John Hubbard)

("Civil defense," the man said, "is a laugh. It's a bunch of guys playing a game. Just wait until something really happens and then watch them fall flat on their foolish faces.")

No one knows exactly when the fateful logjam started building up in the culvert that channels San Francisquito Creek under a Bayshore Highway bridge and directs its flow out toward the bay.

Maybe it was during the early evening hours of December 22, 1955, when the muddy current, already badly rain-swollen, swept high along the creek banks west of Palo Alto and in the city itself, and began pulling down debris that had previously been considered safely above the high-water mark.

Or maybe it wasn't until later, until the night, when the winds howled with hurricane fury and the dark clouds unleashed the total power of their torrential contents and the creek became a surging, enraged river.

The time it happened is not so important. But the fact that it happened is.

Because the logs and the other debris laid a dam in the culvert, created a freak barrier that stopped the water from following its natural course and sent it rolling back toward the city.

About midnight, then, the inevitable occurred.

The creek, fed by an unprecedented runoff from the high flatlands and foothills to the west and choked off at Bayshore to the east, swept over the tops of the levees in one of Palo Alto's finest residential areas, timidly and tentatively at first, then—gathering momentum—with increasing violence.

It coursed waist high along the streets, ran through the back yards and flower gardens, and came rushing into scores of homes, shocking into confused wakefulness hundreds of unsuspecting men, women, and children.

At the city hall City Manager Jerry Keithley, informed of the spillover, conferred hastily with his aides, thought for a moment, then announced his decision:

"It's more than our own personnel can possibly handle. Call out civil defense."

("Civil defense," the man said, "is a laugh. It's a bunch of guys playing a game. Just wait until something really happens and then watch them fall flat on their foolish faces.")

Keithley's words set into motion a crucial chain of events. For this was the moment toward which 6 years of preparation had been directed. This was the peninsula's first big-scale, under-fire test of a volunteer organization that had been alternately intensively trained, then neglected; hopefully praised, then maligned.

This was the acid examination of the paper planning and the mock drills that had begun brightly with the Korean war, only to sputter uncertainly in the years of peace that followed.

This, in the teeth of the worst storm in recorded peninsula history, was civil defense's chance to put up or shut up.

Acting on Keithley's instruction, City Personnel Officer Wilbur Wagstaff, who doubles as Palo Alto's deputy civil defense director, and Fire Chief Louis Ledford, the assistant civil defense director, went rapidly to work.

With the help of other key workers operating in the city hall's civil defense nerve center, they notified the Red Cross that hundreds of people would have to be evacuated from the danger area; they contacted civil defense transportation boss Worth Prine to tell him the floodwaters were already too high for automobiles to bring out the threatened residents, that bigger vehicles would be required; they called Eric Edberg, representative of the local radio "hams" who had signed up for civil defense duty; they saw to it that an evacuation center would be established at Jordan Junior High School, which had been previously designated as an emergency shelter; they asked Dr. Herbert Brown, head of the civil defense medical unit, to send doctors and nurses to the school.

All these contacts, and others, took only a few minutes, because the procedures had been set down in black and white long before.

But then the civil defense leaders sat back to wait, perhaps with figurative fingers crossed, to see how soon—and how effectively—the reactions would come.

The wait was surprisingly, gratifyingly short.

Almost immediately the "hams" were on the job, keeping the air waves crackling with coordinating reports, water-level bulletins from critical creek areas other than the flooded districts, evacuation information.

Quickly, too, the Red Cross took charge at Jordan School, arranging for beds, preparing hot food for the evacuees.

In less than an hour, Palo Alto Transfer & Storage Co. vans were slogging along flooded streets, gathering up human cargoes from the water-swept houses, carrying them to the shelter.

When the water became too deep even for the vans, amphibious equipment was called in from Moffett Field to aid in the life-saving project.

And as the evacuees arrived at the school, the doctors and nurses were there to tend to their needs.

But, fortunately, not much medical work was required.

The evacuation went so smoothly, so rapidly that physical suffering was held to an almost unbelievable minimum.

Despite the fact that nearly 1,000 people had to be evacuated, there was not a single drowning, not even a recorded serious injury.

As Keithley said later:

"I think it was a miracle no one was killed. That water was running mighty high and mighty hard. I know; I was out in it. It could have knocked somebody over easily and swept him away. Every one of the 600 or 700 people who helped fight this flood deserves nothing but the highest compliments."

Added Ledford: "Without civil defense, the evacuation might well have been utter confusion. And that could have had deadly results. All those people waking up out of a sound sleep to find water racing through their houses. Why, when they came out to be evacuated, they had no idea of which way to go to reach safe ground because the water was flowing from several directions. That indecision could have been fatal if CD workers and other personnel hadn't been there to show them the way out."

And Wagstaff: "I saw a lot of military operations snafued during the war, when things were supposed to be planned down to the last detail. By comparison, this went incredibly smoothly."

And Gardner Bullis, disaster relief chairman of the local Red Cross chapter: "Watching the evacuation, you could definitely see the advantages of CD planning. You could see all those drills and paperwork sessions paying off. I thought the order, the lack of confusion were quite remarkable."

("Civil defense," the man said, "is a laugh. It's a bunch of guys playing a game. Just wait until something really happens and then watch them fall flat on their foolish faces.")

That's what the man said. But if he was in Palo Alto that night of December 22, 1955, he's saying it no more.

Proposed Parkway Along C. & O. Canal Route

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Thursday, January 26, 1956

Mr. BEALL. Mr. President, once again I feel I have a duty to call attention to one of the most amazing turnabouts I have ever witnessed within our Government. My reason for trying to get the facts to as many persons as possible is that the C. & O. Canal Parkway issue is not merely a so-called local problem but, in reality, is an integral part of our entire program for highway safety and defense transportation. There are many aspects to the matter which merit widespread consideration, and they were summed up in an extremely fine fashion by J. William Hunt, editor of the Cumberland (Md.) Sunday Times, in that newspaper's edition of January 22, 1956. I therefore ask unanimous consent that Mr. Hunt's excellent editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ACROSS THE DESK

(By J. William Hunt)

TWO YEARS OF STUDY AND SURVEYS PRECEDED 1950 RECOMMENDATION THAT PARKWAY BE BUILT ALONG C. & O. CANAL ROUTE—SOME FACTUAL DATA THAT MAKES NATIONAL PARK SERVICE REVERSAL OF ITS POLICY UNDERSTANDABLE CAUSE FOR AREA INDIGNATION

On August 7, 1950, there was sent to Congress from the Secretary of the Interior (then the Honorable Oscar Chapman serving in the Cabinet of President Harry Truman) the reports asked by the 80th Congress on a proposed parkway along the route of the Chesapeake & Ohio Canal between Great Falls and Cumberland.

A letter of transmittal accompanied the joint survey reports of the Bureau of Public Roads, Department of Commerce, and of the National Park Service, Department of the Interior. Two years had been spent by these Federal agencies in a thorough survey of the advisability and practicability of constructing a parkway.

A bill introduced by J. GLENN BEALL (then Representative of the Sixth Congressional District) authorized the expenditure of $40,000 for a joint reconnaissance study by the Public Roads Administration and the National Park Service * * * to determine the advisability and practicability of constructing a parkway along the route of the Chesapeake & Ohio Canal, including a report of estimated cost.

This authorization was approved by Congress on June 10, 1948.

Note that the original bill made the parkway a definite and important part of the survey.

Before any selfish interests had intruded on the scene; in an atmosphere unclouded by controversy, and in the careful thorough manner of doing a job assigned to them, the two Government agencies spent 2 years on reconnaissance surveys.

With what result?

In the 1950 letter of transmittal, signed by Dale E. Doty, Assistant Secretary of the Interior (acting for Secretary Chapman and with his approval) wrote to House Speaker SAM RAYBURN:

"I believe that the study has brought out the fact that it is entirely practical to construct a parkway along this canal and that it is advisable to do so, provided that the necessary additional right-of-way can be obtained."

In line with this proviso of additional land, the last session of the Maryland General Assembly authorized purchase of the needed acreage between Cumberland and Hancock.

It is our intention this week to trace this whole parkway situation factually from its beginning, and we hope the reader will follow the step-by-step accounts already given, even though it may seem like dull statistics. At the proper time our pent-up indignation at last week's complete reversal of attitude, over the signature of Conrad L. Wirth, now Director of National Park Service under Secretary Douglas McKay, may well break out in a manner competent to reflect the amazement and anger of the Cumberland area over one of the most high-handed and arbitrary actions of an Interior Department that has already incurred sharp criticism for some of its other policies and actions on a national scale.

What has changed the attitude of the National Park Service under McKay and Wirth?

Read this portion of the August 7, 1950, letter from the Department of the Interior to Speaker RAYBURN:

"Many advantages would accrue from construction of the proposed parkway:

"(a) The parkway would function as an approach to the National Capital in which capacity it would connect with the George Washington Memorial Parkway. It is important and fitting for the national status of the Capital area to be so recognized.

"(b) Recreation developments which have lagged far behind the population increase in this area could be provided by the proposed parkway.

"(c) The Government's investment in canal property which has not been utilized anywhere near its possibilities for recreation would be permitted to develop to the maximum on both local and national levels.

"(d) The parkway would provide a controlled access road facility from Washington into the mountains with the assurance of rapid uninterrupted traffic in time of need.

"(e) The project would have outstanding scenic and historical interests that could be developed on the theme of "The historic gateway to the westward."

And here is the concluding paragraph from the Department of the Interior 5 years ago:

"I concur wholeheartedly in this report as I believe that the study has fully disclosed that such a parkway would be both practical and advisable in addition to being economical to construct."

In the namby-pamby statement issued by the present Director of the National Park Service (Wirth) are several instances of a lack of comprehension of the facts.

Here is one illustration:

"A road should not be built on it (the canal)," Wirth writes.

The 1950 report does not propose building the parkway on the canal bed. As alternatives in locating the parkway, the original report mentioned two road locations that would not obliterate the canal bed, and as a third location merely mentioned that this last of three "possible" roadways would "involve the full use and practical obliteration of the canal prism * * * but very little of the length of the canal would require this type of location."

Here is the part of the 1950 report the present National Park Service director should read:

"One type of location would be on the towpath and extending outside the towpath so as to leave the entire canal prism intact. Where a two-lane divided roadway was needed in such cases, one roadway might lie on each side of the canal. * * * A second type of location would lie on the towpath extending into the canal prism, and leaving only a trace of the ditch."

Thus the first mentioned location and type of construction would preserve the canal and also provide for a parkway.

All honor to Senator Beall and Representative Hyde and to Senator Charles M. See and the Allegany County delegation for their splendid work in behalf of the parkway, and to all others who have "fought the good fight" for this most desirable public improvement. Senator Beall inaugurated the project and if we know our fellow countian he is not the kind to give up such a worthy undertaking without a battle.

This is only an opening shot. Let us all fight harder than ever for the parkway and against the mysterious reversal of policy that stems from the present occupants of the posts of power in the Department of the Interior!

Tax on Gasoline and Special Fuels Used for Farm Purposes

SPEECH

OF

HON. JOHN V. BEAMER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1956

Mr. BEAMER. Mr. Speaker, as a farmer myself and as a Representative from the Fifth District of Indiana that boasts of some of the finest farm land in the United States, I feel that I am deeply conscious of the fact that the farmer is not sharing in this Nation's unprecedented economy. Many letters come from farm friends and I have visited hundreds and thousands of farmers.

The big majority suggest that some help in solving their problem will be appreciated. The elimination of the excise tax on gasoline and lubricating oils used for agricultural purposes is one of the measures that will bring immediate relief to farmers.

I introduced a similar measure, H. R. 8586, and appreciated the prompt action taken by the Ways and Means Committee on these measures. It is hoped that the Committees on Agriculture in the House and Senate will give prompt attention to other proposals helpful to the farmers.

Fast Depreciation in the Jet Age

EXTENSION OF REMARKS

OF

HON. ALBERT P. MORANO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1956

Mr. MORANO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a news story which I released today concerning the plight of homeowners victimized by vibrations caused by jet airplanes.

According to the Armed Services Committee, this problem is becoming a national headache, with no suitable solution in sight.

As a matter of fact, I have noticed many mysterious cracks appearing in the walls and ceilings of our own house in Greenwich, Conn., situated in the vicinity of the Westchester Airport, White Plains, N. Y. The only trouble is that, try as I may, I cannot identify the make and branch of service of the planes, nor am I certain they are the culprits. Up to now my hobby has been bird-watching, a most relaxing and rewarding pastime in the quiet country. Perhaps now the Nation will be swept by a new pastime, jet-watching, although eyes much sharper and reflexes much quicker than mine are required.

I commend this article to the attention of my colleagues in hopes that perhaps someone might arrive at a solution to this growing problem:

Air Force and Navy jets are not only breaking the sound barrier, but are breaking up a lot of houses throughout the country, Representative ALBERT P. MORANO, Republican of Connecticut, learned this week.

MORANO stumbled upon this nationwide problem when he took a constituent's complaint to the House Committee on Armed Services.

One of Morano's Fairfield County constituents, Joseph Friedman, of 64 Rippowam Road, Stamford, Conn., wrote the Congressman early this week stating that his house had just been redecorated, but that jet planes flying overhead were causing shocks below that cracked his ceilings and walls. Since his insurance company had no sound barrier policy, Friedman took his case to his Federal representative.

Robert W. Smart, chief counsel for the Armed Services Committee informed MORANO that the situation confronting Mr. Friedman was rapidly becoming a nationwide problem with similar type complaints arising at many places throughout the country.

Procedure for victims of the sound-barrier house-breaking phenomenons are instructed to make sure of the identity of the planes, establish the amount of damage, and be able to establish that the damage was caused by excessive vibrations of jet aircraft, according to Smart. They are then advised to contact their staff Judge Advocate at the Air Force installation nearest them, where they will receive blanks for filing claims.

If the claimant is denied compensation for damages, his next recourse is to proceed with a suit in the court of claims.

Morano said that the chief counsel told of at least one claimant, living in a Southern State, who was successful in action before the Court of Claims.

Because of this the committee has had to authorize the purchase of additional land in the approach and takeoff zone of bases where jet aircraft are operated. The committee has also authorized the acquisition of avigation easements covering areas adjacent to jet fields, in an attempt to minimize the liability of the Government, while at the same time giving adequate compensation to adjacent landowners for the unrestricted use of the air above their land.

"Even these actions present no final solution to the problem," Smart told Morano, "because, with the increasing speed of jet aircraft, it is now commonplace for such aircraft to pierce the sound barrier in normal training operations. This, in turn, results in the so-called sonic boom the violent vibrations of which often result in damage to homes and other property on the ground."

Smart said all Government agencies having any connection with the problem are making every effort to find a solution. He said it was a problem of great magnitude to which there was no answer at this time.

Middle East Crisis

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1956

Mr. CELLER. Mr. Speaker, under leave to extend my remarks, I insert herewith a speech I made before the Farband Labor Zionist Order on January 21, 1956:

Eight hundred Israeli lives have been lost by the daily incursions of Arab infiltrators into the territory of Israel. Thousands of dollars' worth of property have been destroyed or stolen by the infiltrators. The Arab economic boycott of Israel has resulted in the impeding of economic growth to a scandalous extent.

We do not hear any anguished cries against the Arab nations by any power individually or collectively in the United Nations. The headlines do not scream with motions for censure, strong censure, motions for compensation, motions for dismissal, against the Arab tactics. When Israel hits back, the air immediately becomes thick with condemnation, postures of horror are struck, from the United Nations comes motion after motion of censure against Israel.

I think it is pertinent to ask, "Where is the United Nations in all these acts of vandalism and murder perpetrated by the Arabs?" and again, "Where was the United Nations when seven Arab countries attacked Israel in 1948 in an unprovoked aggressive war?" Are we to conclude from this that the drip, drip, drip method of torture indulged in by Arab countries, that the rabid hate propaganda of the Arab nations against Israel, that the economic boycott, are to be dismissed by the United Nations, that in weighing the evidence, Arab provocations are to be thrust aside and ignored by the United Nations. Whether Israel's retaliatory acts are right or wrong is not at issue. What is at issue is that the world understand, and understand rightly, what is happening in the Middle East, what really are its tensions, and unless the world understands and sees the full picture, not only in part, not only the slice United Nations so far presents, but all of it, totally, will peace be served. I was in Israel in 1948 during the siege of Jerusalem. I was in Jerusalem when the Arab bullets whistled through the air and the whir of Arab planes beat upon our ears throughout the night, and the rest of the world was silent. The defense of Jerusalem, the Holy City devoted to three great religions, was left completely to the Israelis to defend. Is it that the world, thrusting justice and balance aside, is permitting itself to be blackmailed?

First the Western World seemed to be paralized by the fear that if Arab sensibilities were wounded, the Arabs would turn to the Soviet world to give it comfort. Now that the Arab world is playing games with the Soviets and the satellite nations, the free world stands trembling with fear before it, and the game goes on to wrest them away from complicity with communism. What the Arabs are say actually is "Heads I win, tails you lose." In the cold war Arabs have placed themselves in the enviable position of playing one faction off against the other, and at this time it seems as if they are succeeding.

The United States has announced its policy that the United States would help that side in the Middle East dispute which acts for peace. To me that is a very odd statement, not because on the face of it it is not a sensible and just attitude, but because the United Sates officialdom knows, and knows it well, that since 1948 the Arabs have refused to make peace, have talked about a second war, have excited their people to live in constant hatred, have refused to acknowledge and accept the existence of the State of Israel, have perpetrated act upon act of murder and destruction. Officialdom knows that tiny Israel has been forced to place frontier guardsmen around the edges of the small country, guardsmen who work all day and watch all night. Officialdom knows that the Arab nations have kept alive the problem of displaced Arabs, have refused to cooperate in any matter of resettlement, have refused even to discuss any regional water plan, and have been successful to a large degree in their economic boycott. All this officialdom knows. But this, officially, we do not say.

There are 40 million Arabs and only a million and a half Israelis. There are seven Arab nations and one little democracy. Shall history say of the Western World that so great was its desperation that one little nation, which it itself brought into being, had to be sacrificed in the name of expediency? That in its struggle to preserve the conscience of mankind, dedicated to democratic principles, the Western World concluded that one little nation itself a democracy could be deemed expendable, while the Arab nations sat back righteously and smiled inwardly at the success of its maneuvers? That a little democracy, the only democracy in one region of the world, could be left alone to be pushed into the sea? Surely, we cannot believe that.

In the meantime, the United States does not act upon Israeli's request for defensive arms. And while the United States waits, Soviet penetration of the Middle East grows deeper and deeper.

Israel must have arms. Let us remember this: Wherever you stand in Israel, you can see a border line with scarcely the twist of a neck. Thus, if there is an attack upon Israel and Israel is unprepared to meet it, Israel will be forced into the sea before any aid whatsoever can be rushed to her.

The only defense Israel can have against an attack is to be able to meet it head on. A Pearl Harbor would mean the end of Israel. There is no space for retreat.

Israel asks for arms for another reason which, above all else, most certainly should be understood by the United States. The United States has consistently pursued the policy that the most effective deterrent against war is to maintain adequate arms for herself and her allies. To that end, we have devoted the major portion of our budget, keeping strong our Armed Forces and trying to keep ahead in military developments and supplying our allies with military aid.

Is it, therefore, unreasonable—can we possibly view it as unreasonable—that Israel, small and friendless, should likewise view an adequate defense as the best deterrent against war, and as the best assurance for peace? We in the United States have sought, through a system of defense pacts—NATO, SEATO, and the encouragement of pacts like the Baghdad Pact and the Northern Tier arrangements—to promote the cause of peace in the world. Is it, therefore, unreasonable that Israel, in her isolation—the only democratic country in the world so isolated—should seek a pact with the United States, the country which once befriended her, the country which once, through legislative action and through Presidential proclamation, gave so much sympathy and understanding to the ideals of the Jewish homeland?

The situation in the Middle East has deteriorated where it now constitutes one of our weakest points, securitywise. Through our lack of firmness, our obvious indecisiveness—so open to the Arab States that they played the East against the West—we now face Soviet penetration of the Middle East. Right now we seem to be running around in circles, crying loudly at the Communist apparition in the area, obviously distraught, now patting the Arab nations on the head, now murmuring sympathetically to Israel, promising and withdrawing, promising and withdrawing again.

Let us make no mistake about it. We have been less than forthright. The Western World has reason for its alarm.

To me it is amazing that the Western World, dedicated to the preservation and even to the expansion of democracy, should have turned its back on the one practicing democratic nation in that area of the world. The British Government is openly pro-Arab, so openly pro-Arab, so vigorously pro-Arab, that the voices of protest are heard around the land.

Great Britain has been feeding the Egyption maw great supplies of arms, including 64 Centurion tanks, scores of jets, and some 180 to 190 reconditional British Valentine tanks.

A shipment of these arms is part and parcel of Eden's policy of Arab appeasement. Eden is like a man who keeps feeding steaks to a tiger in the hope of making him a vegetarian.

Is it that the Government of Great Britain considers Israel a small price to pay for Arab favor? Even if we accept this shabby thought, is Arab favor dependable? Can Eden on one hand deprecate an arms race in the Middle East and on the other condone the supply of arms (all out of proportion to that of Israel) to the country of declared and open hostility?

Eden will soon be in the United States conferring with our officials on tensions in the Middle East. We have reason to believe that Eden will press for a Caesarian operation upon the body of Israel, to truncate the Negev, or ask that Israel cede a portion of her territory so that a corridor can be formed across the Negev, connecting Egypt and Jordan. Aside from the fact that historically such a corridor had not previously existed, under the Ottoman rule or the mandatory rule; aside from the fact that again it is Irsael which is again and the only one asked to cede territory; aside from the fact that such concession could not relieve the tensions of the Middle East nor compel the Arab nations to sue for peace; aside from the fact that it can only further whet the appetite of the Arab nations, leaving them with the knowledge that the louder you cry the more you get, aside from all this, the fact remains that such a corridor would mean that the

Soviet personnel now operating in Egypt would have another road opened to them, enabling them to proceed ever further. For make no mistake about it, the presence of Soviet arms and the personnel to train Egyptians is a most acute danger signal for the Western World. Even now there are submarines in Mediterranean waters flying the Egyptian flag, manned by Soviet personnel.

In all this, where is United States policy? Will our leadership go by default?

We cannot, of course, conclude—since we do not know—that our Government will steer the wrong course. We do know that there has been too much reliance on wishful thinking. We do know that there has been—and still exists—a split among the State Department advisers. We do know that our diplomacy has failed in Egypt. But the course must be set and set soon—with realism, with staring of the facts straight in the face. We cannot afford any conflagration in that area in the name of our own security.

As Prime Minister David Ben-Gurion said, eloquently and with wisdom, in a recent address to the Knesset, the Israeli Parliament: "We know that any war—one even in which we gain the upper hand—involves ruin and destruction for both parties and intensifies hatred between nations. We know that, after our victory in one war, a second round is possible, and after our victory in a second war, a third round may come, and there is no end to this business."

Trees and the Soil Bank

EXTENSION OF REMARKS
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1956

Mr. QUIGLEY. Mr. Speaker, further referring to remarks made by me on Thursday, January 26, relative to the encouragement of tree planting on land taken out of production under the soil bank plan submitted by President Eisenhower, I invite the attention of Members to an editorial published by the Tacoma, Wash., News Tribune for January 23, 1956:

A NEW SOIL BANK IDEA

With official administration blessing, a "soil bank" plan of farm relief stands a very good chance of adoption at this session of Congress. Most of the plans suggested—the Department of Agriculture is studying nearly a score of them—would have the Government rent farmland in order to take it out of production of crops now in surplus supply. More recently has come the interesting suggestion that the plan be extended to build up the Nation's timber resources.

Forest products are one crop not in surplus and not likely to become so. Instead of paying farmers to plant grass on soil bank land, it is argued, why not let them plant trees—especially the disappearing hardwoods?

The idea has obvious political appeal and would ease the overproduction fears of cattle raisers. Some side benefits from devoting soil-bank payments to reforesting include:

1. Better water storage capacity in the land.

2. Arrested lowering of water tables, fewer droughts.

3. More recreational areas. Add to that the Forest Service contention that the Nation's 4½ million woodlots, many of them on farms, need greater replenishment. Too many farmers are simply stripping them of saleable trees without adequate replanting, it points out.

There are weaknesses in the woodlot plan. Merely to care better for existing woodlots would have little bearing on farm crops and surpluses; to plant now productive farm land to trees would tie that land up far longer than might be wise. Soil-bank acreage planted to grass can be thrown back into crop production any time it is needed, but that cannot be done with a newly planted woodlot, unless the new trees are to be sacrificed.

Somewhere, however, there should be a place for woodlot encouragement in the many soil-bank plans under consideration. Inclusion of this feature would do much to sell it to the nonfarming public.

What a Difference Between Now and Then in the Adoption of the Appropriation for Un-American Activities

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1956

Mr. WOLVERTON. Mr. Speaker, today we have under consideration a subject that through the years has proved to be of inestimable importance to the welfare of our Nation and its people.

I refer to the continuing activity of the Committee on Un-American Activities of the House. This committee has had probably more bitter criticism expressed against it than any other Committee of Congress. There is an old saying that under certain circumstances a knock is a boost. Certainly this had been true in its application to the unjust criticism that has been directed against this committee by Communists and other subversive factors in our midst. I can well remember the caustic, untrue, and deceptive charges made against Hon. MARTIN DIES, of Texas, in the early days when fighting communism and subversive activities in our Nation was no easy task. In those days it was a constant encounter between the patriotic forces under the leadership of Congressman DIES and those who sought to break down our American way. Congressman DIES did not receive all the help he was entitled to have in those days. Our people were not as fully aware of the dangers involved as they are today. It can be said to the everlasting credit of MARTIN DIES that he never faltered nor did he deviate in the slightest degree from the patriotic course he had set for himself to pursue. In that day of trial that tested the courage of many in the Congress there was always sufficient to gain the victory when the issue was whether funds sufficient in amount would be granted by the Congress to carry on this great work of ferreting out those who did not believe in our form of Government and would destroy it if they could.

Today, we have before us a resolution—House Resolution 352—from the committee which now has jurisdiction of the same subject, appropriating $275,000 to carry on the work of the committee. Under the leadership of the present chairman of the committee, Hon. FRANCIS WALTER, of Pennsylvania, we have confidence that he and his distinguished committee will continue to carry on effectively and forcibly the work of the committee in the future as in the past. But, as we adopt this resolution, I cannot help notice the ease with which it passes as compared to that day long ago when MARTIN DIES fought almost single-handed. His accomplishments in this respect will ever be a monument to his patriotism and courage.

Constitutional Liberties

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
Tuesday, January 31, 1956
IN THE HOUSE OF REPRESENTATIVES

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include a news story about my speech before the Serra Club at Gardner, Mass., on November 2, 1955.

The material follows:

"The enemies of religion, democracy, and patriotism constitute a powerful active force attacking our way of life," said Congressman PHILIP J. PHILBIN before the Serra Club at Gardner, November 2, 1955, "and it will require not only continuous vigilance, but united, responsible leadership to mobilize American public opinion against them.

" 'Divide and conquer' is their slogan as they drive the abrasive wedges of racial hatred, religious intolerance, and class animosity into the very foundation stones of our great free system," PHILBIN said.

"The un-American zealots who spread hate between various groups of our people are the very ones who also discredit our most precious spiritual principles, make a mockery of the Bill of Rights and foster the absolutism and economic determinism of the police state.

"They cast aspersion and doubt on the sanctity of the human family. They mock and deride our parliamentary institutions. They denounce patriotism as an obsolete tomfoolery. They pillory and misrepresent the servants of the people. They scorn and insult the Constitution and hurl epithets and invectives at our great free enterprise economic system that has served to give us the highest standards ever enjoyed by man.

"These people are not alone the radical doctrinaires of Union Square. Many of them hold influential positions in American life. There is hardly a place in American life where they have not set up their cells of subversion, of conspiracy, against this representative Government and this economic system.

"America will either soon find the way to cope with this grave problem, or American freedom, as we have known it, will face greatest peril. No nation can live half slave and half free, and this Nation cannot preserve its vigor and strength, its Bill of Rights and its Constitution, its liberties for the individual and its basic freedom unless our citizens unite to combat the poisonous anti-religious, antidemocratic, antipatriotic propaganda and conspiracy that is brazenly operating in the Nation.

"This task challenges every one of us, because the poison of subversion and anti-

Americanism reaches every part of the land and every part of the land must move to fight and counteract it."

Calling for renewed respect for constitutional principles and safeguards, PHILBIN declared that "in this task let us not fall prey to the folly and the fallacy of violating, in letter or in spirit, our great Constitution, in order to check the malefactors who would destroy it.

"Let us remember that in this Nation above all nations, every man is entitled to a fair hearing and a fair trial and we must never let star chamber proceedings and hysteria be substituted for the processes of equal justice under the law for everyone regardless of race, class, creed, or persuasion.

"And remember this," said the Congressman, "the man who hates or discriminates against another because of his religion or his race is not a good American.

"From Nero to Hitler, men and women have been beaten and slaughtered for their faith and for their political ideals, but love of God, like liberty, is immortal, and it can no more be killed than the human soul."

ILO-United States Money Promotes Communist Propaganda Efforts

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 23, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including an article by Mr. George E. Sokolsky which is pertinent to a matter that will soon be considered in the House. It is my understanding that a request will be made for a considerable increase in the money previously appropriated to support ILO.

Mr. Speaker, from the standpoint of our anti-Communist propaganda this Congress should consider eliminating our financial support to ILO.

The article follows:

UNITED STATES PLOWS MONEY INTO ILO, BUT REDS REAP THE PROFITS

(By George E. Sokolsky)

The United States has become a member of a large number of international organizations in addition to the United Nations. Most of these organizations come quite expensive because the United States quota usually runs to about one-third of the budget. It is difficult to assess the value of all these international efforts; some are useful, others are only continuous.

The International Labor Organization is one of the least useful and effective.

To the ILO we send Government, employer, and labor delegates. For many years, prior to 1954, Soviet Russia stayed away from the ILO, but in that year Soviet Russia came in with three members to every other country's one member. The three were the Soviet Union, the Ukraine, and Byelorussia. To them must be added the five satellite countries whose policies are determined by the Kremlin, namely, Bulgaria, Hungary, Poland, Albania, and Czechoslovakia.

As the American employer representative, W. L. McGrath, of Cincinnati, says in his report:

"At annual ILO conferences, Communist orators, outnumbering ours in the ratio of 32 to 4, will tell the representatives of 69 nations about the decadence of the free enterprise system, the superiority of the Communist system, the exploitation of the working man by the American capitalists, and our greed and desire for war. These speeches will be reprinted by the ILO and circulated all over the world. One cannot imagine a better readymade vehicle for the promotion of Communist indoctrination. Do we want to continue to finance this Communist operation?"

McGrath objected to seating the Russian employer delegates. As all industry in Soviet Russia is owned by the government, who are these employers? How, in a country which forbids private ownership of an industry, can there be an employer? If there is an employer, is he not merely an official of the government? That really means that all the Russian delegates are government officials and that there are none who represent employers—by which is meant private employers—or for that matter, represent the workers as the government sets up the labor unions in Russia and controls them.

This may not be an exciting argument, except that the reason for the existence of the ILO is to have Government, employers, and labor-union heads meet together to lay down certain policies concerning labor and working conditions on a universal basis. That this cannot be accomplished with the varieties of standards of living in the various countries is obvious from the small accomplishments of the ILO which came into existence after World War I, but the excuse that is being given for its continued existence is that it is useful to have such a cooperative body. McGrath, however, correctly raises the question of the propriety of one country sending only Government delegates because it has no employers and permits none to exist.

McGrath says: "If we are simply to accept the present situation in the ILO, the end result is, to my mind, inevitable. The Communists, with 8 nations to our 1, and 32 votes to our 4, will remain firmly entrenched and will progressively dominate the ILO. It will become merely an international forum for the dissemination of Communist propaganda, financed to at least 25 percent by the taxpayers of the United States. In fact, at its next session, our Congress will be asked to raise the ceiling for the United States contribution to the ILO from $1,750,000 a year to $3 million a year."

Peace Needs Good Faith

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1956

Mr. PHILBIN. Mr. Speaker, for the past several years I have been honored by the Marlboro, Mass., Chapter, Disabled American Veterans by being designated as guest speaker at the annual banquet of this fine group. On October 29, 1955, I addressed the organization and ask unanimous consent that part of my remarks before the Marlboro DAV be printed in the RECORD.

The material follows:

"Veterans are the most important single force defending the Nation against subversion," said Congressman PHILIP J. PHILBIN, of Clinton, addressing the DAV banquet at Marlboro last night.

"You who know the real meaning of patriotism are best fitted to guard our institutions," said the Clinton Congressman, "and your spiritual strength, unity and loyalty furnish an inspiring example to all our citizens."

Outlining current world conditions at some length, PHILBIN declared that the Soviet Government is now playing its old, dual role in international diplomacy—"playing a waiting game until she can catch up to the free world in terms of hydrogen bombs and other scientific weapons, and at the same time brazenly continuing the internal penetration of weaker nations.

"Smiles have replaced scowls on the faces of her diplomats, but her world objectives remain the same and she is pressing them with unabated vigor, skill and persistency.

"There can be no permanent peace in the world until the Soviet negotiates pending questions in sincerity and good faith, and in a willingness to do justice to the oppressed and the tyrannized," he said.

The American Government must continue its own zealous efforts to secure enduring peace, but we cannot permit our armed strength and potential to diminish, in fact, "implemented with fantastic new weapons growing more amazing every day, we must continue to build even more powerful military strength because that is our best safeguard against possible aggression in a world filled with conspiracy and intrigue."

PHILBIN gave the veterans an assuring report on the current status of national veterans programs. "Congress will always safeguard and seek to strengthen basic laws in behalf of veterans and their dependents because that is what the American people want for those who have done so much for the country."

The Congressman congratulated the local post for conspicuous interest and invaluable work for the cause of the veteran. "You can be proud that you have cooperated so loyally and effectively with the other great veterans organizations in carrying out this work," he said.

Beastiality of Red China Communists Now Fully Exposed—Red China Must Not Be Admitted to United Nations

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 23, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, as part of my remarks, I am including an article that appeared in the Washington Daily News for Monday, January 30, written by Mr. John Troan, of the Scripps-Howard staff, after an interview with Dr. Homer V. Bradshaw, who was recently released by the Chinese Communists. The story by Dr. Bradshaw should be printed upon the records of this Congress so that every American citizen may be on notice as to the kind of people who now seek admission to the United Nations.

Mr. Speaker, the Scripps-Howard newspaper, through the Washington Daily News, is to be commended for its forthright reporting of the true situation on the kind of treatment received by American citizens imprisoned in Red China. Other articles will appear. The first one follows hereafter:

FIVE YEARS OF TORTURE: "HOW COULD ONE HUMAN BEING DO THIS TO ANOTHER?"

PITTSBURGH, January 30.—Dr. Homer V. Bradshaw's flight to freedom from behind the Bamboo Curtan ended on a recent freezing cold night at the Pittsburgh Airport when he limped off a plane behind his wife, Wilda, in a wheelchair, both of them pale and wasted, after 1,753 days of imprisonment by Chinese Communists.

The pitiful sight of this silent, wasted woman and her haggard husband was enough to make your heart weep.

An airport policeman, helping them to a waiting auto, said:

"How could one human being do this to another?"

"The answer," says Dr. Bradshaw, "is that the Communists are just plain beasts."

He should know. He and his wife spent about half of their lives with a Presbyterian mission in China. Their reward was almost 5 years of torture by the Reds. It was from this agonizing 5 years that they have just been freed.

It was on another cold night, back in March 1951, in the mountain village of Linhsien, 250 miles northwest of Canton, when their long horror began.

THE REDS INVADED THEIR HOME

The Bradshaws were just preparing to retire for the evening. A band of Communists, armed with pistols and automatic rifles, invaded their home and placed them under arrest.

What followed was a Red nightmare.

In the course of their imprisonment, Dr. Bradshaw suffered a physical crackup and his wife a mental breakdown.

The doctor was permitted to talk to his wife only 3 times while they were in jail, and for almost 4 years he couldn't even find out if she was still alive.

Seventeen times the Communists grilled him about his alleged espionage activities, with one inquisition lasting from midnight until past 6 a. m.

Over and over, the Reds tried to get him to sign a confession that he was a spy, finally dangling hints of an early release in their vain efforts to bait him into signing.

Once, peevish at his obstinacy, they made the doctor eat and sleep with handcuffs on.

His bed was a quilt, spread on boards just off the floor. Two blankets and a mosquito net, for which the doctor had to pay with impounded mission funds, rounded out his bedroom furniture.

HE HAD TO FORCE HIMSELF TO EAT

Most of the time, Dr. Bradshaw was given only two meals a day. And the food got so bad he finally had to force himself to eat.

He was permitted no matches, no cigarettes, no metal objects of any kind, a rule which eventually cost Dr. Bradshaw even the zipper on his trousers.

He wrote letters but some were returned to him by the Communist censors and most of the others never got out of the country. Mail from the United States was intercepted and frequently destroyed.

He wasn't permitted a watch, but they let him keep track of the days by scratching X's on a homemade calendar in his cell.

For almost 4 years, the only exercise he could get was a walk from his cell to the prison washroom across the corridor.

His reading was confined to Communist Chinese newspapers, full of anti-American lies.

Indeed, lying is so much a part of communism, Dr. Bradshaw explains, that you can't even believe them on those rare occasions when they do happen to tell the truth.

Thus, when the doctor was told last December 18 that his 5-year sentence had been commuted by about 2½ months, he still couldn't be sure he was going to be released.

And he wasn't convinced until 2 days later, when he and Mrs. Bradshaw finally hobbled across the barbed-wire border at Kowloon (Hong Kong) and set their feet on free soil again, realizing that, shattered and broken, this was the heartbreaking culmination of their careers of selfless service to the Chinese people.

HE HAD LEARNED TO LOVE CHINESE

In 27 years—he first went there with Mrs. Bradshaw on their honeymoon in 1928—the doctor had learned to love the Chinese and they, in turn, had come to regard him as a cherished and trusted friend.

On their first assignment to the Presbyterian mission in southeastern China, the Bradshaws stayed for 6 years, returning to the United States in 1934.

The following year, Doctor and Mrs. Bradshaw went back to China under the same auspices, the American Board of Foreign Missions of the Presbyterian Church, which operated a hospital, a small church, a grade school and a high school in Kwangtung Province.

A routine furlough came up in the summer of 1941. And with it another vacation in the United States.

The Bradshaws fully expected to return to China in 1942. But they hadn't reckoned with Japan's war in China.

Try as he did, Mr. Bradshaw couldn't get United States Government permission to return to China in 1942.

"So," he said, "I enlisted in the Air Force."

HE BECAME A FLIGHT SURGEON

Actually, Dr. Bradshaw was made a flight surgeon with the Second Air Force with the rank of captain. He spent more than 2 years with the outfit in this country.

But China remained on his mind.

So, one day, Captain Bradshaw wrote a personal appeal to Maj. Gen. Claire Chennault, chief of the Flying Tigers, who wrote their fame over China's skies in World War II.

"I told him I liked China very much," Dr. Bradshaw explains, "and I told the general I thought I ought to have a chance to contribute to driving the Japanese out."

On March 31, 1944, Captain Bradshaw was in China. He had been requisitioned by General Chennault, though neither knew the other, to serve as a flight surgeon with the 14th Air Force.

Ambassador John E. Peurifoy

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1956

Mr. KEOGH. Mr. Speaker, in these days of international crises the sudden, tragic death of Ambassador John E. Peurifoy was a great loss not only to our Nation but to all of the free world. Jack Peurifoy was a brilliant diplomat and a fine example of the career public servant. He devoted his life to his country and to the cause of world peace. Assigned to the trouble spots of the world he served with great distinction as Ambassador to Greece, Guatemala, and Thailand.

Ambassador Peurifoy was born on August 9, 1907, in Walterboro, S. C., and came from a family of lawyers and jurists. He resigned from West Point in 1928 and completed his education by attending night school at American University and George Washington University. Entering the Department of State on October 1, 1938, as an economic analyst he rose rapidly and on January 23, 1947, at the age of 38, he was appointed Deputy Assistant Secretary of State for Administration, then the third ranking position in the Department.

Ambassador Peurifoy was in charge of the United Nations Conference in San Francisco in 1945 and served as Deputy Secretary General of the American Delegation at the first meeting of the General Assembly of the United Nations in London in January 1946.

Joining the career Foreign Service in 1950 at the top, he was appointed ambassador to Athens. It was my good fortune to visit with him in Athens during the period he served as ambassador to Greece and to observe first hand the skill with which he handled his difficult task.

Perhaps Jack Peurifoy will be best remembered as the man most responsible for uprooting the first Communist-infiltrated government established in the Western Hemisphere. The overthrow of the Communists in Guatemala was a major victory for the United States and the credit belonged to Ambassador Peurifoy.

It was my privilege to know Jack Peurifoy as a friend for many years and I shall miss him greatly. My deep sympathy goes to his lovely and devoted widow Betty Jane, and to his young son, Clinton, to whom he left a rich heritage.

Albert Gallatin

EXTENSION OF REMARKS
OF
HON. HERMAN P. EBERHARTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1956

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks, I am today inserting in the Appendix of the RECORD my remarks at ceremonies on January commemorating the 195th birthday of Albert Gallatin:

ALBERT GALLATIN

(Remarks of Congressman HERMAN P. EBERHARTER, Democrat, of Pennsylvania, at ceremonies on January 29 commemorating the 195th birthday of Albert Gallatin)

It is a privilege for me to participate in this ceremony honoring the 195th birthday of that great Swiss-American patriot and statesman, Albert Gallatin. I feel it a personal privilege, for two reasons in particular. First, Albert Gallatin served in the Congress as a Representative from western Pennsylvania and it has been my good fortune to serve as Representative in Congress from the same area. Secondly, Albert Gallatin's most important contribution as a Member of Congress was to conceive and establish the Committee on Ways and Means of which he became the first chairman. It has been my honor to be a member of that committee.

Of all the tributes that one can rightfully shower on his name, it seems to me

that it is most fitting today to mention Albert Gallatin's abiding concern for fostering commerce between nations as the keystone of international amity. Gallatin believed and worked for the principle that lower tariffs, not higher tariffs, were the way to expanding international trade to the mutual benefit of the trading partners. Such mutuality of interest, he felt, was the essential mortar that bound nations together in an amicable partnership. The wisdom and virtue of this philosophy are of compelling importance today.

I am drawn to speculate about what Albert Gallatin would think, were he alive today, of the actions that have been taken to limit the mutually beneficial trade between the United States and his native land, Switzerland. The imposition of higher tariffs on Swiss watch imports by the administration violates the high principles laid down by this famous Founding Father and would cause the Swiss-American statesman great dismay and anguish.

Thus, in honoring the memory of Albert Gallatin, we honor the principles and ideals that were the guideposts of his life. The greatest honor we can accord him today is to reaffirm our own deep commitment to one of his major guiding principles that world peace will be fostered if trade among nations is encouraged to grow and expand.

Dulles' Difficulty

EXTENSION OF REMARKS
OF
HON. ROBERT B. CHIPERFIELD
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1956

Mr. CHIPERFIELD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Galesburg Daily Register Mail, Saturday, January 21, 1956.

DULLES' DIFFICULTY

There appears to be very little wrong with Secretary of State Dulles that a good editor couldn't cure.

He really live two lives. In one he is the man of action, and here his accomplishments are many. In the other he is the man of verbal statement, and in this he finds himself again and again in hot water.

One of his principal troubles seems to be that he permits too flashy a lead to be put on what he says. An example is his latest difficulty, an article in Life magazine which quotes him liberally on how the United States has met specific crises in Korea, Indochina, and Matsu-Quemoy in the past 3 years.

According to Dulles, this country three times went to the brink of war but was saved from it by threats of stern action, including atomic retaliation.

Democrats have assailed these declarations and accused Dulles not only of historical inaccuracy but of contradicting his own secret testimony before a congressional committee.

British and French diplomats likewise have questioned his accuracy, and have announced their shock that he would talk glibly of seeing the United States go to the brink of war.

The matter of Dulles' accuracy can only be settled by recourse to the documents, a process which will require days and weeks.

What evidently disturbs his critics most, however, is the brink-of-war philosophy ascribed to him in the article.

Said Dulles: "The ability to get to the verge of war without getting into the war is the necessary art. If you cannot master it, you inevitably get into war. If you try to run away from it, if you are scared to go to the brink, you are lost. * * * We walked to the brink and we looked it in the face."

In the European view no man or nation should walk that close to all-out war in this atomic age. Yet it is very likely that, as he has often done before, Dulles has overstated his case in trying to make his point. That's where the good editing ought to come in.

Nevertheless, he has a point that is fundamentally sound—clear willingness to use force if pushed too far is a deterrent against aggression. Had we evidenced that willingness in early 1950, the Communists never would have attacked South Korea. They thought we would not fight to save it.

Furthermore, the "show of force" deterrent is an age-old device of European diplomacy. Britain and France did not hesitate to use it when they held power. Today we, not they, have the power and are looked to for preservation of the peace. Europe's reported shock at hearing we have employed the weapon of deterrence seems something less than a realistic response.

In standing behind Dulles as the best Secretary of State he has ever known, President Eisenhower pinned his defense on policy grounds—not Dulles' words. He stressed that America must stand firm in its program for waging peace with justice. If that be interpreted as standing at the brink, he said, then that is because other nations are creating the circumstances that produce the perilous situation.

After all, Dulles did not create the crises in Korea, Indochina, and Matsu-Quemoy. He did not lead us to the brink just to see how close we could get to war. He was concerned to avoid it, but he was convinced the way to do that was to let the enemy know exactly what he could expect from us.

It is not what Dulles has done but what he said that has brought him fresh difficulty. His choice of language has alarmed a good many. But his policy of deterrence should shock no friend of freedom. It has worked where negotiation—or silence—has failed and led us into war.

Red Propaganda

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 25, 1956

Mr. BYRD. Mr. Speaker, it is generally agreed that the latest Bulganin note to our Government was another bold step in the Communist propaganda offensive. Let us examine, therefore, a few general aspects of Red propaganda.

Soviet propaganda is characterized by its totality, fictionalism, militancy, and flexibility. It is colorful, massive in scope, easily available and extremely vitriolic. On the one hand, it is negative and destructive; on the other it appeals to the nobler sentiments of mankind. Through it real values become unreal fictions. Soviet propaganda is achieved through mass action, and mass action is to Soviet propaganda what space is to geopolitics.

Jacob Spolansky, in the Communist Trail in America, makes a most appropriate comment on Communist propaganda when he states: "The Communist doctor never seeks to cure the afflicted patient: he wants to be able to make a propaganda speech at his bier."

The Goal of Peace

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1956

Mr. PHILBIN. Mr. Speaker, on November 5, 1955, it was my privilege to address the Southbridge, Mass., Veterans' Council at its annual Veterans' Day banquet. I ask unanimous consent to have printed in the RECORD part of my remarks to this outstanding patriotic organization.

The material follows:

Speaking November 5, 1955, at the Armistice Day celebration of the Veterans Council at Southbridge, Congressman PHILIP J. PHILBIN declared that "the best way to honor those who fought and died for the Nation is to intensify our efforts for peace."

"The veterans of every war who paid the supreme sacrifice, or who offered their lives to preserve our freedom, are enshrined in the hearts of the American people in grateful remembrance," said PHILBIN, "but their unselfish work will not be complete until peace and security shall come to this troubled world."

Stressing the dilemma of our present international position, he said: "The fact that another world war would bring untold death and desolation must prompt world leadership to speed its work for peace, regardless of obstacles and disappointments."

The Congressman touched on the power of modern weapons.

"No nation can afford to remain unmoved by the dreadful power of modern weapons," he said. "If there are those in the world who insist upon putting idealogical penetration and plans for conquest before peace, this Nation and the free world have no choice than to build effective strength to protect their liberties.

"It is most discouraging that our many repeated proposals for worldwide disarmament and control of nuclear energy have been rejected up to this time, but we must vigorously press these questions with the Soviets and before the bar of world opinion, and we must never lose an opportunity to employ every means of argument and persuasion, and every resource we have, to drive home to the Communist world the paramount urgency of peace."

Hailing historic American foreign policy, PHILBIN said: "Our Government has already proclaimed and emphasized on numerous occasions the traditional American policy against aggressive war and designs on other nations. It remains for the Soviet to give similar assurances, not by words alone, but by deeds, that it will keep the peace, and that it will desist from further conspiracy against the territorial integrity and political independence of other nations.

"As a nation we have no right to barter away the freedom of oppressed peoples and any agreement looking toward lasting peace must be predicated on complete justice and liberation for enslaved nations and all others.

"Since there can never be any compromise of our basic liberties, or of the principles of

our Constitution, failure to attain the goal of peace will require us, for our own protection, to maintain armed forces of great power and magnitude, lamentable though that be in this age of advanced civilization when real international amity and coperation could bring such great blessings."

PHILBIN hailed the leadership of veterans as "a most potent force in keeping the Nation militarily, economically, and spiritually strong. Let us all emulate their great faith and courage, and the good Lord will continue to strengthen our cause."

Wiretapping

EXTENSION OF REMARKS
OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1956

Mr. MADDEN. Mr. Speaker, the following address by Alexander M. Campbell, former Assistant Attorney General of Fort Wayne, Ind., reveals some illuminating facts which expose the wiretapping evil practiced generally by officials and others throughout the country:

WIRETAPPING

(Address by Alexander M. Campbell before the Quest Club of Fort Wayne, Ind., November 11, 1955)

This effort to give you both sides of a raging issue on our national scene comes from actual fact, not fantasy, from real experience in thousands upon thousands of both public and private investigations. Yes, from supervising the investigation, prosecution, trial, and conviction of world-famous spies, international Communist leaders, murderers in Federal cases, corporate executives engaged in war frauding, labor racketeers, workers engaging in sabotage, subversives, and gangsters—infamous characters all—and the question of the use of wiretapping as an instrumentality of detection and prosecution is argued pro and con.

In the end, I will, as always, conclude leaving no doubt where I stand on the issue now before Congress.

First, the technique.

How is it done, where, and by whom?

Electronic snooping devices are produced by a dozen manufacturers. Phones are tapped and eavesdropping accomplished in several different ways. There is a device for finding one pair of telephone wires in a jungle of hundreds of others. The device has 36 tiny neon bulbs on it. From each bulb runs a pair of wires tipped with clips. Attach the clips to 36 terminal pairs at one time in the crossbox in the basement. Dial the number of the phone you are seeking; one neon bulb will light up, identifying the pair of wires of the unsuspecting taxpayer. Then follow those wires to the next bridging point many blocks away and set up the recording plant.

The earphone plant is old-fashioned, outdated, and mostly in the discard.

The recorders run for 13 hours and turn on only when the "bugged" phone rings.

Wiretapping is a common practice engaged in by Government agents, State officials, local police, "private eyes," business competitors, labor racketeers, blackmailers, divorce seekers, and some Senators and Congressmen.

In fact, anyone, for a fee, can have a peepshow view of anyone else's life.

The wiretapping eavesdropping gadgets, include induction coils, microphones, shortwave receivers, microphones that can be concealed in the sleeve, phone tap recorder, phone-tapping unit, pocket wire recorder, phone line locator, earphones, voice activator, parabolic microphone, and high power transmitters with 100-mile range.

Second, Legal history.

Eavesdropping is now big business. The scientific age in which we live has enabled men to thwart the spirit of the Constitution of the United States which provides in the fourth amendment as follows: "The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no warrants shall issue, but upon probable cause, supported by oath or affirmation and particularly describing the place to be searched and the persons or things to be seized."

In 1928 in a dissenting opinion in the Olmstead prohibition wiretapping case, the late Justice Brandeis said: "The makers of our Constitution—conferred, as against the Government, the right to be let alone—the most comprehensive of the rights of man and the right most valued by man." *Olmstead* v. *United States* (277 U. S. 438 (1928)).

In handing down United States Supreme Court's majority decision by a vote of 5 to 4 in that famous case Chief Justice Taft said: "The amendment does not forbid what was done here. There was no searching. There was no seizure. The evidence was secured by the use of the sense of hearing only. There was no entry of the house or offices of the defendants."

Opposition to that decision, as to prohibition enforcement practices generally, led Congress to pass in 1934 the Federal Communications Act which provides in section 605 that: "* * * no person not being authorized by the sender shall intercept any communication and divulge or publish the existence, meaning * * * of such intercepted communication to any person * * *" (47 U. S. C. sec. 605).

That is the law today and the United States Supreme Court has held that wiretapping—though not unconstitutional—is illegal and that evidence so obtained or evidence obtained from clues discovered from wiretapping is inadmissible in Federal courts.

Third, arguments pro wiretapping.

Arguments for legalized wiretapping may be grouped in three general headings:

(a) The no-novelty argument.

This is to the effect that the law already admits evidence obtained by an informer, an eavesdropper, or a policeman hidden in a closet, and even evidence obtained by means of a transmitter concealed on an agent's person.

(b) Great-need argument.

Attorney General Brownell, who favors wiretapping, in a statement prepared for testimony before a Senate Judiciary Committee, April 20, 1954, page 3, said in part: "How can we possibly preserve the safety and liberty of everyone in this Nation unless we pull Federal prosecuting attorneys out of their straight jackets and permit them to use intercepted evidence in the trial of security cases?" He points out that criminals may go free if wiretapping is the only way to obtain evidence against them.

(c) Little-danger argument.

There are those who believe that the actual danger of abuse is slight and that we should trust our duly elected and appointed officials.

The arguments con include:

The brilliant presentment by Justice Hofstadter of the Supreme Court of New York County in the New York Journal, January 12, 1955, page 2, includes the following: "A tapped wire is the greatest invasion of privacy possible * * * a telephone interception is a far more devastating measure than any search warrant. A search warrant is confined to a definite place and to specific items, or, at least, to items of a stated class or description. Those in possession of the searched premises know the search is going on and, when the officer has completed his search, whether successfully or not, he departs. Not so in the case of telephone interception. The interception order is obtained ex-parte, and the person whose line is to be tapped is, of course, in ignorance of the fact. The tap is maintained continuously, day and night. Everything said over the line is heard, however foreign to the stated objective of the law-enforcement officers. The most intimate conversations, personal, social, professional, business, or even confidential, of an unlimited number of persons may be laid bare. in effect, the line to everyone who is called from or makes a call to the tapped line at any time is being tapped during the maintenance of the tap. When a line in a public telephone booth is tapped, as has on occasion been done, the conversations of people having no relation of any kind to the operator of the place in which the booth is situated or the person whose line is tapped are overheard."

The late United States Supreme Court Justice Brandeis said in 1928: "Even general warrants are but puny instruments of tyranny and oppression when compared to wiretapping."

(d) Inadequate result argument.

What are the results of wiretapping? My own observations revealed so few usable results from wiretapping. The very nature of espionage and sabotage causes subversives to do practically all of their work by personal presence or contact. I saw little actual help from wiretapping. It does help keep track of the doings of suspects and develops some leads. This may be done, however, by surveillance where there is far less chance of false identification. The Federal Bureau of Investigation has 6,000 special agents and a multimillion dollar budget.

(e) Overwhelming danger argument.

Official and legal wiretapping in the hands of many public officials will turn this grand free country into a police state.

We are thankful for the integrity of J. Edgar Hoover, Director of the Federal Bureau of Investigation, but he is only one mortal man. What about his successor? His predecessor was Gaston B. Means, the biggest crook, fraud, and blackmailer in Government history who used the Government's Bureau of Identification for those nefarious purposes.

They tapped wires in Nazi Germany, they tap them now in Russia, they tap them all over the United States, at this very hour. Wiretapping is the tool of totalitarian thinking and planning.

We investigated hundreds of Communists, spies, and subversives from 1948 to 1950 during my privileged term as Assistant Attorney General of the United States. We indicted 50 leading Communists, spies, and subversives, including the 12 top Communists in New York, Alger Hiss, Judy Coplon, Harry Bridges, and Harold Cristoffel, the Communist Labor Leader, whose case I argued for the Government, before the United States Supreme Court in 1949. In all of these cases convictions were eventually obtained by the Government—save one, Judy Coplon—whose conviction for espionage was reversed by a United States court of appeals in 1950.

Thousands of interested citizens across the country have since asked why the clever, diabolical, and hateful top woman spy in modern times never went to prison. The answer is wiretapping. The Federal Bureau of Investigation, unbeknown to me, had tapped her telephone wires.

The New York Times and Charles Grutzner said on February 27, 1955, that: "Federal

wiretapping is nothing compared to that of local police and private investigators across the country. A former law enforcement officer told this writer a few days ago: 'Detectives use wiretaps on maybe half of all the important police cases in New York, and many use wiretaps as a routine thing to pick up leads on bookmaking, prostitution and other crimes without bothering to get court orders or even to let their captains know they're tapping.' Not all police, and certainly not all private investigators, limit their use of eavesdropped talks to those conversations they set out to hear. Blackmail and sale of business secrets, though incidental, have been found lucrative to crooked operators."

On January 19, 1955, the Wall Street Journal editorially said: "We see no need for chipping away at the rights and privileges of people who are not Communists in order to catch Communists. Perhaps the latter can be more easily trapped through wiretapping; certainly it will make the job of our police easier * * *. The job of the police would be made easier also if they could go about arresting anyone they chose and if they could break down any door and if they could hold in prison a suspect as long as they wished. But restraints were placed on Government and on police so that these things could not happen."

Thorsten Sellin, distinguished editor of Internal Security and Civil Rights, copyrighted 1955, has said: "All life is a choice among values, and among risks; and a free society—to remain free—must take almost all of its risks on the side of freedom."

As the Government lawyer in the supervision of the Coplon cases, I now look in retrospect and say it is better that one traitor go free than to pull down the sacred constitutional safeguards of American judicial freedom.

There are those who take a minimal safeguard position and advocate:

1. Wiretapping should be permitted only to Federal officials, in cases involving treason, sabotage, espionage, or kidnaping. (In kidnaping cases, parents' wires should be tapped only with their prior consent.)

2. The authority to grant permission for wiretapping should be vested in one Federal judge assigned by the Supreme Court for a 10-year period for each district.

3. Only the Attorney General should be allowed to apply directly to the judge for permission to tap a wire. All requests for permission should be channeled through him.

4. No wire tap should be authorized except upon sworn statement of fact demonstrating reasonable basis for belief of actual, as distinguished from potential treason, sabotage, espionage, or kidnaping.

5. An application should include the names of the suspect and of the telephone subscriber, and the number of people who use the line.

6. Complete records of all applications and approvals should be kept.

7. Only recordings, sealed and preserved in a central place, should be used in evidence. If so employed, all recordings made in connection with an investigation should be made available to the defendant at Government expense. Irrelevant material that might injure innocent outsiders should be exercised, upon agreement between Government and defendant. Recordings should be destroyed only on court order.

8. Taps should be authorized for a maximum of 90 days, with a 90-day renewal permitted.

9. Strict penalties should be provided for any person tapping a wire illegally, and each year a Federal grand jury should be convened to consider possible illegal tapping.

10. The present provisions of the law should remain in effect against any unauthorized tapping or disclosure of information obtained by tapping, whether authorized or unauthorized.

11. The press and public should be informed by monthly and annual reports of the number of taps sought for each type of case; the number granted; the number resulting in prosecution; and other pertinent data. With all of these words I disagree.

In supervising internal security grand jury investigations in New York, the District of Columbia, Pennsylvania, Louisiana, California, Colorado, Illinois, Ohio, and Indiana, I did not use a wiretap or authorize its use in a single case and an American jury returned a verdict of guilty in every case where a grand jury indictment was returned—upon legal evidence—presented in a court of law, where the defendants were confronted face to face with the witnesses against them, with the right of cross-examination afforded them, with all of the God-given constitutional guaranties protecting them—despite their treasonable acts of espionage, fraud, or crimes of violence.

America does not want or need wiretapping. If the Federal Bureau of Investigation is as good as they say it is, and it is, mistake not that, they need no wiretapping aid.

Furthermore, with the use of electronics in this atomic age they are able to detect conversations with the aid of the Parabolic microphone which picks up voices hundreds of feet away without the use of wiretapping.

We can set a device on this table in this briefcase and pick up a conversation a block away. What more does the United States Attorney General need? Give them wiretapping rights and the next step will be opening your mail. Government agents steam open mail occasionally now.

The electronic eavesdropper has practically superseded the telephone wiretapper now, but still they ask for a law which would permit the Federal Government to use in Federal courts evidence obtained by tapping telephone wires. There are more than 53 million telephones in daily use in this country. What a field day they would have.

The snoopers, paid informers, reformed revenue collecting Communists, purveyors upon gullible and unsuspecting citizens, shakedown artists in Government, overzealous prosecutors, a few rabble rousing Congressmen and some demagogs in the Senate, would foist upon this Nation a hysteria and eventual police state.

Former Senator BRIDGES did it to Howard Hughes; Serge Rubinstein, notorious and international financier, whose defense in a Federal prosecution in New York I once declined after leaving Government service, tapped phones before his recent murder. The former Mayor O'Dwyer, of New York, according to Bernard B. Spindal, professional wiretapper and electronic eavesdropper, and Ethelbert Warfield, former law partner of New York City, Police Commissioner Francis W. H. Adams; the Knoedler Art Galleries, and the pharmaceutical firm of E. R. Squibb & Sons all have had their phones tapped and so have I. The Palmer days of the sedition cases after World War I; the Klan era which followed; the McCarthyism of our time, which produced not a single treason or espionage conviction, all ran their hysterical course and then the great American free press destroyed each in turn almost as quickly as they built them up.

We must depend in large measure upon our free press to keep bringing to light these evil abuses as has been recently done in the exposé of the New York wiretapping mess.

The greatest social achievement in the history of civilization is the Anglo-Saxon-Christian-Judian principles of justice as announced by the elder Pitt in 1765 when he said: "The poorest man may, in his cottage, bid defiance to all the force of the Crown."

Or as Justice Brandeis said: "The makers of our Constitution undertook to secure conditions favorable to the pursuit of happiness. They recognized the significance of man's spiritual nature, of his feelings and of his intellect * * *."

My friends, to approve the Attorney General's proposal is to weaken our code both legally, morally, and ethically. To hide an accuser behind an iron curtain is the Russian way, not the American—said the distinguished world historian Claude G. Bowers on the occasion of his recent intellectually dynamic visit to his home town of Fort Wayne.

Wiretapping is but one facet and only a prelude to an infamous procedure wherein faceless people will be allowed to present their whispered rumors and yet escape the test and torture of cross-examination.

I, for one, am unafraid of hysteria, and slovenly thinking, and over-ambitious prosecutors, but we plain citizens must stand up against these forces. Arise, oh, Citizen, speak out before it is too late. Write your Congressman and Senators to vote against this dirty business in that America may remain free, our people secure in their private property, work, education, homes, and faith.

Contributions of Ahepa

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1956

Mr. PHILBIN. Mr. Speaker, on November 13, 1955, I spoke at the anniversary banquet of the Ahepa in my hometown of Clinton, Mass. I ask unanimous consent to have printed in the RECORD a news account of my remarks at this affair.

The material follows:

Before the Ahepa anniversary banquet at Clinton November 13, 1955, Congressman PHILIP J. PHILBIN hailed the local chapter as an inspiring example of Americanism—a fine group devoted to blending the highest values of Greek civilization with the best traditions of America.

Lauding Dr. Nicholas Despotopolus, Ahepa district governor, for his vigorous leadership in promptly seeking aid for Greek coreligionists recently persecuted and outraged in Turkey, PHILBIN declared that in response to his own strong protests, the State Department had advised him that it had taken urgent action and had been assured that there would be no repetition of these outrages and that damages would be indemnified.

Denouncing the outrages as diabolical and to a degree Communist inspired, the local Congressman asserted that free religious worship was not only a most precious American possession, but should be safeguarded zealously by all nations in and out of the United Nations. We must pledge our efforts to that end, he said.

Commenting on the Cyprus question, PHILBIN said that the real issue is whether the right of self-determination, for which this and other nations fought, would be respected. This is a basic right of free men and women and it must be protected and observed at all times and all nations save the Soviet police, slave state recognized that fact.

PHILBIN paid tribute to the contributions of Ahepa and stated that the town of Clin-

ton is famous for many things, but for none more than its strong, loyal attachment to constitutional principles and ideals, particularly its devotion to toleration and respect for the right of every creed and race to enjoy and be protected in their faiths and beliefs.

"I am proud of your friendship, your contributions and your patriotism," he said, "and I wish for you the successful continuance of your great work."

The Lawyer-Accountant Controversy

EXTENSION OF REMARKS
OF

HON. GLENARD P. LIPSCOMB

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mr. LIPSCOMB. Mr. Speaker, I have just read in the January 1956 issue of the National Public Accountant, published by the National Society of Public Accountants, a reprint of a speech delivered by Erwin N. Griswold, dean of the Harvard Law School, at a luncheon meeting of the section of taxation of the American Bar Association, held at the Benjamin Franklin Hotel, Philadelphia, Pa., on Sunday, August 21, 1955, on the so-called lawyer-accountant controversy.

The learned dean has obviously devoted a great deal of thought to the proper place of the accountant and the lawyer in the field of taxation, and is to be commended for his efforts in seeking an answer to this problem.

He recognizes that both professions contribute much to the efficient administration of our tax laws—much to help the ordinary citizen who is so frequently left bewildered by the ever-increasing complexity of our revenue-raising techniques.

In the dean's most lucid analysis of the problem he notes that most lawyers and accountants practice together in a spirit of cooperation and harmony. The difficulties which have arisen between accountants and the organized bar have, for the most part, concerned situations arising in the gray undefined area in which the legitimate activities of the attorney and the accountant seem to overlap and intertwine.

In treating with one aspect of this problem, practice of accountants through the administrative levels of the Internal Revenue Service, Dean Griswold notes that the certified public accountant is admitted to practice, as are lawyers, on the basis of his having qualified via a recognized examination. He expresses concern, however, over the possibility that certain revisions in Treasury's regulations may be adopted with the result that persons with no professional status whatsoever could qualify for admission to practice. He cites as an example the possibility of a disbarred attorney gaining special enrollment by passing the Treasury Department's examination. This possibility is extremely remote if, indeed, it exists at all. Any practitioner, before being granted special or general enrollment, must pass a rigid character check and satisfy the Director of Practice that he is of good character and reputation.

In this and other areas Dean Griswold alludes to the problem of distinguishing between the qualified public accountant and the unqualified practitioner. He has no difficulty with the certified public accountant, however, while he recognizes that there are many qualified public accountants who are not certified, he contends that he can find no benchmark against which to measure this group.

Mr. Speaker, I practiced as a public accountant in California prior to my election to Congress, and in my State, as in several others throughout the country, we have a statute which regulates the practice of accountancy and it covers public accountants as well as certified public accountants. In the above mentioned jurisdictions I would suggest the licensing requirement would serve as a reliable measure for judging the qualifications of the public accountant. There also exists another valid criterion which I commend to Dean Griswold's consideration. On the national level the National Society of Public Accountants represents qualified and ethical public accountants in every State in the Union. Members of this organization—which includes both public accountants and certified public accountants—are qualified and reputable practitioners who are bound by the strictest rules of professional conduct. I consider it a privilege to claim membership in this fine accounting society and I was proud beyond measure when they honored me as their "Man of the Year" in 1955.

I believe many of the real and imagined differences betwen the two great professions of accountancy and law could be resolved if the American Bar Association, representing the legal profession, and the American Institute of Accountants and the National Society of Public Accountants, representing the accounting profession, would gather around the conference table and discuss their mutual problems.

As Members of the House know, I introduced legislation in the 84th Congress, 1st session, H. R. 2416, to clarify the accountants status in the matter of Treasury practice. I am convinced that this legislation is desirable; however, I also realize that the ultimate and overall solution to this so-called controversy between accountants and attorneys in tax practice must come through voluntary action of the three interested parties. As a member of the National Society of Public Accountants, I believe I can assure Dean Griswold, members of the American Institute of Accountants and the American Bar Association that the National Society of Public Accountants is ready and anxious to cooperate with our fellow professionals in working out a solution, not alone in the interest of accountants or lawyers, but in the interest of the American taxpayer and his Government.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

DISTRIBUTION OF THE CONGRESSIONAL RECORD

To the Vice President and each Senator 100 copies; to the Secretary and Sergeant at Arms of the Senate, each, 25 copies; to the Secretary, for official use, not to exceed 35 copies; to the Sergeant at Arms, for use on the floor of the Senate, not to exceed 50 copies; to each Representative, Delegate, and Resident Commissioner in Congress, 68 copies; to the Clerk, Sergeant at Arms, and Doorkeeper of the House of Representatives, each, 25 copies; to the Clerk, for official use, not to exceed 50 copies; and to the Doorkeeper, for use on the floor of the House of Representatives, not to exceed 75 copies; to the Vice President and each Senator, Representative, Delegate, and Resident Commissioner in Congress there shall also be furnished (and shall not be transferable), 3 copies of the daily RECORD, of which 1 shall be delivered at his residence, 1 at his office, and 1 at the Capitol.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRINTING DOCUMENTS AND REPORTS

Documents and reports of committees with the evidence and papers submitted therewith, or any part thereof ordered printed by Congress, may be reprinted by the Public Printer on order of any Member of Congress or Delegate, on prepayment of the cost thereof (U. S. Code, title 44, sec. 162, p. 1940).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.
